THE KLEMME TIMES

VOLUME 33.—NO. 31. KLEMME, IOWA, THURSDAY, JANUARY 3, 1929. $2.00 Per Year In Advance—Outside of Iowa $2.50

OBITUARY OF MRS. LLOYD ULRICH

Clare Margurete Merkel Ulrich was born on a farm in Green County near Paton, Iowa, on March 18th, 1903 and passed away at the Mercy hospital at Mason City, Dec. 27, 1928 at 10:30 A. M., at the age of 25 years, 9 months and 10 days.

She was married on Sept. 27, 1922 to Lloyd Ulrich, son of Mr. and Mrs. Geo. Ulrich of this place and since that time has lived on the Ulrich farm 5 miles northwest of town. To this union was born three sons, Richard Lloy age 5, Merlin Junior age 2, and Lowell Clair born Dec. 22, 1928.

Mrs. Ulrich was baptized in the German Lutheran Church at Ogden, Iowa in which church her parents were members, in her early childhood. After coming with her parents to Klemme about ten years ago she has attended the Methodist church, in which fellowship she and her usband bot became members during the pastorate of Rev. Gedye. More recently they had their membership transferred to the Liberty M. E Church.

The deceased contracted a bad cold a few weeks ago which developed influenza which settled in one of her ears causing untold suffering. A few days ago she was taken to the Mercy hospital where she submitted to a mastoid operation, after which her little son Lowell Clair was born. For he sake of her family she wanted so much to live, and made a heroic fight, but when pneumonia set in the complication was too great and death finally came on Thursday morning about 10:30 relieving her from her pain and suffering. She went to be with her lord whom she said in those closing hours was beckoning her to come.

Besides her husband and three children she leaves to mourn her loss her father and mother, Mr. and Mrs. Peter Merkel, four brothers, Ben, Alfred, Walter and Lester. Also three sisters, Mrs. John Lass, Mrs. Edd. Christians, and Mrs. Vernon Halverson, all of this vicinity.

Card Of Thanks

We wish to thank all those who rendered us assistance in any way during the illness of our loved one, and thanking all who contributed flowers and otherwise expressed to us their deep sympathy in our sorrow. Lloyd Ulrich and children, Peter Merkel and family, George Ulrich and family.

OBITUARY OF MARY MAXINE BUSEMAN

Mary Maxine Buseman, daughter of Mr. and Mrs. George Buseman, died Saturday, December 29, 1928, at the home of her parents, at the tender age of 2 years and 23 days.

After being ill with influenza almost ten days pneumonia developed suddenly causing her ealry death.

Surviving her, and mourning her loss are her parents, four brothers: Erwin, Lester, Melvin and Wayne, and one sister, her grandmother, Mrs. Frank Roths, besides other relatives and friends.

Funeral services were held at the Klemme Reformed Church Monday afternoon, with Rev. Calvin Grosshuesch in charge. Burial was made at the Klemme Cemetery.

In spite of the great number of people ill in our community a large number expressed their sympathy to the Buseman family by attending the service.

The following boys acted as pall bearers: Ronald Barz, Paul Thieman, Alvin Keeper and Dale Schlei.

Card Of Thanks

We wish to thank all those who so kindly assisted us in every way, and for the many expressions of sympathy and flowers presented in memory of our little daughter and sister. George Buseman and family.

REFORMED YOUNG PEOPLE TO GIVE XMAS PROGRAM

The Young People's Bible Class of the Klemme Reformed Church have announced that they will render their Christmas Program Tuesday evening at 7:30 o'clock. This program had to be postponed last week on account of the flu.

CHRIS JACOBS AND E. H. WAHLERT NEW MEN AT THE COURT HOUSE

New Auditor And New Sheriff Begin Duties Of Office

With the new year the county has two new officials in office, that of Auditor and Sheriff.

Mr. Chris Jacobs is the Auditor for the new two years at least and E. H. Wahlert is the Sheriff for a like period.

Chris Jacobs is not new in the business as four years ago he went out of office and Henry Meyer was elected. Chris knows "al the ropes" of the office and was a very efficient officer during the four previous years he served the county. Chris is a congenial fellow, well liked by ev ryone. He has, during the greater part of his life, been interested in county affairs. Before coming to this county he was active in county affairs in Jackson County where he served as supervisor for several years. We are truly glad to see Mr. Jacobs in office as Auditor, for we know of none better qualified to take care of the extensive duties of that important office.

E. H. Wahlert, our new Sheriff is new in politics but is an old resident of the county. For a number of years Mr. Wahlert was affiliated with the Interstate Drainage & Investment Co. at Britt. Later he became a residen of Garner and was with the Greiman Ditcher Co. About a year ago he purchased one of the blacksmith shops at Garner which he still owns.

Mr. Wahlert is a fine type of man and his many friends say they are banking on him to make good in office.

COUNCIL PROCEEDINGS

Klemme, Iowa,
November 5, 1928.

Regular meeting of the Town Council held at the Mayor's Office.

All the members of the Council were present.

Motion made and seconded that the following bills be allowed:-

NO MOVIE SHOW THIS WEEK

The Auxiliary ladies have announced that there will be no show at the Idle Hour this week Saturday.

BILL LAU DIGS UP MORE ABOUT THE WEATHER

Last week the Times suggested that someone look up their almanac to find the days that have equal length of day and night, to find the longest and shortest days of the calender. Mr. Wm. Lau took the time to look it up and here are the figures he brought to the office the day after the paper was out:

1929 Spring begins March 21st.

Days and nights of equal hours: March 17th, 11 hours, 59 minute, and March 18th, 12 hours and 1 minute.

Summer begins June 21st.

The longest days being June 18, 19, 29 and 21st. Hours in dyas: 15 hours and 5 minutes.

Fall begins Sept. 23rd.

Days and inghts of equal hours: Sept. 27th, 11 hours and 59 minutes

Winter begins December 22nd.

Shortest days are Dec. 21, and 22 with 9 hours and 13 minutes of daylight.

Thank you, Bill, and if anyone doubts these figures let 'em show us, we're from Missouri.

MINISTER AND SON DIE WITHIN FEW DAYS OF EACH OTHER

Rev. Grosshuesch was called to Ledyard, Iowa, Saturday to conduct a funeral of Rev. Bussian's seven-year old son. Both Rev. and Mrs Bussian were ill with influenza and could not attend the funeral service. Tuesday Mr. Grosshuesch received another message that Rev. Bussian had died.

This morning, Thursday, Rev. C. Grosshuesch, accompanied by Rev. C. A. Schmid drove to Ledyard to be present at the funeral services held for Rev. Bussian.

Seventeen attended the Alumni Banquet of K. H. S. held at the school gym last Friday evening. The W. F. M. S. of the Methodist Church served the banquet On account of so many being ill the banquet was not as well attended a had been hoped for.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Sunday school, Epworth League and Worship services were all postponed last Sunday on account of there being so much sickness in the community.

All services, both at Liberty and Klemme churchs, will be resumed again on this coming Sunday.

A New Year's message will be delievred at the morning service, and lantern slides showing the work of the church in the Good Will Industry will be shown.

KLEMME REFORMED CHURCH
Calvin Grosshuesch, Pastor

10:00 a. m. English service.
11:00 a. m. Sunday school.

The Confirmation Class will meet at the church Saturday morning at 9 00 o'clock Lessons have been assigned and we expect all pupils to be ready for recitation.

The Bible Class will meet Tuesday evening at 8:00 o'clock.

Choir rehearsal will be Saturday evening at 8:00 o'clock.

MARRIAGE LICENSES ISSUED IN HANCOCK COUNTY

The County Clerk's office reports the following couples have taken out permits to marry:

Cecil O'Rourke and Dora Teck, both of Britt.

Elmer Knaupp and IVy Bradwell, both of Garner.

Dick Ter Hark and Erma Montgomery, both of Belmond.

Willard R. Peck and Agnes E Jones, of Forest City.

Neal Vernon Wildman and Ina Bogard, both of Corwith.

The Klemme Independents, town basketball team are having plenty of games but are having tough luck in losing by a score or two. They plyed at Mason City Monday evening, losing by one score, and the following night played Hayfield at the local court.

NOTICE OF ASSESSMENT OF BENEFITS
Drainage District No. 134.

To the persons named herein, Owners of land with Drainage Dist. No. 134 and to all other persons whom it may concern, ncluding occupants of lands wthin said District.

You and each of you are hereby notified that on the 5th day of Oct. 1928 the Board of Supervisors of Hancock County, Iowa in adjourned Regular Session appointed C. F. Merten, Engineer, J. C. Ford and H. V. Reed as commissioners to apportion costs, cost of contruction, damages and assessment of benefits between the several tracts of land within Drainage Dist. No. 134 in said county, as provided by law.

That the report of the said commissioners is now on file in the office of the County Auditor and that the 5th day of February, 1929, at one o'clock P. M. has been set as the time for hearing the same before the Board of Supervisors of Hancock County, Iowa, at the oCurt House in Garner, Iowa.

That all objections to the said report must be in writing, filed with the County Auditor on or before the hour set for hearing on said 5th day of February, 1929.

That said Board of Supervisors will then and there hear and determine all, objections made and filed to said report, and may increase, diminish, annul or affirm the apportionment made in said report, or in any part thereof, as may appear to the Board to be just and equitable, or the hearing may be adjourned from time to time for cause.

Names of owners, description of property taxed, and amount of assessment on each tract as reported by the Commissioners is as follows-

Everyone enjoyed the evening.

NEWS RECORD OF THE YEAR 1928

Summary of the Notable Events of the Twelve Months in America and Abroad.

HOOVER'S BIG VICTORY

Republicans Sweep the Country in the Presidential Election—Kellogg Treaty to Outlaw War Signed by Nearly All Nations—China Won by the Nationalists—Germany and the Reparations.

By EDWARD W. PICKARD

Herbert Hoover was the dominating figure of the year 1928 in the United States. This by reason of his sweeping victory in the Presidential election at the close of the most interesting campaign the country had had in many years, and his "good will" tour of the Latin American republics. Until the verdict of the polls was rendered, Mr. Hoover's rival for the Presidency, Gov. Al Smith of New York, was almost equally in the public eye and the public mind. Economically and financially the country enjoyed a prosperity that has seldom been equalled, notwithstanding the fact that the problem of relieving the troubles of the agriculturists remained unsolved.

Internationally, the outstanding event of the year was the putting forward of the so-called Kellogg multilateral treaty to outlaw war and its signature in Paris by nearly all the civilized nations of the world. Efforts to accomplish a reduction of armaments, made by the League of Nations and by various statesmen, had no definite results, but the Kellogg pact was looked on by most people as a real step toward world peace. The tenth anniversary of the armistice found the questions of German reparations still unsettled but the governments most concerned were about to open a conference for the purpose of determining finally what and how the Germans must pay. The close of the year also saw steps being taken by President Coolidge's administration for the reopening of the question of American adherence to the world court in the hope that the European nations might accept the American reservations.

In the Far East China provided much of the interest and to the relief of the world its internecine warfare was ended with the victory of the Nationalists. Japan furnished a spectacular incident in the formal coronation of Emperor Hirohito.

Latin America was rather more peaceful than usual, with the exception of Nicaragua, and in that republic the American marines and diplomats succeeded in bringing an end to the civil warfare and in giving the little republic a real election of a President.

INTERNATIONAL

Early in January President Coolidge created a precedent by journeying to Havana, Cuba, to attend the opening of the Pan-American conference and to deliver an address before that body. He returned at once, leaving the interests of the United States in the able hands of Charles Evans Hughes and his fellow delegates. At the instance of Mexico it was decided that the union should not have power to consider political questions, though some of the delegates tried earnestly to make it virtually an American league of nations. Honorio Pueyrredon, head of the Argentina delegation, insisted that the union adopt a declaration against the maintenance of tariff walls between the American republics, and when Mr. Hughes would not listen to this and it was turned down by the conference, Pueyrredon resigned both from his delegation and as ambassador to Washington. Before this occurred he and many others found occasion to denounce intervention by one nation in the internal affairs of another, the attack of course being aimed at the policy of the United States in the case of Nicaragua. As it was evident that a resolution embodying these views could not be carried unanimously, further discussion of the subject was referred to the seventh conference. Definite results of the session were: The acceptance by twenty states of a code of private international law; adoption of resolutions that disputes of a juridical nature be submitted to arbitration, that aggressive war be outlawed and the republics of America committed to the use of peaceable means for the settlement of all disputes between them; the beginning of the codification of international law; the signing of a convention on commercial aviation, and the putting into full effect of the Pan-American sanitary code.

In December there was a serious threat of warfare between Bolivia and Paraguay over the disputed Gran Chaco region. At the same time a Pan-American conference on conciliation and arbitration opened in Washington, and its first efforts were directed toward averting this outbreak of hostilities. The council of the League of Nations also urged the two republics to settle their quarrel without resort to arms.

On February 6, the one hundred and fiftieth anniversary of the signing of the first treaty between the United States and France, the two nations signed a new arbitration pact, binding each party not to go to war with the other. The American government at the time suggested that a better way would be to unite the efforts of the two powers to obtain the adhesion of all the principal powers of the world to a declaration denouncing war as an instrument of their national policy. This was the inception of the multilateral treaty which Secretary of State Kellogg later proposed to the chief powers. One by one the nations accepted the plan in principle, some of them with reservations, and finally the pact was drawn up to suit all. France thereupon invited fourteen other nations to send representatives to Paris to sign the treaty. All responded, and on August 27 the ceremony was performed. The pact was left open for the adhesion of other nations and within a few weeks most of the governments of the civilized world had accepted it. Promising as this movement toward general peace seemed, it was regarded by certain elements in some countries, especially the United States and Italy, with cynical derision. Approval by the American senate is necessary to give it effect, and some of the senators were known to be opposed to it. Senator Borah, chairman of the foreign relations committee, however, gave the treaty his warm indorsement.

Evacuation of the Rhineland and the fixing of the total of the reparations obligations was still insisted on by Germany. By the terms of the Dawes agreement she was paying large sums regularly on account, but the time when the payments should end was coming no nearer. The allies at last recognized this intolerable situation and in November it was agreed that a congress of experts should be convened to revise the Dawes plan and try to fix the total reparations. France persisted in the idea that the question of reparations should be tied up with that of her war debt to the United States but Washington made it plain that this could not be.

John Bassett Moore, American, resigned on April 28 as a member of the permanent court of international justice, commonly known as the world court. Most of the national groups nominated Charles Evans Hughes to succeed him, and the assembly and council of the League of Nations overwhelmingly confirmed the choice on September 8.

FOREIGN

Great Britain pursued the even tenor of its way, but was not in good economic condition. The great number of the unemployed, especially in the mining districts, led the government to try the experiment of helping many men to migrate to Canada and Australia to engage in agricultural work. This was successful to a limited extent but did not especially please the dominions. Early in the year parliament passed the women's franchise measure, known as the "flappers' bill," and thus about five million more women were given the vote. During the session of parliament the house rejected the prayer book revision proposed by the authorities of the Church of England; and Churchill introduced a spectacular budgetary scheme for reforming local government and relieving industrial depression. J. H. Whitley resigned as speaker and Capt. E. A. Fitzroy was elected to succeed him. Attacks on the metropolitan police led to a parliamentary investigation and to the appointment of Lord Byng as commissioner.

King George contracted inflammation of the lungs late in November and his condition became so alarming that the prince of Wales and his brother, the duke of Gloucester, hurriedly returned from a hunting trip in Africa. His majesty appointed a royal commission, headed by the queen, to act for him during his illness.

Dr. Randall Thomas Davidson, archbishop of Canterbury and primate of England, created a precedent by resigning, in July, and Dr. Cosmo Lang, archbishop of York, was appointed to the place. The earl of Birkenhead resigned as secretary of state for India and was succeeded by Viscount Peel. On February 1 James McNeill was installed as governor general of the Irish Free State. Perhaps the most interesting event in the empire, outside of Great Britain, was the decisive defeat of prohibition in New South Wales and Canberra, the federal district of Australia. In November the South African cabinet of Premier Hertzog resigned and he formed a new government.

France, as always, devoted an enormous amount of attention to politics. Premier Poincare held power throughout the year. In the elections on April 22 he won a decided victory, and when he resigned in November he was persuaded to retain office and form a new ministry. The radical socialists were recalcitrant and Poincare left them out of his government. The tenth anniversary found France in a gratifying state of rehabilitation. Most of the farm homes and buildings had been rebuilt, the flooded coal mines had been restored to production and factories had been restored and all were busy. The franc had been stabilized and the foreign trade showed a large increase. Unemployment was almost nonexistent. The communists created disturbances during the summer in Limoges, Troyes and Ivry but were effectually suppressed. Several Alsatian autonomists were convicted in May and sentenced to prison, but President Doumergue pardoned them. Scandals attending the granting of divorces by the Paris courts to Americans led to reforms in the procedure of those tribunals.

Germany, laboring under the burden of the reparations payments, was said by her ambassador to Washington to be distinctly on the upgrade. This notwithstanding rather unfavorable business conditions and an increase in the number of unemployed.

With Premier Mussolini still its dictator, Italy seemed to be making steady progress, and the supremacy of the Fascist party was confirmed and strengthened. The duce put into full effect his plan for reorganization of the government to put practically all power in the hands of the grand council, accomplished monetary reform and put through a law for his pet scheme of land reclamation and utilization.

Rumania was torn by dissension, the Peasant party demanding a share in the government. Finally the revolt grew so serious that Premier Bratiano was forced by the regency to resign and Juliu Maniu, leader of the peasants, came into power as head of a coalition government.

Ahmed Zogu, the handsome young dictator of Albania, decided that his country should have a king and promoted himself to that position, taking the title of Scanderbeg III.

Soviet Russia's rulers have not yet solved the great issue of how to reconcile the conflicting interests of the industrial and the agrarian sections of the population, and during the year there were sporadic revolts of the peasants, without result. The government continued its earnest efforts to enlist financial aid from abroad, and one of its successes was the completion of a contract with the International General Electric company of New York for the purchase of $25,000,000 worth of electric equipment in this country. The exploitation of the country's rich oil resources was carried on energetically. The rules governing concessions to foreign business interests were radically modified in September. Generally speaking, Russia was in a healthier condition than at any time since the revolution.

Victory of the Chinese Nationalists was won after long and hard fighting and despite the opposition of Japan. Marshal Chang Tso-lin, Manchurian war lord, was forced to abandon Peking on June 3, and on his way to Mukden his train was bombed and he was fatally injured. The Nationalists established a complete government and constituted Nanking the capital of the republic. Chiang Kai-Shek, their generalissimo, was elected president of the council. The name of Peking was changed to Peiping, meaning "Northern Peace." The United States took the first step toward recognition of the new government by negotiating a treaty granting China tariff autonomy. Great Britain, Germany, France and Italy all began negotiations with the Nanking government, Japan alone holding aloof because of her claim that her old treaty with China was still in effect.

Gen. Alvaro Obregon, being the only surviving candidate for the Presidency of Mexico after the recalcitrants had been suppressed, was elected on July 1, to take office on December 1. But on July 17, as he was attending a banquet in his honor, he was assassinated by a young native named Toral. The crime created a great sensation and the trial of the murderer and his alleged accomplices was watched with immense interest. In November Toral was convicted and condemned to death, and a nun, Mother Concepcion, who was accused of being the "intellectual author" of the crime, was condemned to twenty years in prison. It was up to the national assembly to choose a Provisional President to serve fourteen months from December 1, and, President Calles refusing the job, it was given to Emilio Portes Gil.

While American marines were trying quite successfully to pacify Nicaragua and quite unsuccessfully to catch Sandino, the rebel chieftain, Brig. Gen. Frank McCoy as the head of an American electoral commission was arranging for an honest and impartial Presidential election. This was authorized by a decree of President Diaz. The voters were properly registered in advance, and when they went to the polls on November 4 each man was required to dip his thumb in a stain to prevent repeating. The election was carried off peaceably and resulted in the choice of Gen. Jose Maria Moncada, the Liberal candidate. His majority over Adolfo Benard, Conservative, was about 20,000.

DOMESTIC

Nothing else was so interesting to the people of the United States as the business of selecting their next President. The campaigning started early, and from the beginning it was tolerably apparent that Secretary of Commerce Herbert Hoover would win the Republican nomination, and that Gov. Al Smith of New York would head the Democratic ticket. The G. O. P. national convention met on June 12 in Kansas City with the Hoover delegates strongly entrenched, the only other prominent candidates being Frank O. Lowden of Illinois and Senator Charles Curtis of Kansas. Lowden was supported by the leaders of farm organizations who wanted the Mc-Nary-Haugen agricultural relief bill, and they promised that there would be a tremendous demonstration by farmers if the convention did not at least adopt a platform plank to their liking. This turned out to be a false alarm, and Hoover went over easily on the first ballot after the resolutions committee had fixed up a platform to conform to his policies. Senator Curtis was consoled with the nomination for Vice President. Mr. Hoover selected Secretary of the Interior Robert C. Work for chairman of the national committee, and the campaign work was promptly organized.

The Democrats met in national convention in Houston, Texas, on June 26, and from that moment there was no doubt of Smith's victory. The southern Democrats, however, being nearly all dry and Protestant, made such fight as they could, and on June 28 accepted the nomination of Smith on the first ballot with wry faces. The enthusiasm of the governor's supporters was such that there were many assertions that the party would stand solidly behind him. How wrong the prediction was is known to all. It took only one ballot for the convention to choose Senator Joe Robinson of Arkansas as Smith's running mate. He was the first resident below the Mason and Dixon line since the Civil war to be named on a Presidential ticket by either of the major parties, and his selection was regarded as a wise, strategic move. Governor Smith, on receiving word of his nomination, rather upset the convention by a telegram in which he declared he had not changed his opposition to the present prohibition laws and methods of their enforcement. John J. Raskob, chairman of the finance committee of the General Motors corporation, was made Democratic national chairman, and under his leadership the party, for the first time in many long years, obtained ample funds for the campaign.

Both candidates made several speaking tours, and for the first time radio was used extensively in the campaign. The people were thoroughly aroused, and the religious issue, though deprecated by the leaders of both parties, would not down. It and also the prohibition issue cut both ways. In the middle western and western states the question of farm relief was played up, but in the end it was overshadowed by the fact that the country in general was exceedingly prosperous, and the voters did not care to make an experimental change.

The American people, men and women, went to the polls on November 6 in unprecedented numbers, and when their ballots had been cast Hoover and Curtis carried forty states with a total of 444 electoral votes, and Smith and Robinson had carried eight states, with 87 votes in the electoral college. Hoover's majority exceeded even that of Wilson in 1912. Moreover, he smashed the solid South, winning Florida, Maryland, New Mexico, North Carolina and Texas. Smith's states were Alabama, Arkansas, Georgia, Louisiana, Massachusetts, Mississippi, Rhode Island and South Carolina. He failed to carry New York, though Franklin Roosevelt (Dem.) was elected governor of that state. When the popular vote was considered, the defeat of Smith did not seem so humiliating. The total vote cast was approximately 35,000,000, and of these Smith received about 15,000,000.

Two weeks after the election Mr. Hoover sailed from San Pedro, Calif., on a good will tour of the republics of Central and South America that was to last about two months, and he announced that he would not select his cabinet until after his return. On his trip he was received everywhere with enthusiasm by the officials and people of the countries visited, and it was believed the tour would do much to cement the friendly relations between the Latin American nations and the United States.

Legislation for naval construction, flood control and farm relief occupied much time in congress from the first of the year. The first, as finally passed, provided for the construction of fifteen cruisers and one plane carrier and carried $364,000,000. In the matter of flood control President Coolidge insisted that the states especially interested must share the cost, and the measure adopted recognized this principle and appropriated $325,000,000 for the work. The President was equally insistent against the McNary-Haugen farm relief measure and when both houses passed it he vetoed it. Another major piece of legislation was the finance bill which reduced taxes more than $200,000,000. The Boulder Canyon dam project, so dear to California, was the subject of a long and bitter fight. The house passed the bill, but when congress adjourned on May 29 it was left as unfinished business in the senate.

Congress assembled for the short term on December 3 with small prospect of passing any important measures except the necessary supply bills. The Republicans decided that the matter of tariff revision should be taken up early in January, but it was virtually agreed upon that this and farm relief should be passed on to a special session which Mr. Hoover had said he would call. President Coolidge in his message gave an account of his stewardship for five and a half years and pictured the state of the nation as most favorable, with peace, prosperity and good will unprecedented. The senate passed the Boulder dam bill amended to meet objections.

President and Mrs. Coolidge spent their summer vacation at a fishing lodge in northern Wisconsin. Their son John went to work in the offices of an eastern railroad, and in November his engagement to Miss Florence Trumbull, daughter of the governor of Connecticut, was announced.

The convention of the American Legion was held in San Antonio, Texas., in October and Paul V. McNutt was elected national commander. At the same time the United Spanish War Veterans met in Havana, Cuba. In September the Grand Army of the Republic held its encampment in Denver and chose John Reese for its commander-in-chief.

AERONAUTICS

Col. Charles Lindbergh carried over into the new year with his tour of the Latin American countries around the Caribbean sea, and interest in his doings was maintained through 1928. On February 29 he was awarded the Woodrow Wilson medal and $25,000, and three weeks later President Coolidge pinned on his breast the Congressional Medal of Honor. In May he became connected with an air transport company. Late in the year he flew to Mexico and was the guest there of Ambassador Morrow, which gave rise to the report that he was to marry Miss Morrow.

The year saw some great events in aeronautics. First of these was Bert Hinkler's solo flight from England to Australia in 15 days. Then in April Koehl and von Huenefeld of Germany and Fitzmaurice of Ireland, starting from Dublin, made the first westbound nonstop flight across the Atlantic, landing on Greenly island in the Straits of Belle Isle. Capt. G. H. Wilkins and Carl B. Ellson made a remarkable flight across the Arctic regions from Point Barrow to Spitzbergen in April. The monoplane Southern Cross with a crew of four flew from Oakland, Calif., to Australia with stops at Hawaii and the Fiji islands; and two Italian aviators flew from Rome to Brazil. In June Amelia Earhart and two pilots flew from New Foundland to Wales. Art Goebel flew from Los Angeles to New York without stop in 18 hours 58 minutes, and Tucker and Collyer made the same flight in the other direction in 24 hours 51 minutes. Soon afterwards these two airmen were killed when their plane crashed in Arizona. Another great achievement was the flight of the huge German dirigible Graf Zeppelin from Friedrichshafen, Germany, to Lakehurst, N. J., carrying mails, freight and paying passengers, and her safe return.

Tragedies of the air were numerous, the most spectacular being the loss of the airship Italia on which Commander Nobile of Italy and a large party were exploring the Arctic regions from Spitzbergen. The dirigible fell on the ice floes and some of the men were carried away with the balloon part and never found. Others, with Nobile, were rescued after many attempts by airplanes and icebreaking steamers. Capt. Roald Amundsen, the famous polar explorer, was among those who attempted to reach the survivors by airplane, and he and his five companions perished in the icy wastes. In March Capt. Walter Hinchcliffe and Miss Elsie Mackay of England attempted the western flight across the Atlantic and were lost at sea. Captain Carranza of Mexico, who had made a nonstop flight from Mexico City to New York, was caught in an electric storm as he started home and perished in New Jersey. Capt. C. T. Courtney and three companions, flying from the Azores to America, were forced down in mid-ocean but were picked up by a steamship, and the same thing happened to two Polish aviators who started from Paris. Hassell and Cramer of Rockford, Ill., flew to Cochrane, Ont., and thence started for Stockholm via Greenland. They reached their first stopping place, Mount Evans, but their plane was too crippled to continue. In October Com. H. C. MacDonald, English aviator, undertook to fly from Newfoundland to England alone in a small plane and was lost at sea.

A novelty that may be promising was the gyroscope plane, invented by a Spaniard, in which he flew across the English channel, rising and descending almost vertically.

Marking the twenty-fifth anniversary of the first flight of the Wright brothers, an international civil aviation conference opened in Washington on December 12 with 40 nations represented. Orville Wright was the guest of honor and Charles Lindbergh was presented with the Harmon medal awarded by the International League of Aviators.

NECROLOGY

Among the well-known persons taken by death were the following:

In January: Loie Fuller, dancer; Emily Stevens and Dorothy Donnelly, actresses; Marvin Hughitt, railroad builder; Thomas Hardy and Vicente Blasco Ibanez, novelists; Louis Post, Talcott Williams and Arthur Clarke, journalists; F. H. Stead, English editor; Earl Haig, commander in chief of British armies in the World war, and Admiral J. M. de Robeck of the British navy; Maj. Gen. G. W. Goethals, builder of the Panama canal; Rear Admiral Victor Blue, U. S. N.; Andrew MacLeish, E. L. Ryerson and William Du Pont, commercial magnates; Count Hugo Hamilton, Swedish statesman, and the earl of Warwick.

In February: Herbert Asquith, earl of Oxford, former British premier; Prince Charles Lichnowsky, German diplomat; Marshal Armando Diaz, Italian commander in chief in World war; Eddie Foy, veteran comedian; E. B. Butler, Chicago millionaire merchant; James L. Ford, author.

In March: William H. Crane and Nora Bayes, actors; Rodman Wanamaker, merchant prince, and J. W. Packard, automobile pioneer; Senators W. N. Ferris of Michigan and Frank B. Willis of Ohio; W. C. Sproul, former governor of Pennsylvania; Viscount Cave, British statesman, and Gustav Ador, ex-President of Switzerland.

In April: Chauncey M. Depew; Congressman J. A. Gallivan of Boston and Martin B. Madden of Chicago; Stanley J. Weyman, novelist, R. C. Carton, dramatist, and Charles Sims, artist, all of England; Dr. Sanger Brown, noted alienist; John A. Dix, former governor of New York; E. M. Statler, hotel owner; Floyd Bennett, famous aviator; Archbishop Mora y del Rio of Mexico; Baron Peter Wrangel, leader of "White" Russians.

In May: Congressmen T. C. Sweet of New York and T. S. Butler of Pennsylvania; Sir Edmund Gosse of England and Bessie Van Vorst of America, authors; Allan Dale, dramatic critic; Prof. Hideyo Noguchi and Dr. W. A. Young of the Rockefeller institute; Herschel Jones of Minneapolis and E. B. Piper of Portland, Ore., journalists; Dr. Edgar F. Smith of Philadelphia, eminent chemist; Federal Judge W. H. Sanborn of St. Paul; William D. Haywood, former I. W. W. chief, in Moscow.

In June: Holbrook Blinn, Robert B. Mantell, Leo Ditrichstein and John Dooley, actors, and Avery Hopwood, playwright; John D. Work, former senator from California; Federal Judge Adam C. Cliffe of Sycamore, Ill.; E. T. Meredith, former secretary of agriculture; Senator Frank R. Gooding of Idaho; Donn Byrne, Irish American novelist; Dr. Otto Nordenskjold, Swedish explorer; J. R. Bone, editor Toronto Daily Star; Mrs. Emeline Pankhurst, English suffragist; Marshall Chang Tso-lin, Manchurian leader; General Swinehart, American soldier of fortune.

In July: Capt. Alfred Lowenstein, Belgian capitalist; Howard Elliot, railroad executive; G. E. Chamberlain, former senator from Oregon; Congressman H. R. Rathbone of Illinois; Ellen Terry, English actress; D. C. Davies, director of Field museum, Chicago; Giovanni Giolitti, Italian statesman; Dr. George Colvin, president University of Louisville; Rear Admiral W. M. Folger, retired; Federal Judge D. C. Westerhaver of Cleveland; T. B. Walker, wealthy Minneapolis lumberman and art patron.

In August: George E. Brennan, Illinois Democratic leader; George R. Morris, New York Republican leader; Col. George B. Harvey, publicist; Congressman L. A. Frothingham of Massachusetts; Gov. A. R. Sorlie of North Dakota; Maude Granger, actress; Gil Robinson, circus man; D. M. Delmas, noted San Francisco attorney; J. B. Laughlin, steel magnate; Viscount Haldane, British statesman; Marshal Emile Fayolle, noted French strategist; Mary Garrett Hay, suffragist.

In September: Maurice Bokanowski, French cabinet member; Rear Admiral G. F. Winslow, retired; Bishop J. C. Hartzell of Cincinnati; Urban Shocker, baseball pitcher; Lincoln Eyre, American war correspondent; Roy K. Moulton, humorist; R. F. Outcault, comic artist; Brig. Gen. W. N. Bixby; E. A. Stillwell, railroad man; Sir Horace Darwin, scientist.

In October: C. W. Barron, editor of Wall Street Journal; George Beban and Larry Semon, motion picture stars; A. F. Seested, publisher of Kansas City Star; W. J. Flynn, former chief of U. S. secret service; Benjamin Strong, governor of New York Federal Reserve bank; Robert Lansing, former secretary of state; George Barr McCutcheon and Frances Newman, novelists; Rev. R. A. Torrey, evangelist; Sir Frank Dicksee, English artist; Dowager Empress Marie of Russia; Brig. Gen. F. R. McQuigg, former commander of American Legion.

In November: Dr. Frank Crane and Eliza Scidmore, American writers; Prof. T. C. Chamberlin of University of Chicago, noted geologist; Dr. John Harding, father of late President Harding; Congressman W. A. Oldfield of Arkansas; G. H. Jones, chairman of Standard Oil of New Jersey; Thomas F. Ryan, New York financier; Rear Admiral F. F. Fletcher, retired; Gen. Baron Jacques, Belgian commander in World war; Admiral Scheer, commander of German fleet in battle of Jutland.

In December: Henry A. Haugen, Chicago banker; Lord Tennyson, son of the poet; Ezra Meeker, last of the Oregon Trail pioneers; Miss Alice Longfellow, daughter of the American poet; James A. Patten, Chicago financier; Jacob M. Dickinson, former secretary of war. Theodore Roberts, actor.

DISASTERS

No disasters comparable to the Mississippi floods afflicted the United States in 1928, but southern Florida was swept by another tropical storm in September that killed 2,200 persons and did vast property damage. The same storm already had ravaged the Antilles, the losses in Porto Rico being especially heavy. A sensational event in November was the sinking of the steamship Vestris off the Virginia capes with the loss of 111 lives.

Of other disasters the worst were: In January: Russian steamer foundered in the Black sea, 200 being drowned; mine explosion at West Frankfort, Tenn., killed 21. In February: Twelve killed by oil refinery explosion in Everett, Mass.; fire in Hollinger gold mine at Timmins, Ont., killed 39. In March: Landslide in Santos, Brazil, killed 200; San Francisquito dam near Los Angeles broke and 436 were drowned; destructive earthquakes in Italy and at Smyrna with many deaths. In April: Earthquakes in the Balkans, in Greece and in Peru fatal to many. In May: Mine explosion at Mather, Penn., killed 18. In June: One hundred perished in a tornado in Oklahoma. In July: Three hundred drowned when a Chilean transport sank; Libog, in the Philippines, destroyed by volcanic eruption. In August: Italian submarine was sunk in collision, 27 men drowning. In September: Theater fire in Madrid, Spain, was fatal to about 120. In October: French submarine was sunk by a steamer and 43 were lost. In November: Destructive floods in Missouri and Kansas; terrible storms on the Atlantic coast of Europe and on the Black sea, resulting in the loss of many lives. In December: An earthquake in southern Peru wrecked several towns and killed about 200 persons.

NEARBY AND YONDER

By T. T. Maxey

Tschischiwapeki

TSCHISCHIWAPEKI, an Indian name, meaning a highly salted body of water, has been contracted to Chesapeake, the name of that alluring inland sea that cuts Virginia in twain and almost bisects the state of Maryland.

No wider than a river at its head, the Chesapeake broadens to a width of 22 miles in the 195 miles to its joining with the sea. Its maximum depth is 165 feet and gross area about 5,000 square miles. It is fed by some 50 tributaries, ranging from two to 100 miles in length, the chief one of which is the historic Potomac. These tributaries harbor many quaint villages of quiet charm that hold ancient colonial homes of rare beauty.

This romantic bay became known to white men quite by accident in 1607 when some passing vessels were blown into its mouth. It figures prominently in the development of the surrounding country, has a war record of renown and is known for the unusual colorfulness of its sunsets.

The Chesapeake is a great sea-food bin, producing more oysters than any other body of water in the world. During one year, Maryland and Virginia which embrace it, produced oysters, clams, crabs, terrapin and fish valued at almost $14,000,000. It also is a great wild-fowl refuge, its shelters being famed as habitats for myriads of the winged tribes. Again, it is an outstanding commercial utility, bearing upon its bosom great cargoes of the world's goods between Baltimore and other world ports in both this and foreign lands.

* * *

Forty-Second Street

EVERY large city has a street which for one reason or another has been smiled upon by fortune and enjoys a national prominence. It naturally follows that the larger the city the more famous the street, as a rule.

It is running true to form, therefore, when a street—Forty-second—in our metropolis, reached the importance that it is advertised as "The World's Greatest Thoroughfare."

And what a transformation it has had! Only a few decades back, the eastern portion of Forty-second was dubbed "Shantytown." It was one of the most unsightly sections of the city. But as "Uptown" New York responded to the urge of progress, Forty-second developed into a great, cross-town traffic artery—from the East river to the Hudson—and today the former slovenly section of it has become the most high toned and carries the greatest buildings.

Only about two miles long, but approximately 100 feet wide, with elevated railroads running over it, street cars operating on it and subways burrowing under it, Forty-second has become such a necessary thoroughfare that New York would be hard put to get along without it.

It has been estimated that more than 250,000 persons and upwards of 25,000 vehicles use it every twenty-four hours; that probably 1,000,000 persons live within convenient walking distance and another million within a few minutes ride.

Shops of every nature imaginable line its sides, along with great terminals, churches, theaters, loft and office buildings and monstrous hotels—at one of which 10,000 people are said to dine daily.

* * *

The National Library

THE National library, as the Library of Congress at Washington sometimes is called, is the largest institution of its kind in all of the Americas.

This treasure house of knowledge covers three and one-half acres of ground, has about eight acres of floor space which contain more than 3,500,000 books, occupying more than 150 miles of shelving, covering every subject under the sun. Almost 200 nations are represented in this stupendous collection—China and Russia lead the foreign list with more than 300,000 and 80,000 volumes respectively, Japan and Scandinavia following with more than 9,000 and 5,000 respectively. In addition, there are upwards of 200,000 maps and charts, 300,000 photographs and prints and 40,000 musical scores. A staff of experts is employed to assist members of Congress, government employes and public callers in locating information on which they are searching.

Wisdom in its every phaze is completely represented here. For instance, the oldest book, printed from movable type—Duranti's Rational Divinorum Officiorum was printed in Mainz in 1459, which was thirty-three years before Columbus discovered America; the smallest book, which incidentally is said to be the smallest book in the world, is a copy of the Rubaiyat of Omar Khayyam, which contains forty-eight pages, each about one-half inch square; the largest book probably is Audobon's Birds of North America, in four volumes, its pages measuring about three feet high.

The normal day's receipts, counting Sundays and holidays, includes approximately 373 books and pamphlets, 40 maps, 40 musical compositions, 13 periodicals and 1,060 newspapers and periodicals.

(©, 1928, Western Newspaper Union.)

Soil Erosion Is Producing Loss

More Plant Food Taken by Streams Than Goes Into Various Crops.

A round $2,000,000,000 is carried away, irretrievably lost, in the rivers and streams of America each year!

That is no wild guess, but the careful and conservative estimate of one of the country's foremost soil experts, Hugh H. Bennett, who is quoted in the Farm Journal.

Wherever you see a muddy stream, you are witnessing a part of this loss. Washing away of the soil, says Mr. Bennett, robs us not only of the soil itself, but of 20 times as much plant food each year as we use in the growing of crops.

Why Permit Loss?

Why do we permit the loss? The answer is that the American farmer whose ancestors settled on rich virgin lands has not yet been brought to realize that the reservoir of his wealth is being drained. Some of them, the more farseeing, appreciate the significance of the muddy stream. The government agricultural services have made some attempt to rouse the agricultural interests and the people as a whole to a realization of the situation. But, so far, what has been done is infinitesimal when compared with what remains to be done.

"It is simply impossible to overestimate the seriousness of this condition, which is at its worst, naturally, in the soft and unprotected soil of the corn belt," says the Farm Journal article.

"More vitally important than the tariff, the equalization fee, taxes, or freight rates, all of which can be fixed if we want to fix them, the loss of the soil and its plant life is not easily fixable. 'Agriculture is only temporary, not permanent, in any land with muddy streams,' says Arthur J. Mason."

Never Be Stopped.

The loss probably can never be stopped entirely, but it can be reduced to a minimum by educational campaigns which will induce land owners to terrace their fields where erosion is rapid, to reforest their lands and to plant protective crops of alfalfa and other growths which will also aid the soil to recoup its losses to nature.

Europe learned this lesson after the lands of the Roman empire were reduced to sterility. There are few muddy streams on that continent today. America has that example to go by, if it will only apply the lesson in time.

Feeding Idle Horses to Prepare Them for Work

Coarse alfalfa or clover hay that cattle will not eat makes good horse feed and should be given at least once a day to the idle work horses. This feed will help supply the food materials needed to keep the horses in good condition and to build up their reserve strength for the coming year. If the horses are in good shape, no grain need be fed until about six weeks before spring work begins. Then a handful of linseed oil meal should be added to each feed of grain to help loosen up the heavy coat of hair and make the horse shed early. Sickness is more likely to occur if the horse carries his winter coat of hair into the spring work season, as he sweats too much, and his coat remains wet most of the night.

Ten to twelve pounds of grain daily is plenty until heavy spring work begins, when the amount should be gradually increased to from one pound to one and a fourth pounds of grain per 100 pounds each horse weight. For example, a 1,500-pound horse at heavy work should be getting 15 to 19 pounds of good grain per day. Oats and ear corn are the best grain feeds for mature horses.

Artificial Lights

Some poultrymen claim that after the birds become used to getting off the perches when the electric lights are turned on, only about twenty minutes of light per night is necessary, particularly if the night lunch method is used, in which the lights are turned on for an hour after the birds have had some sleep. It will be noticed that a majority of the birds will return to the roosts in about twenty minutes. They apparently pick up enough feed during this time and are ready to go back to their perches.

Farm Notes

Trees make a poor roost for hens.

* * *

Proper shelter for farm animals calls for more shingles and sheds.

* * *

The good things said about alfalfa may be applied almost as well to the clovers.

* * *

The long winter nights are never too long for the man who wants to improve himself by study.

* * *

The common red clover makes more growth in its two crops the second season than the mammoth.

* * *

Under the present system of grain distribution there is little to prevent feed grain being used as seed.

* * *

On heavy soils it is usually easier to get a seedbed in the spring when the plowing is done in the fall, because of the action of the winter weather on the soil.

DAIRY FACTS

PREVENT LOSS BY CLEAN HANDLING

Souring Is Caused by Bacteria After Milking.

Clean production, prompt cooling, and frequent deliveries will prevent the souring of milk and will put dollars in the pockets of dairy farmers.

"This souring is caused by bacteria which get into the milk after it is drawn from the cow and can only be prevented by the most careful handling," says John A. Arey, extension dairyman at North Carolina State college.

When first drawn from the cow, milk contains very few if any of the bacteria and the contamination comes from outside sources. Chief among these are the cow's body, the hands of the person doing the milking, the air and the containers.

Mr. Arey states that all of the sources can be eliminated by seeing that the cow's flanks and udder are thoroughly cleaned before milking, that the milker's hands are clean, and that all vessels or containers have been cleaned and sterilized.

These containers should first be rinsed in lukewarm water and then scrubbed with a heavy brush in water to which has been added a strong alkali solution. They should then be sterilized with live steam or some chemical made for that purpose. All utensils in which the seams are not well flushed with solder should be avoided as these crevices are hard to clean and furnish a harboring place for bacteria.

The milk should be cooled as soon as possible after milking, placed in the containers in which it is to be delivered and stored in a refrigerator or cooling tank. Only by taking these precautions can the dairyman prevent the milk from souring and be sure of delivering pure, sweet milk to the market, states Mr. Arey.

Give Dairy Cows Silage With Their Winter Feed

Corn silage is the best and most economical way of providing cattle with the succulence necessary in dairy feeding, says the New York State College of Agriculture at Ithaca, New York. Some way must be provided to carry pasture conditions over into winter feeding and silage is the best form of succulence to be provided.

Good legume hay with a succulent feed furnishes a combination of protein, minerals, and succulence which comes as near as possible to pasture conditions. This palatable and bulky feed is good for the digestive tract, and is economical as a source of carbohydrates. Corn silage stimulates the appetites of the animals so that they do not easily go off feed; they consume larger amounts of roughage than when fed on hay alone.

Get Cow Into Condition During Its Dry Period

Largest profit during the milking period may be expected only from cows that have been gotten in good condition during the dry period. Cows that are thin at calving time never have an opportunity to do their best.

Silage and a legume hay are the best foundation of a ration for the heifer or dry cow. The fitting ration should be fed liberally (from 7 to 12 pounds per day) for a period of four to six weeks before calving excepting that when within a week or ten days of calving it is best to change to a lighter and milder laxative ration. Equal parts of corn or hominy feed, wheat bran, ground oats, and from 10 to 25 per cent of linseed oil meal approaches the ideal as a grain mixture for the preparation period.

Dairy Facts

It doesn't pay to overfeed. Overfeeding usually leads to digestive disorders that play hob with the calf.

* * *

Inch board overlays or cork brick floors under cows insure against many udder troubles which arise from cold concrete floors.

* * *

Experiments at different experiment stations show that ground corn is worth 16 per cent more than whole corn when fed to dairy cows.

* * *

Slimy, stringy, and ropy milk are all caused by bacteria. Such bacteria may come from water or ice, and cows after wading through surface water may carry these bacteria on their bodies to the barn.

* * *

Sweet clover pastures seem to give best satisfaction to dairymen who supplement the pasture with silage, hay or grain.

* * *

Grooming cows will directly or indirectly prove profitable. It improves the quality of the milk and affords satisfaction to the owner.

* * *

Particular care must be taken of milk and cream. They should be kept in a cool place in earthen or glass containers, and should be covered so as not to absorb any sort of odors.

Drink Water to Help Wash Out Kidney Poison

If Your Back Hurts or Bladder Bothers You, Begin Taking Salts

When your kidneys hurt and your back feels sore don't get scared and proceed to load your stomach with a lot of drugs that excite the kidneys and irritate the entire urinary tract. Keep your kidneys clean like you keep your bowels clean, by flushing them with a mild, harmless salts which helps to remove the body's urinous waste and stimulates them to their normal activity. The function of the kidneys is to filter the blood. In 24 hours they strain from it 500 grains of acid and waste, so we can readily understand the vital importance of keeping the kidneys active.

Drink lots of good water—you can't drink too much; also get from any pharmacist about four ounces of Jad Salts; take a tablespoonful in a glass of water before breakfast each morning for a few days and your kidneys may then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for years to help clean and stimulate clogged kidneys; also to neutralize the acids in the system so they are no longer a source of irritation, thus often relieving bladder weakness.

Jad Salts is inexpensive, cannot injure; makes a delightful effervescent lithia-water drink, which everyone should take now and then to help keep their kidneys clean and active. Try this; also keep up the water drinking, and no doubt you will wonder what became of your kidney trouble and backache.

Long-Lived Indians

An Indian chief, whose age is given in tribal records as one hundred and thirty, is mourned at Vallevista, Calif., by four sons, each of whom is more than ninety. The aged leader was Manuel Portes, chief of the Santa Rosa Indians. The tribal records relate that Portes was born in 1798 and that he passed his entire life in the vicinity of the Santa Rosa mountains.

Wrist-Wrecking

A man named Dawidowicz Asojedoffski has been arrested in Berlin for forgery. We can hardly blame him for not wanting to sign his own name.—Boston Transcript.

Don't think that the woman who poses as a man hater can't be induced to change her name.

Letter Long on Way

After 15 years of travel between Pasadena, Calif., and Colombia, South America, a letter has been returned to the sender. In December, 1913, Y. Posthuma of Pasadena sent a letter seeking employment to a mining company in South America. The assortment of stamped directions on the envelope indicated the Colombian post office authorities made little effort to deliver it until February, 1920. Then attempts to find the addresses were without success and the letter was started back toward Pasadena. For the last eight years it has been wandering in that general direction. Posthuma, fortunately, did not wait for a reply to his letter before seeking another job.

Denver Mother Tells Story

Nature controls all the functions of our digestive organs except one. We have control over that, and it's the function that causes the most trouble.

See that your children form regular bowel habits, and at the first sign of bad breath, coated tongue, biliousness or constipation, give them a little California Fig Syrup. It regulates the bowels and stomach and gives these organs tone and strength so they continue to act as Nature intends them to. It helps build up and strengthen pale, listless, underweight children. Children love its rich, fruity taste and it's purely vegetable, so you can give it as often as your child's appetite lags or he seems feverish, cross or fretful.

Leading physicians have endorsed it for 50 years, and its overwhelming sales record of over four million bottles a year shows how mothers depend on it. A Western mother, Mrs. R. W. Stewart, 4112 Raritan St., Denver, Colorado, says: "Raymond was terribly pulled down by constipation. He got weak, fretful and cross, had no appetite or energy and food seemed to sour in his stomach. California Fig Syrup had him romping and playing again in just a few days, and soon he was back to normal weight looking better than he had looked in months."

Protect your child from imitations of California Fig Syrup. The mark of the genuine is the word "California" on the carton.

Not Very Thirsty

"Let's have some ginger ale!"
"Pale?"
"No, just a glass will do."

No woman is as truthful as her mirror.

When Food Sours

Lots of folks who think they have "indigestion" have only an acid condition which could be corrected in five or ten minutes. An effective anti-acid like Phillips Milk of Magnesia soon restores digestion to normal.

Phillips does away with all that sourness and gas right after meals. It prevents the distress so apt to occur two hours after eating. What a pleasant preparation to take! And how good it is for the system! Unlike a burning dose of soda—which is but temporary relief at best—Phillips Milk of Magnesia neutralizes many times its volume in acid.

Next time a hearty meal, or too rich a diet has brought on the least discomfort, try—

Tends to Her Knitting

Not content with knitting 80 pairs of mittens a year for forty-five years, Mrs. Rosamond C. Deering of Portland, Maine, has proved in her eightieth year that her fingers have not yielded to the advance of years by raising the number to 126 pairs.—Indianapolis, News.

The man who never made a blunder is a poor one to have in a responsible position.

If every big business wants a dictator, business sees the good points about Mussolini.

This Fuel Brings You

Clean Heat Pure Air Economy!

The fuel you burn has a vital bearing on the health and happiness of your family. Endurance-

Again the Whippet has demonstrated its endurance and first class workmanship in a gruelling test just completed at Omaha by "Speed" Bradford the daredevil racing demon who, in a 4,059 mile race against time put a Whippet Six Coach to the severest road tests he could conceive—and it came hru smiling and he proclaimed it the best light car he had ever driven—in fact he liked it so well that he has signed up as salesman for the Wetherell Auto Co., Omaha and will sell Whippets.

"Speed" Bradford drove 902 miles each 24 hours, driving thru 11 towns and reporting at each stop, averaging 36.9 miles per hour, including all stops, or 46.1 miles per hour road average. The car made an average of 21.3 miles per gallon of gasoline.

The New Whippets, with all the very latest improvements are now ready for delivery. Call at our garage and let's talk "real" car to you. You can't go wrong by buying a Whippet.

Andrew Wellemeyer left for Kansas City, Kan. New Year's day to resume his studies.

Miss Marie Blank is back again at the Wellemeyer store since Wednesday after being o diffuty on account of flu.

Charles Burch, who attends the Klemme high school, is spending his mid-winter vacation visiting with his parents at Mason City.

Most of the stores were open on New Year's day and as it was rather quiet some of the merchants began to invoice.

Dr. and Mrs. D. P. Anderson entertained Mr. and Mrs. Glenn Seney, of Sheffield, and Frank and Donald Gibbs for dinner Thursday evening.

The Klemme Independents lost to the Mason City Diamond Bread basket ball team 18-38 here last Thursday night.

Mr. P. M. Wilson took his daughter Gladys, and Asa Arnold to Des Moines Wednesday, where both are students at Drake University.

Mrs. C. F. Keraus and Miss Thelma Kluckhohn returned Wednesday morning from Traer, Iowa, where they had been visiting for a week at the W. C. Keraus home.

Dr. R. W Specht, Dentist, Garner, Iowa. adv

Mr. Charles Zollars, of Ames, and Miss Wilma Hudgel, of Drake University, came last Friday to visit a few days at the home of Clarence Elder and Vernon Turgasen.

Miss Agnes Ely returned to Racine, Wis. Monday after spending the holidays visiting with her folks at Belmond and with her sister here Mrs. W. F. Missman.

The Scouts of Troop 56 will hold their regular meeting Friday evening in the Bank basement. New scouts will be received into the organization.

Mrs. Emma Gibbs visited with her son, Charles and family at Mason City Saturday. This was her first trip over to see her grandson, Charles Jr.

Peter Trampel has purchased the west 120 acres of the "Red Cloud Ranch," known as the Walt Bloom place. Adolph Schlichting purchased the balance of the farm with the buildings.

Mr. and Mrs. Jay. Grigs were visiting in Klemme today. Jay called at the Times office and he and Ye Editor got a lot of fishing and hunting done—in theory.

For dinner Saturday noon Mrs. Sadie Turgasen entertained Vernon Turgasen, Dorothy Blinn and Charlie Zollars, and Clarence Elder, of Ames, and Wilma Hudgel, of Drake University.

A number of Klemme Masons re taking in the third degree work at the Garner Temple this afternoon and evening, when three candidates will receive the Master Mason degree.

The Ladies Aid of the M. E. will meet at the Parish House next week Thursday, Jan. 10. Mesdames Wm. Smith and R. C. Ludeke are hostesses. The meeting is called for 2:00 o'clock.

Sanford Knutson returned to his job at the Wellemeyer store last Thursday, after being off the job for a week on account of flu. He stayed with his folks at Swea City during his illness.

Mr. and Mrs. John Josten entertained on New Year's day the E. J. Arnold family, C. A. Larsen and family and Grandpa Larsen. The day was also Earl Josten's birthday anniversary.

Mrs. P. M. Wilson returned Friday from Perry, Iowa where she had been called by the illness of her father. She was accompanied by her sister, Mrs. T. J. Henry of Clarion.

Mrs. Fred Haupt and daughter, Edith, and Miss Adella Kuhlman, and Mr. and Mrs. Elmer Schlei and son Dale were entertained to a New Year's dinner at the C. H. Haupt home at Belmond.

We made an error last week in our list of college students home for the holiday vacation. We unintentionally left out Miss Elvia Stille, who is a student at Cedar Falls. She is visiting with her parents, Mr. and Mrs. Wm. Stille.

Mr. and Mrs. Harold Gruetzmacher and son, Roger, left Tuesday for Iowa Falls for a short visit with her folks before they return to Tekamah, Nebr. where Harold teaches in the high school and directs a large band.

Clarence Elder entertained several college friends at a six o'clock dinner at the home of his parents Friday evening. Those present were Charles Zollars, Wilma Hudgel, Vernon Turgasen, Dorothy Blinn, Donald Turgasen and Andrew Wellemeyer.

Mr. and Mrs. Holly Krause, of Oxford, Iowa, came last week Tuesday for a week's visit at the C. J. Krause home and with other relatives here and at Garner and Charles City. Holly is a nephew of C. J. Krause.

Mr. Van Tassel returned to the Sherwood home Friday, after spending several weeks with relatives in Kansas City.

CUBAN TREES THAT GROW WITHOUT SOIL

Huge trees growing without any visible means of support are a striking feature of the great Zapata swamp of southern Cuba. This swamp, nearly 1,800 square miles in extent, includes an area of limestone that is filled with holes and covered with a variety of tropical trees. Silk-cotton trees four feet in diameter, big mahoganies, and many other kinds are found growing on this limestone area, where not so much as a single spoon of soil could be gathered from an acre. The trees make their start in small pockets and holes in the limestone, where collections of leaves and slight accumulations of disintegrated rock furnish them with cover for growth. The roots stray about over the surface of the rock in search of food, finally plunging through holes to find sustenance in soil hidden deeply in the cavernous recesses of the coral stone.

What if an effort had been made to create the world in a five-day week—what would have happened?

Good Motto

Charles M. Schwab, who after many years as a leader in steel, is beginning to take things easier, said to a group of gentlemen farmers who were admiring some of his prize stock at a Pennsylvania county fair:

"Raising prize stock is something I've wanted to do for a long time but I've been too busy. Divided attention seldom leads to success and all through my business career my motto has been:

"'All work and no play makes jack and a lot of it.'"

NEW CLUB LEADER FOR HANCOCK CO.

MISS JOHNSTON, OF AMES WILL BE NEW DEMONSTRATOR

Will Work In Hancock, Worth And Cerro Gordo Counties

Miss Myrtle B. Johnston, who was reared on a ranch in western Nebraska and studied home economics at Iowa State College, Ames, has been chosen as the home demonstration agent of Hancock, Cerro Gordo and Worth counties. She begins her work immediately and succeeds Miss Merle Ramer, former demonstrator, who recently resigned to take up work in the east.

Miss Johnston was born at Sidney, Neb., Nov. 9, 1905, and there attended grade and high school when she was engaged in various duties on her father's ranch. She was graduated from Iowa State College last spring, receiving a bachelor of science degree in home economics. She has had a thoro training in food preparation, nutrition and dietitics, marketing, meal planning and the fundamental science course. Her elective courses included the educational study for the Smith-Hughes certificates, as well as the advanced course in household equipment, in public speaking for extension workers and experimental cookery.

Reared on a ranch and being acquainted with farm conditions, besides having received the necessary technical training, Miss Johnston was deemed by the Farm Bureau Directors of the three counties, where she will work, as especially fitted to fill the vacancy left by the resignation of Miss Merle Ramer, who has had charge of this activity for two years.

Miss Johnston's application for the position included a deluge of recommendations from both the folks in the old home town and those who have known her in college and in other activities in which she has been engaged. She was referred to as a person of excellent character, exceptional ability, honest, capable and sincere, and as one who would succeed in anything she undertook.

GREAT PICTURE SHOW TO BE HERE NEXT WEEK

"Uncle Tom's Cabin" Is Greatest Production Of The Past Year

For three days next week, Thursday, Friday and Saturday, Jan. 17-18 and 19th "Uncle Tom's Cabin" will be the attraction at the Idle Hour Theatre.

The picture is Carl Laemmle's crowning achievement and was almost two years in the making, costing over two million dollars.

The story is so well known that little description is needed. It is a story which never grows old. You have seen "Uncle Tom's Cabin" on the stage. Now see it on the screen where all the very smallest details of the story are reproduced in a way that is impossible on the stage. More than 2400 "extras" were required for the mammoth scenes, besides the principal actors. You will despise Lawyer Marks, you will be thrilled at Eliza's rescue, you will laugh at Topsy, you will hat eSimon Legree, you'll pity Uncle Tom and you'll cry with Little Eva. You'll sit spellbound as this huge drama unfolds.

The Auxiliary ladies who are conducting the picture shows in Klemme are bringing this picture here at greatly reduced prices, 35c, 25c, and 15c. Plan to bring your family one of these nights: Jan. 17, 18 or 19.

Correct this sentence: "Before I go shopping I always drive around and see what is advertised on the billboards."

Advertising is more than a printed message.

MADE IT VERY HOT FOR OUR NEW SHERIFF

Fire Of Unknown Cause Nearly Destroyed Sheriff's Office

Last Friday afternoon about 4:00 p. m. as Sheriff E. H. Wahlert returned to his office at the Court House he discovered the room was in flames. A small chemical extinguisher failed to function and the fire department was called who soon squelched the conflagation.

Mr. Wahlerts oak desk, some papers and small articles were destoyed. Mr. Wahlert had been absent from the oiffce for about an hour and does not know what caused the fire, unless mice had chewed some matches, starting a blaze.

Mr. Wahlert has been the Sheriff since January first.

ATTENDS COLLEGE IN EAST; IS HOLIDAY VISITOR HERE

Leonard Lau Spends Christmas Vacation With Relatives And Friends

Leonard Lau, who is a student at Gallandet College for the Deaf, at Washington, D. C., was home for the holidays visiting with home folks and friends at Garner, and visiting with the Blank and Lau families here and with friends.

Leonard is making wonderful progress at college and we are glad to hear he is making good. Leonard gets all the home news every week as he is a consistent reader of The Klemme Times.

Many people, students, and people who used to reside here read the home news every week. The Times goes to the four corners of our great nation and frequently goes to foreign countries—Germany, Denmark, Sweden, Canada.

MOTHER OF MRS. BLANK DIED AT BELMOND

Funeral Services Were Held Wednesday For Aged Lady

Mrs. Sena Ruiter, who was nearing her 92nd birthday, died at Belmond last Friday. She was the mother of Mrs. Tom Blank of this place.

Funeral services for Mrs. Ruiter were held at Belmond Wednesday afternoon and burial was made at the Belmond cemetery.

TWO RELIGIOUS DRAMAS GIVEN AT REFORMED CHURCH

Program Tuesday Evening Was Well Attended

"The Search for the Christ Child" and "Ye Who Sat by the Fire", religious program plays were presented at the Klemme Reformed church on Tuesday evening. About twenty-three young people from the Bible Clase took part in the program.

The program was interspersed with appropriate numbers by the choir, and Mabel Schuldt gave a reading.

An offering was taken up which amounted to about $25.00 for the sustentation fund of the Reformed Church, a special fund for the care of the older ministers.

The parts were all very well given and the program was greatly enjoyed by all.

Mother: "Eric, dear. Don't go out too far in the water."

Eric: "But look, Daddy's out a long way."

Mother: "I know, dear, but father has his life insured."

FIRE DAMAGES A HOME IN KLEMME

FIRE SUNDAY NIGHT AT PEARL SCHWARTZ HOME

Fire Company Makes Fast Time In Zero Weather

Sunday night at about ten o'clock the fire siren sounded an alarm as a blaze had been discovered at the Pearl Schwartz home, the family resides in one of the Ell houses in northeast Klemme.

The Schwartz family hadbeen away visiting for the evening since about six o'clock and, the fire was discovered when they arrived home at nearly ten o'clock.

The fire had started in the kitchen where clothing had been hung up behind the kitchen range and which caught fire from the stove, falling to the floor and burning a three foot hole in the floor. The fire was put out with chemicals by the local fire company who made a fast run, arriving on the scene but a few minutes after the alarm had been turned in. The loss consisted of mostly clothing and shoes left in the kitchen, but furniture and other goods were badly damaged by the long exposure to the dense smoke. The loss is covered by insurance.

The fire boys deserve special comment. They certainly did get on the job in double quick time, although the thermometer was well below the zero mark. Hose was strung out in quick time, but luckily it was not necessary to turn on the water. If such had been the case the job would have been a very cold one for the fire company.

KLEMME REFORMED CHURCH
Calvin Grosshuesch, Pastor

There will be no service and no no Sunday school next Sunday, January 13th, as the pastor will be absent.

The Confirmation class will meet Saturday at 1:30 o'clock.

'TIS THE SET OF A SOUL

One ship sails east and another sails west,
With the very ame winds that blow;
'Tis the set of the sails, and not the gales,
That tell them the way to go.
Like the winds of the sea are the ways of fate,
As we voyage along through life,
'Tis the set of a soul that decides its goal,
And not the calm or the strife.

Doubt whom you will, but never yourself.—Bovee.

COURT OF HONOR WILL GIVE AWARDS

SCOUTS WILL ATTEND COURT OF HONOR AT CLARION

Several Scouts Will Receive Awards At This Court Of Honor

A Court of Honor for District III of the North Iowa Council will be held at Clarion next Monday evening, Jan. 14th, beginning at 7:30 o'clock.

This Court of Honor is a public affair and all who are interested in Scouting are invited. Parents of Scouts are especially urged to join the gang and go along. All Scouts who desire transportation should get in touch with J. N. Day before Monday noon, and transportation will be furnished.

A number of Klemme Scouts will receive Second Class Merit Badges, and one Scout, Byrnes Missman will receive his First Class Badge, the first to be issued to any boy in Troop 56.

A few Scouts have advanced as far as posible as Second Class scouts in earning Merit Badges, as a Scout of Second Class ranking is allowed to earn but five out of a list of 30 available badges. First Class scouts have a list of eighty-eight badges to work on leading them first to Star, Life and then Eagle Scouts.

CALLED TO MISSOURI BY THE DEATH OF HIS SISTER

Flu Claims Life Of Conrad Quandt's Sistor At Lecede, Mo.

Conrad Quandt received the sad news that his sister, who lives at Lecede, Missouri, had passed away, a victim of the flu.

Mr. Quandt left Monday evening for the Misouri town to attend the funeral of his sister, Mrs. Mary Garside, the services to be held Tuesday. Mrs. Garside leaves her husband and two children, a boy and girl.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

It has been said that "the way to increase a preacher's power, is to increase the audience." If this sounds like a plausible experiment plan to make church going a regular thing on Sunday. Start this coming Sunday while the year is young.

Morning worship in Klemme at 10:00 o'clock and at 11:30 in Liberty church.

Sunday school at 11:00 o'clock in Klemme, and 10:00 o'clock in Liberty.

Epworth League at 6:45 p. m.

NOTICE OF ANNUAL MEETING

The Annual Meeting of the Klemme Live Stock Shipping Association will be held

THURSDAY AFTERNOON, 2:00 P. M.

JANUARY 17, 1929

Idle Hour Theatre Klemme, Iowa

The Secretary's and Manager's Reports will be read on the year's business. The election of Three Directors whose terms have expired, will be held. Also some important qustions will be discussed. A good attendance will be appreciated.

PETER JOSTEN, Secretary

Good For Business

Don't worry about your competitors, says the Buffalo News Ad-Viser. Competition is the spice of life, the zest of business.

You are losing more money by neglect than by competition.

You are losing more by waste—by lack of team play—by jogging along in a rut.

If your competitors are ahead of you, be a good loser.

Then play the game harder. Get at it with all the brains you have and all the brains you hire.

Don't settle down to a tail-ender with a grouch. Make up your mind to win.

Then when Christmas comes again you might send a present to every one of your competitors with a card saying "Many thanks for having kept me active."

TWO MARKETS ADOPT GRADING OF LIVE POULTRY

Chicago Poultry Board Initiates A New System Of Grading

Grading of both live and dressed poultry on central markets is becoming an established fact, with the recent innovation of live poultry grading on the Chicago Poultry Board. This group is the first organization of wholesale dealers to have a definite system of live poultry grades. The New York Poultry Exchange, recently placed in operation, is planning in the near future such a system in its buying operations.

Since Iowa ships a large amount of live poultry to this and other markets, it is important to Iowa producers to know upon what basis their poultry is being graded, points out Alvan Oderkirk of the Agricultural Economics Section, Iowa State College.

What do these wholesale buyers define as a No. 1, a No. 2 or a No. 3 bird? The definition of their grades is as follows:

"No. 1, or prime, shall consists of vigorous, fleshy, ehalthy birds, free from tumors, downers (leg weaknesses, etc.) T. B., gaps, swollen head or eyes, bruised legs or wings, hunchbacks, heavy dented, or crooked breast bones.

"No. 2, or medium poultry, shall be vigorous, healthy, and free from tumors, downers (leg weaknesses, etc.), T. B., gaps, swollen heads or eyes, extremely thin, but may consist of indented and crooked breast bone, hunchbacks, bruised wings and legs, also scrubby hens and all hens under two and one-half pounds.

"No. 3 poultry shall be such as will not qualify as No. 1 or No. 2, except diseased birds not fit for human food."

IDLE HOUR WILL HAVE SHOW AGAIN SAT. NIGHT

The Auxiliary Ladies who operate the Idle Hour picture show are good guessers. Last week they decided not to have the regular Saturday night show because they felt it would not pay. They were right as the roads were blocked by the blizzard which raged and everybody stayed at home.

However, the weather is settled again so they will put on a picture show Saturday night of this week, entitled "Don't Marry!" We presume bachelors and old maids are especially invited. So don't forget the show Saturday night.

NOTICE OF THE APPOINTMENT OF EXECUTOR

STATE OF IOWA,
Hancock County, ss. No. 1465

NOTICE IS HEREBY GIVEN, that the undersigned has been duly appointed and qualified as Executor of the estate of Valentine Josten, deceased, late of Hancock County. All persons indebted to said estate are requested to make immediate payment; and those having claims against the same will present them, duly authenticated, to the undersigned for allowance, and file in the office of the Clerk of the District Court.

F. A. ARNOLD,
Dated January 5, 1929.
CHRIS J. JOHANSEN,
Clerk District Court.
(Publish Jan. 10-17-24, 1929)

GIVES FIGURES ON COUNTY ROAD COST

COUNTY ROADS TO BE SURFACED BY 1931

Seventy-three Miles of The County Roads Graveled

The following is a brief summary of the 1928 County Engineer's Annual Report of road and bridge work, issued by Engineer Chas. F. Merten. The entire report covering 26 pages may be seen at the office of the county engineer by anyone interested.

Amounts spent for bridges and culverts were as follows:

Permanent bridges and culverts (concrete and steel	$13,369.10
Temporary bridges and culverts, wood and corrugated pipe	1,256.00
Repair work on bridges	3,909.65
Culvert material purchased for townships	2,494.31
Equipment	900.61
Filling bridges and culverts	296.15
Total	$22,225.82

The above expenditures were all made from the county bridge fund which is derived from a three mill tax levy.

The road fund comes from the following sources:

Tax levy of 4 mills yielding approximately	$29,000.00
Gas taxes, aprrox.	20,000.00
Primary Road refunds	7,000.00
Special assessments	2,000.00
Total Receipts	$58,000.00

The amount spent for road work in 1928 is as follows:

Grading east of Goodell	$ 3,609.73
Grading east of Klemme	10,164.03
Grading Crystal Lake to Woden	5,026.93
Grading east of Hayfield	899.25
Graveling north and west of Woden	3,624.55
Graveling west of Goodell	6,431.00
Tiling and drainage assessments	2,902.86
Earth road maintenance	5,019.39
Gravel road maintenance	8,571.12
Equipment and tools	7,539.05
Gravel pits	925.00
Right of way	228.90
Snow fence and snow removal	1,235.84
Road Signs	294.40
Total	$56,472.09

At the end of the 1928 construction season we have on the county road system 73 miles of gravel road and 41 miles of earth roads.

We are increasing the mileage of gravelled county roads at the rate of approximately 15 miles per year, and should have our county road system entirely surfaced in 1931.

Reports of expenditures on township roads will be published later. Much progress was made in gravelling township roads in 1928.

ASSESSORS GATHER DATA FOR STATE DEPARTMENT

Co-Operate With Weather And Crop Bureau Of Agricultural Dept.

Iowa's yearly farm census which is compiled by the Weather and Crop Bureau of the Iowa Department of Agriculture with the help and co-operation of the assessors of Iowa will soon start. Books for the tabulation of data has already been sent to assessors and in some places meetings of the assessors have been arranged to discuss the problems of handling the work in a careful and systematic manner.

Iowa authorities have gone farther than most states in helping farmers use these yearly figures with profit in planning their systems of farming. No other records so clearly show the general trend of production, the source of agricultural income or the efficiency of different methods of farming as this yearly summary of agricultural data.

Here's to a man called Lindy,
A man that's both honest and fair,
He isn't the least bit windy,
But he's always up in the air.

1—Capt. Charles E. Riggs, appointed surgeon general of the navy and chief of its bureau of medicine and surgery. 2—Four generals, including Major General Summerall, chief of staff, and Major General Cheatham, quartermaster general, acting as honorary pall bearers at funeral of Sergt. Joseph Spel who died after thirty years of service. 3—President Coolidge returning from a deer hunt during his vacation on Sapelo island, Georgia.

NEWS REVIEW OF CURRENT EVENTS

Hoover's Advice on German Reparations Wanted by President Coolidge.

By EDWARD W. PICKARD

ONE of the chief reasons for Mr. Hoover's quick return to Washington, which he reached Sunday, according to dispatches from the national capital was President Coolidge's desire to confer with his successor concerning American participation in the international meeting of experts to fix definitely the German reparations. This will be one of the more serious problems for the incoming administration, for the conference of experts is expected to prepare the way for commercialization of the reparations debts and the liquidation of the war obligations of the allied nations to the United States. President Coolidge already has told the allies that this government has no objection to the participation by American experts if they are selected by Germany and the allied powers and it is understood Mr. Hoover approves of this arrangement. Seymour Parker Gilbert, agent general of reparations, is now in the United States and was scheduled to go to Washington to take part in the discussion of the entire project.

Mr. Gilbert made public on New Year's day his report for the fourth year of operation of the Dawes plan. Concerning Germany's increasing prosperity and its ability to pay, the report was so optimistic that the Germans were aroused to wrath and declared Mr. Parker was looking through rose-colored glasses and was skipping over all danger signs which they assert are numerous in German economics. The agent general called the German government to account, however, for permitting some of the states to overspend and overborrow. Some of the German newspapers acknowledge the justice of these strictures.

The French read the report with satisfaction and the newspaper Le Temps says impartial minds now will be convinced that the Dawes plan took adequately into account Germany's capacity to pay and "there is no reason for bringing that subject up again." It was asserted in Paris that France needs the maximum payments by Germany provided by the Dawes plan in order to pay her war debts; and that since Gilbert finds the reich is able to pay that maximum, the financial situation is cleared up. The remaining questions, say the French, are how long Germany must pay, the form of guaranty to be substituted for occupation of the Rhineland, and the terms for commercializing the reparations debt.

President von Hindenburg and Chancellor Mueller, at the official New Year's reception in Berlin, told the diplomats of forty nations that the German people were very bitter "because a great part of their country still lacks the liberty which we claim through divine and human right."

PRESIDENT AND MRS. COOLIDGE returned to Washington on January 2 from their delightful little vacation on the Sea Islands of Georgia. While down there they visited many points of historic interest, and the Chief Executive hunted with success for pheasants, wild turkeys and quail. They were the guests of Mr. and Mrs. Howard E. Coffin.

Mr. and Mrs. Hoover spent a pleasant New Year's day at sea, and after an entertainment the President-Elect worked on his inaugural address and on a report of his Latin-American tour.

REPRESENTATIVES of Bolivia and Paraguay in Washington signed a protocol fixing the conditions for submitting the disputes of those republics to conciliation. The matters will be considered by a commission of nine judges, and all hostilities were immediately suspended.

WHEN congress reconvened on January 3 the fifteen cruiser bill was the unfinished business before the senate, but those urging ratification of the Kellogg war renunciation treaty insisted that action on the pact be given the right of way. Senator Borah, chairman of the foreign relations committee, consented that Senator Hale, chairman of the naval affairs committee, should make his opening speech in favor of the treaty, and then moved that the senate go into executive session for consideration of the treaty. He thought this could be disposed of in about one week, but others were not so sanguine. Senator Hale was forced to yield by the prospect of a filibuster against the cruiser bill.

Representative Tinkham of Massachusetts charged that international bankers and business organizations are spending large sums of money to promote ratification of the Kellogg treaty, and he introduced in the house a resolution for the creation of a commission to investigate the charges. He is bitterly opposed to the treaty.

Senator Hale made public a mass of information laid before the senate naval affairs committee by Secretary of the Navy Wilbur. It shows that the United States not only is weaker than Great Britain and France in first line cruiser strength, but bids fair to be outclassed shortly by both powers in first line destroyers and submarines.

FRANKLIN D. ROOSEVELT was inaugurated governor of New York on January 1 before a throng that was as enthusiastic over his predecessor, Al Smith, as it was over the new executive. Next day Mr. Smith appeared in New York city wearing a silk hat instead of the brown derby, and with Mrs. Smith occupied a suite in the Biltmore hotel. He said he had not decided whether to devote the remainder of his life to pleasure or business. But he is going to spend several weeks in Florida and then will go to Europe for a few months. Wall street says Al need not worry about his future for within the last year or so he has made a comfortable fortune in the stock market.

SO SERIOUS has been the wave of influenza all over the country that Secretary Mellon and Surgeon General Cumming arranged for a public health service national conference on the subject in Washington, opening January 10. Reports from 32 states showed the flu declined in prevalence during the holidays and it was believed the peak had been passed. But the conference will make a full study of the disease in the hope of curbing its spread in the future. Among the victims of the flu was Myron T. Herrick, ambassador to France, who was confined to his bed at his home in Cleveland.

BULLETINS from the bedside of King George of England indicated that he had passed the danger line, and the physicians believed the worst of his illness was over, though his recovery will be slow. The optimism of those close to the king was shown by the fact that his sons went fox hunting, and Sir William Joynson-Hicks, the home secretary, left for a vacation in Mentone, France.

PRESIDENTIAL electors met in the capitals of their several states Wednesday and cast their votes for President and Vice President, and the result was, as might have been suspected, that Hoover and Curtis were elected by 444 votes to 87 votes for Smith and Robinson. For the first time in the history of the government, the result of the balloting was transmitted to Washington by mail instead of by special messengers from each state capital.

J. R. Nutt, treasurer of the Republican national committee, reported last week to the house campaign fund investigating committee that the national committee's expenditures for all purposes in the Hoover campaign totaled $6,256,110. The committee collected a grand total of $6,541,748 from 144,124 subscribers and on December 31 had a balance of $285,637.

The largest single contribution received by the committee was $67,000 from the Pennsylvania state Republican committee. "The ways and means committee of east Pennsylvania" contributed $30,000, according to the report, which also lists gifts of $25,000 each from C. M. Schwab, the steel magnate; Ernst & Ernst, public accountants of Cleveland, Ohio, and John N. Willys, Toledo, Ohio, automobile manufacturer. Three persons, H. Johnson, Eugene Meyer, and George F. Baker, all of New York, each gave $20,000, according to the list, which shows that the six Fisher brothers—Fred, Charles T., W. A., Laurence P., Edward F., and Alfred J., Detroit automobile body manufacturers, contributed a total of $100,000 to the committee's treasury.

CANADA and the United States signed in Ottawa a treaty providing for joint projects to increase and maintain the scenic beauty of Niagara falls. Under its terms the two nations will share the cost of constructing remedial works in the Niagara river to increase the volume of water flowing over the American falls and to provide better distribution of the flow over the Canadian section. A temporary diversion of an additional amount of water for power purposes on each side of the boundary also is provided.

PORTES GIL, the new President of Mexico, has made a good beginning by putting an end to the reign of a gang of professional grafting politicians who have long preyed on the towns and villages in the federal district. He has put the district under the control of a business director and an administrative council. The new plan already has been partially tried out, with success, in Mexico City.

FINAL unification of China under the Nationalist government was achieved when the three eastern provinces, Fengtien, Kirin and Heilungkiang, known collectively as Manchuria, unfurled the Kuomintang flag and provincial officials were sworn in, agreeing to submit to the authority of the Nanking government. The Manchurian government is headed by Gen. Chang Hsueh-liang, son of the late Marshal Chang Tso-lin. Japan for many years has claimed a protectorate over Manchuria which has a territory of about 400,000 square miles. Its population is approximately 30,000,000. Most of them are Chinese but there are about 500,000 Japanese and Russians there.

BUSINESS and financial interests should be pleased with the New Year statement of Secretary of the Treasury Mellon. "During the last year," Mellon said, "the country has made steady progress. Early in the year the volume of business began to show marked improvement over the closing months of 1927, and this improvement has continued. It has been evident in manufacturing, in steel production, carloading, automobile production, building contracts and sales of goods to consumers. All of this is evidence also that buying power has been sustained and that, on the whole, satisfactory employment conditions have prevailed.

"Prices in basic industries have not been unduly high and have remained fairly stable, nor does there seem to be any immediate danger of excessive demand sending prices to such high levels as to make a slump in activity and, consequently, lower prices, inevitable. In the industrial world conditions seem to be on an even keel, and it is much better to have them so, with a slight upward tendency, as at present.

"In the financial world, there is sufficient money available for all legitimate undertakings. A considerable amount of gold has been exported during the last year. But it has not seriously impaired our credit resources, while, at the same time, it has helped to establish gold standards more firmly in Europe and to stabilize foreign currencies with resulting benefits to our import and export trade.

"In so far as the government is concerned, the finances are in a sound condition. The debt has been reduced to manageable proportions; the revenues are ample for our needs, and during the last year there has been another reduction of taxes, the full benefit of which will be more generally felt during the coming year."

FOOTBALL history was made in the Pasadena Rose Bowl game in which Georgia Tech defeated the University of California 8 to 6. Roy Riegels, captain-elect of the California team, seizing a fumbled ball, lost his bearings and ran 69 yards to his own goal line. The California punt from there was blocked and the resulting safety provided the Georgia boys with the two points they needed to win the exciting game.

Young Lady's Elbows No Longer A Hat Rack

"I just couldn't resist any longer telling you of your wonderful medicine, Milks Emulsion. I have been constipated as long as I can remember. Had typhoid fever when I was eight years old and since then my bowels haven't moved freely. Doctors have given me bowel medicine and I have taken pills, salts, castor oil, and everything a person could think of. They didn't do me any good whatever.

"Now, whenever I hear anyone say they are constipated, I immediately tell them of Milks Emulsion. I have taken about 12 large bottles, not all of them regular. Now I keep Milks Emulsion in the house and take it regular. I have taken so much medicine that I thought it was all alike.

"I had a sallow complexion, no color, and felt miserable all the time; but now I have the color of health, and health is something I wouldn't exchange with anyone for a fortune. I wouldn't take ten times the price I paid for Milks Emulsion for the results I have obtained.

"I am 19 years old and weigh 105 pounds. Have gained 5 pounds since taking your medicine and am still gaining. My face is round and my arms are getting round. Before, people used to hang their hats on my elbows, thinking they were hatracks. Now I am going to keep on with Milks Emulsion until I weigh 125 pounds.

"I mentioned your Emulsion to two doctors. They both admitted it was good, and no one knows better than I that it is not only good, but wonderful.

"You may publish this letter if you wish and anyone that wants to ask me about your medicine may do so. I promise to answer every letter. In fact, I couldn't do enough for Milks Emulsion to repay them for what their medicine has done for me. I remain, very respectfully yours, ROSEMOND BOWER, Frontenac, Kan."

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Not Always

Wife (sadly)—You don't love me any more.

Husband—Most certainly I do.

She—Then why do you rush off to the club?

He—My dear, absence makes the heart grow fonder, you know.

Why is a man always shy about making bold assertions when his wife is present?

FLORESTON SHAMPOO—Ideal for use in connection with Parker's Hair Balsam. Makes the hair soft and fluffy. 50 cents by mail or at druggists. Hiscox Chemical Works, Patchogue, N. Y.

Filipinos Fear Visit of Headless Spooks

Many Filipino homes are today marked with a white cross as a precaution against a visit from three alleged, black-robed, headless sisters.

The story of the headless sisters, who are called the Tatlong Marias or Three Marys, began to circulate during the early autumn. It spread rapidly, and fully 75 per cent of the homes were marked with crosses.

Those who marked their doors said that the sisters made nightly calls, and that the person who answered their knock at the door was stricken with a fatal illness. But if a white cross were upon the doors there was no visitation.

Most of the crosses were drawn with white chalk, but some were painted and a few made with flowers. The story of the three sisters has curbed neighborly visits in the evening.

Believe in Banshee as Herald of Death

The wail of the Irish banshee announcing the impending death of a member of some important family is not yet a thing of the past, it appears. After the recent death of Baron O'Neill, head of the old family of that name in County Antrim, some of the old neighbors declared they heard the wail of the banshee the night before near the ruins of Shane's castle on the shores of Lough Neagh. The castle was formerly the O'Neill residence.

Baron O'Neill was eighty-nine at his death and had had a long career as judge and member of parliament. He represented County Antrim in the British parliament from 1863 to 1880. The Irish banshee, which is Gaelic for "woman of the fairies," has the sole duty of announcing a death in certain old and important families by a mournful screaming or "keening" at night. The Welsh and the Scotch also have their banshees but under different names and with less fame than the banshee of the Irish.

Canada as Playground

Canada is achieving a reputation as the playground for the whole world. Big game hunters formerly went to Africa for their thrills, but now many of them go to Canada. This is true, also, of those who go in search of smaller game and mountain climbers and even "hikers." It is estimated that visitors to Canada last year spent $275,000,000 during their sojourning in that country.

Lighthouse Innovation

In 1862 an arc lamp was installed in a lighthouse at Dungeness, England, and supplied with current from a cumbrous magneto-electric machine. This was the first regular electric light in service.

Are *You* Ready

When *your* Children Cry for It

Baby has little upsets at times. All your care cannot prevent them. But you *can* be prepared. Then you can do what any experienced nurse would do—what most physicians would tell you to do—give a few drops of plain Castoria. No sooner done than Baby is soothed; relief is just a matter of moments. Yet you have eased your child without use of a single doubtful drug; Castoria is vegetable. So it's safe to use as often as an infant has any little pain you cannot pat away. And it's always ready for the crueler pangs of colic, or constipation or diarrhea; effective, too for older children. *Twenty-five million bottles were bought last year.*

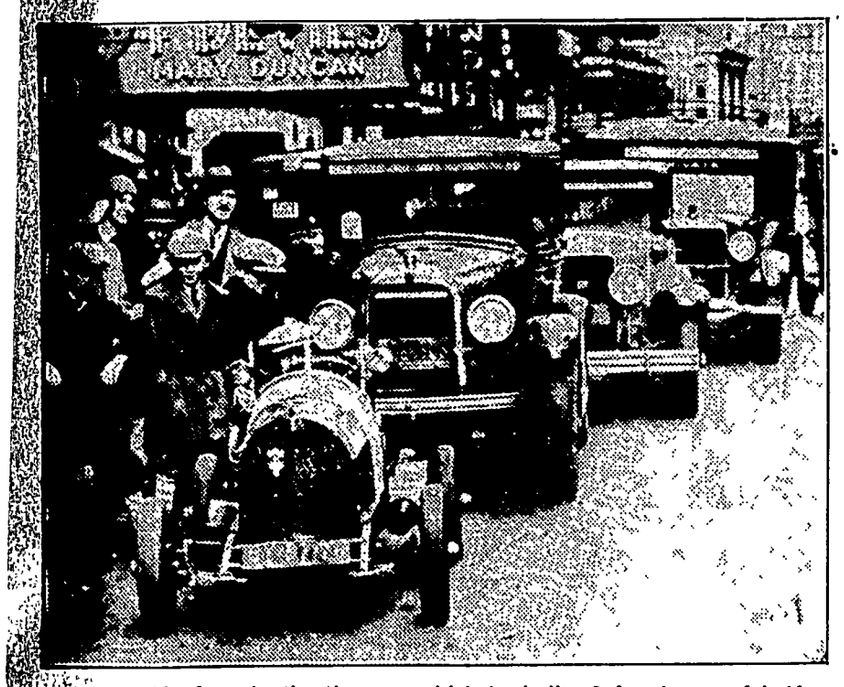
BABY AUTOMOBILE DEVELOPS MUCH SPEED



Philip Giordano in the tiny car which he built—6 feet long and half as high—dodging in and out of the big cars at crowded Times square, New York. The baby automobile can go 67 miles an hour and 40 miles on a gallon of gas. It can turn completely around in a circle the diameter of which is but 10 feet.

CAR WASHING IS VERY IMPORTANT

Careless Handling of Water Will Quickly Ruin Finish of Car.

The lack of washing and failure to wash properly will do more toward ruining the appearance of the car than any other thing. The varnish of the new car is hardened and benefited by frequent washing with clear cool water, writes Richard Bentley in the Farm and Home. Mud, allowed to dry or freeze on the car, takes up all the oil from the varnish and leaves the finish streaked and spotted. A single washing, done carelessly, will destroy the luster that careful washing has preserved for months.

Remove Loose Dust.

Start in by cleaning the top. Give it a good stiff brushing to remove the loose dust and then either sponge it or use a soft brush with clear tepid water and castile soap. A chamois skin kept especially for the purpose will hasten the drying, and, of course, the top is not folded back until it is thoroughly dry. About every other time it is a good idea to give the interior a little more attention than it gets from a stiff brushing.

Go over the leather upholstery with a woolen cloth dipped in clear water to which has been added a few drops of ammonia. If the upholstery is of cloth it can best be cleaned by sponging with water containing a little salt and alcohol.

Now you are ready to use the hose. Be sure to remove the nozzle and flow the water over every part of the body. This serves to wash off as much of the dust as is possible, and to loosen the mud, or ice, or snow, so that with a little patience it can be floated off. In cases where the car is exceptionally dirty it is well to let it stand 15 minutes and then shower it again.

Use Soft Sponge.

Take a soft, clean sponge and, following it with a gentle stream from the hose, go lightly over the body. If certain panels are grease spotted, these should be separately washed with pure water and castile or other neutral soap, but with this one exception: Bar soap, soft soap, or soap solution should never be used on the body above the chassis.

Difference Between Hot and Cold Spark Plugs

Spark plugs may be just plain plugs and all alike to the motorist at present, but when airplanes become commonplace all this may be changed. For instance, there is a change in spark plug design, indirectly traceable to aviation at least, which brings the cool plug into motor car use whereas previously only hot plugs were employed. At that, the cool plug in motor car engines is not so cool as that in aircraft power plants.

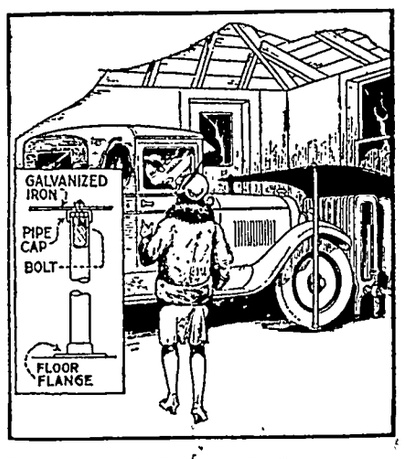
What is the difference? A hot plug is one so designed that it becomes sufficiently heated to burn off the accumulation of oil and gasoline that might produce carbon, thus short-circuiting the insulation. A cool plug is just the opposite. Higher compression is bringing the latter type into the foreground.

Canadian Plate Colors for 1929 Are Sky Blue

The Province of New Brunswick's 1929 automobile license plates will be sky blue with white numerals and letters, the same combination used in 1928 by the state of New Jersey. The other provinces of Canada have the following color schemes for their 1929 motor vehicle license plates, according to reports received by the New Brunswick government bureau of information and tourist travel: Nova Scotia, white numerals and letters on red field; Prince Edward Island, orange on black; Quebec, white on black; Ontario, black on light gray; Manitoba, white on dark green; Saskatchewan, black on orange; Alberta, royal blue on orange, and British Columbia, green on cream.

Plan for Thawing Out Frozen Auto Radiator

The owner of a small garage combined his servicing of cars with occasional repair work. During cold weather, he announced a service of thawing out frozen radiators. The garage was steam-heated, so he equipped one of the radiators with a large sheet-iron shield, bent over at the top as shown and extending far enough to cover the front end of a



Thawing Out Frozen Radiators Is a Trade-Getting Feature for the Small Garage.

car. The heat directed against the frozen auto radiator melted the ice in a few moments. With the motor left running, the fan helped to draw the hot air through, hastening the process considerably. A small sum was charged for this service, but it was free if the car owner purchased alcohol or other supplies. The shield should be braced by means of two lengths of pipe as indicated.—Dale R. Van Horn, Lincoln, Neb., in Popular Mechanics Magazine.

Good Plan to Keep Auto Tools in Car Tool Box

It is poor practice to leave the garage without full equipment of tools in the car. It is always when least prepared that the unforeseen happens, and the absence of an end wrench or a jack that has been left on the garage bench may cause a great deal of inconvenience and possibly a long walk. Every car comes completely equipped and with a set of tools with which every ordinary repair may be made. The point to bear in mind is to keep these together in the car and where they can be found. When going on an extended tour it would be well to be provided with a few extra accessories which, while they do not form the part of any tool equipment, can be readily picked up in a moment at any automobile supply store in the city and are often convenient to have on the road. These include one or two tire sleeves or blowout patches, a grease gun, two rolls of wire tape, extra light bulbs, a ball of heavy twine, an extra oil can for use in injecting gasoline, a can of grease, a gallon can of cylinder oil, and a tightly corked paint can filled with gasoline.

AUTOMOBILE NOTES

A short wait at the crossing may save a long one at the cemetery.

* * *

A motor car with one horn can toss a man farther than a bull with two.

* * *

Keeping the car on the road is an art that can only be acquired by long practice.

* * *

For the harried pedestrian almost any street intersection is "the busiest corner in the world."

* * *

Motorists are at least agreed that the copper with a flashlight is less to be feared than the one with a gun.

* * *

Atchison reports a citizen who doesn't mind it at all when his wife drives from the back seat. There is, of course, such a thing as dumb resignation.

* * *

Credits on automobile time payments have proved sound. Average losses of 50 leading finance companies in one year were but one-fifth of 1 per cent.

Oklahoma Girl Strong as Boy

"Louise Alice was fretful, nervous and all run-down from whooping cough," says Mrs. F. J. Kolar, 1730 West 22nd St., Oklahoma City, Okla. "The little I could force her to eat wouldn't ever digest. She became underweight, sallow and weak.

"Then I decided to try California Fig Syrup, and the results surprised me. Her bowels started working immediately, and in little or no time she was eating so she got to be a pest at the table, always asking us to pass things. Her weight increased, her color improved and she began to romp and play again like other children. Now she's the picture of health, and strong as a boy."

Pleasant-tasting, purely vegetable California Fig Syrup acts surely and quickly to cleanse your child's stomach and bowels of the souring waste that is keeping her half-sick, bilious, sallow, feverish, listless, weak and puny. But it's more than a laxative. It tones and strengthens the stomach and bowels so these organs continue to act normally, of their own accord.

Over four million bottles used a year shows its popularity. Ask for it by the full name, "California Fig Syrup," so you'll get the genuine, endorsed by physicians for 50 years.

Joke on Taxi Driver

A taxi driver tells of waiting half an hour in Pittsburgh for a woman customer to come back and pay the $3.65 she owed him. The next day he happened to see her standing on the sidewalk and he demanded his money or he would have her arrested. She turned pale, stripped a ring from her finger and told him to hold it until she could bring him the money. Congratulating himself upon collecting a bad debt, he took the ring. Later he thought he would have it appraised and asked a jeweler if that this was worth $3.65. "It might be," said the jeweler, "if you had a bushel just like it."

PISO'S for coughs

Quick Relief! A pleasant, effective syrup—35c and 60c sizes. And *externally*, use PISO'S Throat and Chest Salve, 35c.

Coke's Distinct Value in the House Furnace

Soft coal can never be burned in house-heating furnaces with such completeness of combustion as coke. When soft coal is used most of the volatile matter distilled from the coal escapes from the furnace unburned in the form of soot, tar, and combustible gases. Part of the soot and tar is deposited on the heating surfaces of the stove or furnace and in the flues and part escapes through the chimney as visible smoke. The tar and soot do not burn in the furnace because the furnace is usually too small and the temperature too low for maintaining their combustion. The residue left after the tar and soot have been driven from the coal is in the form of coke. It burns slowly and almost completely in the small furnace and the heat which gets into the house is mostly the heat that has been generated by burning this residue. Therefore, when soft coal is burned in the ordinary house-heating furnace the coal is first reduced to coke by driving off the volatile matter, most of which escapes unburned; then, the coke burns in the furnace and heats the house. Driving off the volatile matter unburned not only causes a direct loss of heat but causes a great deal of dirt in the furnace, flues, boiler room, and also in the outside atmosphere. Since the volatile matter in soft coal is of negative value so far as heating the house is concerned, it is better to use a fuel that does not contain volatile matter. Such a fuel is coke.—Bureal of Mines.

Cold Need Cause No Inconvenience

Singers can't always keep from catching cold, but they can get the best of any cold in a few hours—and so can you. Get Pape's Cold Compound that comes in pleasant-tasting tablets, one of which will break up a cold so quickly you'll be astonished.—Adv.

Roads From Rubbish

Salt Lake City has splendid roads that have been built of rubbish. The material is leveled by means of a drag—stoves, baby carriages, bedsteads, etc., being placed by hand. The dump is then rolled with a 15-ton steel roller, which so smashes everything that it packs even more easily than dirt as a foundation for a screened gravel surface.

That's Odd

"You say he called you odd?" he asked. "Yes, but I'll get even," she snapped.

That Million-Dollar Feeling

"You have a beautiful complexion, Mrs. Smith. No wonder you look happy."

"Take NR, dear; it improves the complexion and makes you feel like a million."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

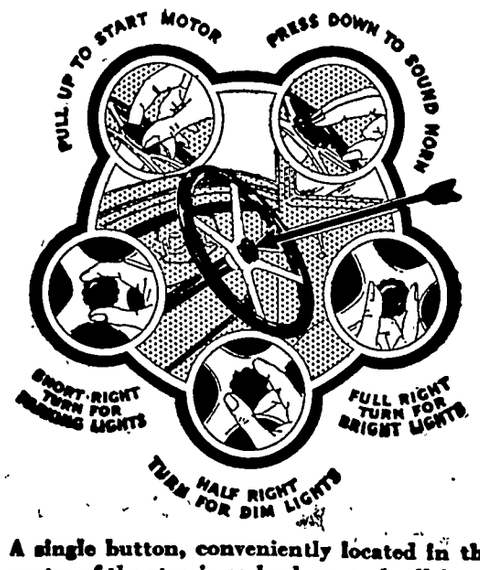
Coupe $535; Sedan $595; Roadster $485; Touring $475; Commercial Chassis $365. All Willys-Overland prices f. o. b. Toledo, Ohio, and specifications subject to change without notice.

THE MOST NOTABLE ADVANCE IN DRIVING CONVENIENCE SINCE THE SELF-STARTER



PULL UP TO START MOTOR
PRESS DOWN TO SOUND HORN
SHORT RIGHT TURN FOR PARKING LIGHTS
FULL RIGHT TURN FOR BRIGHT LIGHTS
TURN HALF RIGHT FOR DIM LIGHTS

A single button, conveniently located in the center of the steering wheel, controls all functions of starting the motor, operating the lights and sounding the horn. This does away with all troublesome foot fumbling for the starting button. It also avoids changing from the comfortable driving position to reach a light switch on the dash. With the new "Finger-Tip Control," you can at all times keep your hands on the wheel and your eyes on the road—an important aid to safety.

Greater Beauty · · Longer Wheelbase · · Larger Bodies

BEAUTY that commands your admiration is expressed in the new Superior Whippet's longer bodies, graceful lines, higher radiator and hood, more distinctive colors, sweeping one-piece full crown fenders—establishing the newest style motif for Fours and light Sixes.

The larger bodies of the new Superior Whippet afford more spacious interiors, with extra leg room and elbow room. The seats are wider and heavily upholstered, and have form-fitting contours.

Both the front and rear springs of the new Superior Whippet have been considerably lengthened. The increased wheelbase, snubbers and oversize balloon tires further enhance the car's superb riding qualities.

Mechanically, the new Superior Whippet furthers a long lead over competition. A new higher compression engine gives more than 20% added horsepower, with greatly increased speed! Higher second gear speed gives faster pick-up.

And this new car is well qualified to carry on Whippet's unsurpassed reputation for dependable performance and minimum operating costs.

Landlady: "No, that's the professor, sir."

Percisely

"How would you classify a telephone girl? Is her's a business or a profession?"

"Neither. It's a calling!"

Furniture Talk--

Furniture Business is most active in the spring; thats when the dealers carry the largest stock, and thats when our rural people choose to buy.

Every mail will bring you advertisements from different stores telling why you should buy from them.

Lest you become confused by all the glowing offers, just remember this: there are two ways to buy Furniture—

ONE WAY The customer goes into a store and wants to look at a Kitchen Cabinet. Dealer shows him one for $12.50. "Can't you make it less, I saw an add offering same thing for $9.85." Then maybe the dealer takes off the casters or leaves out the glassware or switches top or something to give this customer a Cabinet at the price he wants to pay.

ANOTHER WAY. Customer first inquires from his friends as to who is the most honest furniture dealer, then he goes to this dealer and explains his circumstances and asks dealer to help him decide what items are best suited to his needs. This dealer being honest and reliable will tell him both the good and the bad about the different items of furniture and his purchases will prove satisfactory, and he will be glad to recommend this dealer to his friends as a good place to trade.

"There is hardly anyhing in the world that some men can not make a little worse and sell a little cheaper, and the people who consider price only are this man's lawful prey."

We are unloading a Car Load of Furniture this week at Wellemeyer's. It will take us about a week to unpack this after which we want you to "look us over."

We claim to have the best selected stock and the most beauiful display room for Furniture in Hancock County.

Wellemeyer Co.

STOCK TICKER GIVES NATION QUOTATIONS

Marvel of Accuracy Broadcasts Market News.

New York.—The turmoil which the visitor to the floor of the New York stock exchange sees on a busy day is not apparent in the operating rooms of the Western Union from where more than 5,000 stock exchange tickers in 239 cities, in 37 states and territories in this country and Canada are furnished with stock exchange quotations. A studied orderliness stands out from the noise and clatter of myriad telegraph apparatus.

To one who has stood over a stock ticker and watched it unreel quotations hour after hour without the slightest falter or hesitation the question, "How does it do it?" presents itself. One is forced to marvel at the manner in which stock quotations appear in a steady procession as well as the almost uncanny accuracy of the quotations recorded.

The continuous performance of the stock ticker is due in great part to the employment of the old adage, "An ounce of prevention is worth a pound of cure." The ticker service is so regulated, so carefully guarded that a break in the mechanical operation of a ticker is rare. The circuits which carry the quotations are inspected, tested and watched over with persevering care by the maintenance department of the telegraph company. The accuracy of the ticker is due to the training of the operators who manipulate the sending apparatus. All quotations are sent out over a typewriter-like keyboard by operators who have been schooled in this work. How accurate they are may be judged from the fact that in a recent twenty-eight day period, one operator depressed the keys of the sending instrument more than one and one-quarter million times without making a single misprint.

Handling Quotations.

Stock quotations go to the operating rooms of the Western Union over the exchange's own tickers, which also supply the offices of exchange members in downtown New York city, direct from the floor of the "big board." They are relayed by the telegraph company from two points. An office at 40 Broad street in the heart of the city's financial district, and only a stone's throw from the exchange, transmits quotations to New York city, New England and to practically all points east of Ohio and north of Virginia. From 24 Walker street quotations are sent to tickers in the South and West.

As the stock exchange ticker records the quotations at the telegraph company's office, the tape passes before a girl seated at a keyboard which resembles a typewriter keyboard. This operator merely types out the quotations as they are read from the exchange ticker tape. When a key is depressed it creates electrical impulses which in turn work the intricate mechanism of the ticker, resulting in the printing on the ticker tape of the letter or number controlled by its particular key. Only a few seconds elapse between the depressing of the keys in New York city and the imprinting on the ticker tape in distant cities.

To insure accuracy of all quotations, a ticker alongside of the sending operator records what has been sent and another employee compares this with what has been received over the stock exchange ticker.

Rigorous Censorship.

An interesting feature of the ticker service is the fact that the stock exchange through a special committee exercises a rigorous censorship over ticker locations. Only those persons or firms which have been passed upon by this committee may rent a ticker carrying New York stock exchange quotations. This is done to keep quotations from bucket shops and from unscrupulous stock dealers and others who might use the quotations for illegal or unethical purposes.

While by far the greatest number of stock tickers are in the offices of brokers, with bankers taking second place, a goodly number of these instruments are in hotels and restaurants and in some cases in private homes.

Not only has there been a tremendous advance in the number of stock tickers in use, but today hundreds of brokerage houses have their own private leased telegraph wires for orders and executions.

Stock brokers are authority for the statement that their business could never be carried on over such a wide area and with such tremendous speed and accuracy were it not for the organization of the telegraph company. "We would be lost if it weren't for the tickers," one broker said recently. "This marvelous instrument is the eyes through which thousands of persons in all parts of the country view the stock market. What the ticker says is weighed in the balance by investors and speculators far and wide. Through the ticker service the man in San Francisco has just as much chance to keep authentically informed of the market as the man in Philadelphia or Boston or Brooklyn. Quotations reach the coast at practically the same time they reach uptown New York, and it is just as easy for a client to wire a trading order from Los Angeles as it is for a client to phone his order from Central Park West."

Religion Gets Billion

New York.—Something like a billion a year is given by Americans to religion. Total contributions last year for philanthropic purposes were $2,219,700,000. Religion got 46 per cent.

DOINGS AT SCHOOL THIS PAST WEEK

WILL PLAY CORWITH HERE ON NEXT TUESDAY NIGHT

School Is Again Running n Full Swing With Good Attendance

The basketball game which was to have been played in December with Crystal Lake and could not be played because of illness among Crystal Lake players must be played sometime betweem now and the tournament at Britt. We are also owing Hayfield a game which was scheuled there for Jan. 4 but as school vacation was on then it could not be played.

Corwith Plays Here Tuesday

Owing to a change of dates forced upon us by Corwith we haev 10 games this week, but will play Corwith here next Tuesday evening. Game will begin at 7:30 and admission will be 25 and 15 cents.

Other Games Are On List

Other games to follow will be on the following dates:

Jan. 22 Klemme at Garner.
Jan. 25, Crystal Lake here.
Feb. 1, Swaledale there.
Feb. 8, Garner here.
Feb. 12, Corwith there.
Hayfield and Crystal Lake to be announced later.

School Attendance s Good

School was called again on Monday of this week with only a fair attendance as some were still ill and others were unable to get here because of drifted roads. At this writing attendance has resumed the normal again. Fortunately our vacation came just in time to save a lot of forced absence which would have been inevitable had school continued another two weeks.

Other School Items Of Interest

Owing to the game on next Tuesday evening it was necessary to postpone a week our P. T. A. program. Announcement will be made in detail next week.

Mr. Lewis has received recently some new music for the girls' glee club, who are working on it with much zest.

Miss McGinnis' class in Home Economics are now concluding their semesters work on a worthwhile project. Each is making a washable dress. 19 girls al work at the same time, each day on her own dress must employ quite fully their instructor's time.

Obeying Signals

Teacher: "Why are you always late to class!"

Pupil: "Because of a sign I have to pass."

Teacher: "And what has the sign to do with it?"

Pupil: "Why, it says, 'Shool ahead; Go Slow.' "

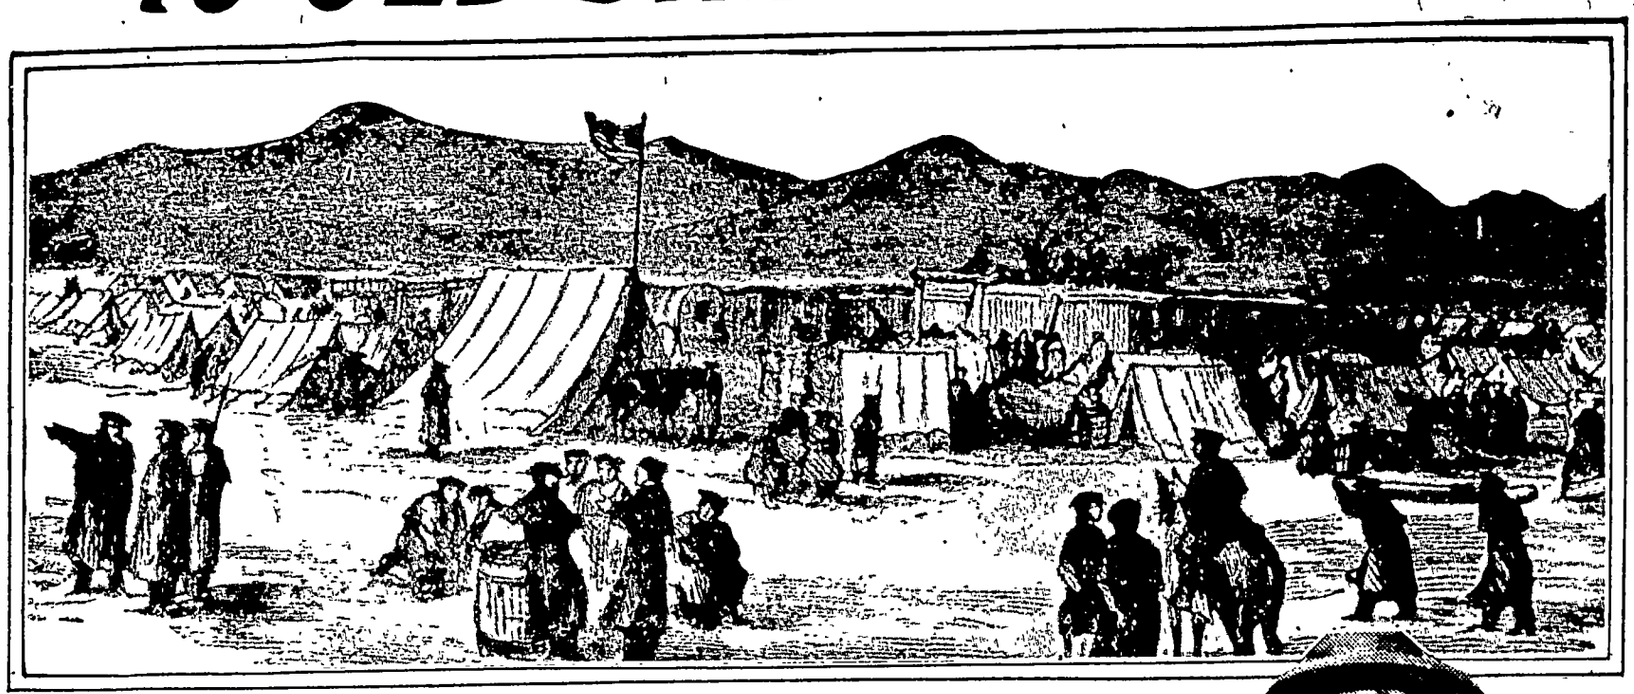
A MUSEUM-MONUMENT to OLD JIM BRIDGER



JOHNSTON'S ARMY AT FORT BRIDGER IN 1857

By ELMO SCOTT WATSON

THERE used to be a saying among the old-time mountain men that "the West had three great liars—Jim Beckwourth was one and Jim Bridger was the other two." Whether or not there was any truth in that assertion, the fact remains that Old Jim Bridger is about to have a monument erected to his memory, and when it is completed it will not be a memorial to "the American Munchausen," which Old Jim may have been upon occasion, but it will be a museum-monument to perpetuate the fame of Jim Bridger, trapper, trader, scout, pathfinder, Indian-fighter and one of the most remarkable characters in many respects the American frontier ever produced.

For the people of Uinta, Lincoln and Sweetwater counties in Wyoming are planning to restore Fort Bridger by raising enough money through popular subscription to purchase the land in Uinta county upon which the few remaining structures of the fort stand and present it to the state of Wyoming for maintenance as the Fort Bridger Historical park. They also plan to erect a museum there in which will be preserved the historical relics of that section of the country and ask the state to appoint a custodian of these relics and of the historical records which will be collected in it.

If this plan is carried out, the restored Fort Bridger will not only be a memorial to the man who built it and gave it his name, but it will also be a symbol of the whole thrilling history of the trans-Missouri West. For past Fort Bridger, in its strategic location on the trail to Oregon and to the California gold fields, streamed the whole magnificent pageant of the West. If the ghosts of the old trading post would talk, they could tell a romantic tale—of Indians and traders and trappers in the brave old days of Kit Carson and the mountain men, "when beaver was money"; of pony express riders and overland stage drivers; of Ben Holliday, the owner of the Overland Stage line and his division superintendent, Jim Slade, the "killer"; of Brigham Young and his Mormons, trekking west in 1847 to their promised land; of the emigrants, maddened with the lust for the shining metal of the California gold fields; of Gen. Albert Sidney Johnston and his army en route to Salt Lake City for the "Mormon war"; of Uncle Sam's cavalrymen who rode out from Fort Bridger when the Utes or Shoshones took the war trail; and of a hundred other famous frontier names and stirring events.

Of the history of Fort Bridger itself, Arthur Chapman, the man who is known best because he once told in poetry "Where the West Begins," but who is also a well-informed historian of the Old West, has written as follows:

In 1842 Fort Bridger was founded. Since 1834 the little valley of Black's Fork had been a trappers' rendezvous. Beaver abounded in nearby streams and there was an abundance of buffalo, deer and elk. Besides, it was on a highway which was being used by those on their way to the Oregon country. "Uncle Jack" Robinson, an old-time trapper, is said to have persuaded Bridger of the many advantages of a trading post on the Black's Fork site.

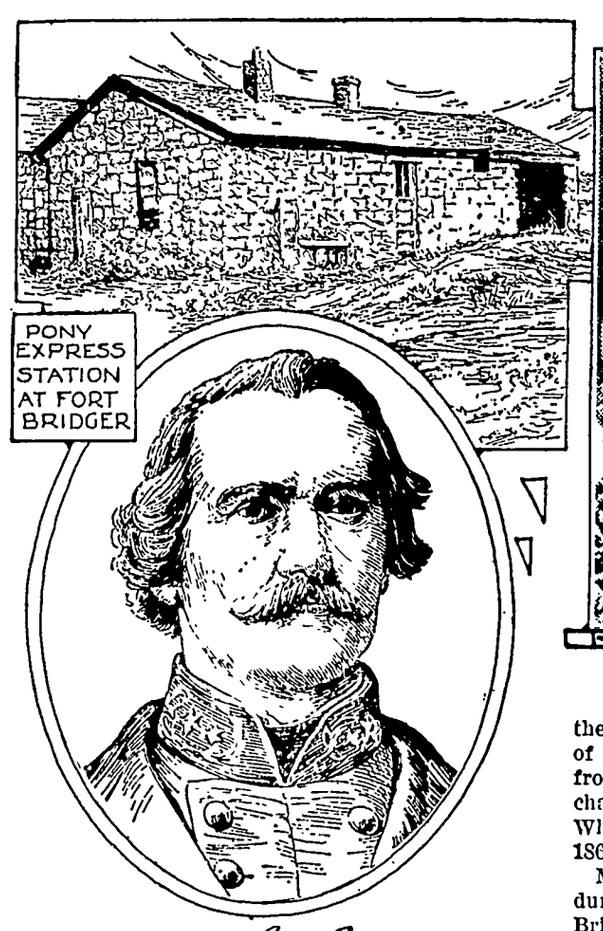
The first building put up by Bridger was a blockhouse, or rather two houses joined, surrounded by a fence eight feet high, made of logs which were set three feet in the ground. In 1845, after a successful trading business in furs had been established, Auguste Vasquez became Bridger's partner.

Bridger and Vasquez continued in partnership till 1854, when they sold out to Louis Robinson, who was said to represent the Mormons and to be acting under orders from Brigham Young. In corroboration of this the War department says: "The Mormons set up a claim to the land on which the post was located on the ground of a conveyance from James Bridger, who was said to hold a Spanish grant for the same."

It is probable that Bridger did have some sort of title from the Mexican government. He established Fort Bridger six years before the United States came into possession of that part of the country through the War of 1848. Mexican grants in New Mexico and Colorado were numerous and there is no reason to disbelieve Bridger's claim, though no official record has ever been found to confirm it.

The price paid by the Mormons for Fort Bridger was $8,000, half of which was "on the nail." Before the remainder was paid, the "Mormon War" began. Fort Bridger became too hot for the Mormons, but Bridger is said to have made a personal journey to Salt Lake City and collected the $4,000 due. The United States government took over the property and disallowed Bridger's claim for six years' rental at $600 a year on the ground that no official copy of the Spanish land grant was found.

Louis Robinson rebuilt the fort in 1855. The walls were 14 feet high and 100 feet square, built of stone. On diagonal corners were bastions. A big corral was built against the fort. The locality was then a part of Utah and the Mormons maintained affairs at the fort until 1857, when the government dispatched a military force to sustain Governor Cumming, who had been appointed by President Buchanan to succeed Brigham Young. In November this force, under Gen. Albert Sidney Johnston, went into winter quarters at Fort Bridger. The greater part of the supplies for the command had been destroyed by Mormon troops. So had most of Fort Bridger itself.



PONY EXPRESS STATION AT FORT BRIDGER

JAMES BRIDGER

Captain Marcy and forty men, guided by Jim Baker, a trapping companion of Bridger, were sent to Fort Massachusetts for supplies. But for the skill and heroism of Jim Baker, the party would never have reached its destination. As it was, it could not return until June and the soldiers at Fort Bridger were nearly starving when relief came. Horses and mules had been eaten and the soldiers had to go to the woods near the fort for their fuel.

General Johnston established Fort Bridger as an army post in 1857. He left a detail at the fort while he pushed on to Salt Lake, where the Mormons consented, without further resistance to the transfer of the office to Governor Cumming. Meantime barracks and quarters were built at Fort Bridger and the old Mormon fort was converted into storehouses. A garrison remained at the fort until 1861, when the soldiers were withdrawn to aid in the campaign in the East.

For about a year, at the height of serious Indian troubles, the fort was without a garrison, and for the protection of the place a voluntary company of mountaineers was organized. Volunteer troops from California and Nevada were later put in charge, until 1866, when the army again came in. When the territory of Wyoming was formed in 1863, Fort Bridger was included.

Many old trappers remained about the fort during the changes that were taking place. Fort Bridger was the most important stop on the Overland Trail to California, after Fort Laramie. A thriving business was done in repairing wagons and selling supplies to the emigrants who were headed westward. The trappers were in demand as guides, as they knew the ins and outs of Indian warfare and were expert in guarding against surprise attacks. One of the most celebrated figures of those days was "Uncle Jack" Robinson, one of Bridger's cronies.

With the establishment of the Overland stage line and the pony express, Fort Bridger became of additional importance. A part of the old building which served as the pony express station is still standing. The stones used in building the old Mormon fort have been incorporated in smaller buildings which were later used as storehouses by the military authorities.

Many expeditions were sent out from Fort Bridger to protect pony express riders or Overland stages from Indian attacks. The stage company kept a large number of horses and mules at the fort. The company's live stock was the best obtainable and the Indians were constantly endeavoring to steal it. In addition there were white outlaws who were specialists in horse stealing and, without military protection from Fort Bridger and other posts along the line, the stage company would have been forced out of business.

As it was, it had to change to a more southerly and considerably safer route east of Fort Bridger when a concerted raid of Shoshone and Arapahoe Indians resulted in stripping the company of every horse and mule within a distance of 300 miles. Stock was run off from stage stations in this raid, and stages were held up and horses and mules taken out of harness, though no passengers were killed.

Fort Bridger was a typically "Wild West" post for several years. An occasional "bad man" cropped up and had to be dealt with summarily in accordance with frontier justice.

The most celebrated "killer" whose name is associated with Fort Bridger was Joseph A. Slade, who had been division superintendent of the Overland, west of Julesburg, Colo. Slade figures in Mark Twain's "Roughing It." At the time he met the future writer Slade is said to have killed 26 men. He was put on to "clean up" the stage division, but did not rest with killing horse thieves and outlaws. He became so promiscuous in his shooting affairs that the stage company invited him to leave. Slade drifted West to Fort Bridger, but he did not get under full headway as a "terror" until he was lured to Montana by gold discoveries there. He trekked to Montana in partnership with a Fort Bridger trader, but owing to his rough behavior he was lynched by Vigilantes at Virginia City.

Ben Holliday, the picturesque owner of the Overland stage line, often visited Fort Bridger. Holliday traveled in a de luxe coach which contained all the luxuries of a modern pullman. The combination of lavish expenditure and threatened competition from the railroad resulted in his financial and physical collapse.

For several years Fort Bridger remained as an important military post, chiefly in keeping in subjection the Ute and Shoshone Indians and as a base of supplies for the troops at the Wind River agency and the Sweetwater mining country. It was not until 1890 that the post was discontinued and troops formally withdrawn.

Jim Bridger, after his sale of the fort which bore his name, went back East in 1856, buying a farm near Kansas City and intending to remain there the rest of his days. But the call of the West was too strong, and he went back to Wyoming, engaging as an army guide, locating at Fort Laramie.

Sultan's Ward

Jim Bridger was the son of James and Chloe,
He came out West a hundred years before
There were old errors to correct, and used
His eyes until his eyes could see no more,
And used his years until his years were spent,
And used his hands to push the mountains from
The river trails, and when his hands grew tired,
Jim Bridger let his children lead him home.

Old Dog Sultan has gone to fetch him in,
He's down in the pasture, riding old Ruff.
He's lost in the sunset, feeling tops of wheat,
His blind hands know when the wheat's high enough.

Jim Bridger rode the Arctic circle when
The Arctic roses were in bloom, and heard
Blood creases in Comanche arrows sing
In Mexico like wing bones of a bird;
If seventeen red years rolled down the West
In which Jim never saw a loaf of bread,
It didn't matter much to him, because
Flour-eating men require a house and bed.

Old Dog Sultan has gone to fetch him in,
There's a lump in his neck, there's pain in his side.
Jim Bridger rode the gaunt Grobean, he rode the swift Grobean,
But Ruff's not safe for the old man to ride.

Jim Bridger wore an arrow in his back,
Meat couldn't spoil along the Yellowstone;
He hated Richard Third and couldn't read,
And trod the starry wilderness alone;
He came at length to know what distance was,
And hills . . . and lured the children from their play,
Telling them tales of how a man could see
Farther out there, with mountains in the way.

Old Dog Sultan has gone to fetch him in,
He's groping down the fence, he's dreaming in the wheat,
He's lost in the sunset, riding old Ruff,
That's Sultan barking now at old Ruff's feet.

—Thomas Hornsby Ferrill in the Rocky Mountain News.

Litter Bedding Affects Manure

Dry Sawdust and Fine Shavings Are Clean and Satisfactory.

Straw is the bedding material almost universally used on the farm. It will absorb from two to three times its weight of liquid. If the supply is scanty, it will pay to cut the straw used as litter, for finely cut it will absorb about three times as much liquid as uncut.

Dry sawdust and fine shavings can be recommended as clean and satisfactory bedding materials. Their absorptive capacity according to fineness and dryness is from two to four times that of ordinary straw.

Not Injurious to Land.

There is a more or less general impression among farmers that manure from stables and cow barns in which sawdust has been used as a litter is injurious to the land. While we would not say that this suspicion may not have some foundation, we have never been able to discover a single instance of such injury and inquiry has been made both in Canada and the United States in this matter, says the Farm and Home. Such injury could only occur on very light soils following very heavy applications. Most satisfactory evidence has been obtained from many farms upon which sawdust has been used as a bedding material for a number of years and upon which the soil is light and sandy. Naturally it is on heavy soils that this class of manure proves most effective.

One word of caution is necessary. Horse manure from stables using sawdust heats very rapidly, especially if left in the pile, and the excessive fermentation that may take place will seriously injure the manure. Such manure should be mixed with that from the cow barn, which can readily be managed when manure carriers are installed and a manure spreader used. Mixed manure (horse and cow) may be handled in the same manner as that made with straw. The saturation of the sawdust with the liquid excreta promotes the ready decomposition of the litter under favorable conditions of temperature, and the best place for this to take place, in order that the full manurial effect may be obtained, is the soil. If the manure cannot be spread at once, the heap should be kept moist and compact, as in the case of manure made with straw.

Hardwood Sawdust Best.

The sawdust of hardwoods decompose more rapidly and further is richer in potash and phosphoric acid than that of pines and conifers generally, but no harm due to resistance to decay need be feared from the use of the latter, provided that it is not employed in larger quantity than is sufficient to absorb and retain the liquid excreta.

Tests Show How Rains Rob Farms of Rich Soil

Tens of millions of dollars are being literally washed away in the rivers and streams of America through failure of farmers and other land owners to properly protect their lands from erosion, reports the Farm Journal. The rich surface soil, created by the accumulation of vegetable matter for many centuries, is laid bare by plowing and deforestation, and within a few years is swept away by rains, leaving only the semi-sterile earth beneath.

"A six-year-old experiment at the Missouri College of Agriculture shows that on a slope of 3.6 feet to 100 feet, soil left without any crops washes so rapidly that only 29 years are required to wear away the seven inches of surface soil," says the magazine. "With a rotation of corn, wheat and clover on the same land, 437 years would be required to move the surface seven inches, while on land left in sod continuously the time required to wash away the same seven inches would be 3,547 years."

Systematic terracing of such sloping ground, used in conjunction with regular cover crops, would make the life of the rich top soil almost interminable, it is pointed out.

Agricultural Notes

Poor land is scarce where cows are abundant.

* * *

A rich farm turneth off a yield; but grievous weeds use up the plant food.

* * *

Besides canning, many vegetables may be stored in cellars for winter use.

* * *

The names of the legumes are as strong towers: the wise farmer useth them and is safe.

* * *

Feed your pullets good grain mash and some cod liver oil if you want them to lay well all winter.

* * *

Concrete floors are sanitary and inexpensive. They are fairly satisfactory when kept well bedded.

* * *

Peat moss, commonly known as moss-litter (sphagnum) makes admirable bedding; it is soft and absorbent.

* * *

Farmers collect a lot of grief by planning their activities on the basis of what prices are when they start—not what prices are likely to be when they are ready to go to market.

Makes Life Sweeter

Too much to eat—too rich a dinner or too much smoking. Lots of things cause sour stomach, but one thing can correct it quickly. Phillips Milk of Magnesia will alkalinize the acidity. Take a spoonful of this pleasant preparation, and the system is soon sweetened.

Phillips is always ready to relieve distress from over-eating; to check gastric acidity; or neutralize nicotine. Remember this for your own comfort and for the sake of those around you. Endorsed by physicians, but they always say *Phillips*. Don't buy something else and expect the same results!

PHILLIPS Milk of Magnesia

IF MOTHERS ONLY KNEW

During these days how many children are complaining of Headache, Feverishness, Stomach Troubles and Irregular Bowels and take cold easily. If mothers only knew what Mother Gray's Sweet Powders would do for their children, no family would ever be without them for use when needed. These powders are so easy and pleasant to take and so effective in their action that mothers who once use them gladly tell others about them. Save yourself a night of worry, by getting a package at your druggist today. Trial Package sent FREE. Address Mother Gray Co., Le Roy, N. Y.

Just for a starter—"Go!"

Large, Generous Sample of Old Time Remedy Sent Free to Every Reader of This Article

More than forty years ago, in a small way, good old Pastor Koenig began the manufacture of Pastor Koenig's Nervine, a remedy recommended for the relief of nervousness, epilepsy, sleeplessness and kindred ailments. The remedy was made after the formula of old German doctors. The sales were small at first, but soon increased and another factory was added to meet the increasing demand. Today there are Koenig factories in the old world and Pastor Koenig's Nervine is not only sold throughout the United States but in every land and clime.

The manufacturers want every reader of this free offer to try the remedy at their expense. They will send a large, generous sample to every one who mentions this article.

Try it and be convinced. It will only cost you a postal to write for large, generous sample.

Address: Koenig Medicine Co., 1[illegible] North Wells street, Chicago, Illinois. Kindly mention your local paper.

Genius begins; labor finishes.

TO RESIST THE ATTACK—of colds or grippe—put your system and your blood in order. Build up your health with that splendid herbal tonic, Dr. Pierce's Golden Medical Discovery, which has stood the test of sixty years of approval. The air we breathe is often full of germs, if our vitality is low we're an easy mark for colds or pneumonia.

One who has used the "Discovery" or "G M D", writes thus:

Grand Island, Nebr.—"I am glad to speak a good word for Dr. Pierce's remedies, especially the 'Golden Medical Discovery' on account of the benefit it was to my husband. His health was poor and he suffered from indigestion. The 'Golden Medical Discovery' was the only thing he found to be of benefit to him."—Mrs. J. W. McMullen, 824 E 9th St.

Fluid or tablets. All dealers.

Write Dr. Pierce's Invalids Hotel, Buffalo, N. Y., for free advice.

Guard Against "Flu" With Musterole

Influenza, Grippe and Pneumonia usually start with a cold. The moment you get those warning aches rub on good old Musterole.

Musterole relieves the congestion and stimulates circulation. It has all the good qualities of the old-fashioned mustard plaster without the blister.

First you feel a warm tingle as the healing ointment penetrates the pores, then a soothing, cooling sensation and quick relief. Have Musterole handy for emergency use. It may prevent serious illness.

To Mothers: **Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.**

MUSTEROLE
NOT A BLISTER

Better than a mustard plaster

POULTRY

ARLIEST HATCHED CHICKS ARE BEST

xperiment Shows the April ullets Produce Good Eggs.

Reports from poultrymen in Colo-do show that the tendency to earlier tching is gaining a foothold among ccessful breeders. Early-hatched icks make better winter layers, they ve found, and the rapid develop-ent in the early-hatched chick re-lts in more economical production broilers.

e cold weather of this season of year seems to give much greater elopment in a short period of time, ile those that are hatched late and ow during the warm weather are wer in their development. Cold ather seems to retard the sexual velopment, thus holding back egg oduction until warmer weather, ac-rding to observations of Charles N. een of the poultry department at the lorado Agricultural college.

If pullets are raised from late-tched eggs and pushed for produc-on, they attain a sexual maturity fore the body maturity is attained. hen the first eggs produced will be mall and continue so until body ma-rity is completed.

In the case of light breeds, such as ghorns and Anconas, these small rds which have been forced break wn under heavy production and go to a winter neck molt and often a ll molt. With the larger breeds ere may be less of this trouble with e late-hatched birds, but they are rder to force into laying. It takes proximately five months to mature Leghorn or Ancona pullet and ap-ximately seven months to mature hode Island Reds, Rocks, Wyan-ttes and other birds of the larger eeds. They should be laying not ter than November 1 and not ear-r than September 1 for best results.

Mash Essential Part of Ration for Layers

The mash is an essential part of e hen's diet, for she cannot make gs economically from grains alone. the mash should be included some the common by-products such as heat bran, middlings and gluten feed. hese feeds are palatable and furnish latively cheap vegetable protein.

The hen must be supplied with ough animal protein either included the mash or fed in addition to it. ome of the more common home sup-lies of animal protein may consist of ilk, buttermilk or some form of aste meat and, in the summer, in-ects that the hen can find on the ange.

Repeated tests at the Wisconsin and ther experiment stations have shown at hens cannot find the necessary mount of animal protein on the range make profitable egg production pos-ble. Even in the summer unless the ens have all the milk they can drink will pay to have some additional nimal protein in the mash. In the inter the hen will not drink enough ilk to supply her needs and some ad-ition should be made.

Ventilation of Poultry House Is Big Problem

The ventilation of the poultry house a much discussed problem and many mes local conditions are responsible or troubles. Sometimes the location f the house is such as to interfere ith the usual results. However, if he walls of the house became damp st year it is an indication of too ttle fresh air. There are two meth-ds of ventilation which are quite ommon. One is the use of muslin rames which may be closed at night nd opened during the day. In houses 4 to 16 feet deep one should have ne square foot of cloth frames for very foot the house is long. Deeper require more while narrow require less. Even with muslin one must not be persuaded to them too tightly as this may re-too little ventilation at night. use requires discretion as does her plan for ventilation.

Feed Heavily

uary and February are the s when all flocks should be fed y, says T. S. Townsley, exten-oultry specialist of the Missouri of Agriculture. By January of the pullets ought to be ma-nd ready to lay, while the ma-of hens should be through the Consequently with proper feed, oduction ought to pick up rap-ring January and February and its maximum during March or

Give Hens Chance

r housing of farm hens during inter plays a big part in keep-e production of the average Illi-hen down to about 50 eggs a It takes contented hens to keep inter egg basket full and poul-en who do not insure the con-ent of their fowls are apt to get egg production only during the al laying season in the spring. ll be profitable for chicken raisers pend money in repairing the old houses.

Canadian Egg Record Broken

The New Brunswick hen, a Barred Plymouth Rock, in the winning pen in the New Brunswick egg-laying contest for 1927-28, who smashed the Canadian egg-laying record by laying 332 eggs in a year, within one of the world's record. The record-laying hen is owned by Mrs. Edward Hart of Grand, Bay Kings county.

Plants Improve Main Highways

Twenty-Five States Have No Laws Governing Trees.

(Prepared by the United States Department of Agriculture.)

The act, passed at the last session of congress, which permits the federal government to pay half the cost of wayside planting along federal-aid highways, will give considerable impetus to the movement long fostered by women's clubs and other social organizations, and its effect will quickly be evident in an improvement of the appearance of the main interstate roads, according to the bureau of public roads of the United States Department of Agriculture.

States Have No Laws.

Latest available figures show that 25 states have no laws governing tree and shrub planting along highways. A few of the remaining 23 have good laws, but the majority have indifferent ones.

The Massachusetts department of public works, and the highway and forestry departments of other states, have already demonstrated how much can be done at small cost to beautify the roadsides by judicious planting of native trees, shrubs, and perennial flowers.

The Massachusetts department is empowered by law to make roadside improvements, the work including such planting, replacements, and care as may be necessary. When a road is laid out as a state highway, it is generally made sufficiently wide to provide an area on each side of the traveled portion for roadside improvement. No trees, shrub, or plant within such a highway can be cut, removed, or new ones added without a permit from the highway department.

Work in Massachusetts.

The work of roadside improvement in Massachusetts is done by the maintenance division. The cost is included as a part of the regular maintenance expenditure of the state. The state has a nursery at Palmer, where trees and shrubs are propagated and where the highway landscape supervisor trains men in the care of trees and roadside beautifcation.

Public acquisition in all states of suitable tracts of land along the highways for state parks, for purposes of recreation and conservation of timber and animal life, and the acquisition of small road-bordering strips and plots for development of parkways and parklets, says the bureau, would enhance considerably the appearance of the roadsides.

Great Losses Incurred by Outbreak of Roup

Announcement of the results of recent study of the University of Arkansas college of agriculture pathologist of losses incurred by an outbreak of roup among a flock of poultry showed a reduction of profit during the year of the outbreak over the preceding one of $2,425.58. The depreciation per bird was $1.47. It is estimated that 90 per cent of the expected profit was lost due to loss of birds and egg production, according to Dr. J. H. Bux, state veterinarian, University of Arkansas college of agriculture.

The prompt removal of sick birds from the flock and individual treatment of the head lesions, the slaughtering of all recovering birds that might have been chronic carriers, frequent cleaning and disinfection of the house, and provision of ample air without draft prevented the losses assuming the proportions that were observed in several other flocks similarly affected.

Trees Too Close

In blocks of orchards where the trees are too close together half of the trees should be cut out this winter.

The natural tendency is for the trees to be left in until those which are to be left permanently do not amount to much. The lower limbs have been stunted or have died back from lack of light. Planting trees far enough apart is a very important matter.

Implement Repairing Done During Winter

Fine Time to Put Machinery and Tools in Shape.

Use your winter leisure time to put your field machinery in fine order. Any workman will do better work if he has better tools. This is true of the farmer just as it is of everybody else. Field work can be done better with good, sharp, well-adjusted tools than with some that are allowed to get out of kilter, become dull, etc.

It pays, and pays well, to keep implements and tools in the very best of condition. To allow them to get into poor condition is inviting rapid and serious depreciation.

During the winter, when there is no great amount of work, is a fine time to put the machinery in good shape for the following year. Begin with your plows. See that the shares are sharp, have good points, and that the hole bottoms are well covered with grease or some protection against rust. Plow adjustments can be made so far as possible, but for actual work it is pretty hard to do this without getting into the field.

Likewise with the cultivator; their points should be sharpened and their surfaces polished and coated with some nonrustable material that can be easily removed. Look to the boxing on the wheels. Sometimes they wear badly.

Go through the whole list of machines—corn planters, drills, mowers, rakes, binder, manure spreader, etc. Examine them from end to end. See that all necessary parts are in good shape or, if badly worn, get new ones ordered immediately. Don't forget when the new ones come that they should be immediately adjusted to the machine.

Good Business Judgment to Purchase Phosphate

It shows good business judgment to buy phosphate and apply it to grain fields, state A. R. Whitson and Griffith Richards of the soils department at the Wisconsin College of Agriculture in a special circular entitled "Use Phosphate—It Will Pay."

They point out that:

Legume crops will produce heavier yields if supplied with plenty of phosphate.

Phosphate will hasten the maturity of small grains and corn from one to two weeks.

Phosphate is constantly leaving the farm in crops, bones of animals, and milk sold.

Phosphate will be lost no matter how carefully the manure is handled.

On the average Wisconsin farm for every dollar spent for phosphate a return of from $2 to $4 may reasonably be expected.

How may phosphate best be applied and in what amounts?

The greatest money return will be obtained by broadcasting for the small grain crop with which alfalfa and clover are sown.

Around the Farm

Repair your chimney and prevent fires.

* * *

Sharp plowshares mean better plowing and less power to do it.

* * *

Soy beans should be sown for hay as soon as possible after corn planting.

* * *

Cod liver oil fed to hens that are housed closely during winter helps keep up egg production.

* * *

Conserving the fertility value of the manure produced is an important part of every dairy farm program.

* * *

Culling the poultry flock is important but it is not a substitute for feeding and good management.

* * *

Limestone works slowly in correcting soil acidity, especially if it is not thoroughly mixed with the soil by disking, harrowing, or cultivating

LIVE STOCK

ROUGH LAND AND FEED FOR BEEF

Cows Can Be Made to Pay Nice Profit to Owner.

Beef prices are away up. It seems as if there should be an opportunity in cattle for a good many men who have lots of rough land. With plenty of grass and roughage and enough grain to keep the stock thrifty, beef cows can be made to pay nice returns.

This is proved by figures from 22 Missouri farms which have been checked over by the State Agricultural college. It was found that all the costs of keeping a beef cow for a year—roughage, grain, taxes, interest, bull service, and all—averaged $25.30. And the calves were worth about $32 a head.

This is a good showing, but to make it the cows must be carried on rough feed as much as possible, the report emphasizes. Some other interesting points are these:

Calves fed grain while nursing their mothers can be made to weigh at least 600 pounds when eight to ten months old. Such calves will usually be fat enough for immediate slaughter.

Calves fed grain while nursing their mothers were approximately 100 pounds per head heavier and worth $2 a hundredweight more at seven and a half months old (weaning) than similar ones of the same age that received no grain prior to weaning.

Calves that are to be sold for slaughter at weaning should be started on grain when two to three months old. They may follow their mothers and eat in a creep or be separated from their mothers and allowed to nurse and have grain twice a day.

Calves fed grain while nursing and those receiving no grain prior to weaning may be fed and marketed as fat yearlings. This plan is adapted to farms producing summer calves or growing a surplus of corn that is to be marketed by feeding to cattle.

Hopeful Results Come Out of Feeding Tests

Hopeful results have come out of feeding tests being made by the college of agriculture, University of Illinois, to help farmers cope with the critical situation which now prevails with respect to scab infection of barley throughout the Mississippi valley, it is reported by Prof. H. P. Rusk, head of the animal husbandry department.

Cattle fed the scab-damaged barley have, during the first month of the test, made gains as high as any that can be remembered in local feeding tests, it was announced. Barley fed to them carried about 50 per cent scab infection. As yet, however, the investigators have met with little success in getting hogs to eat scab-infected barley without harmful results.

Barley throughout the Mississippi valley this year was hit by one of the worst scab devastations in history. Hogs, which ordinarily are the chief consumers of the barley crop, refuse to eat the scab-infected grain unless starved into doing so, in which case the resulting sickness is serious and sometimes fatal. Unconfirmed reports have come from Ohio that even cattle have died from eating the damaged barley, while one case is reported from northwestern Illinois in which horses were killed by it. So serious did the situation become that Germany recently placed an embargo on all barley from America.

Barley Straw Is Not Satisfactory Roughage

Barley straw is not as satisfactory a roughage for horses and cattle as corn fodder. Usually barley straw is more woody than fodder and is not as palatable. Horses and cattle seem to have little trouble with beards from barley straw; however, the feeding value of the straw is relatively low and a good grade of corn fodder should be worth considerable more. Generally speaking, barley straw and wheat straw are quite comparable as feeds and oat straw is to be preferred. —H. J. Gramlich, University of Nebraska.

Intestinal Worms

A new method of treating domestic animals for intestinal worms that will be safe, economical, and effective is being sought by the South Dakota State college experiment station. If the experiment proves successful in producing a good remedy for tapeworms in sheep, roundworms in hogs and intestinal worms in other farm animals it may be worth thousands of dollars to farmers and stockmen.

Oats for Hogs

Whole oats are suitable for all classes of hogs excepting small pigs. For these young pigs the oats should be finely ground in order to avoid injurious effects from too much coarse material in the hulls. Fine grinding also adds to the feeding value of oats for older shotes and for fattening hogs, and the ground oats can be fed advantageously without need for including much corn with them in the ration. Whole oats do well for brood sows and boars on pasture.

Lecturer Rather "Had" Hard-Boiled Citizen

A lecturer on art spoke before a group of men in an industrial city, urging upon them the duty of trying to put more beauty into their surroundings. At the close of the talk, a leading citizen came up to have a few words with the lecturer.

"I enjoyed your remarks," he said, "though I didn't agree with you. The fact is that we have no time here for beauty. The prosperity of this town is due to hard-boiled, practical men."

"Yet," retorted the lecturer, smiling, "you yourself are seeking beauty, according to your lights. You may not have found it, but I know you are aiming at what you think makes for greater attractiveness."

"No, you're wrong," insisted the hard-boiled man. "I'm not interested in beauty."

"Then," said the lecturer, "if you don't mind my being so personal, will you please tell me why you have dyed your whiskers?"

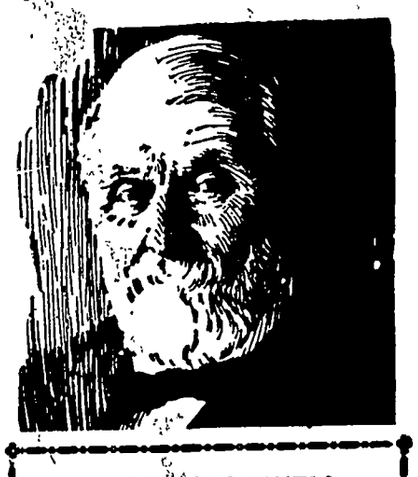
Record Gain in Butter Profits

Dairymen Who Use "Dandelion Butter Color" Say It's the Best Investment of All.

The biggest creameries in the country, who are most careful to cater to the whims of the public, are earning record profits by keeping their butter that appetizing June color everyone likes. Ninety per cent of them are doing it with "Dandelion Butter Color." It's the most economical and satisfactory butter color made. Half a teaspoonful colors a gallon of cream! It doesn't color the buttermilk. It's purely vegetable and tasteless. Approved by all State and National Food Laws. Large bottles, only 35¢ at all drug and grocery stores or write Wells and Richardson Co., Inc., Burlington, Vt., for a FREE SAMPLE BOTTLE.

Measures Mine Currents

To detect air flow and measure its velocity in mine shafts, a little bulb instrument developed by the United States bureau of mines ejects a puff of smoke which can be photographed to show the direction of the air currents. The unit is serviceable also in the study of other ventilating problems.



WHAT DR. CALDWELL LEARNED IN 47 YEARS PRACTICE

A physician watched the results of constipation for 47 years, and believed that no matter how careful people are of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to treat it when it comes. Dr. Caldwell always was in favor of getting as close to nature as possible, hence his remedy for constipation, known as Dr. Caldwell's Syrup Pepsin, is a mild vegetable compound. It can not harm the system and is not habit forming. Syrup Pepsin is pleasant-tasting, and youngsters love it.

Dr. Caldwell did not approve of drastic physics and purges. He did not believe they were good for anybody's system. In a practice of 47 years he never saw any reason for their use when Syrup Pepsin will empty the bowels just as promptly.

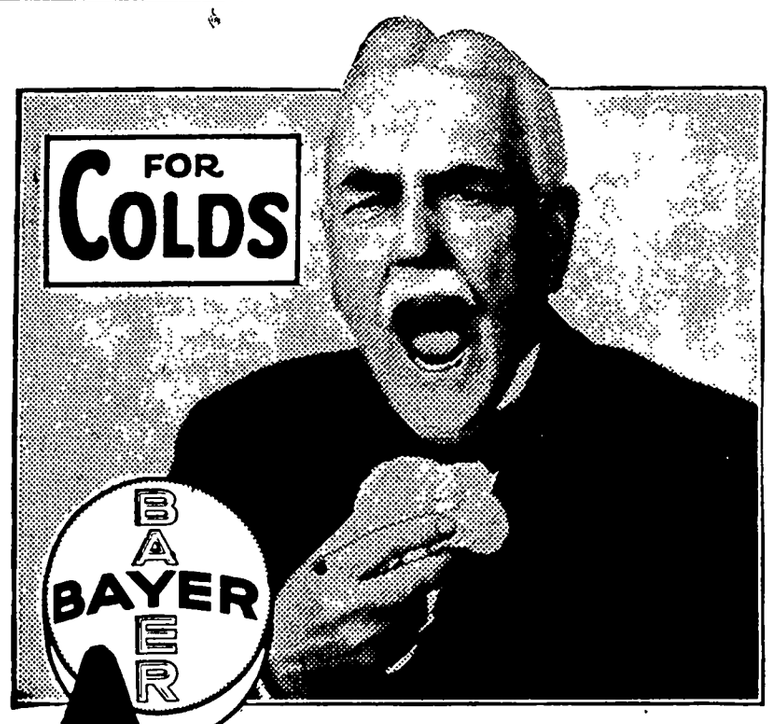
Do not let a day go by without a bowel movement. Do not sit and hope, but go to the nearest druggist and get one of the generous bottles of Dr. Caldwell's Syrup Pepsin, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois for free trial bottle.

Garfield Tea

Was Your Grandmother's Remedy

For every stomach and intestinal ill. This good old-fashioned herb home remedy for constipation, stomach ills and other derangements of the system so prevalent these days is in even greater favor as a family medicine than in your grandmother's day.

For Cuts, Burns, Bruises, Sores
Hanford's Balsam of Myrrh
Money back for first bottle if not suited. All dealers.



To break a cold harmlessly *and in a hurry* try a Bayer Aspirin tablet. And for headache. The action of Aspirin is very efficient, too, in cases of neuralgia, neuritis, even rheumatism and lumbago! And there's no after effect; doctors give Aspirin to children—often infants. Whenever there's pain, think of Aspirin. The genuine Bayer Aspirin has Bayer on the box and on every tablet. All druggists, with proven directions.

Physicians prescribe Bayer Aspirin; it does NOT affect the heart

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

To Preserve White Stag

Steps have been taken to protect the white stag which was recently found in the Reinhard forest, near Cassel, Germany. Because of its rarity the animal, a perfect snow-white specimen, is attracting much interest. It is one and one-half years old and quite normal and healthy.

Endurance--

Again the Whippet has demonstrated its endurance and first class workmanship in a gruelling test just completed at Omaha by "Speed" Bradford the daredevil racing demon who, in a 4,059 mile race against time put a Whippet Six Coach to the severest road tests he could conceive—and it came hru smiling and he proclaimed it the best light car he had ever driven—in fact he liked it so well that he has signed up as salesman for the Wetherell Auto Co., Omaha and will sell Whippets.

"Speed" Bradford drove 902 miles each 24 hours, driving thru 11 towns and reporting at each stop, averaging 36.9 miles per hour, including all stops, or 46.1 miles per hour road average. The car made an average of 21.3 miles per gallon of gasoline.

The New Whippets, with all the very latest improvements are now ready for delivery. Call at our garage and let's talk "real" car to you. You can't go wrong by buying a Whippet.

640 R. R. CARS IN YEAR OF 1928

THAT REPRESENTS CAR LOAD SHIPMENTS FOR KLEMME

Agent M. O. Barr Digs Up Data Of Real Interest Here

When it is all summed up it is quite surprising what a lot of business is transacted in car load lots in and out of our big litle city of Klemme. How many of you would even guess anywhere near that 640 railroad cars were required last to transport stuff in and out of our little city, let alone the vast onnage which was likewisé handled by auto truck?

We are indebted to the following figures given us by M. O. Barr, local agent for the C. R. I. & P. We are sumarizing his report as follows'-

First, the total number of carloads of goods shipped out of Klemme amounted to 430 car loads. The total number of car loads of goods shipped into the Klemme yards in the same period were 210.

In 1928 the following car load shipments left the Klemme yards:- Wheat 1, Corn 10, Oats 47, Other Grain and Seed 4, Coal 1, Cattle 114, Hogs 198, Sheep 2, Hay and Straw 1, Household Goods and Em. Mvbls 1, Butter 51.

The following car load shipments came in during 1928:-

Corn 4, Other Grain and Seed 1, Flour 5, Coal 51, Lumber 17, Mill Products 6, Building Material 26, Furniture 1, Cattle 17, Agricultural Implements 3, Salt 3, Oil and Petroleum Products 23, Hay and straw 11, Packing House Products 6, H. H. Goods and Em'gt Mvbls. 2, Other 34.

We will also give a few comparisons with the 1927 shipping.

In 1927 13 cars as against 10 of corn were shipped. 53 cars of oats in 1927 as against 47 for 1928. A gain of other grain by 2 cars was made last year. Stock shipments fell off a little in 1928 as follows: In 1927 there were 156 car loads of cattle shipped out as against 114 for 1928. Hogs also took a drop as in 1927 there were 213 car loads shipped out and 198 the past year.

A gain was made on sheep as 2 car loads were shipped out in 1928 and but one in 1927.

The big item in the report is the fact that there were 51 car loads of butter shipped out by the Klemme Creamery, lacking just one car of being a car load a week for the entire year.

The total number of car loads of stuff shipped out in 1927 was 448, and in 1928 430. In 1927 223 car loads were shipped in, and in 1928 there were 210 car loads.

The report indicates that a lot of business is transacted in Klemme.

DEFUNCT BANK PAYS FINAL DIVIDEND TO DEPOSITORS

ive Per Cent Plus Brings $30,000 nto Community

Mr. P. C. Hartman, was in Klem- Saturday to issue final dividend ecks to depositors of the defunct emme State Savings Bank which e closed and went into the hands the receiver three years ago last ly. The dividend checks repreted 5 per cent plus, and small s amount seems, still there was in neighborhood of $30,000 payed to depositors of the closed bank. former dividend for about the e per centage was issuod some ago. The dividend checks givout here Saturday closes the ks and is the final curtain of last act.

HANCOCK COUNTY ASSESSORS HOLD ANNUAL MEETING

List Of Valuations Adopted To Aid In Making Assessments

Garner, Iowa, Jan. 10, 1929.

The annual meeting of the assessors of Hancock County met at the Court House and was called to order by Chris Jacobs, County Auditor at 10:30 a. m.

On motion John Love, of Garner, was elected chairman, and Ole G. Peterson, of Britt, secretary.

Upon roll call the following township and corporation assessors responded to their names:

Robert Roths, Goodell, Iowa, Avery Townhip.

F. A. Gorton, Kanawha, Iowa, Amsterdam Township.

C. M. Christenson, Britt, Iowa, Britt Township.

Theo. Frederickson, Woden, Iowa, Bingham Township.

Mandus Christenson, Britt, Iowa, Boone Township.

John A. Love, Garner, Iowa, Concord Township.

Herman Schuldt, Klemme, Iowa, Ell Township.

D. J. LaBounty, Kanawha, Iowa, Erin Township.

Wm. E. Haes, Garner, Iowa, Garfield Township.

John H. Terhufen, Brit, Iowa, Liberty Township.

Lester Wilhite, Corwith, Iowa, Maogr Township.

G. W. Ritter, Hayfield, Iowa, Madison Township.

W. E. Titus, Wesley, Iowa, Orthel Township.

Howard Ruka, Goodell, Iowa, Twin Lake Township.

Ole G. Peterson, Brit; Iowa, Britt Corporation.

Fred Nolte, Goodell, Iowa, Goodell Corporation.

Joe E. Johnson, Klemme, Iowa, Klemme Corporation.

A. B. Davenport, Crystal Lake, Iowa, Crystal Lake Corporation.

R. J. Galloway, Corwith, Iowa, Corwith Corporation.

Fred Saathoff, Woden, Iowa, Woden Corporation.

The following assessors were absent:

Severn Haugland, Crystal Lake, Iowa, Crystal Township.

Andrew Teigen, Forest City, Ia., Ellington Township.

C. A. Sweigard, Garner, Iowa, Garner Corporation.

Joe A. Englet, Kanawha, Iowa, Kanawha Corporation.

After a general discussion on subjects pertaining to the assessor's duties and assessment of property the following schedule was agreed upon for a basis of assessment and was upon motion adopted:

Land, per acre	$ 52.00
Colts, 1 year old	24.00
Colts, 2 years old	32.00
Horses, 3 years old and over	48.00
Stallions	300.00
Mules, 1 year old	24.00
Mules, 2 years old	32.00
Mules, 3 years old	48.00
Jacks	as reported
Cattle is feeding	40.00
Heifers, 1 year old	16.00
Heifers, 2 years old	24.00
Cows	32.00
Steers, 1 year old	20,00
Steers, 2 years old	28.00
Steers, 3 years old	40.00
Bulls	48.00
Swine, over 9 months old	12.00
Sheep, over 9 months old	8.00
Goats, over 1 year old	4.00

Moved and seconded that a vote of thanks be extended to Chris Jacobs for the courtesy extended to the assessors by inviting them to take dinner with him at the Soda Grill, at Garner, conducted by Fred Willodson, which invitation was accepted with alacrity.

No other business to come before the meeting, motion to adjourn was made and adopted.

JOHN A. LOVE, Chairman.
OLE G. PETERSON, Sec.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

We plan to hold all services of the church this coming Sunday at their regular hours. The omrning worship service, both in town and at Liberty, will be given over to the observance of Holy Communion. There will be preaching servic in the evening. you are invited to come.

TROOP 56 DISPLAYS SCOUT TROHPY CUP

LOCAL SCOUTS WILL KEEP CUP FOR THREE MONTHS

Three Other Troops In Council Will Have Turn At Possession

A few weeks ago The Times announced that Troop 56, Boy Scouts of Klemme had won the Mason City Chamber of Commerce Trophy Cup for appearing at a Court of Honor with a one hundred per cent attendance, which included all Scouts, leaders and Troop Committeemen. The Klemme Scout organization accomplished this feat on December 6th, 1928 at Belmond where they appeared one hundred per cent in attendance at the Court of Honor.

Was Presented At Clarion

Monday evening nine Scouts, accompanied by three troop Committeemen, J. N. Day, C. G. Waterman and Dr. W. F. Misman, and Asst. Scoutmaster, R. A. Jorgenson, went to the Court of Honor at Clarion where seven Scouts were up for awards and were agreeably surprised when a part of the program consisted of the Trophy Award to Troop 56 of Klemme. Editor W. Earl Hall of the Mason City Globe Gazette presented the Trophy to Troop 56 of Klemme, which was received by R. A. Jorgenson as representative of the Troop.

Klemme will hold the Cup for the next three months when it will be passed on to Crystal Lake, Troop 31, who won it December 4th at the Crystal Lake Court of Honor, and to Troops 6 and 7 of Mason City who also won the cup on December 8th at a Court of Honor at Clear Lake.

The Trophy is at present on display in J. N. Day's store window. It will be on display for short periods of time at the various business places in town, during the next few weeks.

Becomes First Class Scout

Seven Klemme Scouts received special awards in the way of Merit Badges. They are: Floyd Klotzbach, Raymond Schuldt, Clarence Kluckhohn, Wayne Pavey, Dorance Day, and Henry Smid, these Scouts winning from one to five badges each.

Byrnes Missman was awarded the First Class Badge, being the first of its kind to be issued to Troop 56. Other Scouts in Troop 56 are working first class tests. At this time of the year an important test, that of swimming fifty yards, shows up progress toward getting other boys prepared for First Class Scouts.

Klemme Troop 56 feel they were well treated at the Court of Honor by getting a lion's share of Merit Badges, a First Class Badge and bringing home the Trophy Cup.

A feature of the Court of Honor was awarding Merit badges to the older "boys," such as Troop Committeemen and scout leaders, and in this respect Klemme came in for a good share, boosting the Council Contest points and helping the boys win honors in that respect.

The next Court of Honor for the Third District will be held at Hampton about February 18th.

Parents of Scouts and anyone interested are cordially invited to attend these Courts of Honor.

"Tough Sledding" For The Cream Truck Drivers

The weather and roads we have been having surely tries out cream truck drivers. The Klemme Creamery have a loyal bunch of men and they have made every effort to get the cream to the creamery. It is not an easy matter to drive over such roads in cold weather. A. D. Gimer manager, says 'Tell them we want to say thank you, as we appreciate your efforts men!"

UNCLE TOM'S CABIN

Don't forget to see "Uncle Tom's Cabin" at the Idle Hour this week.

TEN CARS STOCK SHIPPED OUT SAT.

ASSOCIATION LEADS ALL WITH FIVE CAR LOADS

Road Conditions Have Held Down Large Shipments Here

Live stock shipped from here is beginning to asume the proportions of the big shipments of last winter. However, the bad weather and poor roads have held down the size of shipments. The ten car shipment Saturday night was the largest so far this season.

The Klemme Shipping Association had five car loads of stock in the Saturday night shipment, consisting of three car loads of hogs and two car loads of cattle, shipped to the Chicago markets.

C. A. Larsen, another local stock buyer, shipped out two car loads, one being a car load of hogs billed for owa Falls, and the other a car load of cattle for Chicago.

Clarence Tanner and Ed. Buentenbach were Chicago shippers, and Tanner had two car loads of cattle and Buentenbach, one car load.

With better weather and good roads we will expect fifteen car load shipments 'n the next few weeks.

Klemme is noted as one of the best stock shipping points along the line. Local stock buyers pay right up to the scratch.

DAIRYING IS BIG NDUSTRY ON FARMS NEAR KLEMME

Fourteen Farmers Produce Each Over 500 Lbs. Cream Jan. 1-15

Surely the dairy cow is better cared for now days than she was a few years ago. She is better housed and fed proper rations. These facts are indicated by the following list of fourteen patrons of the Klemme Creamery who produced and sold each over five hundred pounds of cream during the first half of this month.

This list is interesting because of the fact that we have had weather well below the zero mark during the period this cream was produced.

Mr. Gimer, manager of the local creamery, tells us that the first few years he ran the creamery when we would experience such weather as we have had for this period, the cows would "shrink off" about one-third in production during extreme cold weather.

From this report we can conclude what the dairymen are doing. Better barns or housing for their cows, feeding rations much improved and general better care of the cows. n cold weather good dairymen keep their cows in the barn, perhaps just letting them out for a short time to drink, and not left to shiver about the straw stack.

Here's the list of patrons who sold 500 pounds or over of cream January 1-15:-

Chris Sheppelman	1206
Mike Halfwassen	1007
Kennedy & Shoemaker	919
Wm. H. Greiman	887
Virgil Cook	664
C. J.4 Janssen	640
Harry Carpenter	636
Herman Lauen	628
Wm. F. Butz	554
Henry Naninga	546
James Kurtz	539
Fred Kothenbeutal	539
Harvey Harberts	522
Carl Hopke	502

KLEMME REFORMED CHURCH
Calvin Grosshuesch, Pastor

Srevices for Sunday, January 20.

8:00 p. m. Bible Class.
Both Choir and Bible Class will elect officers for the year at these meetings.

FRANZ PRINGNITZ DIED EARLY SATURDAY MORNING

Had Been Resident Of Hancock Co. Since 1896

Franz Pringnitz, aged resident of Twin Lake township, passed away early last Saturday morning, after a short illness at the home of his son, Emil, where he has made his home for some time.

Mr. Pringnitz had been a resident of Hancock County since 1896, and prior to that time resided in the vicinity of Akley, Iowa.

Funeral services were held Tuesday with a brief service at the home and with a church service at the Klemme Methodist Church, conducted by Re.v H. E. Whyte, and assisted by Rev. A. W. Gauger, of Holstein, Iowa, former pastor here and a friend of the deceased. Burial was made in the Klemme cemetery.

The obituary is as follows:-

Franz Frederick Pringnitz was born on March 15, 1845 at Hindenberg by Brenclau, Brandenberg, Germany. He passed away at the Emil Pringnitz home early Saturday morning, January 12, 1929, age 83 years, 9 months and 28 days.

He was married in the year 1876 to Frederick Sofia Kruger Yonkey who preceeded him in death by 12 years, having passed away in Mar. 1917. To this union was born four sons, all of whom reside in this community.

It was in the month of May, 1876 that Mr. Pringnitz left his native land and came with his family to Ackley, Iowa, where he resided for several years. In 1896 he moved with his family to Hancock County and took up his residence in this community, where he has lived until his death.

Mr. Pringnitz was confirmed in the Lutheran church in Germany during his early years and in this church his membership has continued until this time. Though well along in years he has been in reasonably good health until the last few weeks when he has showed signs of failing. During the last week or two he has suffered somewhat from a flu attack which finally developed into pneumonia and caused his death.

He leaves to mourn his loss his four sons: Otto, Helmuth, Franz and Emil, all of thi community Likewise his step-daughter, Mrs. Frank Krasselt of Riverside, Cal., his two brothers and one sister still in Germany, 18 grandchildren and his many friends.

Card Of Thanks

We wish to thank all who helped us during the illness of our father; and thanking all for the sympathy extended to us and for the flowers contributed.

Otto Pringnitz and Family,
Helmuth Pringnitz,
Franz Pringnitz and Family,
Emil Pringnitz and Family.

SOUTH DAKOTA MAN BURIED HERE FRIDAY

Was One Time Resident Farmer Of Near Belmond

The remains of Melvin C. Fisk, of Fairview, South Dakota, were shipped to Garner last Thursday evening where undertaker Arthur Wellemeyer met the train and brot the body to Klemme.

The deceased was the owner of a pool hall at Fairview. A short time ago he suffered an attack of flu and heart trouble. He was about to call a doctor when he dropped over dead on January 9th, at the age 7 years.

Mr. Fisk at one time was a resident of this comunity and farmed east of Belmond.

Friday omrning short funeral services were held at the local funeral parlors, conducted by Rev. Whyte and burial was made at the Amsterdam cemetery. Audrey R. Church and wife, Gladys Bennett, Gay and Charles Schmalle and other relatives were here to atend the services.

Phone 1-2 Klemme when you go away, have company or get a new car—that's news!

MOTHER, DAUGHTER HOLD S. S. RECORD

HAVE PERFECT ATTENDANCE FOR OVER THREE YEARS

Mrs. Bredbenner And Daughter Have Outstanding Record

The Secretary's Sunday School report of the Methodist S. S. for the quarter, October, November December gives us some news of great interest

Mrs. Martha Bredbenner, secretary of the M. E. Sunday school was kind enough to furnish us with this interesting report, as follows:-

Number of S. S. meetings, 12.

Number of Officers and Teachers enrolled, 28; with an average attendance of 23.

Number of Scholars enrolled, 177 with an average attendance of approximately 100.

Total enrollment 200, with an average atendance of 120.

The total collections for the past quarter amounted to $58.64, or an average per Sunday of $4.87.

The following members were present each Sunday the past quarter:

Bruce and Evelyn Arnold, Doris Ludeke, Novella Bredbenner, Marthat Bredbenner, Mable Schaefer, Roy and Wilbur Arnold, Mildred Johnson, Nova Koerner, Kenneth Patet, Gladys Schlichting, Ada Sandrey, Mrs. E. J. Arnold, Mr. and Mrs. Ed. Schaefer, E. A. Zeidler and John Josten.

The following members have a perfect attendance for the past six months:

Evelyn, Roy, Wilbur and Mrs. E. J. Arnold, Novella and Martha Bredbenner, Nova Koerner and Mildred Johnson.

The following members have a perfect attendance record for the past year of 1928:

Novella and Martha Bredbenner and Nova Koerner.

Marie Stille mised but one Sunday during the past nine months.

Clarence Lemke missed but two Sundays the past year and Gladys Schlichting missed but three during the year.

These Lead All Others

Miss Novella Bredbenner has a commendable record that is seldom equalled. She has up to Jan. 1st, never missed a Sunday in the past three years and six months, and is still going strong.

Her mother, Mrs. Martha Bredbenner is a close contender for the second high honor with a perfect attendance record of three years and three months.

E. A. Zeidler holds a firm place with a miss of but one Sunday in three years and 6 months.

The Times will have a report of the Reformed Sunday School at a later date, as their fiscal year ends in May, if we are correct, at which time a full report will be given.

CHARLES BUSCH INJURED IN HUNTING ACCIDENT

Gun Accidently Discharged When Climbing Over Fence

Charles Busch, son of Mr. and Mrs. C. F. Busch, of Mason City, who is attending high school here, was injured Saturday about noon when a gun he was carrying while rabbit hunting accidently discharged and the shot striking him on the leg. Charles was not alone as he was accompanied by Wes Schuldt and son, Raymond, who were near by hunting the elusive bunny. Just how it all happened is not clear, but the gun went off unexpected as Charles was proceeding to get on the other side of the fence he wished to cross. Luckily the shot hit either high or low and grazed his leg, but he received more than enough to cause considerable pain and after having the wound dressed was forced to remain at home for several days.

MONOXIDE FUMES ARE NEUTRALIZED

Experimenter Discovers a Way to Render Deadly Gas Quite Harmless.

After eleven years of research and experimenting C. Howard Williams of Downers Grove, Ill., has perfected a chemical treatment for gasoline that neutralizes the deadly fumes of carbon monoxide that comes from the exhaust of an automobile endangering life when the motor is running, if only for a few minutes, in a closed garage. A number of deaths are reported every winter from this cause, and salesmen, who find it necessary to travel long distances by automobile during the winter months, often complain of a sleepiness which is due to carbon monoxide fumes coming up through the heater in their cars. Undoubtedly this drowsiness is a contributing cause to the innumerable road accidents which seemingly have no other explanation.

Rodents Were Used.

White rats and guinea pigs were used by Mr. Williams in his experiments. During a recent demonstration a white rat remained for forty minutes, without apparent ill effects, in a box into which fumes were passing from the exhaust of an engine using the neutralized gasoline, although at times the force of the exhaust was sufficient to raise the animal off its feet. Upon being removed from the box, it ran around and ate in a most natural manner.

Rat Killed.

The gasoline in the tank of the engine was then changed to ordinary transportation gasoline obtained at a nearby filling station and another rat placed in the test box. In exactly two minutes and forty-five seconds after the engine was started, it was dead.

Mr. Williams is well known in oil circles, having been head of the National Petroleum college for more than two years and served as an expert on petroleum products for the government during the World war.

New Antitheft Device Is Invented by German

A new antitheft device providing for setting the license plates of a car in a horizontal position when the car is parked and locked has been invented by a German automotive engineer, according to a bulletin issued by the Chicago Motor club.

The Department of Commerce has issued a paper explaining the device, which is operated by a key in conjunction with a spring controlling the vertical and horizontal positions of the plates. The theory is that if a thief should succeed in driving the car, the horizontal position of the plates would indicate to police and others that the car was being stolen.

Density of Automobiles Now Thickest in Kansas

Kansas leads all other states in the country for density of motor vehicles per mile on its highways.

The five leading states, from the standpoint of automobiles registered per mile are:

Kansas, with 159; Oklahoma, 153; Rhode Island, 30; Nebraska, 97, and New Jersey, 86.

Alabama, with but 13 automobiles per mile, has the fewest number of motor vehicles on its highways, followed by Nevada with 14 and Idaho, South Carolina and North Carolina with 15 each.

Cuba Is Building Great Highway on "Backbone"

The great 700-mile highway, now under construction in Cuba, will extend virtually the length of the island and along its "backbone." It will pass amid jungles and mountain ranges, through towns and cities, and across lagoons and streams. The new road, to be of the most modern construction, will not only make it easier for children in the country districts to attend school, but will facilitate the policing of the island, as well as bring hundreds of remote communities in touch with modern progress.

Brake Neglect Leads to Avoidable Crashes

Many of the accidents that fill space in almost every daily paper are blamed on defective brakes. In many cases, the brakes may have been responsible for the mishap, but lack of attention has been the underlying cause of their failure to work or defection at the critical moment.

Brakes should be kept in the best of condition—both sets of them. They should bind tightly when pressure is applied to them, and be free and clear when the pressure is released. Should the brake band bind when pressure is taken from it, friction is produced and the car runs with difficulty.

Slipping brakes can be traced to worn brake linings, grease on the shoes, or poor adjustment. If the brake lining is worn it should be replaced at once, as it may fail to hold at the next emergency.

Sometimes the lining, if not too much worn, can be put in good shape again by taking up the turn buckle—but an ounce of prevention is worth a pound of cure, and a worn brake lining is never to be relied upon. Should there be grease between the brake surfaces it can be washed out with a little gasoline. If the lining is of leather, neats foot oil or castor oil may be used to advantage.

Washbasin on Running Board of Automobiles

Valuable Automobile Accessory.

An invaluable accessory to automobiles, a wash basin attached to the running board. This and other novelties for automobiles are being shown in London.

New German Engine Will Burn Pulverized Coal

A new internal-combustion engine has been developed in Germany which operates upon pulverized coal or oil. It has been also run satisfactorily on fuels made of dust of peat, rice husks and meal. The motor can be switched from coal to oil without stopping operation. For coal operation the pulverized dust is drawn into a chamber adjacent the firing cylinder, compressed by air and then forced into the explosion chamber. The engine starts without other fuel than its powdered coal.

AUTOMOBILE HINTS

The motor car 125 feet long may be practicable if the back-seat driver is thus eliminated.

* * *

The only thing more irritating than a "no parking" sign is seeing another car parked there regardless.

* * *

An Englishman is going to put gunsights on his car to steer by. What are us pedestrians gonna do now?

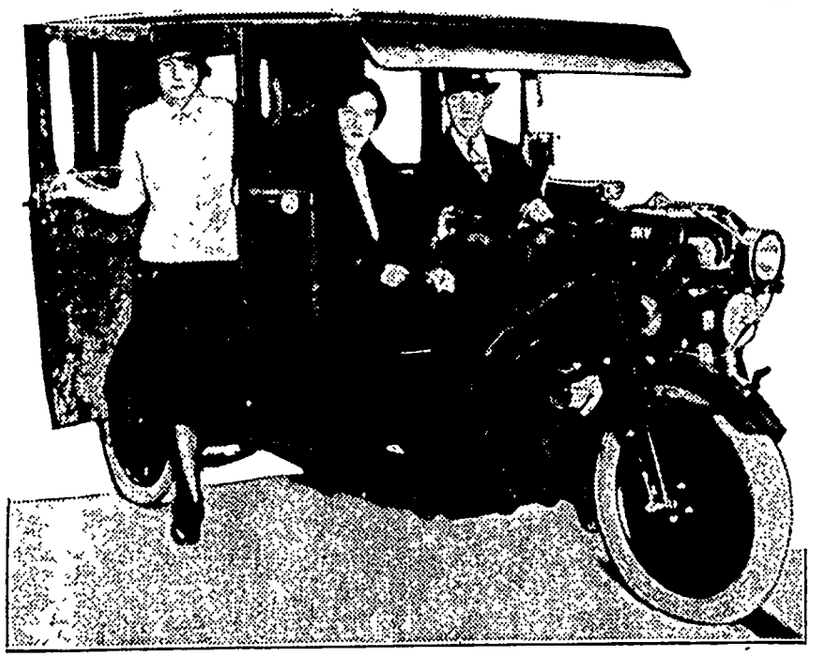
* * *

Doctor Hornaday is of the opinion that monkeys and apes have a positive talent for profanity and abusiveness. Given half a chance they might even learn to hog the highway in a motor car.

* * *

There are 90 firms engaged in the production of motor vehicles in France. Two hundred and five thousand passenger cars and trucks were turned out in 1925, the most successful year in the history of the industry.

NEW GERMAN "COUNTRY TAXI" SEATS FOUR



New German "country taxi" which seats four inside and two with the driver. This vehicle was shown at the Olympia Motor Cycle exposition in London, and sells for about $725. The cycle developed six horse power.

Economical Basis for Dairy Ration

Superior Feeding Value of Legume Hays Has Been Known for Years.

(Prepared by the United States Department of Agriculture.)

For 2,000 years agriculturists have recognized the superior feeding value of legume hays, yet, today, says J. R. Dawson, senior dairy husbandman of the bureau of dairy industry, United States Department of Agriculture, only 41 per cent of the hay grown in the United States is legume hay. Furthermore, he says, in the North Central and North Atlantic states, which contain 66 per cent of all the dairy cows in the country, the farmers grow two tons of nonlegume hay to one of legume hay. These statements are made in Farmers' Bulletin 1573-F, "Legume Hays for Milk Production," recently issued by the department.

Grow and Feed More Protein.

"If dairymen would grow and feed more protein in the form of legume hays, their feed bills would be reduced materially," says the author, who gives some interesting data comparing legume hays with timothy in yield of protein and other nutrients.

During 1927, according to figures in the bulletin, the average acre of alfalfa yielded 2.79 tons of hay per acre, clover 1.75 tons per acre, and timothy 1.43 tons per acre; the average acre of alfalfa produced almost seven times as much digestible protein, more than twice as much total digestible nutrients, and fifteen times as much lime as did timothy.

Timothy and Alfalfa.

"In other words," says Dawson, "15 acres of timothy would have to be grown, harvested and fed to produce as much lime as one acre of alfalfa. It would require approximately seven acres of timothy hay to produce as much crude digestible protein as one acre of alfalfa.

"When the price of alfalfa is around $12 a ton it will furnish 100 pounds of digestible protein for $5.65, whereas from timothy hay at $11 a ton the same amount of protein costs $18.85. Even when compared with the high protein concentrates, such as linseed meal and cottonseed meal at $47 to $50 a ton, alfalfa compares favorably in cost of protein. The cost of the dairy ration may be reduced materially by supplying a portion of the protein with alfalfa hay or some other legume grown on the farm. The legume that can be most practically produced on a given farm is the one that should be given first consideration."

A copy of the bulletin may be obtained by writing to the United States Department of Agriculture, Washington, D. C.

Desirable Degree of Pruning Will Differ

Pruning the newly set tree is primarily for the purpose of reducing the evaporating surface of the tree until new root growth becomes established to supply adequate water. Incidentally also, it may serve in starting a proper framework, or branching system. The degree of pruning which is desirable differs with the species. Trees like the peach, which start new branches readily from the central trunk but the twigs of which tend to dry out badly, should be cut back most severely. Trees like the sour cherry, which does not start growth readily from the dormant buds on the older parts but which makes its new growth from the active buds near the terminals of its branches, should be pruned least.

Lettuce Is Ideal Crop for Frame Gardening

Lettuce is an ideal crop for frame gardening. It may either be matured in the frames or the plants may be started there and later transferred to the garden. An extra early crop may be grown like this: Plant the seeds in a flat box in the house, if a hotbed is not available, harden off the plants gradually and transplant to the frames about ten inches apart just as soon as safe. For a later crop, plant in the frame and thin to stand about the same distance apart in the row. The plants that are thinned out of the frame may be transplanted to the garden if the weather permits. Big Boston is a good variety for frame culture.

Agricultural Hints

Sheep must not get their coats soaked to be dried with their body heat.

* * *

High production is important, but hand in hand with it should go careful marketing.

* * *

Many farm tasks can be done more cheaply during the winter than on the more expensive time during the cropping season.

* * *

Careful selection of the ewes to insure more uniformity in type, breeding, form and fleece will result in a better wool and lamb crop next year.

* * *

Sheep have stricter habits than other animals. If the habits of the shepherd are regular, they know the time as well as if they carried an eight-day clock.

Harold's Mother Knew Answer

"Yes, sir, I am certainly proud of my little boy," says Mrs. H. M. Smith, 421 Topeka Ave., Topeka, Kansas. "He's five and weighs fifty-seven pounds. He's the picture of health as you can see, and I feel like he'll always be that way as long as I can get California Fig Syrup. I have used it with him ever since he was a year old. I knew what to give him for his colds and his feverish, upset spells because Mother used California Fig Syrup with all of us as children. I have used it freely with my boy and he loves it. It always fixes him up, quick."

In many homes, like this, the third and fourth generations are using pure, wholesome California Fig Syrup because it has never failed to do what is expected of it. Nothing so quickly and thoroughly purges a child's system of the souring waste which keeps him cross, feverish, headachy, bilious, half-sick, with coated tongue, bad breath and no appetite or energy as long as it is allowed to remain in the little stomach and bowels. Fig Syrup gives tone and strength to these organs so they continue to act as Nature intends them to do, and helps build up and strengthen weak, pale and underweight children. Over four million bottles used a year shows its popularity. The genuine, endorsed by physicians for 50 years, always bears the word "California."

Name Made Famous

In the early days in this country schoolhouses were small and usually painted red. It is explained that red paint was especially cheap. So many men and women who ultimately attained distinction began their education under these modest conditions and later delighted to pay honor to "the little red schoolhouse" that now the phrase has become a figure of speech.

Will Cold Worry You This Winter?

Some men throw-off a cold within a few hours of contracting it. Anyone can do it with the aid of a simple compound which comes in tablet form, and is no trouble to take or to always have about you. Don't "dope" yourself when you catch cold; use Pape's Cold Compound. Men and women everywhere rely on this amazing little tablet.—Adv.

Long Chicago Street

Western avenue, with a length of 23½ miles, is considered Chicago's longest street.

That Million-Dollar Feeling

"You're looking happy today, Mr. Brown. Someone leave you a million dollars?"

"No, Louie, but I took NR last night and I feel like a million."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

NR TO-NIGHT TOMORROW ALRIGHT

MAKE THE TEST TONIGHT

BE WELL 'n HAPPY

Get Relief. *Drive Out the Poisons*

Auto-intoxication, Constipation, Biliousness, are caused by defective elimination. For over thirty years Nature's Remedy (NR Tablets) has proven the safe, dependable relief for these conditions.

GET A 25¢ BOX — SOLD BY YOUR DRUGGIST

Negro Dialects

"Lost Spirituals" explains that there are two separate and well defined negro dialects in Charleston. One is the Gullah tongue, spoken by negroes from the West coast of Africa and their descendants; the other, the speech of negroes brought into South Carolina from other colonies and later from other states. These dialects are gradually becoming merged.

The Ideal Wife

"Does he love her?"

"Say, if she lost her voice he'd give up everything to help her find it."

In Tampa, Fla., police are ordered to ascertain whether or not a couple are married before they reprimand them for getting in automobiles.

Early Shorthand Forms

Godfrey Dewey, in a monograph on shorthand, says: "Abbreviated writing to take down lectures and also for the preservation of poems recited at the Pythian, Nemean and Olympic games was practiced by the early Greeks and there are specimens of ancient Greek notae or shorthand in the Vatican library at Rome, the Bibliotheque Nationale, Paris, and the British museum."

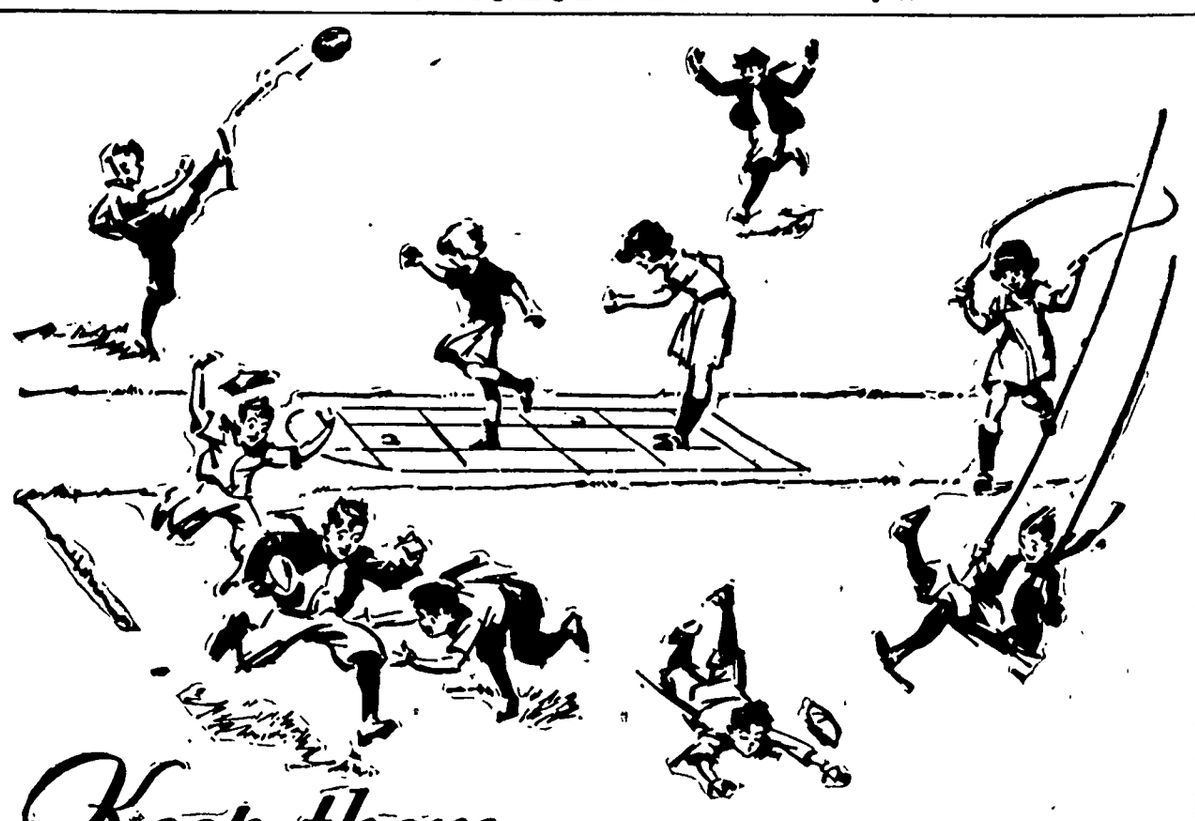
Too Many!

He (under the mistletoe)—Have you ever kissed a man before?

She (ditto)—Y-yes.

"Tell me his name so that I can thrash him."

"But—but—he might be too much for you."



Keep them strong-healthy and happy

ALL children like Karo because it's so delicious and satisfying to their youthful craving for sweets—

But parents now learn from leading doctors that Karo is more than a delicious syrup—

"It is the *IDEAL energy food* for growing children!"

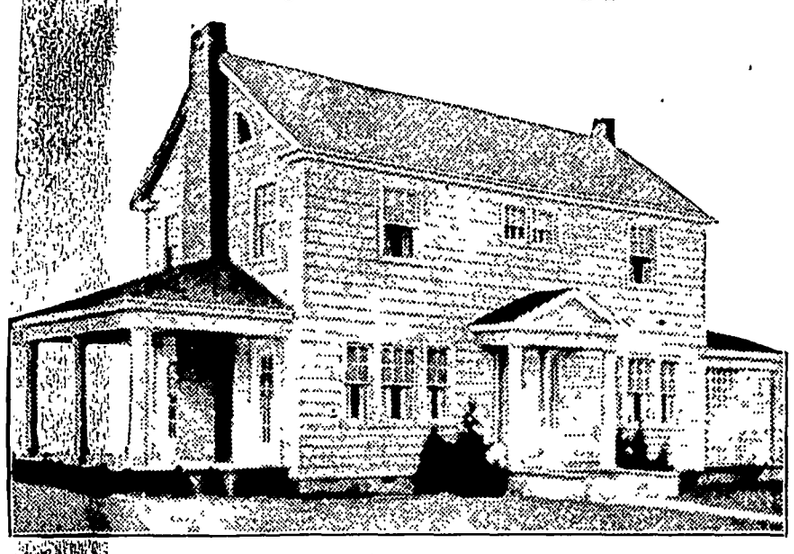
Because there are 120 calories in each ounce of Karo—nearly twice the energy value of eggs and lean beef, weight for weight—

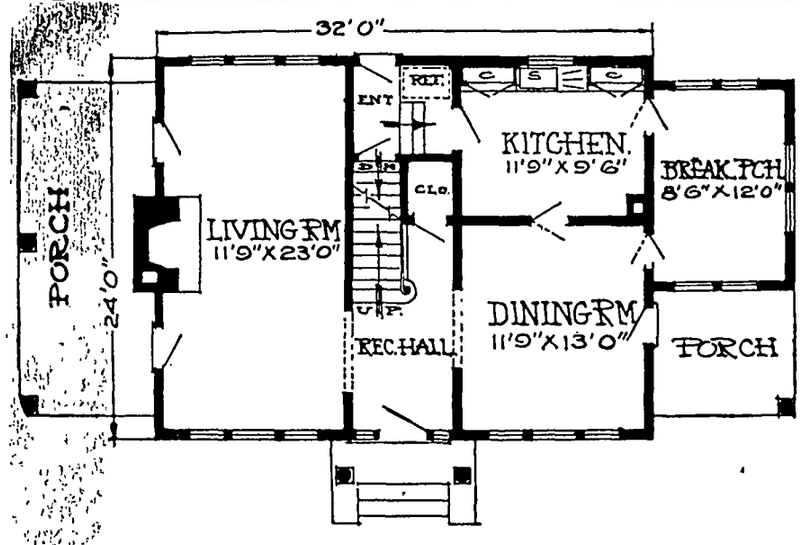
And because Karo is so easily digested—supplying *quickly* the muscular energy growing children need daily.

Serve plenty of Karo to the entire family—keep them strong, healthy and happy.

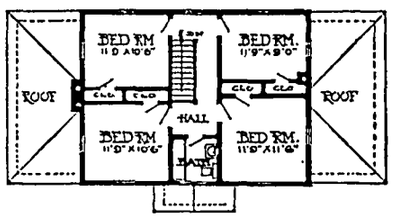
DELICIOUS ON SLICED BREAD

ew England Colonial Style Always Wins Full Appreciation





First Floor Plan.



Second Floor Plan.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

A true New England colonial design is one that is always appreciated. This style has maintained its popularity through the course of many years and will probably always endure. For this reason the house illustrated here will appeal to many families who are seeking a design for a real home of their own. It is a true New England colonial in every feature.

This is a seven-room house with a breakfast porch which, to all purposes, is really an additional room. In true colonial style, the front entrance leads into a central reception hall with arched openings at either side admitting one to the living room and dining room. The former occupies one entire end of the building. It has a large fireplace, served by the outside chimney seen in the exterior view. Two doors open from it onto the open porch which, placed at the end of the house, is entirely separated from the entrance.

The kitchen is at the rear of the dining room and doors open from both dining room and kitchen onto the completely enclosed breakfast porch. Adjoining the kitchen there is a rear entryway which provides space for the refrigerator and gives access to the basement stairs. The reception hall contains a large closet to receive coats and wraps.

Upstairs there are four bedrooms, each with a large closet, placed at the four corners of the house. All these bedrooms are of about the same size, a size which is most adaptable to the usual requirements, and all are provided with good cross ventilation by windows on two sides. The bathroom is placed where it is easily accessible from all the bedrooms and it contains two windows which afford most satisfactory lighting.

New Lavatory Models Improved in Design

Beyond the element of color, three departures mark the newer models of lavatories. One of these has to do with design. The style factor has entered the bathroom and one can obtain lavatories which harmonize in form with both bathtubs and closets. An agreeable unity is given to the bath when these three fixtures show a harmony of line.

Fittings also distinguish the newer lavatories. Most of the exposed area of the fittings on top is covered with china. This eliminates need for keeping metal cleaned or polished. A chromium plating is also used; this retains a permanent luster. Design has been improved and fittings are available in hammered brass, bronze, gold plate and copper finishes, including panels.

The sphere of usefulness of the lavatory has been extended through the combination with it of a dressing table. These models have roomy tops, 36 inches long and 20 inches wide. Oval bowls are 19 by 12 inches. Support is given by strong wall hangers and legs of clearest crystal with metal caps. They are equipped with special fittings that harmonize with the lavatory design.

Enameled iron lavatories range in price from $15 to $150. Those of vitreous china run up to $1,000; they are made by the same process that is used in making the finest tableware. Acid resistance is given to them by a finish of potters' glaze. This quality is also given to those of enameled iron by the use of a special acid resisting enamel.

ootings Must Run Below Frost Line

Footings must be run below the frost line. Otherwise the action of frost beneath them may crack the wall. In a compact soil such as clay it is more necessary to get well below the frost line than in loose soil such as sand and gravel.

Fireplace Location

On entering a living room, a fireplace appears at its best when it is at the far end of the room. For practical reasons also, this has the advantage of avoiding the drafts that are so frequently noticeable to persons sitting around a fire which is located near a doorway or open stairs.

Making Things for Home Is Real Fun

Half the fun of home ownership is in the completion of the home, for a home is just started when the builder turns it over. When a home is finished, when there is no spur to add further refinishing details, beware—this is a danger signal.

Making things with your own hands and a few simple tools is fun. Probably the first thing to do is to make ready a workshop, usually in the basement. Electrical wiring to supply light, heat and power to the work bench, the bench itself and tool cabinets are the requisites. A good list of tools includes the following: Claw hammer, cross-cut saw, miter-box and backsaw, compass, saw, jack plane, wood chisel, rachet bit brace, auger, screw driver, wood rasp, pliers, draw knife, iron vise with sandpaper, assorted wire and finishing nails and screws and chip glue.

It is hardly necessary to suggest items to be made, as each home has special requirements, but a few standbys that can be named are bookcases, planned to fit a given location; window boxes, decorative shutters, built-in seats and lawn furniture.

Graduated Blend Good for Dignified Rooms

Among the several varieties of glazing and mottling, there is no finish more attractive than the graduated blend. A single color may be used over a plain background, or harmonizing colors such as red and yellow.

The color is always deeper and more intense near the bottom of the wall, fading out gradually toward the ceiling. Where dignity and distinction are required, the Tiffany blend is especially appropriate.

Limestone as Veneer

Use of limestone in the new shot-sawed finish as a veneer for all sorts of moderate-priced construction is an interesting development in construction. Random ashlar stone is sawed into four-inch strips at the quarries and shipped direct to the job. There it is jointed with an ordinary buck-saw or electric carborundum saw, when stone masons or bricklayers lay it up in the wall. Facing a residence in this manner will cost from 5 to 6 per cent more than if other materials are used.

FARM STOCK

DAMAGED CORN IS GOOD SWINE FEED

Convert Grain Losses Into Profits Best Plan.

Feed damaged wheat, oats, rye, or corn to hogs, and convert your grain losses into pork profits, advises Prof. R. B. Hinman, of the animal husbandry department at the New York State College of Agriculture. If the injured grain is fed carefully, hogs will receive as much nourishment from the damaged grain as from good grain, Professor Hinman believes.

Corn that has been frosted before the grain was mature is a good feed for swine. The dry matter in soft corn equals that in mature corn pound for pound.

Ground wheat of good quality is of about the same value as corn for swine feeding, says Professor Hinman. Salvage wheat and shrunken wheat cost little, and if the wheat is not shrunken too badly, it may equal sound wheat or barley in food value. Salvage wheat which has been damaged by fire varies in food value, depending upon the extent of the injury by smoke and charring. The ration should be carefully balanced when damaged wheat is used. The wheat should be ground and a protein supplement similar to that fed with corn should be used, though in a slightly lower proportion.

Although even good quality rye has a slightly lower feeding value than wheat, corn, or barley, it may be fed to swine if carefully supplemented with a protein mixture and mixed with corn or barley to increase its palatability, according to Professor Hinman. "Feed the rye coarsely ground or rolled," he advises, "and do not use rye which has been contaminated with ergot."

If damaged oats are used, they should not make up more than one-third of the ration, and less is advisable. Do not feed damaged oats to brood sows at farrowing time and during the suckling period, warns Professor Hinman. Feed damaged oats in small proportions to stock which is growing while fattening.

Pigs Will Root Much if Tankage Is Lacking

Rooting is simply an effort on the part of the pig to find something in the ground, that his system requires which is not supplied in his feed. This may be overcome to a great extent by adding tankage to their feed. Also let them have access to a mineral mixture of 20 pounds each of finely ground limestone and steamed bone meal and 1 pound common salt.

Rings may be put in at any age after weaning. A little corn may be fed at any time after weaning, gradually increasing as they get older, giving them all they will clean up as the time approaches for marketing.

Sheep Protection

When the cold winter rains come it is much better if you can shelter the flock while the rain is falling. You will have fewer running noses, if you can keep them dry. Nothing is harder on sheep than for them to get thoroughly soaked with rain and then be chilled by freezing weather. Dry cold doesn't hurt them if they are healthy and in good flesh. One may be sure a little grain all winter is much better than to wait until nearly lambing time and then feed heavily because they are thin and weak.

Live Stock Notes

Experiments show that there is nothing gained by grinding corn for pigs.

* * *

Rye furnishes a good pasture for hogs during the fall, winter and early spring months.

* * *

Brood sows that have rye pasture during the winter will farrow stronger and more thrifty pigs.

* * *

When hogs are turned into the cornfield to harvest the crop, temporary fencing should be used to confine them to a part of the field rather than giving them the run of a large field.

* * *

Suckling calves intended for baby beef will begin eating grain when they are four or five weeks old. Grain can be fed most conveniently in self-feeders placed inside a small pen or creep.

* * *

Pigs should have all the corn and tankage and oilmeal they will eat if you expect them to make satisfactory gains.

* * *

Take equal parts of oilmeal and tankage, mix and then feed one part of this mixture to nine parts of corn or corn and oats.

* * *

A common saying among sheep men is, "A sheep that can't grind its feed isn't worth feeding." This is another way of saying that it doesn't pay to grind-feed for sheep.

Identification by Ear Is New Proposition

Although the fingerprint system of identifying criminals is almost infallible, there is always one uncertainty in its use—the ability of a criminal to leave a false set of prints made with rubber stamps.

Because of this there is a possibility that before long the fingerprint system may be replaced in official favor by the shape of the ear. Paris police are reported to be working out systems of classification and description. No two human ears of exactly the same shape have ever been discovered, and their shape cannot be altered surgically without leaving telltale marks.

Whereas fingerprints cannot be taken except by force or by the individual's consent, ears can be studied and even photographed without the knowledge of the possessor.

Ear photographs may soon be filed systematically and referred to at need, in a similar manner to fingerprints.

Mrs. Bell Tells Her Friends of Her Narrow Escape

"Something over a year ago I had the flu, which left me with a very bad cough which kept getting worse all the time, until I could not lie down at night. If I attempted to lie down I would cough all night and choke up so I would have to sit up in bed. This continued until I got so weak I could not walk across the floor, and every night I thought would be my last. I became so thin that my hands would meet around my legs. My doctor said that my lungs were affected and I was in a desperate condition.

"Finally I read about Milks Emulsion and started to use it. I have now taken it about three months and I am entirely recovered. My cough is gone and I have taken on flesh and strength, and I thank God that I found Milks Emulsion.

"I have spread the good news among all my friends and there are five of my immediate neighbors taking it, and they all say it has done them so much good. Yours truly, MRS. K. BELL, 1640 Bergen St., Brooklyn, N. Y."

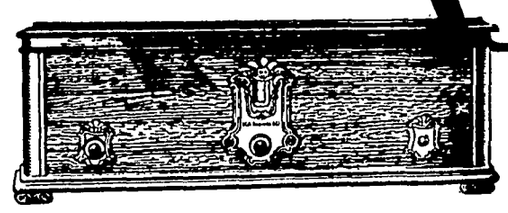
Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Use for Pear Juice

Some years ago a South African inventor claimed to have obtained a "new motor spirit," obtained from the juice of prickly pears, and said the fuel had propelled a six-cylinder car 22 miles on one gallon without special carburetor adjustments.

The young long to be happy; the old wish to be wise.

RADIOLA 60



-for thousands of hours of enjoyment

Product of three great companies —RCA, General Electric and Westinghouse. Very compact. Expertly designed and built of the finest materials for long life and high quality performance. Single dial—just plug it in on your lighting current.

$147 *(less Radiotrons)*

Any Radiola or RCA Loudspeaker may be purchased on RCA Time Payment Plan from your local RCA Dealer.

RCA RADIOLA

MADE BY THE MAKERS OF THE RADIOTRON

Oldest Canadian Town

Samuel de Champlain sailed up the St. Lawrence river in 1603 and the following year he had a share in founding the first permanent French colony in North America, that of Port Royal, now Annapolis, Nova Scotia.

Believes in Marriage

"Chicago Wife Sues for Seventh Divorce." She evidently believes in marriage.

Troublesome Spider

The name "tarantula" is generally applied in the United States to a certain species of large bird spider. It has a bite which is painful but not dangerous, and very seldom fatal, so far as accurate records show.

They're the Hottest

"How did you enjoy your stay at the beach?"

"Fine, after the first tan days."

How Do You Buy Your Fuel?

The wide range of fuels on the market calls for the greatest care in selecting a fuel for your home. Study your requirements and see if your fuel measures up to these standards:

1. *Most Heating Value*
2. *Flexibility* —for all kinds of weather
3. *Cleanliness of Use*
4. *Few Ashes*—to avoid waste
5. *No Smoke or Soot*
6. *Economy*—of first cost and use
7. *Reliability*
8. *Service*—to assure satisfaction
9. *Responsibility* —of the manufacturer
10. *Guarantee*

Genuine

KOPPERS CHICAGO COKE

"Clean as the Sun's Heat"

contains all the advantages of the best domestic fuels without any of their disadvantages. Hotter—cleaner—better—and it costs less.

Ask Your Dealer

to supply you with this superior fuel. Demand the genuine—ask for it by full name.

GUARANTEED

We guarantee genuine Koppers Chicago Coke. If a trial order does not convince you that it is to your advantage to heat your home with this fuel, it is removed at our expense and your money refunded.

Mr. and Mrs. John Newberger at-

Mr. and Mrs. Herman Back and family were entertained at the Herman Thiemann home Sunday.

Alvin and Edwin Thiemann visited at the Jake Tebben home Sunday evening.

Mrs. John Bock spent Tuesday at the Fred Bell home assisting with the work.

Mrs. Wm. Schlawin visited at the Werner Schlawin home on Saturday. Little La Vohn, daughter of Mr. and Mrs Werner Schlawin, who has been seriously ill with the flu, is rapidly recovering her strength.

John Newberger's dressed seventy-eight ducks last week Thursday. Those present who helped with the "ordeal" were Mrs. Wm. Waddingham and daughters Belle and Doris, Albert Tanner and Walter Newtended the funeral of Mrs. Newberger's uncle, Mr. Pringnitz, which was held Tuesday.

George Thieman's dressed ducks and geese on Monday. Fifty-three fowls were dressed. Those helping were Mr. and Mrs. Henry Thieman, and Viola, Mr. and Mrs. Herman Thiemann and Alvin, and Edward Josten. On Tuesday the same ordeal was gone through at the Henry Thiemann home, byt the same group of people.

Alvin Thiemann, Walter Merkel, Ezra Tebben, William Newberger, Arthur Tibbits and Carshen Christians were all on a rabbit hunt last Thursday. They succeeded in killing thirty-three rabbits. They sold the rabbits and bought oysters, and the losing side bought the crackers. On Friday evening they enjoyed an oyster supper at the home of Alvin Thiemann.

County Red Cross Meeting

A Red Cross meeting will be held at Garner Monday p. m. at Legion Hall. Anyone who is a member is invited to attend and may have the privilege of voting. All who can are urged to come.

DOINGS AT SCHOOL THIS PAST WEEK

KLEMME FIVE WINS GAME WITH CORWITH HIGH SCHOOL

Shamrocks Will Invade County Seat Next Tuesday Evening

Our basket ball team was victorious in the game with Corwiht on our own floor Tuesday evening of this week. The game ended 40 to 25 in our favor. It was not an easy game as the score would indicate. The Corwith boys are a scrappy five and had our lads not been alert they would easily have started on a rampage.

To save their voices a number of our students supplied themselves with bells and horns and other devices for making the necessary racket, and racket it was. It actually frightened some of our players, we believe, for they just tore into the game. Those who thought it too cold mised a lot of hilarity.

Will Play Garner Tuesday Eve

As yet we have no game scheduled for Friday evening but play Garner at Garner on next Tuesday evening.. We wish everyone except the babies and grandparents from Klemme would put aside their work and go to the County Seat on next Tuesday evening. We need their noise and encouragement and with it we should win. A fine winter evening will be ordered for the occasion and no one should get frostbitten while making the trip.

Anothe Game Next Week

We shall meet Crystal Lake on our own floor on Friday night of next week. The game should be ours but Crystal Lake has a fast team.

Faculty Enjoys Dinner

The faculty and janitor were the guests of Mr. and Mrs. A. D. Gimer on Monday evening of this week where they were treated to a sumptuous dinner. We had a very pleasant time and appreciate the courtesy extended us.

Semester Examinations Now

Semester examinations are the order this week as this week marks the close of the first half of the school year. Most all of our students seem anxious to make their credits and we hope none fail but it may be expecting too much. If none fail it might seem that the work has been too easy for a considerable number.

P. T. A. Next Thursday Night

On Thursday night of next week our January program of our local P. T. A. will be given. There will be some special music, piano and vocal, possibly a male quartett, and a talk by Rev. Whyte. Some of our students will be asked to discuss the value of certain high school courses being offered in our school. We believe this may be of interest to some. Parents should come prepared to oer sfuggestions as to what they prefer taught in our school if they have any convictions in the matter. Unless they express themselves neither the superintendent nor Board knows what the people want taught. What should govern in the selection of subjects to be offered in such a school as ours? Should we prepare all for college entrance or should we prepare students to go directly to work? Should we, at additional outlay, offer stenography and typewriting? Should we discontinue instrumental music or reduce the time devoted to agriculture?

Declamatory Contest Jan. 29

Miss Trumbell is at present the busiest member of our faculty carrying on her class work, which is not by any means light, and coaching for our local declamatory contest here some 18 or 20 boys and girls who are seeking the honor to represent Klemme High School at the County and State contests which follow. It speaks well for our high school to have so many students with the ambition and courage to try their ability along this line. They are to be commended and so are their parents who have given them the necessary encouragement. We believe every young person acquiring an education should strive to make improvement in his ability to impart hs knowledge and information. To stand before an audience with grace and ease and speak with force and conviction is an art men are not born with. It must be acquired through practice and the sooner that practice is begun the more easily the art is acquired.

Our speakers are making the halls resound with their practice for the local declamatory contest to be held here on January 29. We hope nothing interferes with all coming to hear them on this date.

Winter And Attendance

We appreciate the difficulty some parents and children will have this cold, snowy, winter weather to keep our records good here for attendance and punctuality. We are very grateful that so many of our students are here so regularly and so promptly. To their parents are due no small amount of the credit. On some days a child should remain at home. Health should not be sacrificed for knowledge and a feverish child should not risk his or other's health by coming to school. Children with severe colds should be given a chance in the home to recover from it. Flu and pneumonia begin with colds. Overcome the cold and much of the winter's illness will be avoided.

HANCOCK COUNTY REAL ESTATE TRANSFERS

A Weekly Review Of Sales And Trades In Property

H. D. Foster wife to F. B. McConnell. Q. C. D., date 1-5-29, $1, E½ lots 7-8 block 11, Brown & Hills add Britt.

LIBERTY TOWNSHIP NEWS

Mr. and Mrs. Floyd Franklin were Garner visitors Thursday.

Miss Fern Stille spent Sunday with the home folks.

Miss Lydia Beier visited at the Roy Schaefer home Wednesday.

Mr. and Mrs. Ed. Buentenbach and children were Sunday guests at the Martin Jensen home.

Louie Knoke trucked a load of hogs to Mason City Tuesday for Art Schoenwetter.

Mr. and Mrs. Emil Beier visited with Mr. and Mrs. Reimer in Garner, Tuesday.

Martin Jensen has been confined to his bed with one of his old attacks, but is better at this time.

Mrs. Roy Schaefer and daughter are both sick with the flu this week, but most families in this locality are pretty well over with it.

There were no church services in the Liberty Church Sunday due to bad roads, cold weather, and sickness more or less among the members.

Mrs. Albert Carolus, Fred and Alice went to Lake Cornelia Tuesday to visit the Jake Ter Hark family. The baby is in a very critical condition at this time and we hope to hear more favorable reports soon.

Goodell News

(By Special Correspondent)

Ed. Hemenway was a Belmond caller Thursday.

Tom Roths delivered hogs to Mr. Dawson at Goodell Saturday.

Earl Finn was assiting Mr. Salling drive the cream truck last week.

Johnny Meinders has started to move onto the Mrs. Medau farm.

C. A. Larsen was buying stock in this vicinity Wednesday.

Truman Nelson has been ill with the flu the past week.

Mr. and Mrs. Gruise of Meservey are the new tenants for Virgil Cook.

Harry Carpenter is recovering from the flu.

Mike Kearney and Fernon Griggs were Meservey callers Monday.

Mr. and Mrs. Jay Buchanan attended the dance in Belmond Saturday night.

Water is now being pumped at East Twin Lake for the protection of the fish.

Since the recent blizard, the snow drifts are so high that the roads are impassible on the side roads.

Mrs. Virgil Cook received word that her father, Mr. Harrick, in California is very ill.

Mrs. Anson Avery and baby Lois Ann returned from Hamptom hospital Saturday.

On account of illness and bad roads, the Sunday school attendance in the U. B. Church was very small Sunday.

A crew of men were shoveling snow Monday on the road between Meservey and Goodell so cars can get through.

The many friends of Nels Anderson were sorry to hear of his death which occured Sunday. He has been sick for such a long time that his death was not unexpected.

On account of the roads being blockaded by the snow drifts, the Belmond telephone linemen were compelled to walk five miles northeast of town to repair telephone lines.

The "Never-Sweats" say Mr. Wm. Lau has predicted the weather to perfection so far this winter. Mr. Lau predicted a mild open winter and the "Never-Sweats" were greatly alarmed, thinking that the winter would be so mild and balmy they might be compelled to all move to Northern Minnesota in order to live and be loyal to their order.

TUESDAY BIGGEST JANUARY DAY AT CREAMERY

All Former Records For Volume Broken That Day

A. D. Gimer, manager of the Klemme Creamery gives us an item that is of interest, and shows that the farmers are going in more and more for dairying each year.

Tuesday all former records for the month of January of any year were broken in the amount of cream handled. So much cream was taken in Tuesday that it required four churnings, but as the local creamery has plenty of up to date equipment the big run was easily taken care of.

Satisfied Customers--

Are Our Best Advertisement--

Twenty-one years ago a young and his wife purchased a full equipment of Home Furnishings at Wellemeyer's—as they paid us and hauled the new furniture by team and hay rack, over rough Main roads, to their farm home. After a few years these good people moved far away, and we did not hear from hem again until this week when their grown daughter called at our store.

The daughter introduced herself as her "Boy Friend." "Seems like I ought to know this place," said the daughter, "the first coat ever purchased for me came from this store. It was a white bearskin and I know how good it did wear and when I outgrew the coat Mother dyed it blue and brother wore it several years.. But, what we really want is furniture. Dad and Mother were so well pleased with the furniture purchased from you years ago that we thought we would come and buy here too."

Thus it happened that these young people drove 26 miles, passing two furniture stores on the way, just to buy from a store where their parents had been well treated.

This week our furniture display room is bing filled and crowded with new furniture for your spring needs.

We invite you to call and make your purchases from this old reliable store where so many carloads of Furniture have been sold and so many customers pleased during the 22 years that we have served this community.

Wellemeyer Co.

Fresh Lake Pike
Fresh Herrings
Smoked Fish
Pickled Fish
Fresh Oysters

Let us serve you with MONARCH BRAND Groceries and Canned Goods. We handle a full line of Fresh and Cured Meats. Buy your Bakery Goods here.

Klemme Food Market

PIPE STEMS FROM DISTILLED COAL

Synthetic Products to Be Made in New Plant.

New York.—Raw materials for synthetic pipe stems, umbrella handles or cue balls, and for synthetic anti-knock gasoline are to be manufactured at a Pennsylvania steel mill. Synthetic furniture is predicted as a future development.

The announcement revealing this large-scale entry of a steel business into the by-products field comes from Coatesville, Pa., where the Lukens Steel company has ordered a large, low-temperature coal distillation plant, the first to be installed by an American steel mill.

This kind of coal distillation is new in the United States. One of its outstanding differences from other coal processes is that it produces about two and a half times the amount of tars from which synthetic resins are made. Chemistry has created a new series of articles of daily use from these resins. They include brilliantly colored pencils and pens, tiling for bathrooms, brightly colored tops and stoppers for all sorts of tubes and bottles, a large variety of radio parts and scores of electrical insulations for automobiles.

Dr. Walter Runge of the International Coal Carbonization company, which is installing the distillation plant, says it does not require an extravagant imagination to picture the manufacture of furniture, wainscoting and ornamental building material from coal tar.

Prediction that coal tars would provide materials for making outer walls of buildings in rainbow colors was made before the international conference on bituminous coal in Pittsburgh in November.

The gasoline made as a by-product from the low-temperature distillation of coal is said to contain 60 per cent more anti-knock qualities than that from other processes. It is sold for mixing with some petroleum gasolines.

The Lukens plant, for which ground will be broken early in 1929, will be built to distill 560 tons of bituminous coal daily.

Girl Earns $600 to Pay for Course in Flying

Fremont, Neb. — Nineteen-year-old Josephine M. Schaefer took an airplane ride during a Fourth of July celebration at Humphrey two years ago. That settled the career question for her. She would be a pilot.

Her father, Joseph Schaefer of Norfolk, didn't take so kindly to the idea. Josephine determined upon earning her own money to pay the tuition at a flying school. But jobs for young women were scarce.

The girl came to Fremont, tried several jobs and finally found she could make and save more money as a waitress. She worked twelve hours a day, every day until she had saved $600. With it she paid for a 50-hour course.

Josephine now is finding out that an ambitious aviation enthusiast spends many hours on the ground toying with valves and pistons before she goes aloft.

Her father relented and bought the girl flying togs.

1,100-Year-Old Saxon Cross Found in Abbey

Sempringham, England.—Part of a Saxon cross, said to be about one thousand years old, has been discovered half-hidden in the graveyard adjoining the ancient Abbey church.

The district is rich in antiquarian remains, many relics having from time to time been unearthed during excavations for land drainage where the village—demolished centuries ago—originally stood.

Sempringham is famous as being the place where St. Gilbert founded the only religious order of English origin, the Gilbertines. He died here in 1189 at the age of one hundred six.

Spanish Monarch Plays Lead in Moving Picture

Toledo, Spain.—King Alfonso of Spain was leading man in a moving picture of the recent royal hunting party on the estate of the duke of Pastrana.

He permitted a film to be made of himself and his companions, not only while they were engaged in bringing down game, but also during intimate moments of family life in the castle. A camera operator obtained several views of the king playing on the lawn with the duke's children.

Road Chief Suggests Law to Ban Billboards

Washington.—Thomas H. McDonald, chief of the United States bureau of public roads, calls attention to a need for legislation to eliminate billboards and other signs along the highways constructed by federal aid. "The complete effectiveness of standard signs placed along the principal transcontinental highways to aid motorists and insure their safety is hindred by advertising billboards so placed as to obscure them or withdraw attention from them," Mr. McDonald says in his annual report to Secretary of Agriculture Jardine.

BILLY GOAT CONSTANT PAL OF TRICK HORSE

Follows His Equine Idol Wherever He Goes.

Charleston, S. C.—For several years Moonbeam, a trick horse, and Bill, a bearded black goat of no particular ancestry, have been inseparable companions. The story of their friendship is the story of Bill's admiration for Moonbeam.

Once Moonbeam did Bill a service, and now Bill will sleep nowhere but in Moonbeam's stall. When Moonbeam takes their master, Dr. W. H. Price, for a ride, Bill goes along, and does whatever Moonbeam does. This is sometimes hard, for Moonbeam is an accomplished hurdler, which little Bill decidedly is not, and many times the goat has come to grief in his attempts to copy the actions of his equine idol.

It is a long story, and begins with Moonbeam. Several years ago, when his age was three, Moonbeam belonged to a farmer, and was known as "a mean critter, right enough." He had never been ridden nor driven, and the only way to enter his pasture with safety was first to drive him into his stall with rocks.

Bought by Doctor.

One day Doctor Price, who was then county inspector of meats, went to the country for a vacation and saw the horse. When he was told of the animal's vicious disposition he took a heavy club, entered the pasture, and when Moonbeam rushed forward to attack him struck him on the nose. The horse was so surprised that that afternoon he let himself be saddled and ridden, and Doctor Price bought him and made of him a well behaved animal, with numerous tricks in his bag, including kneeling at command and rolling over.

And now enters Bill on the end of a string held in the hand of a small boy with a tear-stained face. His father had told him he could not keep Bill, but must take him to the city slaughter house to be killed. Fortunately for Bill, the superintendent of the slaughter house was a kind-hearted man. He bought Bill and promised not to kill him.

For some time Bill dwelt unmolested in the slaughter house stable where Moonbeam had a stall all his own. One day in November, 1927, Bill broke a leg, and next morning was found lying in the corner of Moonbeam's exclusive stall, with Moonbeam guarding him from intruders. Even Doctor Price could not enter the stall until he had pacified the horse.

Lives With Horse.

In a few weeks Bill was well again, and every one supposed he would go out on his own. But no—he stayed with Moonbeam.

Bill had refused food before. Now he ate heartily, but only in the presence of the horse. How much he admired his equine benefactor was soon shown when Moonbeam was taken out to try some hurdles. The goat trotted alongside.

They came to the first hurdle and the horse went over easily. Bill stopped short, eyed the fence, and then, with a mighty standing leap, came within inches of the top, but crashed back to the ground. Native cunning prompted him to run around the hurdle and catch up with Moonbeam, but he had learned the trick and cleared the next hurdle by inches.

Then Moonbeam did his stunt of kneeling, and Bill promptly knelt beside him. Moonbeam rolled over, and Bill instantly did the same, and got his horns stuck so fast in the sand he had to be helped to his feet.

Nowadays the two share a stall on their master's estate on Jolly island, a fashionable suburb of Charleston. The islands is full of goats running at large, but Bill never even bats an eye at them. His one and only interest is Moonbeam. So content is he that when it becomes necessary to take the horse out alone Bill has to be tied in his stall, where he whimpers until Moonbeam is brought back again.

Page and Half Written by Dickens Bring $9,000

Philadelphia.—A page and a half of the original manuscript of Charles Dickens' famous "Pickwick Papers" brought $9,000 at an executor's sale of books and historical documents of the collection of George W. Childs, publisher, who died in 1894.

On the faded yellow paper, still well preserved, is the conclusion of the sixteenth chapter of the story. The paper is signed "Charles Dickens" and "Boz," one of his noms de plume, and dated 1838. It was purchased by Charles Sessler, a collector.

Artificial Legs in Shop Windows Menace Morals

London.—Artificial legs for the display of silk stockings in shop windows are a menace to public morals, in the opinion of Rev. P. Y. Knight, vicar of the village of Ryehope, near Sunderland. When the vicar gazed upon a display in the shop of the local draper, he paid the draper the price of the legs, on condition that they be taken from the window and burned.

And Kept It Up

New York.—Women start to outtalk men early. Tests made by a member of the faculty of Columbia on kindergarten pupils show the girls do two-thirds of the conversation, whether their parents are from East side or West side.

TWO RIBBONS MARK LINCOLN'S BIBLE

Did Chance or the President Place Them There?

Washington.—Was it chance that left two white silk ribbon markers at passages particularly appropriate to the stress of the Civil war in the Bible upon which Abraham Lincoln took the oath of office, or did the hand of the President himself place them there?

The book is now in the permanent keeping of the Library of Congress. It was placed there last spring by Mrs. Robert Todd Lincoln together with the old family Bible of Abraham Lincoln and the gold medal presented to Mrs. Lincoln by the citizens of France after President Lincoln's death.

It is a small book with red plush covers and gilt-edged leaves.

The two markers were left at the thirty-first chapter of Deuteronomy and the fourth chapter of Hosea. Both chapters contain verses particularly appropriate to the dark days through which Lincoln passed soon after taking the oath of office.

The sixth verse of the first named chapter reads: "Be strong and of good courage, fear not nor be afraid of them, for the Lord thy God, He it is that doth go with thee, He will not fail thee nor forsake thee."

The first three verses of the fourth chapter of Hosea, where the other marker rests, are as follows:

"Hear ye the word of the Lord, ye children of Israel, for the Lord hath a controversy with the inhabitants of the land because there is no truth nor mercy nor knowledge of God in the land. By swearing and lying and killing and stealing and committing adultery they break out and blood toucheth blood. Therefore, shall the land mourn and every one that dwelleth therein shall languish with the beasts of the fields, and with the fowls of heaven, yea, the fishes of the sea also shall be taken away."

Open Hall of Fishes at American Museum

New York.—The American Museum of Natural History has opened a hall of fishes, where visitors may see for themselves the records that cause scientists to believe that possibly land animals once came from the sea.

A few fishes living today have true lungs by which they breathe even after the water in which they live has dried up. Specimens of these fish are on exhibition, with four legs in the shape of paddles, which are the equivalent of fore and hind legs of land animals. The theory, is that these fish belong to long-past ages. They come from Australian and African waters and are named lung-fish.

The exhibits grade fish, showing in the highest types the fighting tarpon and trout, whose ability to escape after being hooked furnishes one of the chief pleasures of anglers.

The great predatory fish of the oceans and the world's most beautiful water inhabitants are shown in reproductions that depict their natural actions. Models show how fish swim, how some possess marvelous mechanisms for transmitting slight changes in water pressure to their interior balancing organs, how they breathe, build nests and protect their young.

3 Belted Kingfishers Seen at Grand Canyon

Grand Canyon, Ariz.—The Grand Canyon National park recently received a visit from three belted kingfishers, a species that previously was unknown among the bird life of the park. The three birds were observed by park employees along the Bright Angel creek on the north rim of the canyon. Their occurence in this region indicates that they followed the torturous path of the Colorado river through a semiarid region where it must have been a difficult matter for even their sharp eyes to perceive food in the muddy waters. Bright Angel creek with its clear water, trout and native minnows afforded an excellent resting place for these traveling avian fishermen.

Art Center

New York.—The art center of the United States is Aurora, Ill. That is the deduction of officials of the Grand Central Art galleries from per capita ownership of masterpieces.

Seek to Grow Fruits, Gardens in Labrador

Amherst, Mass.—Prof. F. C. Sears, head of the pomology department of Massachusetts Agricultural college, who spent the summer in Labrador, investigating the possibilities of increasing the production of food plants, recently told of his observations concerning the agricultural problems of the country. The trip was made at the invitation of Sir Wilfred T. Grenfell, who is particularly anxious to introduce fruits and a greater variety of vegetables.

As a result of Professor Sears' visit, plans are being made to send fruit trees, bushes, vines and vegetable seeds to be grown and tested in Labrador. One of the miniature "experiment stations" will be located on Doctor Grenfell's private grounds at St. Anthony.

CAUGHT ON THE FLY

A lot of "perseverance" is just waiting.

Not even the featherweight likes to be called down.

Danger comes the sooner when it is despised.—Syrus.

Covetousness is a sort of mental gluttony.—Chamfort.

To fear the worst oft cures the worst.—Shakespeare.

A corrupt judge is not qualified to inquire into the truth.—Horace.

Stage-struck girls should think twice before they begin to act.

Worry destroys the future while pretending to be anxious about it.

No woman can hope to remain young forever—unless she is an actress.

Some men take good care of a motor car; others treat it like one of the family.

If some men felt as bad as they really are, it would be useless to call in a doctor.

If I must die, I will encounter darkness as a bride, and hug it in mine arms.—Shakespeare.

Wisdom comes with years. The longer we live, the more we realize what we might have done.

Day follows on the murkiest night, and, when the time comes, the latest fruits will ripen.—Schiller.

Childhood is like a mirror, which reflects in after life the images first presented to it.—Samuel Smiles.

SMALL BOY PROVED EQUAL TO OCCASION

Little Walter Bowes, of Highland Park, takes life very seriously for a small chap and when anything goes wrong he manages to contrive some logical explanation therefor. One day recently he accompanied his mother when she went to call upon friends in Boyle Heights and while the customary gabfest was in progress Walter played on the porch, and while running back and forth, knocked down the thermometer.

This was a serious mishap but the little chap felt that it was his duty to report it and take his punishment, nevertheless, so he toddled into the house and stood at his mother's knee.

"What is it?" asked Mrs. Bowes, guessing from Walter's attitude that something was wrong.

"I was playing on the porch," said Walter, "and now the temperature is down."—Los Angeles Times.

Diamond Mart May Move

As the result of the threatened suspension of diamond-cutting by the World Diamond Cutters' union of Antwerp, Belgium, and Amsterdam, Holland, the diamond markets of the world may be moved to South Africa. This was the prediction of F. W. Beyers, the minister of mines, which was made during his speech while laying the foundation stone of the diamond-cutting factory at Kimberly, South Africa, recently. He warned the organization that if the boycott materialized, South Africa would train a sufficient number of cutters to carry on the industry unaided.

X-Ray Wonders

X-ray cinemas showing a broken bone in the process of knitting and similar subjects heretofore outside the realm of photography are made possible by a new camera developed by Dr. Arthur C. Pillsbury, naturalist and photographer of the university of California.

The first motion picture with the X-ray camera showed the growth in the interior of a rose. It took seventy-two hours to film, taking one picture at a time in intermittent exposures.—Popular Mechanics Magazine.

Not the Garden Variety

A young Italian not long from the land of Mussolini is a waiter in a downtown restaurant. Recently a customer sat down to dinner and inquired as to the bill of fare.

"Well, Joe, what tonight?"

"We have dock," the waiter replied.

"Dock? You don't mean dock like we used to dig out of the garden?"

"No, dock — like a goose — only dock!"—Indianapolis News.

Eligibility

The wise professor was correcting examination papers. He came to one that had "William Jones, English 4" in the upper left-hand corner and just below, "I'm the captain of the football team." The rest of the paper was blank. The wise professor marked it A-plus and went on with his work.—Life.

Like Mother Does

Two little girls were "dressed up" and making visits after the fashion of grown-ups. After a brief visit they left, saying:

"Now you must talk about us after we're gone—that's the way mother does."

His Forte

"There's a young man I know who makes little things count."

"How does he do it?"

"Teaches arithmetic in a primary school!"

His Reward

"Dingbat saved money. Didn't take a vacation."

"Ah, maybe we can touch him up now."—Louisville Courier.

The Choice

Dusty—De lady gimme a piece of angel cake and a pair of old shoes.

Rhodes—Which are yer goin' to eat?—Pathfinder Magazine.

CUPID'S ACTIVITY CRAMPED BY COLD

Fewer Single Girls Found in Warmer Cities.

Madison, Wis. — Cold weather cramps the activity of Cupid. More girls between fifteen and twenty-four years of age living in warm climates get married than girls of the same class in colder temperature cities, a survey submitted in the school of commerce at the University of Wisconsin reveals.

A correlation between temperatures and wedding bells is found.

The warmer the climate the better chance a girl has to get married. In twelve southern cities of 100,000 or more population, having annual mean temperatures ranging from 59 to 69 degrees, 27 per cent of the native white women are single, the study finds.

In twelve northern cities of the same class, on the other hand, 33 per cent of the women are single, the annual mean temperature in these cities ranging from 45 to 48 degrees.

Smaller cities with populations between 25,000 and 100,000, however, do not show such a high correlation between temperatures and marriages. In fifteen warm cities of this class, with annual temperatures running from 60 to 70 degrees, the percentage of single women is 26. In fifteen colder cities of this class, with annual mean temperature from 38 to 48 degrees, 30 per cent of the women are single.

The statistics for the survey are based on the 1920 census report. For the temperatures the United States weather bureau, the World almanac and Climatology of the United States were used.

The percentages necessarily had to be corrected when the percentage of men exceeded the percentage of women or vice versa, the survey states.

Of the 144 cities included in the survey, Superior, Wis., had the lowest annual mean temperature, 38 degrees. In that city 37.3 per cent of the native white females are single. The highest mean annual temperature was that of Tampa, Fla., 72 degrees. In that city, 20.4 per cent of the native white women are single. This shows a difference of 16.9 per cent between the coldest and warmest city.

Public as Judge of Art Displays Expert Taste

Washington.—The public is about as good a judge of paintings as artists and professional art critics, directors of the noted Corcoran Art gallery of Washington have found out.

The Corcoran gallery, at its biennial exhibitions of contemporary American oil paintings, conducted a public referendum among the visitors to the exhibition on their choice as the best painting. A painting by Gari Melchers of New York, called "A Native of Virginia," was selected. It shows an old country woman leaning on a grubbing hoe.

Melchers, in previous exhibitions has won second, third and fourth respectively, in choices made by a jury of leading artists and critics of the country.

C. Powell Minnigerode, director of the gallery, said the picture unquestionably was one of the most noted in the exhibition. A $200 prize went to the artist.

Melchers was born in Detroit in 1860 and has gained considerable renown, both in the United States and in foreign countries. He has been awarded decorations by Bavaria, France and Germany for his paintings.

Entomologists' Value Revealed by Institute

Pittsburgh, Pa.—The absent-minded professor who scampers after elusive butterflies and bugs with a net contributes much to the benefit of humanity.

Carnegie Institute of Technology here has more than 1,500,000 specimens of bugs, beetles, etc., and officials point out that study of myriad insects, gathered from near and far, reveals which is beneficial to mankind, and discloses how to rid infested places of harmful insects.

Pittsburgh is the home of four outstanding figures in the entomological world. Dr. W. J. Holland, director emeritus of Carnegie museum, has a personal collection of specimens gathered from the four corners of the earth. Dr. Hugo Kahl, a native of Sweden, presides over the museum's collection. Associated with him are two others—H. G. Klages and B. Krautwurm, both well-known entomologists.

Ancient Gothic Ruins Reveal Old Metropolis

Backtchisarai, Crimea.—Far-stretching ruins of a great city of unknown origin have been discovered in the valley of Eski-Kermen in the very heart of the Crimean peninsula.

The ruins are said to extend more than two miles, and consist of high fortress walls, hundreds of homes hewed out of rocks and six great cave temples, embellished with ancient frescoes. Russian archeologists said the ruins were once the capital of the Goth's kingdom, known in history as the city of Feodora, founded during the reign of Justinian the Great.

BRIEF HUMOR

Um

"Don't you like home cooking?"

"Yes, but home has no cabaret features."

Cause?

"Why is beef so high?"

"All the cowboys have gone into the movies."

All Lot of 'Em Ever Got

"So your husband went hunting, eh? What did he get?"

"Shot."

Ignorantia Legis

"Why did you lose your case?"

"Because my lawyer, like necessity, knows no law."

Endurance

"The family upstairs plays the same piece day in and day out!"

"Some record!"

His Business

"He appears to be a man with pronounced convictions."

"Yes, he's a judge."

Something Gained

"What did you realize on your stock investment?"

"What a fool I was."

Inferior Workmanship

Brown—I'm a self-made man.

Jones—That's what comes of employing cheap labor.—Life.

Deep Sarcasm

She—You were right, dear, and I was wrong.

He—Forgive me, darling.

Getting a Rest

"That man doesn't seem to care for flowers."

"He's a florist on a holiday."

Reason Enough

Diner.—Waiter, take this coffee away. It's like mud.

Waiter—Well, it was ground this morning.

Screen Gives Effect of Three Dimensions

Cinemas in three dimensions, a problem on which several fortunes have been spent in recent years, are achieved in an entirely new way by an English inventor who has developed a motion picture screen which has for its surface 900,000 tiny glass lenses, each barely a quarter of an inch across. The screen is made by first coating the usual surface with a thick layer of white lead and then affixing the glass globules by hand to this coating.

The stereoscopic effect is then obtained with ordinary film and a standard projector, for the myriad tiny lenses split up the light into hundreds of thousands of minute beams which are individually magnified on the screen so that each lens gives depth in relief and produces the illusion that the spectator is looking around the object photographed.—Popular Mechanics Magazine.

"Phantom Ship" Uncanny

German scientists are taking great interest in the demonstration on Ammersee lake near Munich of an unmanned mystery boat. It is a motor launch, which, on receipt of a certain signal from the station, immediately returns to shore in a straight line. If the transmitter is mounted on another ship the boat can be towed by wireless and the distance between it and the towboat can be adjusted at will. A large doll of uncanny appearance fastened with its hands to the steering wheel caused the natives to nick name the craft the "Phantom Ship."

Braking Time

Pearl White, the former movie star, was about to sail for her Paris home after a visit to America, and in answer to a reporter's questions she said:

"It's safety first with the movie stars nowadays. Why, if they have to skip a rope they hire a double. It wasn't so in my time.

"Yes," Miss White ended, "our movie stars aren't what they were ten or fifteen years ago. Some of them, in fact, are quite two years older."

Overdid Yawn

At Novato, Calif., Herbert Graf indulged in a prolonged and luxurious yawn. It was a complete success until Graham sought to close his jaws. He discovered they had locked. The victim managed to attract attention of others to his plight and he was taken to a hospital where physicians restored the jaw to normal.

Words Recorded on Steel

Recording the words on a fine steel wire, instead of a wax record, a new dictating machine has been introduced in Germany. Dr. Kurt Stille, the inventor, predicts that eventually the machine may be used in recording of two-way wireless conversation.

Expressing It in French

The Saleslady—That lot of lingerie waists we got from New York don't seem to go very well.

The Manager—Advertise 'em as our latest importations from Paris, the "pique-about" model.

That's Why

"That big car of Brown's sure kicks up a lot of dust."

"No wonder, it's dragging a mortgage on a quarter section of land."—Capper's Weekly.

NEWS REVIEW OF CURRENT EVENTS

Hoover Spends Week in the Capital Conferring and Building a Cabinet.

By EDWARD W. PICKARD

PRESIDENT-ELECT HOOVER spent the week in Washington conferring with President Coolidge, Secretary of the Treasury Mellon and others prominent in the Republican party. Besides discussing German reparations, farm relief, an extra session of congress and other problems, he was presumably selecting at least some of the ten members of his cabinet. But he was firm in his determination not to make public any results of his conferences and cogitations. Washington correspondents were compelled to guess, and they did a lot of guessing.

As to the new cabinet, the guessers were almost unanimous in the belief that Mr. Mellon would retain the treasury portfolio. It was said this was settled even before the election. Soon after his arrival Mr. Hoover had luncheon and a long talk with the financier, probably concerning the European project to liquidate German reparations and the war debts owed the United States. The scaling down of those debts to America was formerly a matter on which Hoover and Mellon were in sharp disagreement. The deep interest Mr. Hoover displays in Latin-America intensifies the belief that his secretary of state will be Ambassador Dwight W. Morrow, who has done such excellent work in reestablishing amicable relations with Mexico. For the same reason some of the correspondents think Mr. Hoover will select for secretary of commerce Dr. Julius Klein, who, as chief of the bureau of foreign and domestic commerce, helped greatly the expansion of American trade with Latin-America.

That the southern border states will be given representation in the cabinet is taken for granted, and one of the most conspicuous candidates is Mrs. A. T. Hert of Kentucky, a vice chairman of the Republican national committee. She wants the place of secretary of the interior, and last week several Republican congressmen from Kentucky urged Mr. Hoover to give her that place or make her postmaster general. No woman has ever been a member of an American cabinet. The Interior department portfolio also was asked for Bascom Slemp of Virginia. William J. Donovan's claims on an appointment are strong and it was thought he might be made either attorney general or, more likely, secretary of war. One of Mr. Hoover's callers was Senator Smith W. Brookhart of Iowa and it was his purpose to warn the President-Elect that the Republican radicals in the senate would make a bitter fight against confirmation of either Mr. Mellon or Mr. Donovan. Semi-officially it was stated Mr. Hoover did not expect to complete his cabinet until just before his inauguration. He was soon to go to Miami Beach for a rest, intending to return to Washington by February 15 to continue that job. This plan will make his projected visits to Cuba, Haiti, Porto Rico and Mexico City rather hurried.

Representatives of agricultural states told the President-Elect they would rather have an extra session for the handling of farm relief legislation. They think a more satisfactory bill may be passed under Hoover than under Coolidge, and they would rather have the former appoint the federal farm board. The Pennsylvania delegation in congress wants the extra session also to take up the matter of tariff revision upward.

DEBATE on the ratification of the Kellogg anti-war treaty brought out a lot of oratory in the senate, the most persistent speakers being those demanding reservations and interpretive statements. Pacifists were given credit for delaying action on the treaty, their idea being that this would help them in defeating the 15-cruiser naval bill. Senator Borah was confident that there were enough votes for the treaty without reservation or interpretation.

In the house right-of-way under special rule was given the bill for reapportionment of the house membership on the basis of the 1930 census. The measure, which is sponsored by Chairman Fenn of the census committee, would divide the representatives by the major fraction plan, which would result in the loss of about twenty-three representatives by some states and an equal gain by others, particularly those in the Middle and Far West, where the population has greatly increased since 1910, the last time an apportionment was made on the basis of a population of 91,641,197.

MICHIGAN'S "life for a pint" law and the plight of its latest victim, Mrs. Etta Mae Miller, stirred up a lively clash in the house. During the debate, precipitated by a dry defender of the Michigan code, wets seized the opportunity to compare the alleged past record of Mrs. Miller with the "moral lapses" of Sebastian S. Kresge, millionaire chain store owner and a chief contributor to the Anti-Saloon league.

The same day Senator Harris of Georgia offered an amendment to the deficiency appropriation bill adding $50,000,000 for prohibition enforcement, and he said if this was defeated he would submit a similar rider to every appropriation bill brought to the senate.

In Ottawa, Canada, a conference on liquor smuggling was being held by delegates from the United States and the Dominion, and the former didn't do so well. They tried to persuade the Canadians to refuse papers to vessels seeking to clear for United States ports with liquor cargoes, but the reply of the Canucks was in effect an inquiry why the United States could not arrange her own laws to handle the problem instead of asking aid from another country. They also quoted former American prohibition officials as saying that liquor smuggled from Canada formed only a small portion of the total amount consumed in the country, and implied, in effect, "Why all the excitement about this small source?"

ALL records for sustained flight in an aircraft of any description were smashed by the army's big trimotored plane Question Mark over southern California. Manned by Maj. Carl Spatz, Capt. Ira Eaker, Lieuts. H. A. Halverson and E. R. Quesada and Sergt. Roy Hooe, the plane was refueled in the air 36 times and flew for 150 hours, 40 minutes and 15 seconds before trouble with two of its motors forced it to a landing at the starting point on the Los Angeles air field. The practicability of refueling of airplanes while en route was demonstrated, and this was said by the army air officers to be the major purpose of the flight. The members of the crew were supplied with food by the fuel planes and came out of the ordeal in excellent physical condition.

Air mail and passenger service between the United States and the West Indies was inaugurated last week by the Pan-American Airways, Inc., operating company for the Aviation Corporation of the Americas. The trimotored plane Havana was first on the route, with distinguished passengers, including Miss Amelia Earhart. At Havana its mail was transferred to another plane which took off for Santiago de Cuba en route to Porto Rico. About the same time the service was started from Porto Rico.

Igor Sikorsky, famous Russian airplane constructor, told in London of the plan of himself and others to establish a 48-hour air service across the Atlantic ocean, which will be worked with the aid of four artificial islands to be anchored in the Atlantic.

QUARRELS between the Croats and the Serbs in the kingdom of Yugo-Slavia have resulted in the addition of another dictatorship to the growing list in Europe. King Alexander, declaring that the parliamentary system had failed completely, abrogated the constitution and dissolved parliament, the land assemblies and municipal councils, and assumed absolute power himself, with Gen. Peter Zivkovic, commander of the royal bodyguards, as his premier. The Croats were at first pleased by the coup, and the Serb politicians were correspondingly depressed. Later, when it appeared that the military dictatorship would be long lived, none of them liked it so well. The king first clamped on a strict censorship; next he issued an entire new set of laws, completely changing the Yugo-Slavian jurisprudence, and then he issued a proclamation forbidding all public assemblage in the kingdom. Italy and Great Britain are intensely interested in these developments, and it is said the British government is far from satisfied with Alexander's action.

WHITE RUSSIANS everywhere were in mourning for Grand Duke Nicholas, chief claimant to the throne, who died in Cannes, France. He was a cousin of the late Czar Nicholas II and in the World war made a reputation as a great military commander. His nephew, Grand Duke Cyril, has now become the head of the Russian imperialists.

WORK of the Pan-American conciliation congress in Washington culminated in the signing of compulsory arbitration and conciliation treaties by representatives of the United States and nineteen Latin American nations. The arbitration treaty provides for obligatory arbitration of all juridical questions it has not been possible to adjust by diplomacy. The conciliation treaty provides for conciliation of all disputes arising between the signatory nations which cannot be settled by diplomacy. All nations are bound to submit their disputes to conciliation but are not bound by the decisions rendered. Permanent commissions are established and obligated to attempt to mediate disputes before they reach the dangerous stage. Under this treaty no contracting country can go to war for 18 months without violating the pact.

Secretary of State Kellogg announced the appointment of Brig. Gen. Frank R. McCoy as American member of the conciliation commission which will attempt to mediate the differences between Bolivia and Paraguay.

IF HOSTILITIES do not break out between China and Japan it will not be the fault of the Japanese. The latest trouble is in Hankow. A Chinaman was killed there by a motor cycle operated by a Japanese marine, and the Japanese consul refused to pay the compensation demanded. An anti-Japanese society picketed the Japanese concession, practically isolating it, and the reply of Japan was the landing of a strong force of marines in Hankow. Chinese Nationalist officials filed protests and warned Japan of the danger of serious results, and the Nanking government sent a navy squadron into Tsingtao harbor, which is occupied by the Japanese navy.

AT THE inaugural ball in Hartford marking the social beginning of the third term of Gov. John H. Trumbull of Connecticut, John Coolidge, son of the President, appeared in the resplendent uniform of a major, having just been appointed an officer on the governor's staff. Major John and Miss Trumbull, his fiancee, helped Governor and Mrs. Trumbull lead the grand march.

TEX RICKARD, greatest of American sport promoters, died in a hospital in Miami Beach of complications that set in after an operation for the removal of his appendix. His body was taken to New York and lay in state in the New Madison Square Garden which he built, and many thousands of genuine mourners passed before his bier. The funeral ceremony was held in the Garden in the presence of 10,000 persons, among them being prominent sportsmen and celebrities in other walks of life.

Another noteworthy death of the week was that of Benjamin Duke, principal figure in the American tobacco industry.

THE high council of the Salvation Army, meeting in Sunbury, England, adopted a resolution asking Gen. Bramwell Booth, leader of the Army for the last 16 years, to retire from that post because of the condition of his health. At the same time it was made clear that in retirement he would retain his title of general and continue to enjoy the honor and dignities attached to it.

FARM POULTRY

COD LIVER OIL HELPS HENS LAY

Much Needed in Winter as Substitute for Sunshine.

Cod liver oil is an important item in winter rations for poultry because it helps to maintain egg production, prevents lameness, and helps them to lay strong-shelled eggs. It contains vitamines A and D which promote growth and maintain vitality and disease resistance, says the State College of Agriculture at Ithaca, N. Y.

Cod liver oil is essential to hens that are closely housed during winter. Vitamine D in the oil is a substitute for direct sunlight, according to poultrymen at the college, who say its use, therefore, is most desirable during winter and early spring when direct sunshine cannot be used or when little is available.

This oil, which is the richest known source of these vitamines, is usually fed for its vitamine D; although vitamine A is present in the oil, it is not so important as vitamine D because yellow corn and leafy green feeds contain enough of vitamine A to meet the ordinary requirements of poultry.

Poultrymen may use the cheaper grades of cod liver oil because they are less expensive and contain the essential vitamines in the same quantity as in the other grades. In feeding cod liver oil during winter and early spring, add 1 per cent of oil to the dry mash portion of the poultry ration. Roughly, this is slightly more than one pint of cod liver oil to 100 pounds of mash. This quantity of oil in the mash will provide approximately one-half of 1 per cent of oil in the whole ration of grain and mash.

Satisfactory Rations for the Laying Flock

According to the test work conducted at Wisconsin and other stations, satisfactory corn belt rations for the laying flock must contain plenty of yellow corn, some form of milk and leafy green feed, or a green feed substitute like fine green alfalfa or clover hay, to furnish vitamine A. Vitamine D, the ultra-violet ray factor, is equally important. To get it in sufficient quantities during the winter and early spring months requires the use of cod liver oil or a good deal of direct sunshine or sunshine received through a glass substitute that really admits the ultra-violet rays. Professor Halpin recommended the use of all three—cod liver oil in the laying mash, an open shed or yard for good weather, and effective glass substitute windows.

Making Mash Palatable Is Problem for Keeper

Making a dry mash palatable so that the laying flock will eat it in sufficient quantities is one of the problems of the farm flock keeper. That is one of the virtues of commercially mixed mashes. The manufacturer has put various ingredients together that will not only produce eggs but that taste good to the hens even though they are receiving a liberal grain ration. Putting in plenty of ground yellow corn and not overdoing the ground oats and bran portions helps make the mash more popular with the hens.

Corn gluten feed when added to the mash makes it more palatable. In a recent bulletin of the Illinois experiment station, they also call attention to the fact that corn gluten feed increases palatability of mash.

Poultry Hints

Feed oyster shells to poultry.

* * *

Grit, oyster shell and plenty of drinking water are necessary in the production of eggs.

* * *

Feed a ration that includes a good egg mash, some hard grain and some green feed, and good, clean water.

* * *

If several ordinary shipping crates are available, it is possible to fill these with the hens that are to be culled before starting with the work.

* * *

About four o'clock in the afternoon the hens should have all the grain they will clean up. The mash hopper should be kept open all the time.

* * *

During the winter birds should eat one and one-half to two times as much scratch grain as mash, but they must eat sufficient mash to produce eggs.

* * *

In all cases the amount of grain varies with flock conditions. Heavy breeds consume more feed than light breeds.

* * *

Culling out the "boarder" hen reduces the extra feed bill and also brings in extra money through sale of nonproducers.

* * *

Poultry houses which are too high are usually cold and drafty in winter. This may be remedied, easily and cheaply, by putting in a straw loft.

ATWATER KENT RADIO

"I know that man—
that is exactly the way he talks"

SHE was listening to a demonstration of an Atwater Kent. Turning the FULL-VISION Dial from one station to another, suddenly she heard the voice of a friend she had not seen for years. She listened eagerly. It was "exactly the way he talked."

"I'll take the set," she said. "This radio tells the truth."

Anyone can convince himself that Atwater Kent receivers and speakers do give faithful reproduction. Listen to an orchestra and pick out the individual instruments. Each has its own character—its own identity.

Turn to a male quartet, a piano solo, a radio drama with all the varying voices and inflections—or to the President when he speaks. Every sound is true to the original. That is the standard of Atwater Kent performance.

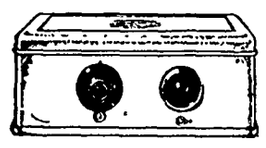
Atwater Kent gives it to you for less money. Less money because Atwater Kent Radio is manufactured in great quantities, making economies of production possible. Yet this huge output does not affect quality in the slightest. For every set, besides being made of the finest materials has to pass 222 tests or inspections in the course of manufacture.

Turn the FULL-VISION Dial and listen to "the radio that tells the truth."

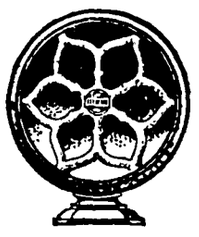
ATWATER KENT MANUFACTURING COMPANY
4764 Wissahickon Avenue — *A. Atwater Kent, Pres.* — Philadelphia, Pa.

Prices slightly higher west of the Rockies.

Model 40 (Electric) $77



For 110-120 volt, 50-60 cycle alternating current. Requires six A. C. tubes and one rectifying tube, $77 (without tubes).



"Radio's Truest Voice"
Atwater Kent Radio Speakers: Models E, E-2, E-3, same quality, different in size. Each, $20.

On the air—every Sunday night Atwater Kent Radio Hour—

Battery Sets, $49–

Solid mahogany cabinets. Panels finished in gold. FULL-VISION Model 48, $49; Model 49, extra powerful, $68. Prices do not include tubes or batteries.

For Colds —

How many people you know end their colds with Bayer Aspirin? And how often you've heard of its prompt relief of sore throat, tonsilitis. No wonder millions take it for colds, neuralgia, rheumatism; and the aches and pains that go with them. The wonder is that anyone still worries through a winter without the tablets! They relieve quickly, yet have no effect whatever on the heart. Friends have told you Bayer Aspirin is marvelous; doctors have declared it harmless. Every druggist has it, with proven directions. Why not put it to the test?

BAYER ASPIRIN

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

A MOTHER'S PROBLEM

Is, how to treat her child who is peevish and fretty, yet not seriously sick. Many Mothers say they always keep a package of **Mother Gray's Sweet Powders** on hand for use when needed. They break up colds, relieve feverishness, worms, constipation, headache, teething disorders and stomach troubles, and act as a tonic to the whole system. Equally good for older people. Sold by Druggists everywhere.

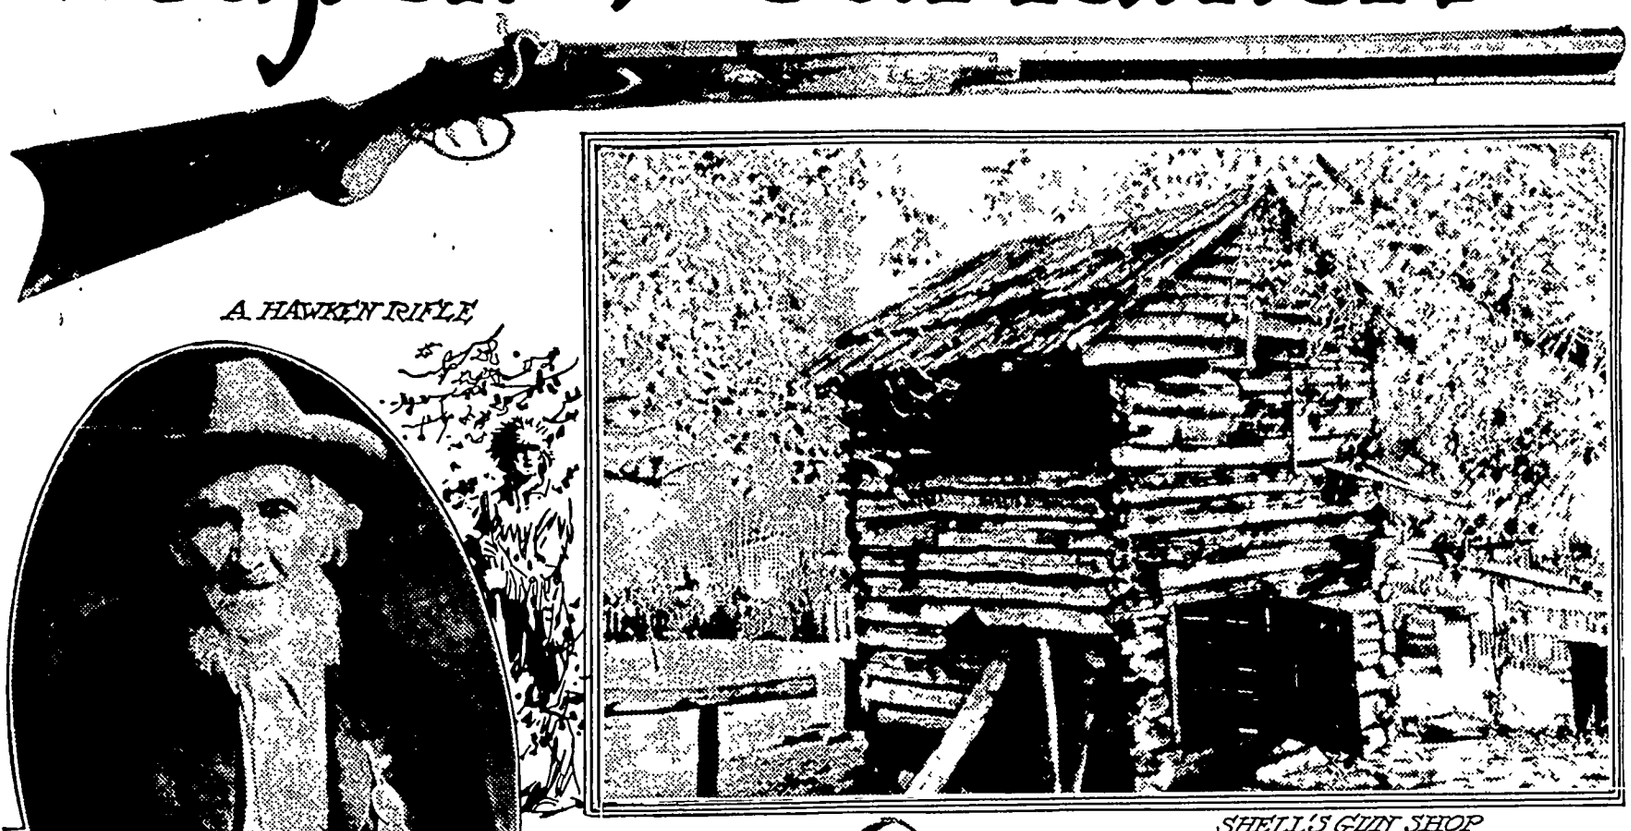
"The Sweet Ancient Weapon of Our Fathers"

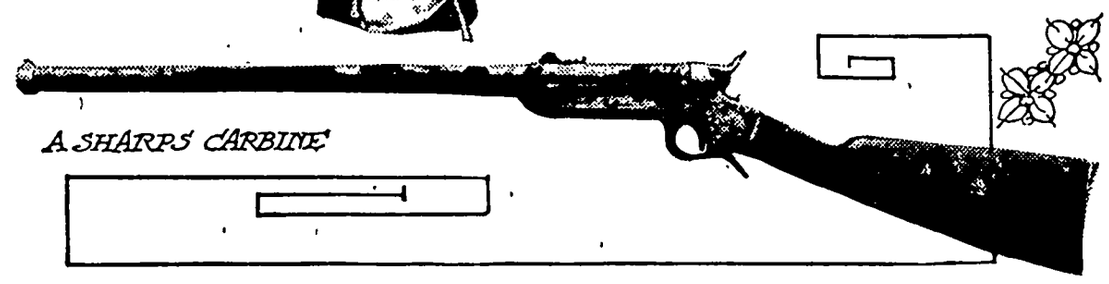


A HAWKEN RIFLE

JOHN SHELL

SHELL'S GUN SHOP

A "KAINTUCK" MADE BY JOHN SHELL



A SHARPS CARBINE

By ELMO SCOTT WATSON

IN HIS book, "The Way of the West," the late Emerson Hough paid a fine tribute to one of the earliest "Made in America" products when he wrote: "Witness this sweet ancient weapon of our fathers, the American rifle, maker of states, empire builder. Useful as its cousin, the ax, it is in design simple as the ax; in outline severe, practicable, purposeful in every regard. . . . This is no belonging of a weak nor savage man. It is the weapon of the Anglo-Saxon; that is to say, the Anglo-Saxon in America, who invented it because he had need for it. . . . Never in the history of the arms of nations has there been produced a weapon whose results have been more tremendous in comparison to the visible expenditure of energy; never has there been a more economical engine, or an environment where economy was more impressive. . . . With it were equipped the early Americans, gaunt, keen, tireless that marched to meet the invading forces at the battle of New Orleans; and when the officers of the British army, on the day after that stricken field, found half their dead shot between the eyes, they knew they could lead their troops no more against such weaponry and such weapon bearers. The rifle had won the West, and it would hold it fast."

The weapon of which he wrote was the long rifle, which, shooting a tiny ball, instead of a bullet, and as Hough also says, "shooting it with an accuracy hitherto deemed impossible in the achievements of firearms," made it the favorite weapon of the American frontiersman just before the Revolution. With it were equipped the companies of "expert riflemen" from Virginia, Maryland and Pennsylvania who marched in 1775 to take part in the siege of Boston and who later furnished the men for the famous Morgan Riflemen. It was the weapon which Daniel Boone and his associates carried into the "Dark and Bloody Ground" of Kentucky and because of their feats with it, this rifle became popularly known as the "Kentucky rifle," or in the vernacular, the "old Kaintuck."

And therein lies one of the curious inconsistencies in history. For the "Kentucky rifle" was originally made and perfected in Pennsylvania by Pennsylvania German rifle makers and it would have been vastly more appropriate if this type of weapon had gone down in history as the "Pennsylvania rifle." Recently press dispatches recorded a curious "coals-to-Newcastle" item in the fact that the Pennsylvania museum in Philadelphia had been presented with 35 examples of this weapon, through the generosity of J. Stogdell Stokes, a collector, and in the item they were called "Kentucky rifles"!

The principle of the rifle, the twist in the bore, is said to have originated in the German states of the Palatinate, but it remained for German immigrants to this country to improve it and perfect its use. This they began doing as early as 1732, and before 1760 the town of Lancaster, Pa., had a virtual monopoly upon the rifle-making business. After that date, men who had learned the trade there branched out for themselves and the fame of the Lancaster gunsmiths had spread throughout the colonies. By 1775 these Lancaster "graduates" were operating rifle shops in Baltimore and Cumberland, Md., Alexandria, Newmarket, Winchester and Richmond, Va., Charlottesville, Camden and Salisbury, N. C., and Augusta, Ga., Schenectady, Esopus, Onondaga, Johnstown and Canajoharie, N. Y., not to mention the numerous ones in Lancaster, Easton and other towns in Pennsylvania.

Sawyer in his "Firearms in American History" lists no less than 70 Pennsylvania rifle makers previous to 1783, of whom 25 were early Lancaster rifle makers, whose arms were in use at the outbreak of the Revolution, even if the men themselves were not then living. But of all these, two were destined for the greatest fame. One of them was a gunsmith who operated his gunshop in Philadelphia before and after 1732 and in Lancaster before and after 1753. Jacob Decherd was his name (it is also spelled Dechert, Descherd and Dickert), but the American frontiersmen were to call his product a "Deckard" or "Deckhard" and to swear by it as "the sweetest-shootin' weapon in the world."

The other man was an Easton (Pa.) rifle maker years ago Emerson Hough started an inquiry as to named John Golcher or Goulcher, who for a while was employed in a Philadelphia "factory" to instruct in boring and grinding barrels, but who returned to Easton where he began turning out rifles that became famous, especially single-lock, revolving double-barrel rifles. One of his rifles was used by George Washington, but perhaps the most famous was that double-barreled Golcher with which Timothy Murphy of Morgan's Rifle corps killed General Frazer at the Battle of Saratoga, which in view of the tremendous results of his deadly aim can appropriately be called a "shot heard around the world," no less than that fired at Concord.

Although so many of the rifles of these Pennsylvania craftsmen were carried into Kentucky by the pioneers who crossed over into that Promised Land before and during the Revolution as to give this type of arm the name of "Kentucky rifle," the number was not enough to supply the frontiersmen's needs in battling the savages who were trying in vain to stem the tide of white invasion. So it was only natural that they should prevail upon one of the Pennsylvania rifle makers to establish a gun shop in the new country and some time before 1790 a certain Mills, said to have been an apprentice of Decherd, was turning out "Kaintucks" at Harrodsburg. He lived there until 1815 and no doubt some of the rifles were carried by the Kentucky and Tennessee frontiersmen under "Old Hickory," who shot Pakenham's veterans "squarely between the eyes" at the battle of New Orleans. Another Pennsylvania-Kentucky rifle maker, whose career covered both the flintlock and percussion lock period of rifle making was John Shell, who learned the trade at Liverpool, Pa., emigrated to Kentucky and died only a few years ago in his homestead on Greasy creek, where he had lived for a century, at the ripe old age of one hundred thirty-three!

The "old Kaintuck" has had no more appreciative and better-informed historian than the man previously quoted, Emerson Hough, who writes of it in "The Way to the West" as follows:

> The ball of the American rifle was small, forty, sixty or perhaps one hundred of them weighing scarcely more than a pound. The little, curving horn, filled with the precious powder grains, carried enough to furnish many shots. The stock of the rifle itself gave housing to the little squares of linen or fine leather with which the bullet was patched in loading. With this tiny store of powder and lead, easily portable food for this providentially contrived weapon, the American frontiersman passed on silently through the forest, a master, an arbiter, ruler of savage beast or savage foeman, and in time master of the civilized antagonist that said him nay.

Even when the Pennsylvania rifle makers had helped push the frontier to beyond the Mississippi, their contribution to the "winning of the West" was not yet done. For it was the Hawkins or Hawkens, a family of Pennsylvania gunsmiths, who made the famous Hawken rifle which became the favorite weapon of such men as Kit Carson, Jim Bridger, Jim Baker and all the other old-time mountain men. The history of this family is not entirely clear. Sawyer states that Henry Hawkins (later members of the family spelled it "Hawken") learned the trade at Lancaster, Pa., worked in the Harpers Ferry armory and went to St. Louis soon after 1800. However, the men who made the Hawken rifle famous throughout the great West were two brothers, Jacob and Samuel Hawken (sons of Henry Hawkins) who were partners in a gunshop in St. Louis in 1822. After they put their product on the market, no trapper or fur trader would start out on an expedition up the Missouri or into the Rockies without a "trusty Hawken," if he could help it. The only difficulty was that the demand exceeded the supply, especially at the price asked. For the Hawkens, and especially S. Hawken, who became the more famous of the two, had but one price for their rifles and that was $25, no more, no less. He could have obtained much more than that, but he believed it was a fair price and maintained it.

Today Hawken rifles are rarities. Several now many genuine Hawkens there were still in existence and discovered that so far as is known there were only four. Two were in the collection of the Missouri Historical society, one was owned by Judge Jules E. Guinotte of the Probate court in Kansas City, and the fourth was the Hawken owned by Kit Carson, now preserved in the museum of Montezuma lodge, A. F. and A. M. of Santa Fe, N. M., of which Carson was a member. At that time, a fifth was discovered by the author of this article in the collections of the El Paso County Pioneer association in Colorado Springs, Colo. This weapon (which is pictured above) was lent to the society in 1910 by Le Roy Chapman of Littleton, Colo.

Near it was another famous weapon, also said to have been owned once by Kit Carson, a .56 caliber Sharps rifled carbine, made by Sharps and Hankins in Philadelphia in 1859. These carbines were made for navy use and had a leather covering sewed on the entire length of the barrel to prevent rust. One of the partners in the firm which made this gun was Christian Sharps who began making rifles, which were used in the Mexican war, although his first patent was not issued until 1848. However, it was not until 1859 that the Sharps rifles became famous. Then one fall day in that year old John Brown attacked Harpers Ferry and over the wires flashed the news that Brown and his men were armed with "Sharps man-killers" and that one of Brown's sons had shot and killed the mayor of the town with that weapon.

When the Civil war broke out the famous Pennsylvania "Buck Tail" regiment marched to war armed with these improved "man killers," a short gun of .56 caliber with a sword bayonet. Instead of caps they used a tape which was coiled in a chamber close to the tube and when the soldier was ready to fire the tape was pulled up so that one end would cover the tube and the hammer would strike the percussion tape. Another Sharps rifle, used in the Civil war, was a .52 caliber and used a linen cartridge. "Their rapidity of fire and accuracy enabled a soldier marksman to hit his enemy first," says Sawyer. "And the renown of Civil war companies of infantry armed with Sharps rifles soon gave rise to the laudatory term 'Sharpshooters.'"

But it remained for a later Sharps to bring that rifle maker his greatest fame. That was the old Sharps buffalo gun. This was the model made from 1875 to 1880 which used a metallic cartridge and was made in three calibers, .40, .45 and .50. These rifles had a thick heavy barrel and the total weight of the weapon was from fourteen to eighteen pounds. The bullet fired from such a weapon had a tremendous shocking power, even at a range of a quarter of a mile or more. In fact, one of the most famous shots in American history was that made by Billy Dixon, a buffalo hunter, at the battle of Adobe Walls in the Texas Panhandle in 1874. Popular tradition has preserved the tale of this shot and exaggerated it until it had Dixon killing an Indian at a mile and a half! Here is what Dixon himself has to say about it in the story of his life which he dictated before his death in 1913 and which was published by his widow, Mrs. Olive K. Dixon, the next year: "The distance was not far from three-fourths of a mile . . . I took careful aim and pulled the trigger. We saw an Indian fall from his horse . . . I was admittedly a good marksman, yet this was what might be called a 'scratch' shot."

Theodore Roosevelt once said that the Sharps rifle sounded the knell of doom for the North American buffalo. He might have added that it did the same for the Indian, for when the red man was deprived of this staple in his food supply his day of dominion of a continent was done. So the product of another Pennsylvania rifle maker helped win the trans-Mississippi West just as those of the earlier gun makers of the Keystone state had won the trans-Allegheny West. For the "Kaintuck," the Hawken and the Sharps rifles in the hands of American frontiersmen were tools with which a nation was made.

Have Kidneys Examined By Your Doctor

Take Salts to Wash Kidneys If Back Pains You or Bladder Bothers

Flush your kidneys by drinking a quart of water each day, also take salts occasionally, says a noted authority, who tells us that too much rich food forms acids which almost paralyze the kidneys in their efforts to expel it from the blood. They become sluggish and weaken; then you may suffer with a dull misery in the kidney region, sharp pains in the back or sick headache, dizziness, your stomach sours, tongue is coated, and when the weather is bad you have rheumatic twinges. The urine gets cloudy, full of sediment, the channels often get sore and irritated, obliging you to seek relief two or three times during the night.

To help neutralize these irritating acids, to help cleanse the kidneys and flush off the body's urinous waste, get four ounces of Jad Salts from any pharmacy here; take a tablespoonful in a glass of water before breakfast for a few days, and your kidneys may then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for years to help flush and stimulate sluggish kidneys; also to neutralize the acids in the system so they no longer irritate, thus often relieving bladder weakness.

Jad Salts is inexpensive, cannot injure and makes a delightful effervescent lithia-water drink.

Solitude does not relieve some people of bad company.

Help is Offered

and is freely given to every nervous, delicate woman, by Dr. Pierce. Write Dr. Pierce's Clinic in Buffalo, N.Y., for confidential medical advice. No charge for this service. Obtain Dr. Pierce's Prescription now, in liquid or tablets, from your druggist or send 10c to Dr. Pierce at above address, for trial package of tablets. One woman writes:

"About two years ago I suffered with very severe pains in my right side, had functional disturbances, was weak, nervous and rundown. Doctors said I could never be a mother. I began taking Dr. Pierce's Favorite Prescription—took eight bottles in all—and today I have a fine healthy boy, and enjoy better health. I cannot say enough in favor of Dr. Pierce's Favorite Prescription."—Mrs. Maude Bailey, Edgar, Nebr.

Have you ever tried Dr. Pierce's Pellets for the stomach and bowels?

Folly loves the martyrdom of fame. —Byron.

Don't Let That Cold Turn Into "Flu"

That cold may turn into "Flu," Grippe or, even worse, Pneumonia, unless you take care of it at once.

Rub Musterole on the congested parts and see how quickly it brings relief as effectively as the messy old mustard plaster.

Musterole, made from pure oil of mustard, camphor, menthol and other simple ingredients, is a counter-irritant which stimulates circulation and helps break up the cold.

You will feel a warm tingle as it enters the pores, then a cooling sensation that brings welcome relief.

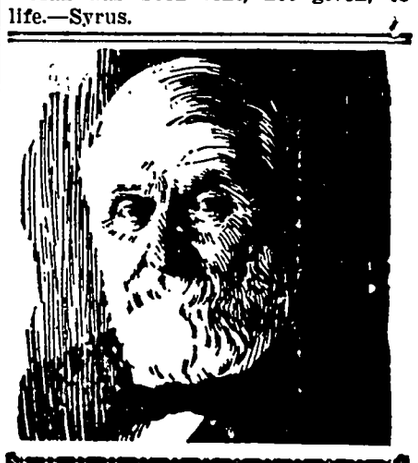
MUSTEROLE
WILL NOT BLISTER

Better than a mustard plaster

Man has been lent, not given, to life.—Syrus.



SAME PRESCRIPTION HE WROTE IN 1892

When Dr. Caldwell started to practice medicine, back in 1875, the needs for a laxative were not as great as today. People lived normal lives, ate plain, wholesome food, and got plenty of fresh air. But even that early there were drastic physics and purges for the relief of constipation which Dr. Caldwell did not believe were good for human beings.

The prescription for constipation that he used early in his practice, and which he put in drug stores in 1892 under the name of Dr. Caldwell's Syrup Pepsin, is a liquid vegetable remedy, intended for women, children and elderly people, and they need just such a mild, safe bowel stimulant.

This prescription has proven its worth and is now the largest selling liquid laxative. It has won the confidence of people who needed it to get relief from headaches, biliousness, flatulence, indigestion, loss of appetite and sleep, bad breath, dyspepsia, colds, fevers. At your druggist, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois, for free trial bottle.

Klemme Co-Operative Grain Co.

News of Klemme and Vicinity

Dr. R. W. Specht, Dentist, Garner, Iowa. adv

George Gruetzmacher of Garner was a Klemme caller Tuesday.

Owen Conwell, of Goodell, was in Klemme on business Tuesday.

Harold Leitzinger and family were entertained at the Arthur Moulton home Sunday.

Clarence Kluckhohn and family were entertained at the Aug. Baack home Sunday.

Poland China Bred Sow Sale, Thursday, Feb. 14. R. C. Ludeke, Klemme, Iowa. tfc

Clarence Tanner went to Chicago Saturday evening. He shipped two car loads of cattle.

The funeral of Mrs. George Schaefer of Garner was held Friday afternoon.

Mr. and Mrs. Henry Buseman and Leona attended a funeral at Garner Tuesday.

Ed. Ford, of Iowa Falls was a Klemme business caller one day this week.

Dog! Man's most faithful friend. Pay your tax and save his life. P. Grange, Mayor. 1tc

Souts! The next meeting will be Monday night at 7:30 o'clock, at the First National Bank.

"Uncle Tom's Cabin" is showing at the Idle Hour this week, Thursday, Friday and Saturday. Don't miss this great picture. 1tc

Emil Patet and family are moving today to their house in Morningside addition, which they recently purchased.

Grandma Schlawin went to the country Monday to stay with her daughter, Mrs. Lew Griffen for the rest of the winter.

Mr. S. S. Grange left for Ruthven today after visiting at the home of his son, Paul Grange and family for several months.

Several of the Klemme ladies will attend the county meeting of the Legion Auxiliary at Britt this afternoon.

Miss Mabel Schaefer spent the week end at the Elmer Schaefer home on account of cold weather and bad roads.

Mr. and Mrs. Otto Pringnitz were called to Minnesota last week on account of the death of Mrs. Pringnitz' father.

Mr. J. J. Tebben returned from Carrol, Iowa, Thursday, where he was called by the death of his nephew who died of influenza.

Mr. and Mrs. Elmer Schaefer and family, and Miss Mabel Schaefer were dinner guests at the J. J. Stille home Sunday.

Rev. and Mrs. H. E. Whyte were at Algona Monday to attend a meeting of the pastors of the Algona District.

G. W. Kluckhohn & Sons hardware department has been improved by having a back screen built into their display window.

Hot lunches are being served in Liebrty No. 8 school of which Miss Mabel Schaefer is teacher. Most all of the pupils have returned to school again after having a siege of flu.

Mrs. Harland Trees of Clear Lake was visiting with her mother, Mrs. Church, Tuesday. She was acompanied here by Octave Church who had been visiting at the Trees home.

J. N. Day and family, armed with a supply of home made sherbet, cake and coffee went over to the William Smith home Tuesday evening to help him celebrate his birthday.

Mr. and Mrs. E. J. Stokesbary had an oyster stew Monday evening and entertained Mr. and Mrs. C. A. Larsen and daughters, A. H. Yahnke, Charlie Yahnke, Ernest Yahnke, Ed. Yahnke and Albert Fuller. And when that crowd got through it created a considerable shortage on the oyster market.

Mr. and Mrs. J. N. Day entertained the Dr. W. F. Missman family for dinner Sunday. A special item on the menu was delicious homemade sherbet.

F. A. Arnold, C. G. Waterman and A. J. Kudje drove to Garner Tuesday evening to attend a banquet and meeting of the Hancock County Bankers Association. J. N. Sprole, of Garner was host.

A number of Klemme Masons and Eastern Stars will go to Garner tonight to attend a joint installation of Masons and Eastern Stars A banquet will be served following the joint installation.

Rev. H. E. Whyte had a speaking engagement at Mallard Wednesday evening where he was called to address the Young People's Sub-District Rally. He was joined at Algona by Supt. Leese.

The Royal Neighbor ladies met Friday afternoon for the purpose of having installation services, but on acount of the bad weather this part of their work was postponed until a future meeting.

Walter Reed will have a fram sale February 6th. Watch the Times for his ad next week. Mr. Reed has a fine lot of farm machinery and live stock to dispose of and it will pay you to attend his sale if you want good stuff.

Mr. and Mrs. E. R. Whyte, of Cushing, Iowa, parents of Rev. H. E. Whyte, and Mr. and Mrs. Marvin Sims, the latter a sister of Rev. Whyte, came Friday and remained at the Whyte home until Monday morning for a visit.

Rev. Calvin Grosshuesch returned this morning from Sheboygan, Wis., where he spent nearly a week visiting with his parents and other relatives. He reports that he found his parents in good health. He says Wisconsin has a lot of snow and most road are impassible.

A. H. Yahnke, Charlies Yahnke and Ernest Yahnke of Garden City, Minn., Albert Fuller of Good Thunder, Minn., and Ed. Yahnke of Buffalo Center, Iowa, came Monday to attend the funeral of their uncle, Mr. Franz Pringnitz, whose funeral services were held Tuesday.

Mr. and Mrs. J. N. Day, C. G. Waterman and family, R. A. Jorgenson and family and Dr W. F. Missman took the Boy Scouts to Clarion Monday night for the Court of Honor. Our Scouts received 2nd Class Merit Badges and Byrnes Missman was made a first class Scout.

Mr. A. D. Gimer had a birthday Monday and in honor of the event Mrs. Gimer had a birthday dinner for him and had as guests the faculty of the Klemme schol and Mr. Patet, Mrs. Patet being unable to be present on acount of recent illness. Mrs. Gimer served a most delicious dinner and had the table beautifully decorated for the ocassion. A most pleasant evening was reported by the guests.

Mr. and Mrs. C. G. Waterman, and Mr. and Mrs. R. A. Jorgenson attended the North Iowa Council Boy Scout Annual Banquet given at the Hanford Hotel last Thursday evening at Mason City. There were about 300 people seated at the long tables in the banquet hall. Rev. Lyndon Harper, of Marshalltown was the principal speaker of the evening and gave one of the best addresses that we have ever had the privilege of listening to. Special music was furnished by the Church of Christ orchestra and several fine numbers were given by the "Rusty Hinge" quartett, composed of Earl Hall, Edson Cornell, Earl Dean and Dr. Kunz. Dr. Kunz also gave several vocal solos on the program. Near the close of the evening the annual election was held and Dr. Raymond Weston was chosen to head the organization for the coming year. The annual banquet is the outstanding program of the year for Scout Leaders in the North Iowa Council, and those who missed it, missed a wonderful time.

Send in your news items or call us on the phone. We want the news and are glad to have your co-operation. Times Office.

DOINGS AT SCHOOL THIS PAST WEEK

WEST AND GIBSON PLAY LAST BASKET BALL GAME

Team Will Be Seriously Handicapped In Hard Battles

On last Friday night our team played Clear Lake's seconds ou the Clear Lake floor, and after being led the first half by a score of 12 to 4, they came back and won by a score of 22 to 12, preventing the Clear Lake five from scorng a sngle point and adding 18 to their own. It was a most remarkable comeback.

Gibson And West Star

Oral Gibson and Clair West were playing their last game for Klemme and covered themselves with glory. They played a wonderful game and it is with deep regret that we cannot permit them to play any longer. Both have been in school now their eight semesters and according to the rules of the State Athletic Association hey are not permitted to play this semester. These rules must not be volated. If hey are and it is discovered membership in the association terminates and that means other schools refuse to play us. The rules are made for the good of high schools and the objects of the association would be defeated through their violation. These rules, some may say, are unfair and should not be regarded. hey are good rules for they were made to keep some boys from purposely flunking their senior class work in order to remain in school longer for athletics.

Garner Took Both Games

Tuesday night of this week we were to play Garner there, but the blizzard kept us at home. However, this game was played Wednesday night which resulted in the Garner grade team defeating our grade team 18 to 8, and the high school here defeating our basket shooters 32 to 9.

On Friday night we shall have a fine battle on our own court a high school team from Crystal Lake. A good game is expected.

P. T. A. program tonight!

Local Declamatory Contest On Next Tuesday Evening

Next Tuesday night our speakers being coached for some time by Miss Lumbell will contest for the honor of representing Klemme in county and state contests which follow.

The price of admission will be 25 and 35 cents and special music will be included in the program.

The speakers and their selections follow:

Oratorical

"America for Americans"..... Raymond Barz
"The Man Nobody Knows" ..... Oral Gibson
"The Need of an Incorruptable Press" ..... Blanche Gmer
"Masterful Man of the Ages" ..... Floyd Klotzbach

Dramatic

"Wheels of Time" ..... Marie Carson
"..... Reva Elder
"Greatest Gift" .... Emma Goll
"With the Charmed ..... Laurence Greimann
"Part of a Burglar" .... Nova Koerner
"Heart" .... Valeria Koerner
"Death" .... Lucile Kraus
"Locks" .... Gracka Quandt
"Vision of the Personal" ..... Mabel Schuldt
"Members" Agatha Steeman

Humorous

"Fall from Grace" ..... Thelma Kluckhohn
"Marshum" .. Byrnes Missman
"Bloodhound" ..... Verner Priebe
"Man Goes Traveling" .... Ethel Pringnit

KLEMME PEOPLE HOLD OFFICE IN GARNER LODGES

Joint Installation Of Masonic And Eastern Star Lodges Held

Bethel Lodge No. 319 and Relife Chapter O. E. S. No. 391, Garner, held a joint installation service at their lodge rooms last Thursday evening, which was attended by a large crowd and with all Klemme Masons and Stars present. Rev. Van Metre, Charles Tompkins, Walter Moll and Supt. J. R. Baggs provided special quartet singing, and special music was furnished by the M. E. Church orchestra, a violin solo by Miss Mildred Johnson, accompanied on the piano by Miss Irene Johnson, and several vocal numbers by Miss Thelma Roe.

Mr. Charles Tompkins was the installing officer for Bethel Lodge and the following officers were installed for the year 1929: Worshipful Master, N. E. Brear; Senior Warden, Pud Tompkins, Junior Warden, C. G. Waterman; Secretary, H. V. Reed; Treasurer, Isaac Swelgard. These were the elective officers installed. The following officers, appointed by the W. M. were installed in order: Senior Deacon, Edwin F. Bock; Junior Deacon, J. S. Trumbell; Senior Steward, Victor Waldek; Junior Steward, E. F. Jacobs; Chaplain, A. C. Taylor; and Tyler, E. F. Wetterling. Frank Miller acted as installing Marshall.

Officers installed in the Eastern Star Lodge were: Worthy Matron, Bernice Daniels; Worthy Patron, Clinton Daniels; Associate Matron, Mildred Schissel; Associate Patron, Victor Waldek; Conductress, Viola Tompkins; Associate Conductress, Mae Strate; Secretary, Cora Zeiger; Treasurer, Edna Wetterling; Organist, Mable Mounce; Chaplin, Dorothy Moe; Marshall, Zora Merten. The following Star Points: Ada, Cora Prouty; Ruth, Mary Jane Jorgenson; Esther, Lena Grau; Martha, Jennie Reed; Electra, Ione Sinclair; Warden, Belle Love. and Sentinel, Purd Tompkins. Zora Merten was the installing officer, assisted by Edna Wetterling, Installing Marshall.

Following the ceremonies of installation Rev. Dibble, of Mason City gave an address.

Following the evening's program a lunch was enjoyed by all.

NEIGHBORS AND FRIENDS GIVE BIG SURPRISE PARTY

Mr. And Mrs. Bert Auchampach To Move To Ventura

Last Friday evening some seventy people, friends and neighbors of Mr. and Mrs. Bert Auchampach who reside north east of Klemme, gathered at the Auchampach home to give a surprise farewell party. The nineteen families who came brought with them lunch baskets heavily laden with eatables fit for a king. The affair was entirely successful as Mr. and Mrs. Auchmapach were not expecting company. The evening was spent in visiting and playing cards, following which lunch was served. A pleasant part of the evening's program was the presentation of remembrance gifts to Mr. and Mrs. Auchampach which included a davenport end table and a purse of silver.

Mr. and Mrs. Auchampach are moving this week to their home at Ventura where they will reside in the future.

The best wishes of the community go with them to their new home.

KLEMME REFORMED CHURCH
Calvin Grosshuesch, Pastor

Services for Sunday, January 27:
10:00 a. m. German service.
11:00 a. m. Sunday school.

Choir practice Sat. evening, 8:00.

The Confirmation class meets on Tuesday and Saturday at 1:30 p. m.

The Teachers and Board members of the Sur day School will meet at the parsonage Wednesday, Jan. 30th, at 8:00 p. m.

COUNTY ROAD TO GO THRU TOWN

FINAL ACTION BRINGS COUNTY ROAD TO MAIN STREET

Road Leading Into Klemme Now In The County Road System

Some time ago The Times told of a proposed change in the Klemme Street system whereby an effort as made to draw in corporation lines of the town, which action was duly taken, resulting in that land involved was taken out of the incorporated town of Klemme, including the two roads leading west out of town.

By this action these two roads became township roads and again upon due petition and presentation before the Courts the road leading west from Klemme at the end of Main Street was taken over into the County Road System permanently.

County Engineer C. F. Merten reports that the State Highway Commission has given its approval, of the change.

The road is now entirely in the hands of the County Road System and under the care of the County Engineer and the Board of Supervisors. It is now up to them, and they have promised to do so, to put in a standard grade and gravel this road into Klemme. The project also includes the widening of the corner where it joins Highway No. 15, to meet the specifications of the State Highway Commission.

As was explained in The Times some time ago, this action was taken because the town could not keep sufficient funds on hand to properly care for the road and at the same time keep up the streets.

This action is nothing new in this county as similar steps have been taken at Garner, Britt, Crystal Lake and Corwith, if we are correct.

This short piece of road has always been quite an item of expense to Klemme, as a great deal of traffic is handled on this road and much work was needed to keep it in good condition. The road needed to be brought up to a standard grade and graveled, but the town lacks the equipment for such work. The county has machinery for building roads of this nature. In winter this road is blocked with snow a great part of the time, but the town did not have sufficientfunds on hand to purchase snow fence for that stretch of road.

However, with the change which has been made we have every reason to believe that the tax payers will be saved a lot of money and we will have a better road as a result.

The saving the town will make will enable the council to sped more money on the streets of Klemme, which is certainly needed.

The Board promises to grade the road and gravel it this spring or summer.

BAD BLIZZARD RECALLS DAYS OF PIONEERS

The blizard we had Tuesday was a regular old fashioned storm like the old timers tell about. Many of the country schools had difficulty in getting children home that day, and Dist. 7 Liberty, or better known as the Stille School experienced a problem. Miss Ethel Wellemeyer, the teacher kept the pupils at the school until she received word from the parents. Paul Stille, who lives two miles from the school phoned to his brother, Lester, wo lives just across the road from the school, to keep his two small daughters over night. Howard Spitler, who resides also two miles away made arrangements to have his children remain at the Lester Stille home. Alvin Stokesbary, who lives a half mile west of school started out in a bob sled to get his son, but broke down and had to return home and telephoned Lester Stille to keep his son until evening when he would drive over to get him, but Mr. Stille invited him to stay, so teacher and pupils all remained at the hospitable home of Mr. and Mrs. Stille.

CRYSTAL LAKE IS WINNER IN AREA

TROOP 56 IN 5TH PLACE IN THE COUNCIL-WIDE CONTEST

Crystal Lake Troop 31 Lead All Others By Large Margin

The Council-Wide nter Troop Contest of Boy Scouts in the North Iowa Council closes Saturday night, after an exciting grind of twelve weeks.

The points won were based on the percentage of attendance of both Scouts. Troop Committeemen and Leaders at Troop Meetings, Religious services and Court of Honor advancements.

With their lead of 54,675 points Troop 31, Crystal Lake wins the President's Cup. Troop 7, Mason City, placed second with 30,125 points and won a tent. Troop 17 of Clear Lake came in for third place with 26,600 points, winning the penant.

Honorable Mention

Troop 22, Nora Springs	25,775
Troop 56, Klemme	25,075
Troop 4, Mason City	24,225
Troop 41, Greene	21,700
Troop 14, Mason City	20,050
Troop 47, Clarion	19,875
Troop 34, Clear Lake	19,725

Hang Up Real Record

Troop 31, Crystal Lake, are to be complimented for the splendid record they made in the contest, and they have "hung up a target for the rest of the troops to shoot at for some time to come."

Here's how hey did it: Troop 31, winner of the Council-Wide Inter-Troop Contest had PERFECT attendance of Scouts, Leaders and Troop Committeemen the entire Contest. Also perfect attendance at religious services each week, except the last two Sundays, when two Scouts were unable, because of illness, to be moved. Every Scout, Leader and Committeeman ADVANCED during the Contest.

Crystal Lake Leaders say, "We're glad it's over! But, it's been a wonderful contest and of inetimable value to our Troop and Troop Committee. Our Troop was determined to profit by the Contest! We did!"

Headquarters says, 'No stopping now! The Contest means nothing to any Troop unless the Contest knowledge and pep gained, is continued. Program building; projects; church attendance; advancements, etc. must be kept up! Let's cash in on the enthusiasm aroused!"

Troop 56 Made Good Showing

Troop 56, Klemme, although not in on the prizes, made a fine effort and are perching second to the top on the honorable mention column. Troop 56 held second place in the contest for several weeks and then lost its grip. However in the past few weeks they made a good "come back" and were determined, to put a Scout-like finish on the contest. Every Troop could not win, but a lot of Troops could have made a better showing.

Troop 56 takes its place on the honor list and congratulates the winners.

COUNTY OFFICERS NAME THEIR NEW DEPUTIES

Hancock County court house officials have named their new assistants where changes have been made in the roll.

Sheriff E. H. Wahlert has appointed Wes Merten as court bailiff and Ed. Rhodes as the bailiff for the grand jury.

Miss Verna Katter has been appointed as Deputy Recorder to assist her mother, Mrs. Fern Peck Katter, Recorder. Miss Helen Quintus for the former deputy in the Recorder's office.

Chris Jacobs, our County Auditor has as his assistants Miss Tillie Bocher and Miss Loraine Hansen.

The other offices retain the same assistants.

YOUNG PEOPLE WERE MARRIED TUESDAY AT GARNER

Mr. nd Mrs. John M. Newberger Will Live On Farm South Of Ventura

John M. Newberger and Pearl Ax were married at Garner, Tuesday afternoon, January 22, 1929, by the Rev. Van Metre, pastor of the Methodist Church. The couple were attended by Miss Pearl Prull, and Mr. Burton Nyemier, both of Ackley, Iowa.

The Bride is the oldest daughter of Mr. and Mrs. Wm. Ax, of Swaledale. She is a graduate of tho Garner High School in the class of 1926 Since that time, the past two and one half years she has been a successful teacher in the rural schools near Meservey and Swaledale.

The groom is a son of Mr. and Mrs. John Newberger and has been living with his parents on their farm east of Klemme. He is a graduate of Hamilton's University of Commerce, of Mason City.

Both of these young people are well and favorably known in this community. They will make their home on a farm owned by the father of the groom, about four miles south of Ventura, and will "be at home" to their many friends after March 1st.

Following the wedding ceremony a dinner was served at the home of the Bride's parents. The newly-left on a honeymoon trip htrough Southern Iowa and Missouri.

This marrige has special interest because of the fact that t is also the wedding anniversary of Mr. and Mrs John Newberger, parents of the groom who were married in Klemme thirty-three years ago by Rev Haefner, of the Methodist church.

The Times extends congratulations and best wishes.

CREAM HAULERS HAVE TOUGH LUCK PAST FEW DAYS

Heavylly Drifted Roads Hard On Drivers And Trucks Both

This continued winter weather is surely making it tough for cream truck drivers for the Klemme Co-Operative Creamery. Delays are unavoidable.

Alfred Merkel had a break down with his truck Monday at about the farthest point away on the Goodell Route. Emil Krause came to his rescue and towed him back to town, after several hours delay.

Harold Leitzinger had a break down with his truck Monday on the West Route. He succeeded in hiring another truck in the country and finished making his route, but was delayed several hours.

Einar Salling, acompanied by E. Finn battled snow drifts Tuesday on the Meservey route and got along in good shape until about evening and a tough snow bank was struck two miles east of Goodell when they were homeward bound, but Salling's Ford truck was tired out and quit, so a team and sled was pressed into service and the cream unloaded in the basement of a farm house for the night. The men stayed in the country until the storm was over and came to Klemme to get Salling's International truck to load up again and finish the trip. It took the two men two full days o get the cream, but Salling said it was "some load."

Cream haulers and mail carriers are certainly earning their money these days.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

The following schedule of services will be observed Sunday, January 27th.

Divine worship and preaching service at Klemme at 10:00 a. m. and at Liberty at 11:30 a. m.

Sunday school at Klemme at 11 and at Liberty at 10 a. m.

Epworth League at 6:45 p. m.

Evening praise and worship service at 7:30 o'clock. Special music.

We are glad to tell you that our local Epworth League had a delegation of 30 present at the Sub-District Rally at Britt Monday evening. A fine program and social hour was enjoyed by all.

HENRY MEDAUS DIED SUNDAY EVE

FUNERAL SERVICE WAS HELD HERE WEDNESDAY

Had Been Resident Of This County For The Past Thirty Years

Another of our citizens, who has been aresident of this community for a long number of years, has been called to his reward. Friends of Henry Medaus were grieved to learn of his death which came Sunday evening following an illness of about two weeks. Funeral services for Mr. Medaus were held here Tuesday at the Methodist Church, and burial was made in the Klemme cemetery.

The following obituary was read at the funeral services by Rev. H. E. Whyte:

Henry Medaus was born at Manitwaco, Wisconsin, on February 2, 1864, and passed away at his home in Klemme, Iowa, Sunday evening, January 20th at about ten o'clock as the result of an attack of influenza which had confined him to his home for more than two weeks. His age at the time of his death was 65 years, 11 months, and 15 days.

Mr. Medaus has been a man of frail body most of his life, and has passed through many severe sick spells, some of them confining him to his bed for several weeks and even months. He knew well the meaning of pain and suffering; but thru it all he kept faith and was remarkably patient.

In his early boyhood he was confirmed in the German Lutheran church and has maintained an active relationship to some protestant church from that time on. For the last seven years he has been a faithful member of the Methodist Episcopal Church of this place.

It was about thirty eight years ago that Mr. Medaus came from Wisconsin to make his home in this community. It was here that he met Miss Lena Juers to whom he was married on Mar. 24, 1898. Thru the years mingled with cloud and sunshine she has been his constant and devoted helpmate.

Besides his wife, he leaves to mourn his loss, his daughter, Mrs George Johnson of Klemme, three sisters: Mrs. Fred Swartz, and Mrs Otto Schmidt, both of Oelwein, Iowa and Mrs. Fred Hoffman of Margaret, Michigan. Likewise his brother Louie Medaus, of Manitwaco, Wis his step-brother, W. C. Schmidt, of Klemme, Iowa, and three grandchildren.

Card Of Thanks

We wish to take this means of expressing our thanks to friends and neighbors for their kind assistance during the illness and death of our husband and father, and for the helpful words of sympathy and for the flowers contributed.

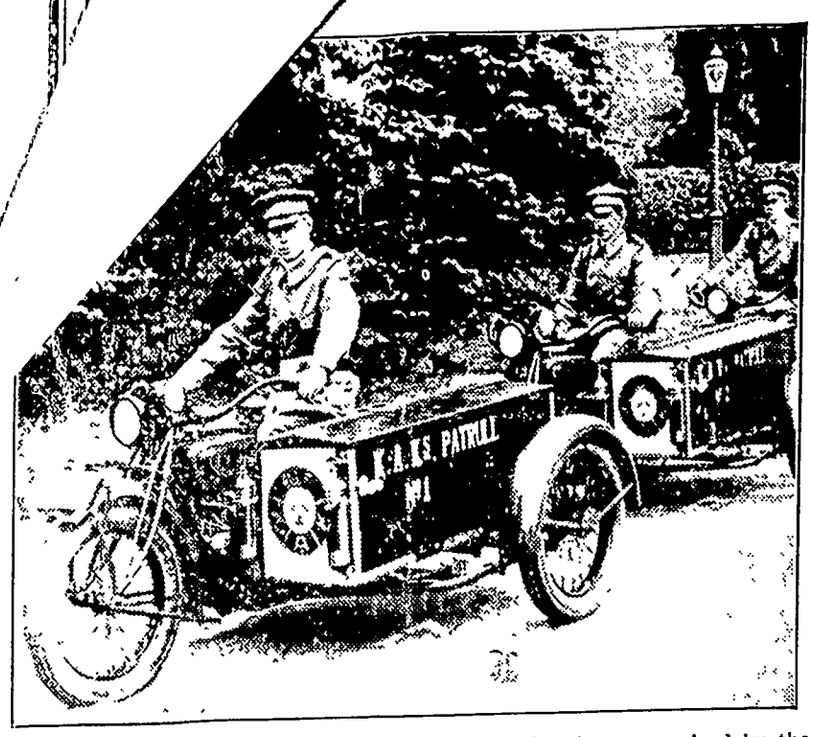
Mrs. Henry Medaus
Mr. and Mrs. George Johnson
and family.

The M. E. Ladies Aid Society will meet early next month, so please take notice of the change in dates. The next meeting will be held on Friday afternoon, February 1ts, at 2:30. Mesdames John Johnson and R. A. Jorgenson will serve. The usual meeting date is Thursday, but as this is press day at the Times office Mr. Jorgenon ran not serve on that date because she assists at the office. This first Friday in the month does not interfere with lodge meetings. Bring your needle and thimble for sewing and try to be at the Parish house at 2 o'clock.

FARMERS, NOTICE!

I have taken the agency for The Economy Hog and Cattle Powder Co and handle a full line of their products. Call on me if you need anything along that line. Gilbert Schaper, Klemme, Iowa. 1tc

...AIR PATROL IN SWEDEN



A part of the emergency repair patrol which has been organized by the Royal Automobile Club of Sweden for the convenience and service of Swedish motorists.

PEDESTRIAN HAS RIGHT-OF-WAY

Motorists Are Warned to Exercise Care as Result of Court Decision.

A decision has just been handed down by the United States District Court of Appeals, upholding a pedestrian's right-of-way at a crossing despite traffic signal shifts, according to the legal department of the American Motorists' Association.

Pedestrians' Rights.

In effect the court holds that pedestrians have the right-of-way not only at uncontrolled crossings but also when they have entered an intersection on a green light and further holds that the pedestrian has the right-of-way until he reaches the opposite curb, without regard to the change of lights during his passage of the crossing.

The decision is regarded by the association's legal department as just and is being called to the attention of the motoring public in order that the motorist may have full knowledge of his legal responsibility.

"When a pedestrian steps from a curb to cross the street, having a green signal with him, he does so by way of invitation and he cannot be charged with contributory neglect if the signal switches when he is in the street. Caught in this position, the obligation rests upon the motorists not only to observe the situation, but to wait until the crossing is clear," the decision declares.

Must Exercise Vigilance.

"Many automobile drivers," continued the court, "seem to imagine that with the shift of the signal they are given a clear right-of-way against intersecting traffic. In this belief they recklessly start their machines regardless of persons who are already on the intersection. It is the duty of drivers of machines to exercise greatest vigilance and care under such circumstances and not only to have their machines under control, but to stop and wait until pedestrians have had an opportunity to clear the crossing. Failure to observe these precautions constitutes negligence on the part of the driver, which, in case of accident, is chargeable to him."

Few Bad Driving Habits Among Average Drivers

When a motor car engine heats persistently for no apparent reason, it often is due to bad driving practices. Keeping the foot continually on the clutch pedal while driving will cause the clutch to slip and make the engine labor. Keeping a foot on the brake pedal also may make the car pull hard and cause overheating.

Some drivers fail to advance the spark after starting the engine. This causes the engine to overheat. The spark should be kept as far advanced as possible. The excessive use of low gear when it is not necessary or the failure to shift the low gear when the car is laboring in sand or mud or up a steep grade, also will cause the engine to overheat.

Overheating reduces the engine's power and increases the wear. The cause should be traced and the trouble removed as soon as possible.

Safety Workers Now Use Billboards in Campaign

Traffic safety, expounded by pretty nearly every conceivable means, now is being preached in Greater Cleveland by means of the billboard.

Six large billboards, scattered about in every section of the metropolitan area, have been placarded with "Drive Safely" designs.

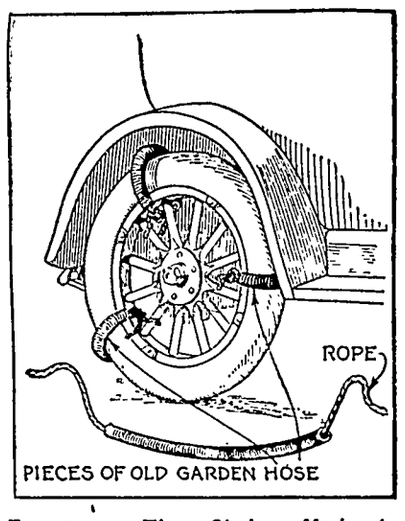
Eight to ten additional billboards will be placarded with similar designs.

This unique method of impressing upon a careless citizenry the need for driving and walking safely in the public thoroughfares results from the joint efforts of the Cleveland Auto club, the Cleveland Safety council, and the General Outdoor Advertising company, this latter company donating the billboards.

Emergency Tire Chains Made of Old Garden Hose

While chains of the ordinary type usually will give you traction in snow or mud, it is a dirty job to apply them. And when most of the route is clear, with only a short section of road in bad shape, chains will come in for a lot of unnecessary wear besides chafing the tires.

The illustration shows a simple solution of the problem. Take pieces of old garden hose and through each piece pass a length of strong rope.



Emergency Tire Chains Made by Threading Rope Through Hose and Tying On.

When you reach the bad place in the road it is the work of but a few moments to tie them in place as shown. They can be removed with equal facility when the bad part of the road is left behind. Pieces of hose attached in this way are particularly effective in deep, soft snow but they are, of course, no good on ice, where ordinary chains should be used.—Popular Science Monthly.

Yellowstone National Park Was First Choice

"Yellowstone National park was by far the first choice the past season of motorists who had from two to three weeks for their vacation," says Bert Vanderwarf, manager of the touring bureau of the Chicago Motor club.

"Second choice was the Rocky Mountain National park, and nearby Colorado Springs and Pike's peak," continued Mr. Vanderwarf. "The Black Hills of South Dakota ran third. The natural freaks of Yellowstone, and their comparatively short distance of 1,500 miles from Chicago, lured these thousands of car owners.

"The majority of those who had from seven to nine weeks at their disposal headed their cars for the Grand canyon, while Glacier National park was the next most popular destination. Many motorists in this class also toured through Yosemite, Lassen, Sequoia and General Grant National parks, all in California. Traffic in all parks the past season showed an increase of from 10 to 15 per cent over 1927."

AUTOMOBILE ITEMS

Most traffic reformers are just persons who would change the ways of others.

* * *

Give the radiator hose connections a good coating of shellac to keep oil away from the rubber.

* * *

The next great battle is whether the radio will keep them at home or the auto away from home.

* * *

Fashion says that in the splashy season the proper idea is to carry spare stockings. Some of them seen on the streets certainly look spare enough.

* * *

Within twenty years street car transportation will be a thing of the past, according to F. R. Fageol, auto coach manufacturer. It will be replaced by the motor bus and coach, he asserts.

* * *

Safety experts and psychologists who have studied the "jay walking" problem liken it to the "beat the train to the crossing" situation. In both cases a spirit of race causes the careless pedestrian or reckless autoist to court danger.

Orchard Information

PEACH CURCULIO IS COSTLY BUG

To Control Growers Must Follow Definite Schedule.

One of the costly insects which cuts profits to the peach grower is the curculio, sometimes referred to as the "Million-Dollar" bug.

"This insect passes the winter as an adult, hidden under trash and leaves, along fence rows and other places," says C. H. Brannon, extension entomologist at the North Carolina State college. "The beetle emerges about the time the peach buds are opening and feeds on the young foliage until the fruit is set. The young peaches are attacked as soon as they are set, and are damaged in two ways. First, the fruit is punctured, the egg deposited and the crescent-shaped scar is sealed over. The worm developing in the small fruit causes a tremendous damage. The second injury is also very serious in rainy seasons. Brown rot gains entrance to the fruit through the feeding and egg punctures and is often increased enormously in this way."

Generally, there are two generations of the curculio, states Mr. Brannon, and when the second one comes along, it is in such enormous numbers that a whole crop of late peaches may be destroyed. The eggs of the insect hatch in three days during warm weather and each female will lay from 100 to 500 eggs. The larvae or worms feed on the fruit for 20 days then enter the soil to pupate, emerging after 28 days.

To control this costly insect, peach growers must follow a definite schedule of dusting or spraying, advises Mr. Brannon. These schedules may be obtained from the county agents or from the state college. Growers are also urged to pick up and destroy the drops, beginning just after the fruit is set. As a further precaution, the growers might well disk the orchard, using the extension disk, and going over the land at least once a week until summer. Many of the larvae and pupae will thus be destroyed.

Concord Vines Average Three Tons Per Acre

Under the best of care and on the most favorable soils Concord vines have averaged three tons per acre over a ten-year period. This means that in some seasons the yield has only been three-fourths of a ton, while in others it has reached the high point of six tons per acre. Yields have been noted running to eight tons but this is exceptional. Probably Concord is in its prime between the tenth and twenty-fifth years; after this time the yields fluctuate more from year to year. This latter statement holds only in the event that attention be carefully given to all cultural details. The average yield of Concord is considerably less than the three-ton figure. In fact it is probably not over a half. This can be attributed to unfavorable locations and soils, to indifferent care and to unfavorable climatic conditions, during the winter, spring and active growing season.

Pruned Trees Prevents Serious Rodent Injury

When the apple trees reach the age of eight to ten years they are not so likely to be seriously injured by rabbits. The same holds true with peaches, cherries and plums. To minimize the liability of injury, however, the grower should continue to keep trees wrapped which grow near fence rows, ravines or other quarters of the rabbit. For the parts of the bearing orchard located more distant from the haunts of the cottontails, serious injury may be prevented by commencing the regular pruning shortly after the leaves drop in the fall, leaving on the ground near the trees the branches removed. These furnish food for both rabbits and field mice, and they may be more fond of the tender bark on the pruned branches and shoots than that on the tree trunks. As a result, the rabbits and mice may do little or no injury.

Cover Strawberries

Strawberry plants should be "covered up and tucked in for the night." If they are covered too soon, they will not immediately enter that "sleep" which we wish them to have, but lie "half awake" until the severe winter winds begin to creep in, and then, the real danger begins. Better wait until they have gone "sound to sleep" before all the covers are placed on and they are "tucked snugly in" for the cold "night" before them.

Raspberry Care

It will pay to lay down the raspberries. The pruning will consist of cutting back the main stem to a height of from three and one-half to four feet above the ground, that is if the canes have made a good vigorous growth the preceding year. Some varieties are not as vigorous as this and may have to be cut much lower. Sometimes two and one-half feet above the ground will be as much wood as one should leave on some of the red raspberries.

With Every Dose, I Say: "God Bless Milks Emulsion"

"At last, after nine and one-half years, I am really getting well. I feel perfectly well (think of it!) and I am sure no one came so near to the pearly gates and missed going through.

"Yesterday a doctor said to my mother: 'My God, Mrs. Stultz, this thing is a miracle that she will get well!' My mother smiled her radiant smile and said: 'It is time you gave the public something for their money; tell them to take Milks Emulsion.'

"I have spent fifteen thousand dollars in doctoring, climates, etc., and one bottle of Milks Emulsion is worth more than all they did for me put together, and I have had the best medical advice in the world.

"As I said before, I am feeling fine and the rales are all gone from my chest; have no cough, but I am not taking any chances of getting a relapse, so I am going to stay right in bed and take Milks Emulsion until I get my weight back.

"I look down at my feet sticking up in the bed and say: 'By golly, babies, you are going to do some walking now. Cheer up; your day is coming.'

"I can't tell you how happy I am, and I love the Milks Emulsion Company. Faithfully and affectionately yours, ANAMAE STULTZ, Colfax, Calif." Jan. 28, 1927.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Had Never Been Locked

The Philadelphia Record moved to a new building. Then the front door of the old Record building had to be locked—the first time in forty-six years. And when they started looking for the key, they could not find it. In fact, no one remembered ever seeing the front door key. So a locksmith made a new key for the lock that had been nothing more than an ornamental fixture for a little less than half a century.

Attend the Party In Spite of Cold!

Don't despair some day your social calendar is full, and you awake with a miserable cold. Be rid of it by noon! You can, if you know the secret: Pape's Cold Compound soon settles any cold, yes, even one that has reached deep in the throat or lungs.—Adv.

Critical Summary

"That taxi narrowly missed you."

"Good driver," commented Miss Cayenne, "but poor marksman."

Trusting to luck at least saves worry beforehand.

Honor is the reward of virtue.

Dorothy's Mother Proves Claim

Children don't ordinarily take to medicines but here's one that all of them love. Perhaps it shouldn't be called a medicine at all. It's more like a rich, concentrated food. It's pure, wholesome, sweet to the taste and sweet in your child's little stomach. It builds up and strengthens weak, puny, underweight children, makes them eat heartily, brings the roses back to their cheeks, makes them playful, energetic, full of life. And no bilious, headachy, constipated, feverish, fretful baby or child ever failed to respond to the gentle influence of California Fig Syrup on their little bowels. It starts lazy bowels quick, cleans them out thoroughly, tones and strengthens them so they continue to act normally, of their own accord.

Millions of mothers know about California Fig Syrup from experience. A Western mother, Mrs. J. G. Moore, 119 Cliff Ave., San Antonio, Texas, says: "California Fig Syrup is certainly all that's claimed for it. I have proved that with my little Dorothy. She was a bottle baby and very delicate. Her bowels were weak. I started her on Fig Syrup when she was a few months old and it regulated her, quick. I have used it with her ever since for colds and every little set-back and her wonderful condition tells better than words how it helps."

Don't be imposed on. See that the Fig Syrup you buy bears the name, "California" so you'll get the genuine, famous for 50 years.

Monkeys in Dentist's Chair

Twelve husky, grinning monkeys are undergoing treatment at the college of dentistry of the University of California, at present having their teeth straightened. They are kept especially to observe the effect of diet on teeth. Their teeth are much like children's, having the same number, and two sets, milk and permanent, but the monkeys differ in a vital respect. They like to go to the dentist. The doctors report that the monkeys throw back their heads and open their mouths cheerfully and seem to chatter with interest at the goings-on.

Chewing Gum

Professor—What is the most common obstruction in the speech of American people?

Freshman—Chewing gum.—Chicago Tribune.

Never strike a man for a loan when he is down.

Mothers—Try Mild Children's Musterole

Of course, you know good old Musterole; how quickly, how easily it relieves chest colds, sore throat, rheumatic and neuralgic pain, sore joints and muscles, stiff neck and lumbago.

We also want you to know CHILDREN'S MUSTEROLE—Musterole in milder form. Unexcelled for relief of croupy coughs and colds; it penetrates, soothes and relieves without the blister of the old-fashioned mustard plaster. Keep a jar handy! It comes ready to apply instantly, without fuss or bother.

CHILDREN'S MUSTEROLE WILL NOT BLISTER MILD

Better than a mustard plaste

Why children should eat KARO on cereals

LEADING physicians now recommend Karo as the *ideal* energy-giving food for growing children—

Not only is Karo delicious and fully satisfying to a child's craving for sweets—

But Karo does not cause a child to develop an abnormal taste for sweets—nor does it affect the digestion or appetite.

There are 120 calories per ounce in Karo—nearly twice the energy value of eggs and lean beef, weight for weight.

Serve the children plenty of Karo—keep them strong, healthy and happy.

Note—Compare the price of Karo, pound for pound, with other staple foods. Isn't Karo economical?

Makes Life Sweeter

Next time a coated tongue, fetid breath, or acrid skin gives evidence of sour stomach—try Phillips Milk of Magnesia!

Get acquainted with this perfect anti-acid that helps the system keep sound and sweet. That every stomach needs at times. Take it whenever a hearty meal brings any discomfort.

Phillips Milk of Magnesia has won medical endorsement. And convinced millions of men and women they didn't have "indigestion." Don't diet, and don't suffer; just remember Phillips. Pleasant to take, and always effective.

The name Phillips is important; it identifies the genuine product. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875

Relief! Take Piso's—relief is diate. You get a good night's rest renewed vitality. 35c and 60c. Standard for 64 Years

FARM STOCK

SHIPPING STOCK IN ALL SEASONS

Make Careful Inspection of Car and Remove Refuse.

Before loading a car for shipment of live stock, it should be thoroughly cleaned of all manure and refuse. The car should also be carefully inspected to eliminate all defects such as holes in the floor, projecting nails, etc. In winter it should be well bedded with straw and if the weather is extremely cold, the north side should be covered with building paper. Covering all sides is not advisable, however, because it may smother the stock. In summer the car should be bedded with sand rather than straw and thoroughly wet down for cattle and hogs but need not be wet down for sheep. For hogs in hot weather it is a good plan to suspend 50-pound cakes of ice in sacks at intervals of about four feet along the center line of the car. The motion of the car sprays the hogs with cold water. Handle the stock carefully and do not get them overheated. Load uniform grades if possible.

The following details should be observed for the different classes of live stock:

Cattle.—Keep grain-fed cattle on their accustomed ration up to loading time as nearly as possible. Take grass-fed cattle off pasture for a few days. Reduce silage if a heavy silage ration is being fed. Feed timothy hay or wild hay in addition to other roughage as much as they will clean up. If near market keep them off water for 9 to 12 hours before loading. If not, allow it up to finish. Use a slapjack made of canvas or leather instead of a club or prod for handling cattle. Ship cattle that have been fed together rather than mix them from different feed lots. Pen off cripples and tie bulls securely when shipped with other cattle.

Hogs.—Reduce the last regular feed before shipping and hogs that are fed on slop rations might be benefited by changing the last feed to middlings and ground oats. The hogs should be rested after the last feed to prevent indigestion. Use short, strong pig hurdles instead of clubs for moving and separating hogs. It is a serious mistake to feed hogs heavily before loading.

Sheep.—Reduce the grain ration about one-half on the day before shipping and feed wild hay or timothy. Water right up to the time of shipment. Withholding water before shipping in order to get a bigger fill on arrival at the market is not only cruel but usually reacts to the disadvantage of the shipper since it causes blueness of the skin and may result in bloating and similar digestive troubles. Feeding salt before shipping is likely to cause similar disorders.

Heating Hog Houses Insures Pig Crops

Rather significant developments are occurring in hog raising methods in cold climates. Farmers want to have their crop of spring pigs early so that they will be ready for the fall market just as quickly as possible. The advantage of the early start is very material. However, in the northern states the weather in early spring sometimes is very cold and new-born pigs are likely to suffer severely.

The well-known practice of using brooders for small chickens is being extended to the hog-raising business. Special houses are being built in which young pigs can be given extra good care. Heaters are installed and it is interesting to watch the little pigs scramble around to get into the area of warmth around this heater. It shows that they appreciate it.

Practical hog raisers who have tried out artificial heat in a practical way testify to the value of this improvement. The cost of utilizing it is not very great but it certainly is good insurance of big pig crops.

Heated Water Helps Porkers Make Gains

For winter hog production, experiments carried on last winter at the Iowa experiment station showed that heated water in automatic hog waterers paid good dividends by helping the porkers make quicker and cheaper gains. Such heaters use a small kerosene lamp to heat the water and are very inexpensive to operate. Pigs having access to these heated waterers gained 5 per cent more in the same period, the amount of feed per 100 pounds of gain was reduced 10 per cent and the cost of production was reduced 63 cents per 100 pounds, or 10 per cent.

Lambs in Feedlot

Western lambs which are to be fattened for market should be watched closely when put into the feedlot. It will take a few days to get them accustomed to new conditions and especially to get them started. Too much grain at the start may result in death of some of the lambs. Until all the lambs become accustomed to grain, only a small amount of concentrates should be supplied as there is the danger that some of the lambs will eat more grain than they can stand.

Red Squill Rat Poison Harmless

Tests Fail to Show Injury to Poultry From Eating the Powder.

(Prepared by the United States Department of Agriculture.)

The control of rats in poultry establishments is usually of great importance, as the abundance of feed in poultry runs almost invariably attracts large numbers of rats, which cause serious losses among the chickens. The question is at times raised as to whether or not red squill, the rat poison now becoming commonly used in such cases, is harmful to the poultry.

Number of Tests Made.

A number of tests have been made in the laboratory and in the field by the biological survey of the United States Department of Agriculture and others to determine the effect of red squill on adult chickens, and up to the present time no record of adult poultry harmed with squill has been received. These tests included in one case two hens fed on a 10 per cent concentration of red-squill rat bait to the exclusion of all other food for a period of six weeks, without apparent injury.

No experiments, however, had been made to determine the effect of red squill on baby chicks until a recent investigation conducted by a member of the biological survey staff in co-operation with the North Carolina State college experiment station. In a series of feeding tests baby chicks from five to eighteen days old were fed varying quantities of 10 per cent powdered red squill mixed with a standard chick-feed formula.

Chicks Dislike Squill.

In all experiments chicks showed a distinct preference for feed that did not contain squill powder. It was found that chicks are not likely to eat enough feed composed of 10 per cent squill in one, two, or three feedings to cause death, even when given to the exclusion of other feed, and that a high mortality is not likely to occur when squill feed is exposed to vigorous chicks for five consecutive days when other palatable feed is obtainable. Some chicks show a distinct dislike for red-squill powder, and since it is not highly toxic to them, it may be used with safety as a rat poison in places accessible to chicks if they are well supplied by other more palatable feed and care is taken to prevent them from feeding on squill feed for more than 48 hours.

Paint Is Distasteful to Injurious Rabbits

To keep rabbits from gnawing fruit trees, a writer in the American Fruit Grower's Magazine has advised painting them—the trees, you know, not the rabbits—with the following mixture:

Two pounds of sulphur, two pounds yellow ochre, one gill turpentine, one gill linseed oil, one ounce asafetida, four to six eggs, one-half pint wheat flour. Mix well with sweet milk and apply with a brush close to the ground and as high up as necessary.

"Peter Rabbit won't take a nibble at the tree for 15 months," the writer declares, and he adds: "It is good for borers and scale."

Editor Weymouth, who specializes in apple trees and rabbits, says he has tried paint as well as various wrappings. Some of them work pretty well. But a little cylinder of mesh wire always works. Buy a roll of 16-inch finely woven chicken wire and cut it up with tinners' shears into 15-inch lengths. Loop these around the trees and fasten the loose ends together. You're protected from rabbits until the tree is five or six years old.

Plant Food of Manure Disappears in Winter

Many have definitely in mind how many loads or tons of manure a given number of cattle and other live stock produce a year, but comparatively few realize the enormous waste of fertility there is in the average manure pile or barnyard. Under fairly favorable conditions when manure lies in the barnyard during the winter months and is hauled out in the spring after the planting season is over about 50 per cent of its plant food content has disappeared. Under rather unfavorable conditions when the feed lot is on a hillside and the manure is left in the yard till midsummer from 75 to as high as 80 per cent of its value may be lost. Its bulk may not shrink that much but its actual plant content—the quantity of nitrogen, phosphorus and potassium—in many instances disappears to that extent.

Agricultural Notes

The names of the legumes are as strong towers: the wise farmer useth them and is safe.

* * *

Metal milk caps are convenient to keep the milk covered after removing the cardboard cap.

* * *

The younger the chicks can be taught to use the regulation roosts at night, the better off they are, since there is less chance of their death or injury by crowding.

* * *

Power for operating a cream separator may be supplied by a one-half horse-power motor. The energy consumption will be about one-half kilowatt hour a 1,000 pounds of whole milk.

Made Lime Kilns of Etruscan Crematories

In ancient times cremation was practiced throughout the civilized world with the exception of Egypt, where bodies of the departed were embalmed, in Judea where they were placed in sepulchers, and in China where graves were made in the earth. In the other countries there were few exceptions to the general custom of cremation. Among these, however, might be mentioned those persons who had taken their own lives, untoothed children and persons struck by lightning.

An Italian archeologist recently discovered what he declared to be the crematories used by the Etruscans, the mysterious civilized people who preceded the Romans in that country and who vanished more than 25 centuries ago. It was discovered that the Etruscan crematories were made use of by the conquering Romans in a strangely practical way. The arched fire chambers, in which an intense fire may be maintained, were turned into lime kilns.—Detroit News.

Seeing the Signs

"Do you know anything about palmistry, George dear?" the sweet young thing asked her suitor.

"Well, not very much," he answered, with an air of becoming modesty. "But the other evening I had a remarkable experience which might be called an example of the art."

"Oh, George," enthused the girl, "do tell me."

"Well," said George, "I looked at a friend's hand and predicted that he would shortly have some money. Before I left him he had quite a useful sum given him!"

"And you foretold that from his hand, dear?" asked the girl.

"Yes; he had the ace, king, jack and ten of trumps in it."

Costly Omelet

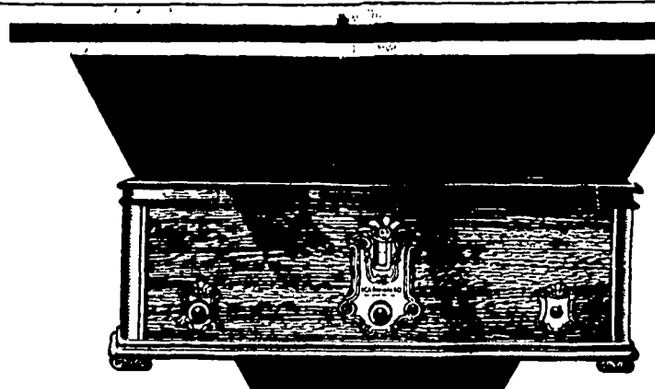
What is believed to be the largest omelet ever served was dished out on an Amador county highway near Jackson, Calif., for $25 without coffee. Manuel Lopez was driving along in his automobile with 120 dozen choice eggs packed in the car when there came a collision with an automobile driven by J. H. Williams. Williams was forced to pay for the omelet which resulted from the impact of the cars. The price agreed upon was $25.

Resting on Dad

Harrington—Is your son lazy?

Carrington—No; he was simply born tired and has been getting his rest out of me ever since.

It's fortunate for mankind that but few of our prayers are answered.



RADIOLA 60

—a set to be proud of

Product of three great companies—RCA, General Electric and Westinghouse. Very compact. Expertly designed and built of the finest materials for long life and high quality performance. Single dial—just plug it in on your lighting current.

$147 *(less Radiotrons)*

Any Radiola or RCA Loudspeaker may be purchased on RCA Time Payment Plan from your local RCA Dealer.

RCA RADIOLA

MADE BY THE MAKERS OF THE RADIOTRON

Better

"How is the new bridge getting on?"

"Written reports by the contractor are glowing."

"Tell him to send some photographs."

In the Lisbon earthquake in 1755, a tidal wave which gathered off the coast of Portugal was 60 feet high when it reached Lisbon.

Rich Literary Gift

More than 10,000 letters, dating from 1790 to 1875, written by Wendel Phillips, William Lloyd Garrison John Brown, Charles Sumner and others, have been presented to Syracuse university by Gerritt Smith Miller of Petersboro, N. Y.

People who are good at repartee never find enough opportunities to use it.

Bess, you're the most immaculate person I ever saw. How do you manage it?

Ask Jim . . . he swore he'd cut down on cleaning bills . . . so he started burning Koppers Chicago Coke . . . The house is so much cleaner now—draperies, rugs, walls—everything! . . . and I mean really cleaner . . . tell Bob about it, for your own sake.

Guaranteed

We guarantee genuine Koppers Chicago Coke. If a trial order does not convince you that it is to your advantage to heat your home with this fuel, it is removed at our expense and your money refunded.

Ask Your Dealer

to supply you with this superior fuel. Demand the genuine—ask for it by full name.

Genuine

KOPPERS CHICAGO COKE

"Clean as the Sun's Heat"

Acclaimed by thousands of Chicago users, genuine Koppers Chicago Coke is smokeless and sootless—the clean, full-value fuel. Efficient and economical.

Albright who has succeeded Stephen Mather as director of national park service. 2—Secretary of Agriculture Jardine laying cornerstone for new structure connecting two buildings of Department of Agriculture in Washington. 3—Maj. Gen. Francis Parker, new chief of bureau of insular affairs of War department.

NEWS REVIEW OF CURRENT EVENTS

Kellogg Anti-War Treaty Is Ratified by Senate and Signed by President.

By EDWARD W. PICKARD

UNDER the able leadership of Senator Borah, the Kellogg treaty renouncing war as a national policy was ratified last week by the senate. The vote was 85 to 1, Senator John J. Blaine of Wisconsin being the only one to remain steadfast in his opposition to the pact. All others who had been fighting the treaty fell into line after Senator Borah agreed to the submission of a report from the foreign relations committee setting forth the American understanding of the meaning of the pact.

This report said that the committee approved the treaty with the understanding that it does not curtail the right of self-defense; that each nation is free to determine what constitutes the right of self-defense. It also stated that the Monroe Doctrine is a part of our system of national defense and that there is no obligation on the part of any of the signers to engage in punitive or coercive measures against a violator nation.

It might be well to reprint the two essential articles of the treaty. These are:

"ARTICLE 1. The high contracting parties solemnly declare in the names of their respective peoples that they condemn recourse to war for the solution of international controversies, and renounce it as an instrument of national policy in their relations with one another.

"ARTICLE 2. The high contracting parties agree that the settlement or solution of all disputes or conflicts of whatever nature or of whatever origin they may be, which may arise among them, shall never be sought except by pacific means."

President Coolidge, it is said, considers the successful negotiation of this treaty the high accomplishment of his administration. Skeptics and cynics consider it a mere gesture that, in a crisis, will amount to little or nothing. Between these two views is the general opinion of mankind, that the pact is a big step toward world peace that must have a powerful moral effect whenever there is threat of war between any of the signatory nations—and these include almost all the nations on earth. Some of the senators who voted for the treaty did it with a laugh, agreeing with Senator Glass that it is "not worth a postage stamp," but that its defeat would psychologically be a bad thing. In Europe the ratification was greeted with joy by the governments.

On Thursday President Coolidge signed the treaty in the presence of the cabinet and members of the senate.

WITH the Kellogg treaty out of the way, the senate started in on the debate on the administration's 15 cruiser bill which, according to Senator Hale of Maine, chairman of the naval affairs committee, would go through with only 10 or 12 senators in opposition. The pacifists kept up their strenuous fight against this measure and there was danger of a filibuster developing to defeat it, but Mr. Hale said he had assurances that this course would not be adopted. Since it was brought out that wars of self-defense would not be affected by the Kellogg treaty, the supporters of the cruiser bill felt that the pacifist arguments against it were refuted. The opening speaker for the measure was Senator Swanson of Virginia, Democrat, who declared the proposals contained in the bill were most moderate, not exceeding in any degree the requirements of our navy and "not to be construed in any light as competition on our part as they only seek to bring our navy up to the ratio established at the Washington conference—they even fall far short of this."

PRESIDENT-ELECT HOOVER found so much to do in Washington that his departure for Florida again was postponed until Monday, and it now seems certain that he will have to abandon his projected visits to the West Indies and Mexico. Washington correspondents said they had authority to state that Secretary of the Treasury Mellon had been asked to retain his portfolio in the Hoover cabinet and had accepted. It was also asserted that Ambassador Morrow would not be the new secretary of state, preferring to continue his excellent work in Mexico, and that Henry P. Fletcher, ambassador to Italy, probably would be selected to succeed Mr. Kellogg. Other rather positive guesses are that William J. Donovan will be attorney general and that a man from the Far West will be secretary of the interior.

During his stay in the capital Mr. Hoover made definite arrangements for the calling of a special session of congress, starting early in April, to take up farm relief and the tariff. Speaker Longworth said the ways and means committee of the house would have a tariff bill ready for consideration at the beginning of the session. It has been holding hearings for some time. Mr. Hoover also conferred with Senators Edge and Wesley L. Jones, wet and dry leaders, and agreed to appoint, soon after assuming office, a commission to investigate all phases of prohibition enforcement. The members will be men outside of congress and will be as nearly unprejudiced on the question as possible. Congress will be asked to appropriate money for the investigation, but it was decided no legislation was needed by the President to appoint the commission.

ACCORDING to a decision of the United States Supreme court, rendered last week, the Chicago sanitary district may not divert water from Lake Michigan for the sanitation of Chicago. The present diversion of 8,500 cubic feet of water per second through the sanitary district canal is to be reduced to a small fraction thereof for the purpose of maintaining the navigability of the Chicago river only.

It will be within the power and discretion of congress, however, to increase the volume of diversion eventually to the present amount or more for the purpose of navigation of the projected lakes to the gulf deep waterway. Although the decision casts doubt on the power of congress to authorize diversion for sanitary purposes only, the diversion permitted for deep waterway navigation would be sufficient for incidental sanitation, particularly in conjunction with the septic tank sewage disposal system now in process of construction.

Members of the Illinois delegation in congress immediately began planning action to save the deep waterway project by getting enabling legislation, and Senators Deneen and Glenn laid the whole problem before President-Elect Hoover.

REAPPORTIONMENT of the 435 members of the house of representatives on the basis of the 1930 census, effective in 1932, seems certain. Little opposition was expected in the senate to the measure passed by the house by an overwhelming viva voce vote. The bill provides for automatic reapportionment by the secretary of commerce every ten years in the event that congress, at the first session following each census, fails to enact a reapportionment bill.

BACHA SAKAO, son of a poor Afghan water carrier, may become the king of Afghanistan. His real name is Habibullah Khan and he is the leader of the rebels who have been besieging Kabul, the capital. A few days ago King Amanullah rescinded some of his reform measures and then abdicated in favor of his brother, Inayatullah. But this did not satisfy the rebels and they continued their attacks on the government forces. Amanullah fled, but Inayatullah was cornered in Kabul and recent reports said the city, with the exception of the citadel, was in the hands of Habibullah's followers. Priests and tribesmen in the Jallalabad area joined the insurgents and the city of Jagdalak was reported captured.

This revolt in Afghanistan is an interesting result of international scheming. The Afghan minister to Paris says it was brought about by British intrigue. He declares Great Britain never forgave Amanullah for forcing the recognition of his country's right to diplomatic relations with other nations in 1919, and when, during his recent visit to Europe he went to Russia and came under Soviet influences, the British vowed to get him, and incited the tribesmen to rebel. The Russian government is believed to have had a hand in the affair and may yet come out winner.

GEN. BRAMWELL BOOTH, aged and sick, refused to retire as commander-in-chief of the Salvation Army when the high council of the organization asked him to do so, offering to let him retain the honorary title and dignities. So the council, after deliberating all day, declared the old general unfit to continue in his high office, the vote being 55 to 8.

General Booth was quoted as having issued the following statement while the council was voting to oust him:

"I shall resist by every means in my power this attempt to deprive me of the leadership of the Salvation Army. I have not much money, but I will spend what I have in defending my position. I should be a coward—worse than a coward—a skunk—if I quite because there is a bit of a rumpus."

J. PIERPONT MORGAN and Owen D. Young with Thomas Nelson Perkins as alternate, were agreed upon as the unofficial American representatives on the board of experts that is to devise a final settlement of German reparations. Great Britain suggested these names and they were accepted by France, Belgium, Germany, Italy and Japan. The program was to obtain the consent of the men selected, propose their names to the reparations commission and then ask Secretary Kellogg if the American government had any objection, to which he would reply in the negative. All of which was made necessary by the determination of this government to have no official concern in the business.

THE long quarrel between the Holy See and the state of Italy is about to be settled amicably, according to dispatches from Rome. Cardinal Gasparri and Benito Mussolini have concluded an agreement by which the Vatican grounds are to constitute a completely free and independent territory under the sovereignty of the pope. A precedent for this is found in the existence of the republic of San Marino within Italy, of Monaco within France and of Andorra surrounded by jurisdiction of other states.

JOHN D. ROCKEFELLER, JR., and Col. Robert W. Stewart have been engaged in a desperate battle for control of the Standard Oil company of Indiana, and it is reported that Rockefeller is winning. Stewart, who is chairman of the board and who had some well remembered troubles with the senate, refused to resign at the demand of Rockefeller and was supported by President E. G. Seubert and the other members of the board of directors. Thereupon both Rockefeller and Stewart started out to get proxies for the next annual meeting, set for March 7. Before the end of the week it was believed Rockefeller had obtained more than 51 per cent of the voting proxies. John D., Sr., joined his son in the fight, making it harder for Colonel Stewart.

NORTHERN EUROPE was swept last week by terrific gales and snow storms. Steamers and sailing vessels were wrecked, train service stopped and rural districts isolated and buried in snow. The loss of human lives was considerable, and great numbers of cattle perished.

Off the coast of China a Chinese steamer, caught in a storm, ran on a rock and sank, about 300 natives being drowned.

MRS. GEORGE H. RUTH, estranged wife of Babe Ruth, famous baseball player, was burned to death in the apartment of a dentist in a suburb of Boston. Her identity was discovered by accident.

Wyatt Earp, last of the celebrated frontier gunmen who helped preserve order in the old West, died in Hollywood, Calif.

Count Chinda, lord chamberlain of Japan and former ambassador to Washington, passed away in Tokyo.

POULTRY FACTS

COD LIVER OIL AIDS EARLY CHICK

Three Tests Made at North Carolina Station.

Three separate tests made lately at the North Carolina experiment station prove the value of 1 per cent of cod liver oil in the mash feed supplied to early hatched chicks.

"Chicks reared in our laboratories where we could control nearly all conditions have proven the value of cod liver oil in the mash feed," declares Dr. B. F. Kaupp, head of the poultry department at State college. "One lot of chicks fed a complete ration except for the vitamines, broke in health in the fifth week. The chicks receiving 1 per cent of the tested oil in the same kind of mash did not break in health and were strong and well developed. In a second test, the chicks which were not allowed to run out-of-doors nor receive direct sunlight gave us exactly the same results. Those receiving the oil were strong and well and were sold as broilers. Those receiving only the straight mash and grain feed broke in health at the end of the fifth week."

Doctor Kaupp states that a third flock was carried on the basic ration without oil but were given all the tender range that they would eat. These broke in health in the seventh week indicating that they secured some vitamines from the green feed but not enough to keep them in good health.

In another test, at the coastal plain station, one lot of chicks was allowed to run on a fresh, green pasture three or four hours during the middle of the day with the result that they did not break in health but were not so large and strong as the chicks in the cod liver oil flock. Doctor Kaupp states that those chicks which run out-of-doors pick up other things which are required for good health and development, but usually this is not sufficient as the tests with the cod liver oil show.

As a result of all the tests, Doctor Kaupp believes that the expense of using 1 per cent of this oil is well worth while. It holds up the health and gives stronger constitutional vigor.

Coccidiosis Is Very Destructive to Chicks

Coccidiosis is a disease of the intestines and while it affects all birds it is especially destructive to chicks up to two months old. The cause is a microscopic organism. The transmission of infection from diseased to healthy birds occurs by contamination of the feed, water and ground. The coccidia multiply with great rapidity in the intestines and enormous numbers are discharged in the droppings.

The most prominent and characteristic symptoms in nearly all cases are white, diarrheal discharges and the rapid wasting away of the affected birds. Adult birds have considerable resistance to this germ and the disease is frequently seen in the chronic form.

There is no satisfactory cure for this disease in young chickens.

Balanced Ration for Hens Very Important

Until about fifty years ago chickens were fed only grain and since they were permitted to range at will they secured their essential requirements so they could live and lay some eggs during the spring. About this time it was discovered that additional protein in form of meat or milk fed with the grains became known as the balanced ration—a ration in which the surplus carbohydrates of the grains were balanced in better proportion by adding a protein concentrate. It was the balanced ration that first made commercial poultry keeping possible, but in the light of recent information on the nutrition of chickens, the poultryman's feeding problem of today is to complete the balanced ration.

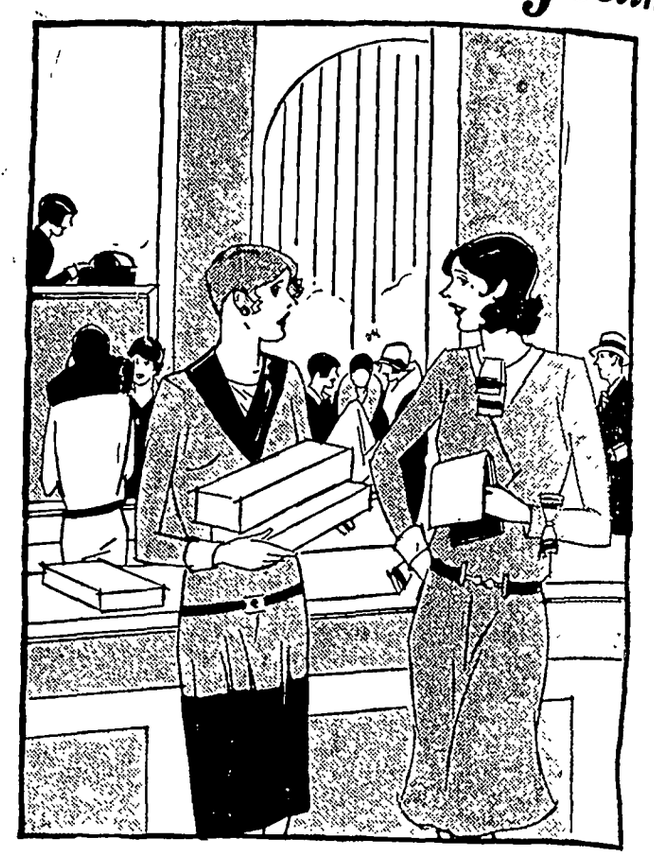
Age to Keep Hens

With Leghorns, Anconas, Minorcas and birds of this type, the hens of the right type may be kept until they are three years old. It is not usually advisable to keep them after they have reached three years of age. With the general purpose breeds, such as Rhode Island Reds, Plymouth Rocks, Orpingtons, etc., it is usually best to sell them after they are two years old. Extremely valuable hens can sometimes be kept five years, but this is quite unusual.

Thin-Shelled Eggs

Whenever there is a late spring with a great deal of cloudy weather, many flocks lay thin-shelled eggs. The eggshell quality from such a flock will begin to improve as soon as the hens get into direct sunlight. It is a common observation that when a flock is laying thin-shelled eggs and is turned out-of-doors in the sun, the shell quality improves. It is very important in managing a flock to open the windows on sunshiny days during the winter or early spring.

That Million-Dollar Feeling



"Wish it was time to quit. I've had a terrible splitting headache all day."

"Listen, Margie, just take NR tonight. You'll feel like a million tomorrow."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

NR TO-NIGHT TOMORROW ALRIGHT

MAKE THE TEST TONIGHT

BE WELL and HAPPY

Get Relief. Drive Out the Poisons

Auto-intoxication, Constipation, Biliousness, are caused by defective elimination. For over thirty years Nature's Remedy (NR Tablets) has proven the safe, dependable relief for these conditions.

Goblet of Friendship Never Yet Exhausted

I have drained the sparkling beaker of the magical brew of Youth and been thrilled with the wild tumult of its impetuous urge coursing through my veins.

I have pledged my happiness with the blood-red goblet of Love and drank deeply of its sacred and intoxicating contents.

I have toyed with the tempting opal bowl of Ambition, but its dregs are bitter and may only be sweetened by libations from the crystal cup of Service to Man.

Then it was revealed to me that no one yet has drunk too deeply of the sacrament in the golden chalice of Friendship, without which even Youth and Love would lose their deepest meaning.—Dan Beard in the Pictorial Review.

Increased Their Thirst

Wife (seeing husband attacked by bees)—Run, honey, run!

Husband—Don't call me honey, for heaven's sake! You're making them desperate.—Pearson's

An old maid says that she never married because she couldn't find a man to suitor.

If time is money the lazy man's must be counterfeit.

A man never has to go halfway in order to meet trouble.

IT'S DANGEROUS GROUND you stand on—with a cough, a cold or grippe, and your blood impoverished. You must do something! Dr. Pierce's Golden Medical Discovery enriches the blood—builds health and strength.

Silas H. Eidson, Route 5, Box 4, St. John, Kans., remarked:—"I have used Dr. Pierce's Golden Medical Discovery, 'Anuric Tablets' and 'Pleasant Pellets' and I surely can say that they have done wonders for me. I had whooping cough and pneumonia when I was 19 years and was troubled ever since with indigestion, constipation and kidney trouble. I tried doctors but did not get relief. I had given up hopes, but thank God I am a well man and I certainly can recommend Dr. Pierce's medicines to be all that is claimed for them."

All druggists. Tablets or fluid. Send Dr. Pierce, Buffalo, N. Y., if you desire a trial pkg. of tablets.

Leave It to Her

Jim—You'll keep our engagement a dark secret, won't you Nellie?

Nellie—I'll tell the world.

SCHOOLGIRLS NEED HEALTH

Daughter of Mrs. Catherine Lamuth, Box 72, Mohawk, Michigan

"After my daughter grew into womanhood she began to feel rundown and weak and a friend asked me to get her your medicine. She took Lydia E. Pinkham's Vegetable Compound and Lydia E. Pinkham's Herb Medicine. Her nerves are better, her appetite is good, she is in good spirits and able to work every day. We recommend the Vegetable Compound to other girls and to their mothers."—*Mrs. Catherine Lamuth.*

Daughter of Mrs. Eva Wood Howe, 1006 South H. Street, Danville, Ill.

"I praise Lydia E. Pinkham's Vegetable Compound for what it has done for my fourteen-year-old daughter as well as for me. It has helped her growth and her nerves and she has a good appetite now and sleeps well. She has gone to school every day since beginning the medicine. I will continue to give it to her at regular intervals and will recommend it to other mothers who have daughters with similar troubles."—*Mrs. Eva Wood Howe.*

Abraham Lincoln, the Human Being

Lincoln arrives in Washington

UNDERWOOD & UNDERWOOD Photo

By ELMO SCOTT WATSON

CONSIDERING the fact that it deals with a certain set of truths, most of which can be backed up by documentary evidence, it is rather queer that there should have been in the past—and for that matter, still are—so many ways of writing biography. One style, which was much in vogue in the early days of this Republic, was the kind which made Abraham Lincoln suspicious of all biography. For, as he said to his friend Herndon, "Biographies as written are false and misleading. The author of a life of his hero paints him as a perfect man—magnifies his perfections and suppresses his imperfections—describes the success of his hero in glowing terms, never once hinting at his failures and blunders."

Can it be that the prophetic vision of this man of destiny made him foresee what his biographers would do and caused him to utter those words? For immediately after his death a perfect horde of writers began creating a Lincoln myth in much the same fashion as Lincoln himself had characterized it. Describing this process when it was just beginning, Ingersoll declared "Washington is now only a steel engraving. Of the real man who lived and loved and hated and schemed we know but little. . . . Hundreds of people are now engaged in smoothing out the lines on Lincoln's face—forcing all features to the common mold—so that he may be known, not as he really was, but according to their poor standard, as he should have been."

Somewhere between the extremes of the old-style "nihil nisi bonum" biographer and the modern muckraker, somewhere between the superficial "psychographic" biographer and the compiler of the dull facts of a "Who's Who," there lies the ideal type of biographer who can so blend fact and opinion, who can so avoid both the creation of a mythical superman and the delineation of a "weak vessel of human clay" and can present the portrait of a man who is both a hero and a believable human being. Modern biography has furnished at least one example of this type of writer, but the tragedy of it is that death interrupted his work before it was finished. For, such is the two-volume study of the first 50 years of Abraham Lincoln's life, by the late Albert J. Beveridge, published recently by the Houghton Mifflin company. Literary critics seem to be unanimous in the opinion expressed by one of them that "On the whole, this is incomparably the greatest story of Lincoln's life before his Presidency. It was a cruel stroke that took Beveridge from us before he reached the Civil War. For Beveridge died soon after he had made the first draft of his chapter on the Lincoln-Douglas debates and as another critic has justly said, 'it ends like Schubert's "Unfinished Symphony."'

The Lincoln which stalks through the pages of Beveridge's books is a different Lincoln from that presented to us by the myth-makers. He is a less perfect but much more understandable figure—a human being. He had his weaknesses, his flaws, some of which are not wholly admirable themselves, but the man himself is all the more admirable because he rose to the heights he did in spite of those flaws. Despite the fact that Beveridge demolishes many of the favorite stories about Lincoln, he is not an idle "debunker" nor by a stretch of imagination could he be classified with the muckrakers. "He does not cringe before a fact that dissipates a cherished illusion. That is the only thing an honest historian can do." Says one critic, and therein lies the great merit of what Beveridge has done. The myth-makers "lynched" Herndon for telling the truth about Lincoln many years ago. Beveridge has defended Herndon almost without exception. But, had Beveridge lived, it is certain that the modern myth-makers would not have dared try to "lynch" him. There simply is no answer to the facts which he presents.

(All portraits from Beveridge's "Lincoln," courtesy Houghton Mifflin Company.)

1. Abraham Lincoln in 1857. The ambrotype made by Alschuler in Urbana, Ill. From the collection of Frederick H. Meserve.

2. Mary Todd Lincoln. From a print in the collection of Oliver R. Barrett.

3. Abraham Lincoln about 1848. From a daguerreotype formerly owned by Robert T. Lincoln, in the collection of Frederick H. Meserve.

4. Abraham Lincoln in 1858. The ambrotype made at Macomb, Ill. From the collection of Frederick H. Meserve.

The myths which Beveridge has demolished are many. The picture of the boy Lincoln reading by the light of the fireplace, Beveridge shows to be imaginary. The story of his industrious and energetic youth has been much overdone, for Beveridge shows that he had considerable of a distaste for manual labor, did it only when it was absolutely necessary and when he did "hire out" his employers often had reason to complain that he was more likely to be telling stories than working. The story of his letter to a minister begging him to preach a sermon over his mother's grave is shown to be impossible because at that time Lincoln could not write.

Another favorite story about Lincoln is that of his witnessing the slave auction in New Orleans and his declaration that when he had a chance he would hit that institution and "hit it hard." It is true that he saw the slave auction, but there is no record that he commented upon it either then or thereafter and for years his attitude toward slavery was one of indifference. Especially was this shown in his carcer as a legislator in Illinois when a decided stand on slavery would have made him very unpopular. Lincoln had all the more reason to keep silent on the slavery question then for as a legislator he was more concerned with managing the fight for the removal of the capital from Vandalia to Springfield, in his own district, and he was not taking any chances on antagonizing anyone who would have any influence in that contest.

No other historian has ever made as careful a study of Lincoln's career in the Illinois legislature as has Beveridge and from that study there is only one possible conclusion to draw—that Lincoln was a clever manipulator, a typical partisan politician, more concerned with results than methods and guided by expediency. This was true especially of slavery, for as Beveridge says: "Two decades were to pass before Lincoln showed much concern over slavery."

As a congressman, Beveridge shows Lincoln to have been pretty much of a failure. His appeal for election was not because of any special fitness for the job, but as he said, "Turn about is fair play—you know that is my argument." After being elected he virtually "double-crossed" his constituents with a strong speech against the Mexican war (which was popular in his state) and they were so infuriated by this that he was denied re-election and his whole political career seemed wrecked forever. Deeply humiliated, he returned to Illinois, a discredited man, and again took up his profession of law.

At about this time he became subject of fits of melancholy which bordered closely upon insanity. According to the popular legend, it was his grief over the death of Ann Rutledge which was responsible for this condition. In view of the recent furore over the publication of the purported love letters between Ann Rutledge and Lincoln in the Atlantic Monthly, it is interesting to note that Beveridge shows that Ann was in love with a young man named John McNamar and not with Lincoln and that, although Lincoln no doubt was deeply affected by Ann's death, it could not account for his condition, described by one of his friends, as "Lincoln was crazy as a loon." Although most of Lincoln's love affairs were unfortunate, and followed by mental lapses, including his unhappy marriage to Mary Todd, from which he had once "backed out," Beveridge's conclusion seems to be that it was his bitter disappointment in politics and the strain caused by "excessive study and reading" which were principally responsible for the melancholy which overtook him from time to time.

Among the other weaknesses of this very human being, Abraham Lincoln, which Beveridge shows was his habit of writing anonymous letters to the newspapers. It was one of these which involved him in the famous duel with James Shields which "leaves one with the feeling that by the standards of the day, Lincoln deserved a thrashing." But the result of this was, as Beveridge points out, "At last his habit, formed in boyhood, of ridiculing other persons through offensive anonymous letters, had been sternly checked. . . . Never did Lincoln forget that experience. . . . From the time of the Shields duel Lincoln was infinitely circumspect and considerate in his dealings with others."

He was a regular reader of newspapers and especially the newspaper poetry of the time, many pieces of which he clipped. More than that he attempted to write poetry himself. His earliest poem is the now-famous couplet which he scribbled in the copy book when he was a boy:

Abraham Lincoln, his hand and pen
He will be good but God knows when.

But it was during his career as a legislator, both state and national, that he became more ambitious as a versifier. Beveridge records one instance in which he wrote a poem of "ten verses on the ancient topics of death, decay and the comforts of memory; and it was only one of four cantos." Beveridge reproduces one which he calls the "best of the verses in this canto" and remarks "Fortunately, the remaining cantos of this production appear to have been lost." Then he says "Lincoln was thirty-seven years old when he wrote these 'poems.' Nearly twenty years were to elapse before he produced the Second Inaugural."

But it was also in this period that "the Lincoln of immortality was being molded in the fiery furnace of these latter days of impenetrable gloom." And one of the mysteries of Lincoln which Beveridge does not attempt to solve and which may never be solved is the sudden genius in the use of words which Lincoln developed at this period in his career. Beveridge shows him working earnestly for a literary style, seeking the exact word or phrases and the musical combination which were to make the Gettysburg address immortal. But there is no reason which can be assigned for the change from the man who wrote a very poor kind of poetry into the writer of matchless prose.

But the fact remains that by the time he was forty-five, this "unhappily-married small-town lawyer and politician who differed only from hundreds of other mid-western lawyers of his day and generation only by his inflexible honesty, his great personal ambition and his puzzling alternations of gayety and gloom" was beginning to develop into the towering genius of the Lincoln-Douglas debater and the only man who could have led the nation safely through the four years of agony of 1861-65. By some strange alchemy this man whom Beveridge makes us see so clearly, was changing into the statesman and leader who probably could never have existed without the molding in the "fiery furnace" of his early years when he was "disciplined by humiliation and driven to a ruthless self-analysis by disappointment." So, for all that this latest biographer of Lincoln takes away from us many a pretty legend, he has given us an infinitely greater and finer character and one more worthy of our respect and admiration because through an understanding of Abraham Lincoln, the human being, we can come nearer an understanding of Abraham Lincoln, the immortal.

ASPIRIN

To break a cold harmlessly *and in a hurry* try a Bayer Aspirin tablet. And for headache. The action of Aspirin is very efficient, too, in cases of neuralgia, neuritis, even rheumatism and lumbago! And there's no after effect; doctors give Aspirin to children—often infants. Whenever there's pain, think of Aspirin. The genuine Bayer Aspirin has Bayer on the box and on every tablet. All druggists, with proven directions.

Physicians prescribe Bayer Aspirin; it does NOT affect the heart

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid.

Cuban Women Lawyers

Cuban women, although they may be lawyers, are refused the privilege of becoming judges by a decision of the Supreme court. The decision states that a judge must be a citizen of the republic with all the functions of a citizen. Inasmuch as women have not yet been granted the right of franchise, judgeships are automatically withheld from them. Women's organizations are protesting against this situation.

An Easy Cure

Annie—Well, how are you today?

Lorry—My rheumatism has gone. I rubbed my knee for an hour.

Annie—Your knee? I thought you said it was your arm.

Lorry—Yes, but the exercise cured me.

In common parlance—slang.

When Children Complain

Children are naturally happy and playful and when they complain of headache or dizziness, are cross and feverish, restless at night, have bad dreams and no "pep" for play, it is a sure sign of an upset stomach that can be quickly remedied if you give them

MOTHER GRAY'S SWEET POWDERS

They act quickly and gently on the bowels, relieve constipation, cleanse the stomach and sweeten the feverish breath. They break up colds and act as a tonic to the whole system. Children like to take them. This safe and pleasant remedy has been used by mothers for over 30 years. Mother Gray's Sweet Powders are sold by all druggists; accept no substitute.

Spellbinding

"You have held many audiences spellbound!"

"Yes," answered Senator Sorghum. "But I didn't seem able to keep everybody well hypnotized after they got into the voting booths."

What about the FLU?

HAVE you had it? Are you going to have it? What are you doing to prevent it?

Everybody is asking these questions just now.

Doctors say to keep out of crowds; be cheerful; eat good food; get plenty of sleep; keep the bowels open.

At the first sign of constipation, take a dose of Thedford's BLACK-DRAUGHT.

At the first sign of Flu, that is, when you begin to have a little temperature and feel like you are taking cold, go to bed and call your doctor. You can not cure the Flu on your feet.

Prevention, as everyone knows, is better than cure. One of the best ways to prevent catching a cold which might develop into the Flu, is to keep your system free from impurities by using Thedford's

Black-Draught

News of Klemme and Vicinity

Dr. R. W. Specht, Dentist, Garner, Iowa. adv

Mrs. A. R. White and son, Albert were Belmond visitors Tuesday.

Henry Helps and Otto Pringnitz were in Chicago over the week end.

Old Time Dance at the Idle Hour Wed., Jan. 30th. All welcome. 1tc

Mr. and Mrs. Tim Waddingham were Klemme callers Monday.

Mrs. Marlin Croner is still confined to her home suffering from after effects of the flu.

Thelma Gimer spent Saturday and Sunday in the country visiting at the Clarence Johnson home.

Dorance Grange was absent from school Monday and Tuesday because of illness.

Mr. and Mrs. Gus Okrueg of near Goodell were Klemme busness callers Tuesday.

Clarence Elder, Vernon Turgasen and Maurce Greman, of Ames, spent the week end in Klemme.

Miss Minnie Blumer, of Jewell, was here to atend the funeral of her uncle, Mr. Henry Medaus.

Mr. and Mrs. David Schwichtenberg were Mason City visitors Tuesday.

Mr. and Mrs. Herman Priebe visited at the John Swalve home Sunday.

Miss Gertrude Ely, of Belmond, spent the week end visiting at the Dr. W. F. Missman home.

LOST—Monday, Parker Fountain Pen, without cap. Return to Times Office, reward. 1tc

Poland China Bred Sow Sale, Thursday, Feb. 14. R. C. Ludeke, Klemme, Iowa. tfc

Mr. and Mrs. Dave Ross of Garner entertained for Sunday dinner J. N. Day and family and Wm. X. Smith and family.

The Auxiliary Ladies will hold an Old Time Dance, with old time music at the Idle Hour Theatre next Wednesday night. 1tc

Mrs. T. F. Mitchell and Mrs. Peterson, of Swea City, came Friday to spend the day visiting at the C. F. Keraus home.

Quite a number of Klemme young people took in the sub-district Epworth League Rally at Britt on Monday evening.

Red Carlson stayed at the Herman Bridges home Tuesday as he could not get home on acount of the storm.

FOR SALE—what is known as the B. Reichardt property in the west part of Klemme. Inquire of Mrs. Wm. Wenz. 3tc

Mr. and Mrs. Gimer and family visited at the Clarence Johnson home Sunday afternoon and enjoyed a six o'clock dinner, a feature of which was home-made ice cream.

Dr. and Mrs. D. P. Anderson are at Des Moines this week. Dr. Anderson is attending the forty-first annual meeting of the Iowa State Veteninary Medical Association.

The Klemme Creamery received a car load of spruce butter tubs this week. There were 3,600 tubs in the load, which, when filled with butter will make nine car loads.

Otto Pringnitz and Henry Helps returned from Chicago Tuesday and on account of the blizzard could not get home, so they spent the night at the U. G. Smid home.

Mrs. C. G. Waterman, Mrs. R. A. Jorgenson and Mrs. Paul Grange attended the regular meeting of the Eastern Star at Garner Friday evening.

N. E. Brear, of Garner, newly elected master of the Masonic Lodge, is the first in Hancock County to purchase an airplane. "Nick" has a fine new Eaglerock plane and is awaiting fine weather to soar among the birds. Masons hope he does not go so far as to call a lodge meeting up among the clouds.

The feature picture, "Uncle Toms Cabin," shown here last Thursday, Friday and Saturday, drew a packed house for each performance. It was a very good picture.

Mr. and Mrs. C. F. Keraus were visiting at the Joe Horecka home at Garner Friday evening. Mr. Horecka has been seriously ill. Mrs. Horecka and Mrs. Keraus are sisters.

Mr. and Mrs. Bert Auchampach moved this week to their home in Ventura. We expect to hear of a number of good fish stories from Bert this summer.

R. A. Jorgenson and family had Sunday dinner at the J. Jorgenson home at Garner. Mrs. J. Jorgenson had just returned from an extended visit in South Dakota.

Gus Okrueg, who lives west of Goodell will have a public sale in February 14 at which time he will sell stock, machinery, etc. Mr. and Mrs. Okrueg will retire and move to their nice new home on their other section of land.

Martin Barz, that handome young man (single, yet) who hands out groceries at the Klemme Food Market s now a regular resident of this town and rooms at the Grandma Schroeder home. Before he had been driving to and from work.

Mrs. Harry Gram and daughter, Colleen are quarantined for scarlet fever which they have in a light form. Mrs. Arthur Moulton is caring for them. This is the only case of a contagious disease in the community.

The home of Wm. Bredlow was the scene of a happy family gathering Sunday in honor of Grandpa Bredlow's 74th birthday. Those who were present were August Kropp and family, Herman Gast and family, and Mr. and Mrs. Albert Borchers. All brought well filled baskets and enjoyed a big dinner and a pleasant afternoon.

UNDER GOVERNMENT SUPERVISION

The Book Shows--

When you keep your funds in a checking account, you know at a glance just how much money you have available — no need to gather together and count up. You know at a glance. It is easy and sensible to start a checking account. See an officer of this bank.

First National Bank

Pete Wilson had more shelving installed in his drug store this week. John Suckow put in the shelves on the west side of the store and near the rear. Mr. Wilson has one of the best stocked drug stores in this part of the state and more room is needed to display his stock.

Ralph Elder has the spirit of winter in his system, we believe for he comes to town with his team decked out in sleigh bells each morning as he delivers milk and cream. Or are the bells used as a signal to let the kids know R. W. is coming? At any rate the kids have a fondness for Ralph and enjoy riding around with him. At any rate the bells sound fine on a cold frosty morning.

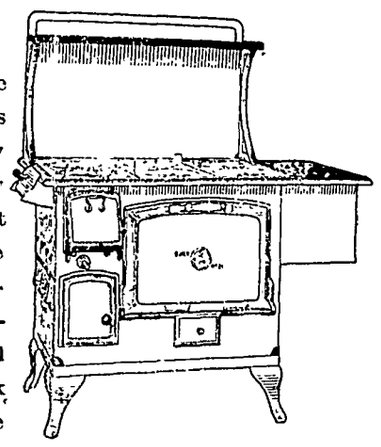
PUBLIC NOTICE

The records of the Town of Klemme, Iowa, are open to the public at all times, and your inspection is cordially invited.

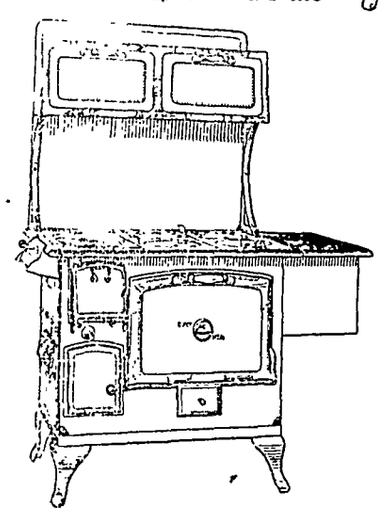
P. GRANGE, Mayor,
A. J. KUDJE, Clerk,
C. G. WATERMAN, Treas.

Phone 1-2 Klemme when you go away, have company or get a new car—that's news!

NOW--Beauty in Ranges



We now have on display the very latest in Kitchen Ranges —Now you can have beauty in Your Kitchen for these new Ranges have beautiful, soft colorings which please the eye and harmonize with your color scheme. Besides the beautiful colors they are equipped with either a high or low back as shown. They have all the latest features n Ranges. The back top plate is solid, easy to clean. Come in and see the ranges pictured here.



You will be delighted with these beautiful ranges. Now is the time to buy, and when you come here wo can show you a complete line, and at a price you wish to pay. See us first—

E. F. Jacobs

We have It--

Order Field Seeds

We are now receiving orders for early Spring delivery on FIELD SEEDS. Let us have your order at once for any kind of seed you need.

Mill Feeds

We have a nice stock of Mill Feeds on hand. Just got in a car load of International Feed, also a car load of barrel molasses, fine for mixing with your feed. If you need Laying Mash or your poultry we have it here for you now.

Coal

We have plenty o good furnace and kitchen rang ecoal on hand ready for delivery. Our coal is mighty good!

Klemme Co-Operative Grain Co.

COUNTY CONTEST HERE MONDAY EVE

FIRST COUNTY ROUND HERE ON NEXT MONDAY NIGHT

Local Contest Held Tuesday Eve. Was Well Attended

A fine sized crowd greeted our speakers at our local declamatory contest on Tuesday evening of this week. An elimination contest had to be staged Tuesday afternoon to determine the four who should speak in the dramatic class that evening. There was stiff competition in this class between ten of our young people, all of whom showed to excellent advantage. The judge liked best the work of the following: Marie Carson, Nova Koerner, Valeria Koerner and Lucile Kraus. Those speaking in oratorical and humorous classes were as given in the columns last week. In the final contest first and second place winners were:

Oratorical: 1st, Oral Gibson; 2nd, Raymond Barz.

Dramatic: 1st, Lucile Kraus; 2nd, Valeria Koerner.

Humorous: 1st, Thelma Kluckhohn; 2nd, Byrnes Mdesman.

County Contest Begins Here

Our seconds: Valeria, Raymond and Byrnes will represent our school in the first round of the county against Hayfield and Garner on next Monday evening in our own auditorium. We wish as many might be present for this contest as came to our local one. The program will begin at 8:00 o'clock.

The following contestants will take part: From Garner they are as follows: Oratorical, "The Modern Slave," by Kenneth Ryan; Dramatic, "Peter and the Angels," by Betty Carr; Humorous, "Biff Perkins Toboggan Slide," by Helen Becker.

Hayfield: Oratorical, "The Menance of Lawlessness," by Laura Kuller; Dramatic, 'The Wheels of Time' by Mabel Lackore; Humorous, "Sister in the Medicine Closet," by June Cope.

Klemme: Oratorical, "America for Americans," by Raymond Barz; Dramatic, "Strongheart," by Valeria Koerner; Humorous, "Trial Mershum," by Byrnes Missman.

Our high school Girls Glee Club will sing and we hope to have other music. Admission will be 25 cents and 35 cents.

Three Judges from out of town will officiate.

Date For State Contest March 1

The First State Contest will be held at Garner on March 1, unless changed by managers of competing schools. We shall compete there with Garner and Kalnawha. Oral Gibson, Lucile Knaus and Thelma Kluckhohn will represent us there.

Judge Was Very Satisfactory

We were fortunate in securing for our local contest such a competent judge, Mrs. E. E. Hunter, of Mason City, who in addition to judging gave us all some very helpful suggestions on what constitutes good performance by a speaker. Also, after the program she met the speakers and gave them suggestions more in detail. She was once an I. S. T. College instructor.

Local Teacher Deserves Credit

To Miss Trumbell belongs not a little credit for the showing made and the work done. Had she been able to devote her time exclusively to coaching the eighteen contestants the work would have been correspondingly better but with her six english classes to take care of in the mean time she could not do more. This is the first time, as far as we know, that a special coach has not been provided.

The door receipts, from the contest amounted to $47.15, and more than last year.

B. B. Game Here Next Week

Our next basket ball game will be played away from home. We play a return game with Swaledale there Friday night unless roads are blockaded. On Friday night of next week we play on our own floor a return game with Garner, both the grades and high school.

CALIFORNIA GIRL MAKES SHORT STAY HERE TUESDAY

Miss Hulda Johnson s Buyer For Large Los Angles Stores

Miss Hulda Johnson, of Los Angeles, spent Tuesday visting at the home of her parents, Mr. and Mrs. Joe Johnson. That all of the family might thoroughly enjoy her visit a family dinner was held at the parental home and all of the children and their families enjoyed a get-to-gether. Those prsent were: Clarence Johnson and family, Geo. Johnson and family, Mrs. John Johnson and daughters. Ant Kuidje and family, and the ohnson children who are at home. Miss Hulda is the buyer for some large stores at Los Angeles and had been on a buying trip to New York City. She was on her return trip to the west when she stopped here for a short visit.

MAIL CARRIERS GO BACK TO OLD DAYS AND USE DOBBIN

Many Rural Communities Without Mail For Several Days

Mail carriers last week had a bad time of it in this country and many did not make their routes from Tuesday until Saturday. Carrier Sumner Trumbell could not reach some parts of his route until Saturday, when he procured teams and sleds. R. W. Elder made one round of the route and Trumbell took the other. Cream haulers likewise are having a tough time of it getting out on the routes and getting the cream to town.

10:00 a. m. English Service.

11:00 a. m. Sunday school.

The Young Peoples' Bible Class will meet Tuesday evening at 8:00.

Choir practice Sat. evening, 8:00.

The Confirmation class meets on Tuesday and Saturday at 1:30 p. m.

STOCK SHIPMENTS TOTAL NINE CARS

STOCK SHIPMENTS FOR THIS PAST WEEK

Five Cars Shipped Saturday And Three More Tuesday

There were only five car loads of live stock shipped out Saturday evening, which was perhaps due, in a measure, to the bad weather and roads.

The Klemme Shipping Association had three car loads of hogs, C. A. Larsen had one car of mixed, and Ed. Schoenwetter had one car load of cattle.

Tuesday business again picked up at the local yards when C. A. Larsen loaded out hogs. He had two car loads and one double deck car, which really makes four cars. The shipment was consigned to Iowa Falls.

The Saturday night shipment was all billed for Chicago.

CROWD BRAVES STORM TO ATTEND P. T. A. MEETING

Spelling Contest Will Receive Support Of Parent Teachers

The storm Thursday evening did not prevent a fair sized crowd from attending the P. T. A. meeting held at the high school. However, on account of the audience not being any larger Rev. Whyte's talk was postponed until the next meeting. A few questions were voted on among which it was decided to limit the program to one hour only and then have a short game period in the gymnasium, after which lunch would be served. The P. T. A. also decided to again back the local spelling contest by offering cash prizes to the winners in each room taking part. The crowd was small but the meeting was enthusiastic never the less and thirty persons enjoyed the fine lunch which had been prepared.

NOTICE OF MEETING

The Trustees of Liberty Twp. will meet Feb. 4 for the purpose of letting road bosses and road dragger. Other busines may be taken up. L. Griffen, Twp. Clerk. 2p

LADIES AID WILL MEET AT THE PARISH HOUSE FRIDAY

Plans Have Been Made To Hold A Bazaar Next Fall

The Ladies Aid Society of the M. E. Church will hold their regular meeting this week Friday afternoon at the Parish House. The ladies have planned to hold a bazaar again next fall so request is made that all bring needles and thimble. There will be sewing to do. The Aid has reached its $1,000 goal but does not intend to quit work because of that. The Aid has added to the equipment at the Parish House, three dozen folding chairs. They wish to thnak the School Board for the use of the school cairs in the past when extra chairs were needed. The Aid also wishes to have more members and any lady interestd is urgd to join and help along with the good work, that of helping provide means with which to build a new church in Klemme sometime. Mrs. R. A. Jorgenson and Mrs. John Johnson are the hostesses Friday. There will be special music, a vocal solo "Ah, I Have Sighed To Rest Me," by Mrs. Whyte, and an instumental solo, "Second Valse," by Aug. Durand, by Mrs. Jorgenson.

NORTH POLE HAS NOTHING ON IOWA THIS MONTH

Houses Here Resemble Eskimo Igloo Covered With Snow

This country is beginning to resemble the North Pole in more ways than one. For some time now we have had zero and sub-zero weather and so much snow that roads are blocked; about the only roads that are passable are the primary roads which are kept open with daily trips of the big snow plows. It is with a great deal of difficulty that the road into Klemme is kept open and for a couple of days last week it was entirely blocked but Saturday morning a number of men shoveled out a path so that cars could come in and out. Saturday was like days of old times as the streets were lined with teams and bob sleds and many farmers had a hard time to find places to hitch as the old hitching posts have practically disappeared.

FOR SALE—what is known as the B. Reichardt property in the west part of Klemme. Inquire of Mrs. Wm. Wenz. 3tc

ANDERSON TOOK IN VET CONVENTION

VETS HAD IMPORTANT MEET AT DES MOINES LAST WEEK

Local Veterinarian And Wife Attend Forty-First Annual Meeting

Dr. D. P. Anderson and wife returned Saturday from Des Moines where they attended the forty-first annual meeting of the Iowa Veterinary Medical Association. Dr. and Mrs. Wesson, of Garner were also in attendance. The Doctor reports that the meeting was of rare educational value this year because a wealth of new discoveries and research aplicable to Iowa animal disease problems were clearly presented to the veterinarians by prominent specialists from many parts of the United States.

Many Frauds Were Exposed

High lights on the program, says Dr. Anderson, were addresses by Dr. J. H. Weiner, consulting chemist of Kansas City who exposed many glaring frauds perpetrated on the farmers of the middle west in the form of worthless cure-alls for animals. He stated that most of the so-called cures advertised for "necro" in hogs ranged from 83 to 99 per cent water.

Dr. I. Ernest Newsom, an internationally known authority on diseases of sheep, stressed the importance of rotation, sanitation and proper diagnosis in control of lamb and sheep diseases.

1300 Attend Annual Banquet

A banquet was held Wednesday evening at Hotel Savery with 1300 in attendance. Many members of the legislature, prominent physicians, county agents and farm bureau officials helped the veterinarians and their wives make this the most successful banquet in forty years. Representative and Mrs. C. H. Nelson of this county were the guests of Dr. and Mrs. Anderson, and Dr. and Mrs. Wesson, at the banquet.

Clinic Was Held At Ames

A clinic at Ames, Friday, demonstrated many of the technics and methods discussed at Des Moines.

Dr. Anderson has consistently attended meeting of the Iowa Veterinary Association for the past several years, and he feels that in this way he gains much information which is of value to his clients.

FARM BUREAU WOMEN MET AT BRITT, MONDAY

Achievement Day Will Be held In February

The Womens' Division of the Farm Bureau Board of Hancock County met in a regular monthly session at the Odd Fellows Hall at Britt on Monday, Jan. 21, at 10:00 a. m., with eighteen ladies present representing seven townships.

Matters of general intrest were discussed and assignments made for the Achievement Day to be held in February and plans were also made for a training chool on Poster Making to be held in February with Miss Alma Meintz from the Extension Department.

Through the refusal of Mrs. S. B. Durant to officiate in the capacity of County Chairman, Mrs. Ernest Schubert of Britt was reelected at this meeting for the ensuing year. Mrs. Ed. Oxley of Corwith was reappointed publicity chairman and secretary.

The ladies enjoyed a picnic dinner at noon.

—Mrs. Ed. Oxley, Pub. Chm.

FARMERS, NOTICE!

I have taken the agency for The Economy Hog and Cattle Powder Co and handle a full line of their products. Call on me if you need anything along that line. Gilbert Schaper, Klemme, Iowa. 1tc

The 100 Percent Man

-- A Definition --

A 100 per cent man is not a gus, a wonder, a marvel, or a gi anything else.

He is just a real human be willing to smile at the smiling t —always cheerful— conserves health and strength—recognizes obstacles—laughs at competitio believes in himself—believes in goods.

He believes, acts and talks t his house is the only concern in istence; its policies are sound, management is honest, its work are "all for one and one for all."

He is glad to see Monday morn come, and sorry to see the curt rung down on Saturday night.

In other words, he is a man w his whole being (mind and bo **in the task at hand.**

A 100 percenter is not looking another job—another territory different time of year—nor does imagine the whole world is agai him and **opportunity has stop her tick-tacking.**

He realizes that the 100 per c man does today (not tomorrow) work in hand, just a little bit bet and with a little more brain acti than the other fellow does it.

The 100 percenter has patience perserverance; he has a future cause he builds character, person ity and reputation each day of week. He is honest, because lyi trickery, insincerity, misrepresen tion and the other sins of the "g by-today" man are all minus quantities in the percentage column. He is thrifty because he knows the warmth in the friendship of "good old Dollar Bill" and because an empty pocketbook will never keep the thermometer of the percentage table at 100 centigrade.

A 100 percenter has his weaknesses but he knows them, and strives to overcome them. He is an analyzer—first of himself and then of conditions. When he does something fine, he lets others call him a 100 percenter, but sticks to his number seven hat, tightens up his belt, and uses his head to plan how he can "beat his own record." The know-it-all is a 100 per cent man with one of the naughts left off.

A 100 percenter, ever since he heard the story of "Little Red Riding Hood," knows what his eyes, ears and brain are for—to learn—and that a real education never ends. That is where he has it on the so-called educated man.

A 100 percenter always obeys orders. He knows his rules—his prices — his company's decisions — his business literature — and plays the game according to "Hoyle," or whoever "wrote the book." A 100 Percent man takes two looks before he starts, then finishes when he starts.

A 100 Percenter is a MAN (all in capitals), d ing a MAN'S WORK in a manly way.—J. I. Holcomb.

MADAME DU DEFFOND

GREUZE'S PORTRAIT OF FRANKLIN

LOUIS XVI

COMTE DE VERGENNES

By ELMO SCOTT WATSON

IF BENJAMIN FRANKLIN were alive today . . . !

While it may, perhaps, be idle business to speculate upon the results of such an event as stated in the foregoing, in these modern days of American participation in world affairs and with a new administration facing the solution of important international problems, it might be particularly advantageous for this country to have a modern Benjamin Franklin as an "ambassador of good will" in helping solve them. For Benjamin Franklin, America's first "ambassador," in fact, even if not officially entitled to that distinction, was one of the most skillful diplomats who ever represented the United States abroad.

As January 17 approaches to mark the anniversary of Franklin's birth, Americans are likely to remember him principally because Thrift week, which begins on that date, recalls to their minds the fact that Franklin, through his "Poor Richard's Almanac," was the first American apostle of thrift. The printers and newspaper men of America will remember him then because January 17 is the beginning of Newspaper week and recalls his great service as a pioneer in the journalism of this country. And such was the versatility of this man that various other groups will have occasion to remember him because he was an inventor, a scientist, a philosopher and a writer. But few of us know much about him in another role—that of unofficial "ambassador" to France whose accomplishments were of incalculable value to the cause of liberty and but for whom the struggle to gain that liberty might not have been successful. For that reason the appearance of a new book is particularly timely. It is "Benjamin Franklin of France, 1776-1785," written by Willis Steell and published recently by Minton, Balch and company.

When Franklin was selected in 1776 as one of the commissioners of equal powers in France to ple for aid for the revolting colonies, a post ich called for the most sagacious kind of han- ng of delicate international questions, the ice was a happier one than the Continental ngress realized at that time. For this was not anklin's first visit to France. He had been there 1767. As a philosopher and a scientist, he had en welcomed by the "best minds" of the time in rance and had been invited to become a member f the School of Economists. Doctor Quesnay, ormer physician to the famous Madame de Pompadour, but more noted as "The Apostle of the Economists," wrote a note to Mirabeau which said "Doctor Franklin has just left me . . . he is the sage we pictured, that and more, humorist, philosopher, old regime gentleman, a miracle out of an uninhabited country . . ." He was presented at the court of Louis XV and made friendships which were destined to be of great value later. Again in 1769 he returned to France, after an extended stay in England where he served as agent for Georgia, New Jersey and Massachusetts and had been looked upon as a "colonial ambassador" at a time when the first storm clouds of the Revolution were beginning to loom up on the horizon On this visit Steell records: "The old friends ran to him in crowds and brought others by their panegyrics. Mlle. Bihuron modeled him in wax, popular artists asked him to sit and if he declined, sketched him from memory. The Economists held a special session in his honor. Dupont, Dubourg, the Count and Countess Maurepas devised entertainments with Franklin as the guest of honor. Now, in fact, and to his satisfaction. Franklin made the acquaintance of an exceeding number of 'good ladies.'"

The popularity of this man, who had once been a penniless boy in Philadelphia, and a "wandering printer" in England and who, when he was later chosen as a commissioner to France, described himself as a "fag end," because his name came up for consideration in the Continental congress as an afterthought, in Paris, the center of the most brilliant, sophisticated and intellectual social and diplomatic life in Europe, is explained by Steell as follows:

> When Franklin came to Paris and met the men l women of society, with their graceful logic, ir enticing vices, he came not to judge but to ept with open mind all the views and standards a rationalistic civilisation.
> He had no pride and no reserves; all men interested him and he could interest any man. He d early learned how to choose the right words ay exactly what he meant to express or to hide what he did not; without great originality (in fact, charges of plagiarism brought against him for some of his most famous "pieces" have never been fully disproved), nevertheless his table talk and his letters are as delightful now as they were in his day.
>
> Urbane, cheerful, aware of the sun though it might be hidden behind a cloud, this man had by nature the gift of social ease. This is a trait to which all French women aspire and one they most admire in their men. Their brothers found him responsible, deliberate, thrifty, all French traits. Is it surprising that they received him as one of themselves?
>
> Knowing these facts then, it is not surprising to learn of the ovation which Franklin was given when he arrived in France in November, 1776. In commenting upon that reception Steell draws an interesting parallel with a modern incident. He says:
>
> When the news (of Franklin's arrival) reached Paris, the city turned out en masse. On every tongue sounded the name, "Franquelin! Franquelin!" And an ovation was prepared for him such as the town had never before arranged for any stranger.
>
> Franklin came back not to a small coterie of the intelligentsia but to the whole French people, who had never heard of his former presence among them. The excitement, too, included every class of society, the aristocrats, the bourgeoisie, the workers. "Franquelin!" came from a people sharing a new land with the Red Indians, a land from which the hereditary enemies of France had driven her settlers and a people which was now engaged in a struggle for life or death with the hated English.
>
> In the latter thought may be found a partial reason for their enthusiasm, but only a part. That an old man (the French had added some years to Franklin's soixante-dix) had left his quiet hearth, braved the winter seas to come to teach them the true rights of man, warmed the universal heart and inspired in each person the strong desire to see for himself this man—this embodied dream.
>
> The aged man, weak from confinement, scarcely able to walk, craved only a quiet inn where he might rest for a few days preparing for the land journey. But it was not to be. People crowded round him, to touch his hand, to feel his garment. The huzzas of the crowd kept him from sleeping. A great feast of welcome was made ready for him at Nantes. . . .
>
> A modern instance (Lindbergh's arrival in Paris in 1927) saves this description of the wild enthusiasm by the people of Paris for Franklin from the charge of exaggeration. It is the single example of modern times to reach the Franklin climax and it should be interesting to compare the two. Portraits purporting to be faithful likenesses of the Sage appeared on the street the day after his arrival, artists who had never seen him taxed their imagination for a picture of the man who drew lightning from the clouds, and these were artlessly accepted as faithful likenesses until Doctor Quesnay placed a portrait of his friend in the hands of engravers and Mlle. Bihuron had copies made of her wax effigy. Meanwhile every sort of commodity was put in shop windows labeled "Franklin."

But, despite this tumultuous welcome, the job which confronted Franklin was no sinecure. Upon the invitation of Ray de Chaumont, Franklin established his headquarters in the Hotel de Valentinois in Passy, a village on the outskirts of Paris, and although the Hotel de Valentinois was looked upon as the "American embassy," Franklin's status as an ambassador was not officially recognized. The Comte de Vergennes, minister of foreign affairs, made it plain when he received Franklin and his fellow commissioners, Silas Deane and Arthur Lee, that "he saw them not as ambassadors, but as gentlemen to whom he wished to show respect." This Vergennes, however, while telling Franklin that his king, Louis XVI, had warned him to preserve neutrality, "for impoverished France would fall without cause if she broke with England," was the same Vergennes "who close his eyes or looked the other way when canm was surreptitiously removed from royal arenals and loaded on ships with an unknown destination!"

Nor was Franklin's work made any lighter by his associates. However, Deane, though "honest but totally incompetent and blundering in his relation to the French government," was soon recalled. Lee, an "envious marplot eaten up with jealousy hatred for Franklin," certainly was more of a hindrance than a help, until Franklin "brushed him as far as he would a wasp." John Adams, who succeeded Deane, was a man of greater caliber, but "he had strong prejudices and he did not like Franklin whose head was turned, he thought, by admiration and flattery." Not only did he tell Franklin that he disapproved of all his conduct, but Adams constantly wrote letters back to America, criticizing Franklin and apparently doing all he could to discredit him at home. Fortunately, however, congress had enough confidence in Franklin to allow him a free hand and so, despite all the difficulties, he finally triumphed—in the treaty of alliance with France, the loans of large sums of money and the aid of French troops, all of which contributed so materially to the success of the revolution.

Although the story of Benjamin Franklin, "ambassador," in Paris is the more important story in American history, the story of Benjamin Franklin "the man," has a greater element of human interest. It is doubtful if the world ever before, since, has seen the like of his career—this sire, unaffected American colonial winning the hearts of a whole nation as did he. Steell's book is all of this story—of Franklin's friendship for the great men of France at a time when she was producing great men—philosophers, economists, statesmen and scholars. And perhaps most human of all is his conquest of the hearts of the "good ladies." For there is no denying the fact that Benjamin Franklin "had a way with him" when women were concerned. The record of his friendships based on mutual admiration for those qualities of mind and heart shown by both parties to the friendship, with the blind Madame du Deffond, fame for her love affair with Horace Walpole and her friendship with Voltaire, with Mme. Helvetius, with Mme. d'Houdetot and with a host of other brilliant women forms one of the most romantic stories in the history of human society.

And certainly it is all the more to his credit that the attention which he received from such brilliant women did not turn his head. A lesser man than Franklin probably would have, under the circumstances, furnished another shining example of "women making a fool of a man." In this regard Steell's comment is interesting. He says:

> The list of French men and women who admired and courted him might be enlarged so as to include everyone of personage of fashion or fame then living in Paris. ..... Franklin was acknowledged by "tout Paris" to be a great wit when this capital appreciated wit above all else, and his genius for friendship could have kept him in remembrance had he no other claim. In his lighter, as in his more serious mood, in his "philanderings," as in his business contacts, the man Franklin is always there, never to be mistaken for another who lived, wrote and talked in his time. He worshiped science—natural history in the lead; he loved good talk and the other good things of life; he admired great men; and he doted on pretty women. To both sexes he was an intelligent and understanding friend.
>
> Without being a statesman, a leader, or even an organizer that he accomplished for his country with the results he had remains unexampled in human achievement. His political institutions were not based on long tradition and a life-long study of precedent; better than wide reading and broad culture they reveal sane thinking and sound judgment.
>
> A man must indeed be great who, courted by women, does not appear ridiculous; but having weighed Franklin thus surrounded, we see even plainer the kindly qualities of his mind and heart.

ASPIRIN

To break a cold harmlessly *and in a hurry* try a Bayer Aspirin tablet. And for headache. The action of Aspirin is very efficient, too, in cases of neuralgia, neuritis, even rheumatism and lumbago! And there's no after effect; doctors give Aspirin to children—often infants. Whenever there's pain, think of Aspirin. The genuine Bayer Aspirin has Bayer on the box and on every tablet. All druggists, with proven directions.

Physicians prescribe Bayer Aspirin; it does NOT affect the heart

(Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid)

Literary Lights Find Fame Not Widespread

Sinclair Lewis, the novelist, had proved to be quite unknown in a Middle Western town, and he said rather bitterly to a reporter afterward:

"Fame nowadays is confined to the movies and politics. Speak of Cautious Cal and the people will know what you mean, but speak of vers libre or super-realism and they'll think you are referring to a stove polish or a mouth wash.

"Fame, literary fame, is nothing nowadays. Once I was motoring in Devon. I passed through Ilfracombe, and then I came to Watermouth castle. There, as I found out afterward, Marie Corelli had lived while she wrote 'The Sorrows of Satan.'

"But a native put it differently.

"'There, sir,' he said, 'used to live the great Mary Gorilla, the devil's disciple.'"

Monster Indian Dam

The largest dam in the world has been completed at Bhatgor, Bhor state, India. It is 5,333 feet long and the volume of masonry is 21,500,000 cubic feet, holding back a lake 14½ square miles in extent. Two canals more than 100 miles long will irrigate an area of more than 850,000 acres, from which the annual value of the crops should be about $12,500,000.

A woman who marries a proud man knows that he will see that she is well dressed.

A charitable girl never gives her rival's age away.

WHEN CHILDREN FRET

It isn't right for the little tots to fret and they wouldn't if they felt right. Constipation, headache, worms, feverishness, bad breath; any of these will make a child fret. They need the pleasant remedy—MOTHER GRAY'S SWEET POWDERS They regulate the bowels, break up colds, relieve feverishness, teething disorders and stomach troubles.

TRADE MARK

Used by Mothers for over 30 years. All druggists sell Mother Gray's Sweet Powders. Ask today *Trial package* Free. Address THE MOTHER GRAY CO., Le Roy, N. Y.

Waste of Time

"When you tries to make a man change his mind," said Uncle Eben, "he's purty sure to staht in tryin' to make you change yours and you might as well call it a draw an' go back to work."—Washington Star.

Remarkable Sentence

Because it contains every letter of the alphabet, the following sentence is of great value to typists in their practice: The quick brown fox jumps over the lazy dog.

A player should never attempt to play Hamlet unless he has at least a ghost of a show.

That Million-Dollar Feeling

"The way you're smiling, it must be a big relief to get that shoe off."
"That isn't why I'm smiling. I took NR last night and I feel like a million."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

NR TO-NIGHT BE WELL HAPPY
Get Relief, Drive Out the Poisons
Indigestion, Constipation, Biliousness, caused by defective elimination, are relieved when you take NR. Quickly frees Mother's system of poisons. Sweetens the stomach, purifies the blood, clears the complexion.

Matt Smith has been ill with the flu for a few days.

Henry Helps and sons were business callers at Goodell Saturday.

Mr. and Mrs. Harry Buss and family were visiting at Titonka one day last week with friends.

Harmen Trampel was a caller at the D. A. and Herb Marshal home Sunday afternoon.

Miss Leona Buseman has been visiting for a few weeks at the Geo. Buseman home.

Rob Roths is assessor for this township this year. He held this job last year also.

Arthur and Elmer Bachman assisted with some work at the Clarence Bachman farm Tuesday.

D. A. and Herb Marshall were callers at the Clyde Marshall home Tuesday.

Mr. and Mrs. Harry Buss and family are the owners of a new sedan purchased recently.

Ralph Elder was a business caller at the Wm. Bell home Monday afternoon.

Clarence Bachman took a load of hogs to town Tuesday which he sold to C. A. Larsen.

Clarence Bachman helped with the hauling of hogs to town for Jule Cook Saturday. They were shipped from Meservey.

Miss Bonnie Bachman has been staying at the home of her sister, Mrs. Rob Roths since the weather has been bad.

Mrs. George Ruka, mother of Mrs. Harry Carpenter has been assisting with the work there during Mr. Carpenter's siege of flu.

Mr. and Mrs. George Buseman and family and Miss Leona Buseman were visiting at the Mrs. Frank Roths home Monday evening.

Mr. and Mrs. George Buseman and family and Leona Buseman visited at the Clarence Bachman home Tuesday evening.

Mrs. John Bachman and daughter Gladys went back to the home of her mother, Mrs. Chris Hanson, Sunday to care for her as she is recovering from the flu.

Mrs. Fred Bachman and son Wayne were callers at the Rob Roths home Sunday afternoon. Miss Bonnie Bachman also returned home with them.

Mr. James Carlson of Michigan was visiting at the homes of Mrs. Frank Roths and Rob Roths for a few days and also with other relatives and friends in this vicinity.

Mr. and Mrs. Clarence Bachman and daughter, Maxine, and son Delbert, were visiting at the John Bachman home last Monday evening.

The mail carrier on Route 1 missed his first round Friday. That is a real good record for the kind of weather and roads we have been having this winter.

Miss Lela Griggs, who has been attending Iowa State College at Ames has accepted a position with the Bell Telephone Company to do clerical work.

The Prairie Queen School, where Miss Alvina Buss is teacher, did not have school Friday due to the bad weather. There was only a half a day of school in District No. 2 as there were only two pupils in attendance that day.

Dwight Helps and Harry Pringnitz drove down to Galt Tuesday morning to get Henry Helps and Otto Pringnitz who were on their way home from Chicago. Due to the severe snow storm all had to stay in town that night.

FRANKLIN ADVOCATED NO SALARY FOR PRESIDENTS

Benjamin Franklin, reputed to have been one of the world's wisest men, was opposed to paying any salary whatsoever to the President of the United States.

In the Constitutional Convention of 1787 Doctor Franklin urged that a President should meet his personal expenses from his own resources, in order that the highet office in the land might not be sought after by excessively and sordidly ambitious men.

His motion, however, was not even voted upon, but died without a roll call.

This obscure historical incident is revealed by William Hard in the current World's Work in an article describing just how the head office of the greatest business in the world—the United States government, is kept up.

6-WHEEL TRUCKS URGED FOR ROADS

Effect of Vehicle on Highways Is About One-Half That of Four-Wheel.

(Prepared by the United States Department of Agriculture.)

For better and cheaper transportation—the six-wheel vehicle and pneumatic tires, says the bureau of public roads, United States Department of Agriculture.

Automotive and highway engineers are constantly seeking more economic transportation. Highway engineers have always been faced with the problem of producing the greatest mileage of serviceable roads, and have been forced to design them as light as possible, consistent with traffic demands. On the other hand, truck operating costs are generally reduced by increasing the pay load capacity.

Preserve Highways.

To preserve the existing highways and to give economic transportation, the introduction of the six-wheel truck, with a limitation of wheel concentration and pneumatic tires, and not the limitation of gross load, is the solution of the problem, Thos. H. MacDonald, chief of the bureau, recently told members of the Society of Automotive Engineers.

According to investigations of the bureau, all conditions of test being equal, the effect of a six-wheel vehicle on the highways is about one-half that of the four-wheel. This is the first of two important reasons for the six-wheel truck. The other is, that increasing the number of wheels so reduces the load on each wheel as to permit the use of pneumatic tires on the larger-sized trucks, which cannot be so equipped when supplied with only four wheels. The pneumatic tire reduces the impact of the moving truck and so tends further to protect the highway. The bureau's tests show that the impact of a solid tire exerts a pressure on a pavement two or three times the standing load, while the pressure exerted by the pneumatic tire is only a small percentage above that of the load at rest.

Transport Surveys.

Co-operative highway transport surveys, carried on by the bureau and various state highway departments, have shown conclusively that, for general use, the five-ton, four-wheel truck is today the maximum size required. Its wheel concentrations are within the safe load limit for the modern standard types of rural pavements. But there is a very large mileage that is not safe for loads beyond this. It is to protect this large mileage and at the same time permit the operation of large-capacity trucks wherever desirable that the federal road chief suggests the six-wheel solution.

AUTOMOBILE HINTS

Watch the choke when driving on cold days.

* * *

Many an owner learns to lock the car after its predecessor has been stolen.

* * *

Ben Hur won the race without any volunteer advisor. There were no back seats on chariots.

* * *

Funny how people insist in thinking that some day the old boat will really knock a train off the track.

* * *

Somehow it seems as if the more talk there is about careful motoring the more accidents there are.

* * *

A car should always be in motion when steered. Tugging at the wheel while the car is standing still not only strains the steering gear, but causes unnecessary wear on the tires.

Big Alcohol Cost to Motorists in Winter

Thirty million gallons of alcohol or more than one-third the entire output of the United States will be used by water-cooled automobiles during the winter, it was declared at the annual meeting of the Industrial Alcohol Institute at Chicago. The report of the institute did not take into consideration that glycerin and other compounds used by water-cooled cars during cold weather reach an additional volume from 25 per cent to 50 per cent of alcohol used.

With alcohol averaging $1 a gallon, it is readily seen that owners of water-cooled motor cars will spend $30,000,000. Assuming that users of other anti-freezing compounds spend an equal amount, the total expenditure for radiator solutions will total approximately $60,000,000.

Example in Good Driving Is a Serious Obligation

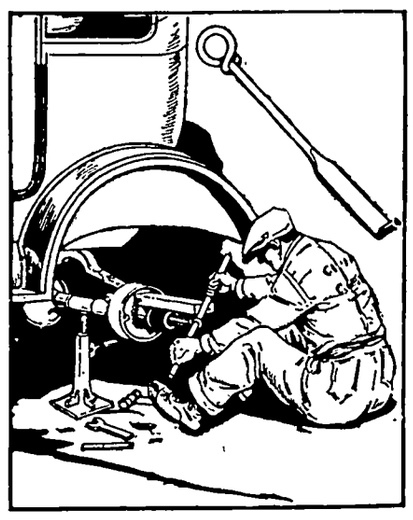
"Setting an example in proper driving is a serious obligation on the part of veteran drivers," says Charles M. Hayes, president of the Chicago Motor club.

"From the veteran, the novice should learn to do his slow driving on the right-hand side of the road, leaving the inside lanes for faster moving traffic; always to move over on a signal from the rear; to make intelligent use of his horn; never to pass another car on a hill or on a curve; to sound his horn before emerging from alleys, and to drive with extreme caution wherever he encounters pedestrians, especially children; to make proper use of the signal lights and to start on the green, and not on the yellow; always to look before pulling away from the curb.

"These are a few of the precautions the veteran driver always takes, and they will accomplish more in the way of reducing accidents than all the efforts of amateur safety tinkers, who perhaps mean well, but who accomplish little."

Remove Roller Bearings to Insert New Washers

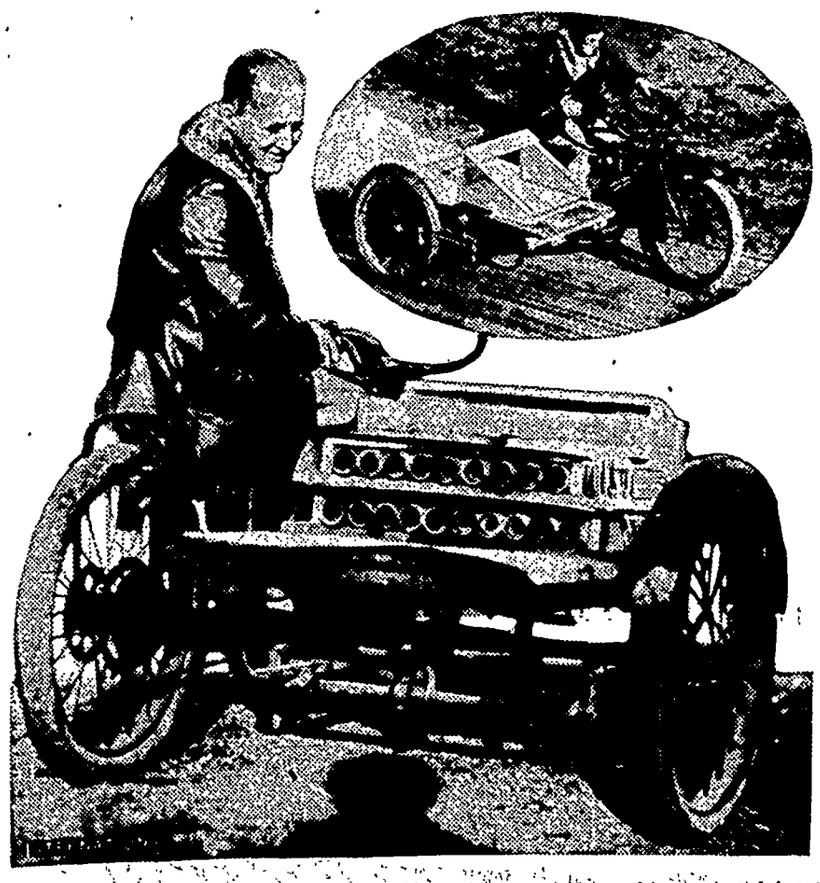
Quite often it is necessary to remove a roller bearing so that felt washers may be inserted behind them to prevent grease from leaking out on the wheel. A simple tool for pulling out the bearing and the method of using it are shown in the drawing. It consists of an iron rod flattened



Roller Bearings Can Readily Be Removed With This Simple Tool.

at one end and bent to the shape shown. The flat end is slipped under the bearing, a length of iron rod is put through the eye and a block of wood is used as a fulcrum under one end of the rod while the other end is pulled, which immediately removes the bearing.—C. C. Stuart, Bridgeport, Conn., in Popular Mechanics Magazine.

WHITE DRIVES ROCKET-DRIVEN MOTOR CYCLE



Capt. George White, cyclist and inventor, seated on his rocket-driven motor cycle, which he expects to eclipse all speed records. He tested his machine, which is propelled by exploding rockets, similar to that means used by Opal, the German. He made his tests at the velodrome, Two Hundred Twenty-fifth street, New York.

POULTRY

FLASHLIGHT BIG AID IN CULLING

Shows Many Loafers Among Layers in Hen Flock.

Literally catching the loafers napping is an excellent method of culling the poultry flock, if the culling process is carried on from week to week. Extension specialists in poultry at the Ohio State university suggest that the weekly culling may be done very conveniently with a flashlight when the birds are ou the roost at night.

Birds showing shriveled combs or molt, or having empty crops, should be culled. Absence of yellow pigment is one of the indications of a good producer, and it may be difficult, under a flashlight, to determine the coloring of the eyerings, earlobes, vent, beak and shanks. If there is doubt, the birds can be isolated and examined again by daylight. The heavy egg producers will have lost yellow color from the body parts mentioned. However, the color will return should the bird cease to lay.

In the low producer, the comb is pale, small and shriveled, the vent is yellow, shrunken and dry. Eyes are small and shrunken, turning in toward the beak. Shanks are yellow, round and full, the pelvic bones close together, hard and rigid. Space between the pelvic bones and the breast bone is shallow or full of hard fat. The skin is thick and underlaid with fat. The bird is generally narrow across the ribs and hips, and the body is shallow and round.

How Much Does Pullet Cost Till Able to Lay?

The North Carolina State college has conducted several tests to determine the amount of feed required to start a Red, Barred Plymouth Rock or Wyandotte laying pullet. In one series of tests the entire animal feed was milk and in the other meat meal. In the case of the milk-fed pullets it required 20 pounds of feed from the time the pullets were hatched till they began to lay 21 weeks later. This feed cost 71 cents. In the meat meal flock, nine and one-half pounds of mash and nine and one-half pounds of grain were used and the cost was 57 cents. Adding the cost of the chick, and other costs, the S. C. Rhode Island Red, Barred Plymouth Rock or White Wyandotte pullets just in lay would cost $1.50 when milk fed and $1.17 when meat meal fed. These pullets sell for $2 each at laying time. If you have surplus milk, feed it to the growing birds.

For Early Winter and Late Fall Production

With most ordinary flocks only 50 per cent or so of the flock is kept as aged hens, the other half being pullets, and the purpose of this is to provide for early winter and late fall egg production. Pullets, when hatched early and properly fed, will begin laying in October or November and lay quite heavily during this season of the year. Hens that are one year of age or older rarely begin laying before late December or early January. They do their heaviest laying during the late winter and early spring months. Therefore, to balance egg production it is necessary to have approximately half the flock old hens and half the flock pullets.

Poultry Facts

Birds that are not fit to be kept over as breeders should be disposed of at once.

* * *

Moldy or spoiled feed is always dangerous. It causes loss of appetite, diarrhea, fungus growth in the "innards," and often kills the fowls.

* * *

Don't be afraid to feed oats, especially if you can get heavy white oats. They are a great poultry feed, unless too much hull and not enough kernel.

* * *

If laying fowls lose weight, give them more grain. If they're lazy, heavy, and laying poorly, cut the grain down, so they'll eat more mash.

* * *

Corn, also barley, if fed, should be given in the evening, because these feeds provide needed heat for the birds during cold nights on the roosts.

* * *

Improve your flock next year by getting some good males to breed with them. Start right now to looking or writing around and locate some good ones.

* * *

Turkeys will begin laying indoors, even in the late winter months, if they are well sheltered and given a good laying mash.

* * *

There is plenty of room for more poultry meat and it pays to keep a flock of good meat fowls that have been bred for egg production.

* * *

Don't think you have to keep Leghorns to get eggs. Any breed or variety can be bred for egg production. It is a matter of strain more than breed.

LIVE STOCK NEWS

FEEDING SURPLUS CORN TO SWINE

Plan to Increase Average Weight of Hogs.

(Prepared by the United States Department of Agriculture.)

Agriculture would benefit and a minimum disturbance of prices for all the commodities involved would follow, in the opinion of Secretary of Agriculture W. M. Jardine, if 50,000,000 bushels of corn were devoted to the additional feeding of cattle and hogs this year. However, he warns against the production of hogs heavier than the desirable market weight, because price discriminations against too-heavy hogs would serve to offset the value of the extra weight.

"An increase of five pounds in the weight of the average hog," says Secretary Jardine, "is about as far as hog feeders should plan to go this year." An average increase of five pounds in the weight of the 45,000,000 hogs fed on the 1928 corn crop would mean the consumption of about 20,000,000 additional bushels.

Secretary Jardine believes cattle feeding is preferable to hog feeding in many respects as a method of utilizing more corn, and says "opportunities for feeding about 32,000,000 bushels of corn deserve the consideration of cattlemen. It takes about 200 pounds of shelled corn to put 100 pounds of gain on a two-year-old steer. At this rate 2,225,000 steers fed to be 100 pounds heavier by corn feeding would consume approximately 32,000,000 bushels of the crop. This is probably a very conservative number, being only half of the steers slaughtered annually under federal inspection.

"The advisability of feeding surplus corn to cattle rather than to hogs," he continues, "is plainly evident. Two and a quarter million steers, each fed to weigh 100 pounds more, are equivalent to about 124,000,000 pounds of dressed beef, or one pound per person. This is not a sufficient increase to affect prices seriously or to offset the 10 per cent decrease in the number of cattle killed within the last year. The heavier feeding of corn should be on the lighter cattle, since there are signs of a plentiful supply of heavy cattle in the summer of 1929."

Give Colts Good Care During Winter Months

Colts should be looking good at this time of the year, and it is highly important that they be given the proper care and attention after weaning to keep them growing well during the winter months. Before colts are weaned, they should have become accustomed to eating grain since grain feeding is necessary to prevent a check in growth after weaning. Plenty of alfalfa hay and other roughage should be fed together with enough grain to keep the colts gaining all through the winter. Colts well cared for during the winter will continue to make good growth on pasture next season. A well developed young horse has a much higher value than one that is stunted.

Good Proportions for Boar for Next Spring

Anyone intending to buy a boar to sire the next spring pig crop will be well repaid for a little care in selecting him. Buy one that will sire pigs with the necessary constitution and feeding ability to make a good start toward 200-pound market hogs. An undersized, scrawny boar cannot be expected to sire pigs that will be vigorous and "good doers." The boar should be large for his age, wide and deep, have plenty of bone, and stand on straight legs with strong feet and pasterns. He must also be smooth, well proportioned from end to end, and of the right type.

Live Stock Hints

Sheep need sheds for shelter.

* * *

Cold winter rains and winds kill more lambs than do dogs.

* * *

The power of a horse is estimated at 3,300 pounds, raised a foot high, in one minute.

* * *

An old horseman once said if a man wants to learn about horses he must learn from horses.

* * *

If animals are properly cared for a large share of disease troubles will be eliminated. Improper feeding is probably the biggest factor in lowering the resistance of animals.

* * *

Soy beans should not be used as a substitute for corn in rations for fattening hogs because of the danger of producing soft pork.

* * *

Growing soy beans with corn and hogging off the two crops with mineral mixture fed in self-feeders is an efficient way of using beans.

* * *

Experiments at Purdue show that a pound of soy beans fed with minerals will practically replace a pound of tankage when supplementing corn and legume pasture for fattening pigs.

It May Urg

When *your* Children Cry for It

Castoria is a comfort when Baby is fretful. No sooner taken than the little one is at ease. If restless, a few drops soon bring contentment. No harm done, for Castoria is a baby remedy, meant for babies. Perfectly safe to give the youngest infant; you have the doctors' word for that! It is a vegetable product and you could use it every day. But it's in an emergency that Castoria means most. Some night when constipation must be relieved—or colic pains—or other suffering. Never be without it; some mothers keep an extra bottle, unopened, to make sure there will always be Castoria in the house. It is effective for older children, too; read the book that comes with it.

Fletcher's CASTORIA

Liberal Yet Restricted

"Modesty is the concealment of what is ugly. There is nothing immodest in the display of what is beautiful."

Lady Millicent Hawes, formerly the duchess of Sutherland, was talking about the present-day fashions.

"I have seen a number of dinner gowns," she said, "and they are lovely."

She added with a laugh:

"Of course they are remarkable in latitude rather than longitude."

Worth Knowing When Winter Cold Co

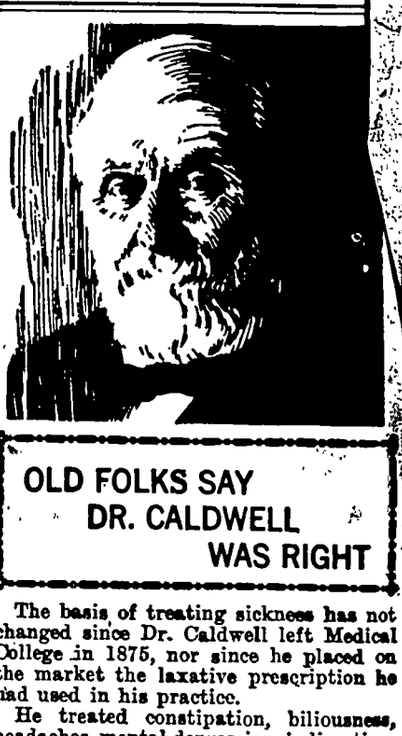
Did you ever hear of a five remedy for colds? There is one it really does bring you out of it pletely. Even if it's grippe, this od works, only takes longer. Cold Compound is in tablet Pleasant-tasting, but it surely ha "authority!"—Adv.

Swedish Graduates Idle

The great response which the Swedes have given to the desi the Swedish government for standard of education is worrying cials of the University of U Sweden. There are now so young graduates who have fin their university courses that the nothing for them to do.

One of the second set of deadly sins is to withhold praise f a man when he deserves it.

The best thing about defeats is getting it and not letting it turn sour.



OLD FOLKS SAY DR. CALDWELL WAS RIGHT

The basis of treating sickness has not changed since Dr. Caldwell left Medical College in 1875, nor since he placed on the market the laxative prescription he had used in his practice.

He treated constipation, biliousness, headaches, mental depression, indigestion, sour stomach and other indispositions entirely by means of simple vegetable laxatives, herbs and roots. These are still the basis of Dr. Caldwell's Syrup Pepsin, a combination of senna and other mild herbs, with pepsin.

The simpler the remedy for constipation, the safer for the child and for you. And as you can get results in a mild and safe way by using Dr. Caldwell's Syrup Pepsin, why take chances with strong drugs?

A bottle will last several months, and all can use it. It is pleasant to the taste, gentle in action, and free from narcotics. Elderly people find it ideal. All drug stores have the generous bottles, or write "Syrup Pepsin," Dept. 82, Monticello, Illinois, for free trial bottle.

Every Cough Costs You Money

FLU (Infectious Bronchitis) is a disease causing acute inflammation of the air passages of the lungs. Hogs cough, sneeze and gasp for breath. Very noticeable as they first come out from sleeping quarters. Lose weight rapidly. Often fatal unless promptly and correctly treated. (Read further particulars in "The Lee Way" book, free on request.)

At first sneezing, coughing or gasping for breath, feed Lee's Flu-Koff Emulsion in thick slop or soaked grain (oats preferred), and spray Lee's Vapo-Spray around the heads of the hogs or in the bedding. Thousands of hog raisers completely control colds and flu with these remedies.

Physicians Helped Develop Remedies

Vapo-Spray is a combination of healing oils and the breathing of these vapors gets immediate action on the irritated breathing passages. Flu-Koff is like a cough syrup for people—allays the cough, reduces temperature and overcomes inflammation. Four physicians assisted the 12 veterinarians of the Lee Staff in perfecting this wonderful double treatment.

Don't let colds or flu rob you of your hog profits. Come in and get these medicines today. Equally effective for poultry—keep them on hand for prompt treatment.

Ask also for a copy of the 1929 "Lee Way" book, free upon request.

INFANT SON OF MR. AND MRS. ALBERT KEHL DIED SUNDAY

Funeral Services Were Held At The Home Monday Afternoon

Ernest Eugene, the three weeks old baby son of Mr. and Mrs. Albert Kehl, who reside north of Klemme, passed away early Sunday morning, February 3rd, after an illness since birth.

The little one is survived by the grieved parents, a sister, Marjorie aged 9 years and a brother, Harold aged 7 years, and the grandparents, Mr. and Mrs. Philip Kehl and Mr. and Mrs. Charles Parr, who were present at the funeral services.

Funeral services were conducted at the home Monday afternoon by Rev. Calvin Grosshuesch, and interment was made in the Klemme Cemetery.

Card Of Thanks

We wish to thank our many friends and neighbors for their help and kindness during the illness and death of our little son, Ernest Eugene.

Mr. and Mrs. Albert Kehl and family.

Barney Croner Instantly Killed

FORMER KLEMME MAN KILLED AT HAMMOND, IND.

Was Carpenter Here Working For His Brother, M. Croner

Elmer Croner, better known here as "Barney" and a brother of Marlin Croner was accidently killed at Hammond, Ind. The following news cliping gives the details:

Elmer D. Croner, a carpenter, living at 51 Doty street, Hammond, was instantly killed at 10:30 o'clock this morning in the basement of the new Lion store, when, as he worked on top of an elevator, a descending weight of another elevator drove his body against the wall, crushing his head like an egg-shell.

Croner, who is not married, was employed by Virgo Mick, 672 Hohman street, and was installing shoe repair machinery. Standing on top of the elevator at the basement level, Croner failed to see the descending weight which caused his death.

John Pruhl, 52 Kenwood avenue, eye-witness to the tragedy and whose shout of warning to Croner was too late, told police that the down-coming weight, attached to the next elevator, caught the victim on the shoulder, crushed his body between the wall and the elevator, and smashed his head. The weight which struck the carpenter weighs approximately one ton.

Croner's remains were taken to Emmerling's mortuary, Hammond, pending funeral arrangements. He is survived by a brother, Marlin Croner, also of 51 Doty Street, Calvin Cox, 672 Hohman, was working with Croner, but did not see the accident. He, however, aided Officers Tebodo, Rickman and Elman, of the Hammond police, in identifying the shaft victim, whose features were unrecognizable. He is believed to have been between 30 and 40 years of age.

MASQUERADE DANCE

The Legion Auxiliary ladies will put on a Masquerade Dance at the Idle Hour Theatre next Wednesday night, Feb. 13 to which everyone is invited. Four nice prizes are offered. WM. KATTER DIED FOLLOWING FALL

DIED AT MASON CITY HOSPITAL FOLLOWING ACCIDENT

Fell From Tree Tuesday While At Work In Grove Near Home

Wm Katter, well known Liberty Township farmer, died at a Mason City hospital Wednesday, as a result of a serious accident which befell him the previous morning.

Mr. Katter, with his sons, went to the grove at his farm to fell and trim out trees. Despite his advanced years Mr. Katter was agile and hearty and in the course of the morning's work scaled a tree to cut off a limb that was in the way of felling a nearby tree. In some way Mr. Katter slipped and fell 25 feet to the frozen ground below, substaining a broken right leg above the ankle and dislocating his left hip. Local doctors were summoned and he was taken to a Mason City hospital where it was thought he could receive better care. The seriousness of his fall was not at first fully realized but it developed that he had received internal injuries in the fall and with the shock following he passed away Wednesday afternoon.

Mr. Katter was one of the substantiall farmers of this community and was known all over the county. His many friends were shocked to hear of his sudden death.

COUNCIL PROCEEDINGS

Klemme, Iowa

FORMER TIMES "DEVIL" WINS FRATERNITY TRIP

Clarence Elder Represents Ames At National Meeting In West

Clarence Elder, of Klemme, senior student in the journalistic department of Iowa State College at Ames, Iowa, has been selected by his fraternity as a representative at the National Convention in California. Clarence will leave next week on a special train of fraternity brothers from all over the United States and will board a private car which comes from Chicago. A big trip has been planned and all will have a wonderful time and see a lot of country.

We congratulate "Dutch" on his good fortune and we know that he is deserving of this special honor. Only the best students are selected for this trip and we are glad to see Clarence get this signal honor.

Wallace Pavey and Fred Ridder visited the Harr Parr Tractor factory at Charles City Tuesday. Wallace says the factory turns out and loads a tractor every fifteen minutes now.

Prune Peddlers Conquer Drifts

SEVENTEEN MEN CLEAN SNOW OFF KLEMME ROAD

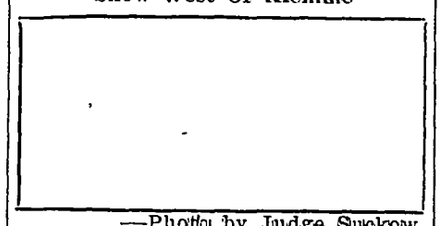
County Snow Plow Opened Up Road Last Saturday

The county road plow was down here Saturday to attempt to open up the badly drifted road between the town and the highway. Because of the thick ice and snow under the drifts the plow could not get sufficient footing to entirely clear out the snow.

The mayor sent out and S. O. S and seventeen businessmen and men about town responded to the call and for a few hours wielded pick-axes and shovels and cleaned the road out where the snow plow could not get at. In places there were eighteen inches of frozen snow and ice, which all had to be picked out and shoveled over the bank.

The county plow was supposed to have again come Monday afternoon to complete the job of getting rid of the snow, and up to this time has failed to appear. However the road to Klemme was put in fine shape for auto traffic.

Picture Of Business Men Shoveling Snow West Of Klemme



—Photo by Judge Suckow.

Note—The arrow points to a lot of men who were conspicuous by their absence. Oyster stews were (not) served to the laboring prune peddlers and retired agriculturists. Hot coffee and sandwiches will be served at the next snow shoveling spree. Each man bring a tin-cup, two slices of bread and a piece of cheese, and a bottle of coffee. The coffee and sandwiches are thus served free.

A lot of men didn't help shovel because of lame backs—there were plenty. Those who did go out got their lame backs afterwards—so it all comes out the same.

Anyway, everybody had a lot of fun, the road got cleaned out and Judge Suckow and Aug. Ridedr were both peeved because we didn't give them a write up the other time they shoveled snow. But we had a lame back that time, so didn't know they were out. So we tell the world that Judge Suckow and August Ridder were there—leaning on a shovel handle most of the time, telling the rest of us how!

Hereafter the county will furnish free liniment for snow shovelers. Lame back excuses are no longer on the excuse list.

Bring your own liniment!

Leave your lame back at home and bring a pick axe and shovel, you need 'em both and can pick with one hand and shovel with the other. That's the way Bill Stille does. And, talk about fast workers, "Smiddy" of the Ford garage used a pick in both hands and kicked the snow out with his hind legs!

WELLEMEYER HAS CAR OF FURNITURE

LOCAL MERCHANT HAS LARGE SALE BEGINNING SATURDAY

Wellemeyer Co. Have Carload Of New Furniture On Floor

On Saturday of this week marks the first day of the Wellemeyer Co. big furniture sale. This has become an annual event and many people drive miles and miles to take advantage of the special low prices on high grade furniture offered during the week.

The sales Mr. Wellemeyer conducts is not one of the ordinary "get here quick before the bargains are all gone," or 'the first fifty people at the door Saturday morning will get a dust pan free." Mr. Wellemeyer has much better things to offer his customers than these "Hair-Breadth Harry affairs. Back of his sale is a period of long years of honest merchandising; giving good goods for the money and ready to justify any errors.

Mr. Wellemeyer has a different plan of conducting a furniture sale so that all have an equal chance to select the pieces they like the best. This plan is that not a single piece of furniture will be removed from the floor until after the sale. Each piece of furniture is kept in plain view at all times. If a certain article appeals to the customer, he buys it. If it has been sold previously this article immediately re-ordered, as many times as it is sold The manufacturer has a reserve supply held back for Mr. Wellemeyer for this very purpose. In this way there is no mad rush for "bargains" but every buyer gets the same opportunity to get in on the low prices offered.

The publisher has personally inspected Mr. Wellemeyer's stock of new furniture and we can truly say that a dollar spent buying furniture at this sale is the "most" furniture you have bought for many years for the same amount of money.

There are, and have been furniture sales in several near by towns and cities, but already a number of prospective customers have called to see the new furniture here and have signified their intentions to buy, as they say that the furniture offered by Mr. Wellemeyer is lower priced and better than offered by other furniture dealers.

A feature not often found at sales of this kind is the fact that every piece of furniture on sale is brand new, 1929 merchandise The Wellemeyer store had previously 'cleaned house" and everything is new at this sale.

The Times Print Shop have been busy the past week printing the several thousands of circulars for the Wellemeyer Co. and which have been mailed to every family in Hancock County and adjoining territory.

LADIES AID TO HAVE LINCOLN BIRTHDAY SUPPER

Baked Beans Cabbage Salad
Buttered Bread Jelly
Pickles
Coffee Cherry or Apple Pie

INDEPENDENTS LOSE TO M. C. CANVAS QUINT

Game Here Thursday Night Plenty Of Exciting In Last Frame

The Klemme Independent Basket Ball Team went down to defeat here last Thursday night when the Mason City Canvas Co. five invaded the local gym. The score was in the visitors' favor, 30-32, but it was nobody's game until the final whistle.

Klemme trailed a couple of baskets at the half and a number of flashy plays by the tent makers apparently put the game on ice for them, while the locals seemed to be sleepy and told each other bed-time stories. However, something happened and they came back strong the last frame and for a time things began to hum as the locals piled up the count and when the final whistle sounded the locals had caught up within one basket of putting a knot on the game.

The following filled the Klemme line-up: Pete Moulton, Knutson, West, Gibson, Stokesbary and Koerner.

Albert Swanson Enlarges Plant

LOCAL HATCHERY ADDS NEW EQUIPMENT TO PLANT

Swanson Can Handle 14,000 Eggs At One Time At His Plant

Albert Swanson is one of the industrious young men of this community and who is making a success of the poultry business and conducting an up to date hatchery on his farm 1 mile north and 1½ miles east of Klemme.

Mr. Swanson has been in the hatching business for several years and also raises pure bred single comb White Leghorn chickens.

Mr. Swanson is installing an electric plant and electric storage brooders so that he can brood approximately 5,000 chicks at a time. His mammoth 10,000 egg incubator recently installed gives him a capacity now of handling 13,600 eggs at one time in his plant. Besides installing a lot of new equipment he has also built a new hatchery building and has increased his flock of Leghorns to 500 choice layers.

Mr. Swanson uses the Leghorn eggs from his own flock, but has made connections so that he can also supply several popular heavier breeds from flocks which he has selected.

Mr. Swanson has improved his plant greatly and certainly has a modern hatchery. He personally looks after culling of flocks and believes his Leghorns are better than ever this year. He already has orders booked for 5,000 Leghorn chix and all from old customers.

Besides being quite a poultry man Mr. Swanson is a bee fancier and has 25 hives. Albert says, "Tell 'em to be careful or they will get stung, but as far as chicks are concerned I will do my best to give all customers a square deal."

METHODIST CHUROH NOTES

H. E. Whyte, Pastor

The sermon Sunday morning will pay tribute to Abraham Lincoln. We all do well as we approach the birthday of this great American to study his life and reflect upon the ideals and principals which governed his career and made what he was, and still is in the world.

At the evening services we are to have another steropticon lecture showing the church in action in one of our mission fields.

All children wishing to enroll in the Catechism Classes come to the church at 3:00 o'clock Saturday.

Warner Butts took Jay Griggs and Francis Mason to East Lake where the former ran the rotary pump to supply fresh air for the fish to keep them alive through the winter. They continued the pumping until Saturday. George Mickesh also assisted with the work Friday.

MEMORY OF RAHAM LINCOLN

NO bugles blared to herald out his birth,
No bonfires leaped above the sleeping earth,
No soft, luxurious cradle waited there
To hold his little body in its care.

HIS home was cold and cheerless like that cave
That sheltered One who came to love and save—
Humble and poor within that cabin rude,
He lay—the man to stir the multitude.

AND like that other One when manhood came
He sought not riches, power or fleeting fame;
His was a purpose noble, great and high:
To make a better world for you and I.

O MAN of vision, sent to fill our need,
Humble of heart, mighty of strength and deed;
A grateful world gives thanks and praise today
Because a man like you has walked its way.

—KATHERINE EDELMAN

Birthplace of Lincoln by No Means Squalid

And now there has been brought to light practical evidence that the birthplace of Abraham Lincoln was not the pitiful hut of poverty that has been described lugubriously by historians, nor was the great emancipator of humble and poor parentage. A letter-book of Capt. John Dunlap, historic printer of Philadelphia, and wealthy landowner, coupled with a research made recently by a newspaperman of Kentucky, brings out plainly these refutations.

Since the recent discovery of the important work rendered during the Revolution by Captain Dunlap and Lieutenant Claypoole, printers of the first daily newspaper in America and official printers of the Continental congress, John Barr, Connecticut historian and a member of the Historical Society of Pennsylvania, has followed the documents of Dunlap and revealed through his study many interesting facts of historical value.

The latest source of information that has come to notice is the letter-book of Dunlap, loaned the Historical society by the noted printer's great-grandson, George Chapman Bleight of Haymarket, Va., formerly a Philadelphia attorney. The letters are the correspondence of Dunlap and four other wealthy men who traveled to the very spot in Kentucky where Lincoln's family came from Virginia in order to invest in land there.

Dispels Poverty Legend.

By comparing the reports of these men to their Philadelphia associates and the documentary evidence presented in a book compiled by Louis A. Warren, a newspaperman of Hodgenville, Ky., Mr. Barr has drawn conclusions which he points out as adequate to dispel the popular belief in the poverty legend.

Abraham Lincoln needed no such tale to enhance his greatness. His rise from obscurity was mighty enough, starting from the Kentucky bluegrass frontier—it is not necessary to fable his beginning from a low level.

The correspondence Dunlap offers testifies to the richness of the land, the beautiful resources of the country and the splendid type of men who populated the section. John Dunlap, his brother, James, George Keightly, William Orr, the engineer, and Michael Hillegas, then treasurer of the United States, were partners in purchasing 135,000 acres of the Kentucky land. Later Dunlap's son visited Elizabethtown, ten miles from the Lincoln birthplace, to carry on his father's affairs.

At the same time that these men who made the long journey from Philadelphia, via Pittsburgh, the Ohio river, Lexington, Ky., and Frankfort, Ky., Abraham Lincoln, grandfather of his namesake, who became President of the United States, left his comfortable home in Virginia for the same purpose—to invest in the newly opened land of promise. Abraham Lincoln had extensive holdings in Virginia and purchased large tracts in the new country. He was not poor. The year was 1783.

Indians Killed Grandfather.

Again, the Philadelphians were linked with Abraham Lincoln in tragedy. The country was beautiful and rich, but dangerous from hostile Indians. Lincoln lost his life by the tomahawk in the same year that George Keightly was killed in a similar, perhaps the same, Indian massacre. James Dunlap tells the story of Keightly's death in a letter to his brother, who had returned to Philadelphia temporarily with plans to remove his family to the new country. The letter, warning him to remain North, reads:

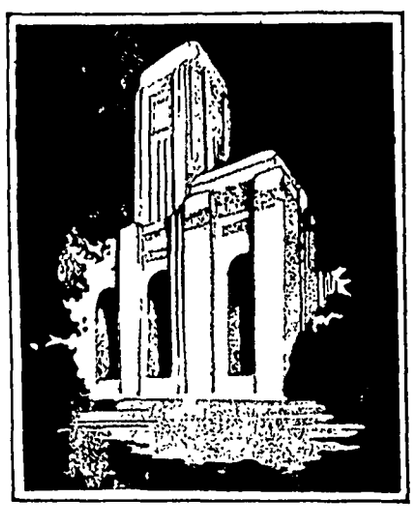
"Dear Brother: I am now on my way to the Falls. I am sorry I have some very unhappy news to tell you—that is the death of Mr. Keightly, who was killed by the Indians on the 12th of August, 1784, within five miles of this place and 15 from the Falls—W. Daniels, the lawyer, was killed at the same instant. Mr. Johnston, the clerk of the lower county, was wounded; in the same company, Mr. Keightly was shot, tomahawked and scalped—Pray drive away all notions of returning to this country. All that is to be got in it is not equal to the danger that attends living in it—"

When Abraham Lincoln met his death at the hands of the Indians, his oldest son, Mordecai, who was fifteen years old at the time, avenged his death as an Indian stooped over to take the pioneer's scalp. Thomas Lincoln, father of the President, witnessed the scene. He was ten years old at the time. The entire estate went to Mordecai Lincoln, under the law of primogeniture, and consisted mainly of 5,544 acres of land in Virginia and in Kentucky—a considerable estate for "a drifting, moving people, struggling with poverty."

Father Owned Land.

So it was that Thomas Lincoln was to earn his livelihood. He rose from laborer to carpenter, surveyor, soldier, farmer and property owner. In Elizabethtown he was employed by Samuel Haycraft, a substantial business man of the territory, who was a close friend of John Dunlap and who wrote many letters to the Philadelphian. There he met Nancy Hanks and later built the cabin where Lincoln, the President, was born—a new cabin and as well constructed as an average house of the time and section—on a farm, ten miles from Elizabethtown, at Hodgenville.

Deeds in the courts there show that the farm which has been identified as the site of Lincoln's birthplace and from which the cabin enshrined in the Lincoln memorial was taken consisted of more than 300 acres—a considerable plot, and not a few acres, as has been told. The farm was purchased in 1808 with $200 in cash and other subsequent payments. He owned, in addition, records show, 230 acres of Kentucky lands.—Leonard H. Arnold, in Philadelphia Record.



Here is a drawing of the central feature of the $1,265,000 memorial which Indiana will erect to the memory of Abraham Lincoln and his mother, Nancy Hanks. The site is the original Lincoln farm near the Ohio river, midway between Evansville and French Lick, where Lincoln spent 14 years of the formative period of youth.

To Symbolize Lincoln Spirit

In a clump of black oaks on a knoll in southwestern Indiana a monument of Indiana limestone is to be erected to perpetuate the memory of Abraham Lincoln and enshrine the humble grave of Nancy Hanks Lincoln, his mother.

Thomas Hibben of New York, a native of Indiana, has been selected as the architect, and his plans have been indorsed by the Indiana Lincoln union, an organization of nationally known Hoosiers.

The edifice will be a departure from the usual sophisticated type of architecture, Mr. Hibben explained.

"We seek to create a symbol of the great power and gentleness that was Lincoln," said the architect. "Such gentleness is not negative, but infinite and human. Such power is the nobility of strength, the understanding of all humanity in its reality."

The memorial will be approximately 200 feet in each direction, comprising a series of four open courts of simple masonry surrounding a main building from which will rise a shaft 150 feet high.

The grounds surrounding the memorial will be landscaped to reproduce the scene as it was in the fourteen years the boy Lincoln lived and toiled there.

The History of John J. Doherty's Case

"Three years ago I took a severe cold, putting me directly to bed. After a month's treatment for pleurisy my physician was baffled by the action of my fever or temperature, which was high one day and low the next, and while he tried different prescriptions, I didn't improve any, but slowly became weaker.

"The doctor finally decided to tap me by running a needle-like instrument into the left side of my back and between the ribs, to ascertain if pus was forming in my left lung. The tapping resulted in the withdrawal of a small quantity of pus and the doctor said it was forming so fast that I must have an operation to extract and draw out the pus. At the time my heart pained me terribly because it was three inches out of place, due to the pressure of the fast-accumulating pus.

"I was ordered to the hospital for an immediate operation or I would be a dead man in 36 hours. The next morning the surgeon removed one inch of two ribs in the back, forming a square cavity to remove the pus, which squirted eight feet from the table. About two quarts was removed. A rubber tube was then inserted in the cavity to the lung for a drain, which took about three weeks to perfectly drain and heal the cavity.

"The doctors told me that I had to take all precautions possible, as I was subject to easily capturing tubercular germs, due to the weakness of my lungs. For one whole year I used several kinds of tonic and lung medicines and didn't improve much from weakness.

"Then I began the use of Milks Emulsion and after a month's trial I found myself with increasing appetite and gaining strength, and today I have regained my natural weight and strength and feel completely myself. And the joy of it is, after using all of the Milks Emulsion that I did it didn't form a habit. I haven't used any for a month now and I feel at my best. I am 48 years of age and weigh 180 pounds.

"I want to thank you from the bottom of my heart for your wonderful preparation." Yours truly, JOHN J. DOHERTY, Odanah, Wis.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Great Power Aggregation

The total capacity of prime movers, that is, water wheels, steam engines and turbines and internal combustion engines in public utility plants, factories, mines and quarries in the United States on January 1 of this years was 56,500,000 horsepower. This total does not include railroad locomotives, motor vehicles or water craft.

Some people seem to live in the air and every time they touch earth they get into trouble.

A Perpetual Motion Clock

Since 1914 a clock in Dayton, Ohio, has been running without being wound. It is equipped with a thermal motor, consisting of a gallon tank filled with alcohol, a one-half-inch cylinder and piston with a ten-inch stroke. A rise in the temperature expands the alcohol, pushing the piston up with a series of weights weighing 60 pounds. A fall in temperature allows the weights to descend, winding the springs in the clock movement. —Popular Mechanics Magazine.

You Know His Type

"What kind of a fellow is this Burton?"

"He is the kind who always speaks of it as the influenzy, instead of flu." —Cincinnati Enquirer.

Advice on Silence

In a country of such diversified people, with such diversified ideals—said an American statesman—the only safe thing is to say absolutely nothing.—Woman's Home Companion.

AVERY TWIN LAKE NEWS ITEMS

(By Special Correspondent)

Wayne Pavey spent Sunday afternoon with Francis Buseman.

Rob Roths has been busy assessing in Avery Township.

Ruth Grieman spent Sunday at the Fred Etchem home.

Mr. and Mrs. Fred Etchen are enjoying a new radio which was recently installed.

Mrs. Edwin Josten spent Tuesday at the Fred Becker home east of Klemme.

Ruben and Henry Grieman spent one evening at the Fred Etchen home the past week.

Leona Buseman is spending a few weeks at the George Buseman and Mrs. Frank Roths homes.

Dave Schwichtenberg hauled hogs for Dick Swalve Saturday. Dick shipped a carload that evening.

Quite a number of farmers here attended the Mrs. Medaus sale held Tuesday.

Mrs Fred Etchen visited at the home of Mr. and Mrs. George Platt one day recently.

Mrs. Carl Wille and daughter, Arlene spent several days last week visiting relatives.

This vicinity is being visited by what is known as mumps. There are several cases around here.

Robert Greiman assisted with work at the Fred Etchen home the past week.

Mrs. William Greiman, Jr. and family visited at the Fred Etchen home Sunday afternoon.

Ernest Schwichtenberg was a caller at the Emil Kraus home last Wednesday evening.

Mr. and Mrs. Fred Becker and daughter, Irene, spent one day recently at the Edwin Josten home.

Mr. and Mrs. Fred Etchen visited at the home of Mrs. Etchen's parents, Mr. and Mrs. William Greiman last Sunday afternoon.

Erwin Haupt has been spending several days the past week at the Elmer Schlei and Mrs. Fred Haupt homes.

Mr. and Mrs. David Schwichtenberg and daughters, Jean and Viola and sons John and Jesse visited at the Dick Swalve home Sunday last.

William Saudrey returned to his duties in high school, after having a ten day vacation recuperating from illness.

Francis Buseman, a freshman in the Klemmo high school spent last Tuesday evening at the W. F. Pavey home.

Miss Nolan's school closed Monday noon. There were not enough in attendance to continue as nearly all pupils were ill with mumps.

Mrs. Julius Priebe visited with Mrs. Herman Priebe last Tuesday. The men attended Mrs. Medaus' sale that day.

B. L. Prouty of Garner, was a caller at the Dick Swalve home on Monday, installing an electric motor to pump water for the stock.

Mr. and Mrs. Fred Etchen attended the forty-eighth wedding anniversary of Mrs. Etchen's parents, Mr. and Mrs. Wm. Greiman, Sr. on Sunday.

Carrie Swalve, who attends the Klemme high school, remains at the home of her grand parents, as the weather makes it impossible to return home each evening.

GAS FORCES WOMAN TO SLEEP IN CHAIR

"Nights I sat up in a chair, I had stomach gas so bad. I took Adlerika and nothing I eat hurts me now. I sleep fine."—Mrs. Glenn Butler.

Even the FIRST spoonful of Adlerika relieves gas on the stomach and removes astonishing amounts of old waste matter from the system. Makes you enjoy your meals and sleep better. No matter what you have tried for your stomach and bowels, Adlerika will surprise you. Wilson's Pharmacy, Klemme, Ia. 1tc

GOT EXERCISE BUT DIDN'T TRAVEL FAR

For some unknown reason, it appears that a Presidential candidate must prove his prowess as a fisherman or he doesn't stand a chance to be elected. Hence the pathetic attempts of both Coolidge and Hoover to appear at home in trout outfits.

As a matter of fact, the only genuine fisherman-President was Grover Cleveland. And of all the fish yarns, those he told on himself were the best.

Once, on a foggy Massachusetts morning he slipped out of his bed, bright and early, groped around until he found his boat and rowed out to sea.

"I rowed and rowed and rowed," he confessed to his host, later, "and presently the sun began to shine through the fog. And there, right in front of my face was the shore. I had forgotten to untie the boat."—Los Angeles Times.

History of Fire and Light Through Ages

An important English firm engaged in the manufacture of matches are the sponsors of a vastly interesting but little known museum devoted entirely to the story of man's struggles down the ages to preserve to himself those most blessed gifts of the gods—fire and light. In many thousands of exhibits the tale is graphically told, the exhibitors having been at pains to present the collection in strict chronological order and logical array. It is said to be the most complete collection of its kind in the world, a boast that no one who had seen it would deny. For many years a private collector, Mr. Edward Bidwell, now over eighty, industriously assembled most of the exhibits. Others have been added, other collections embraced, until now the detailed catalogue prepared by Mr. Miller Christy, an authority on the history of fire-making appliances, already comprises over 250 pages.

Tonsorial Mockery

They are telling at the Century club a joke on the English writer, D. H. Lawrence.

Mr. Lawrence, on his recent lecture tour, arrived in a smallish Ohio town and went to the barber's for a hair cut.

"Anything going on tonight?" he asked the barber.

"Lecture," said the barber. "Englishman named Lawrence."

The Englishman named Lawrence smiled. "I'm him," he said.

The barber started back in a theatrical way. Then he said to a man who was sharpening razors on a stone:

"Here, Bill, sweep up all this red hair. I want to preserve it."—New York Times.

Electric Lamp Progress

In 1900 it was said that the incandescent lamp with carbon filament was so perfect a device that it could never be much improved. It was at about that date that industrial research was inaugurated in the electrical industry. Since then the efficiency of the incandescent lamp has been approximately quadrupled, and the great increase in the intensities of artificial lighting made possible by the cheaper light. The new applications created by the new lamps have had a far-reaching effect on our industrial prosperity.

Exposed

Little Jane Nies, a frequent visitor to southern California from St. Louis, was poring over her lessons, working hard for a double promotion, when her mother spied her counting on her fingers.

"Jane," she said jokingly, "why not take off your shoes and stockings and then you'll have twenty digits to use."

"Jane pondered over the suggestion for a moment and then exclaimed: "Now I know why daddy went barefooted when he was a little boy!"—Exchange.

Real Sea Beacon

The lighthouse at Cape Race in the North Atlantic is one of the best-known beacons in the world. It is equipped with a flashlight of 1,100,000 candle power, which has been seen at a distance of 76 miles. The apparatus and inclosing lantern required to produce that result weighs 42 tons and cost $40,000. The fog siren at this lighthouse station has been heard a distance of 45 miles.

Plenty of Them

"What kind of watch have you got?"

"A wonder watch."

"Wonder watch! Never heard of that before."

"Well, it's like this. Every time I look at it I wonder what time it is."

She Remembered

Father (of popular daughter)—That young man seems to take a long time to say good night.

Mother (wearily)—Men haven't changed much.—Capper's Weekly.

Publicity

She—How did you know I was going to wear my hair curled this evening?

He—I saw it in the papers this morning.—Capper's Weekly.

Nothing Upstairs

"Is she dumb?"

"Well, I heard her ask a dentist what art school he attended to learn how to draw teeth."

Farmers'

Meals and Lunches

Farmers are especially invited to eat their dinner here when in town. We specialize in good dinners, well cooked, appetizing—generous helpings.

Whether it's a piping hot cup of coffee and a sandwich, a piece of homemade pie or a short order, you will find us ready to give you courteous, prompt service.

Furniture Sale Starts February 9th

Wellemeyer Company

Your Home Should Come First

Your Home should come first in your mind, in your heart,
The world has its pleasures, but pleasures depart.
The joys that are deeper, the joys that are true,
Are here in your Home always waiting for you.

Oh, some want to wander, and some want to spend,
But here you will find it, peace in the end.
Whatever your future, the best or the worst,
In planning, in spending, your Home should come first.

So fill it with comfort, and fill it with cheer,
Harmonious beauty, and make it so dear
That children remember, wherever they roam,
The gentle old adage "there's no place like home."

A chair by the fireside, a table, a light,
God grant there is somewhere they wait you tonight.
For fame you may hunger, for fortune may thirst,
But working or playing, Your Home Should Come First!

Wellemeyer Company

FURNITURE SALE

FEBRUARY 9 TO 16, 1929

February Is The Best Month To Buy, Read On--

LARGE ASSORTMENTS—

No two pieces alike in the entire car load. We bought it this way on purpose so that you would have an endless variety of New Furniture to pick from. Of course we have made arrangements for a fill-in shipment to arrive in time for our March 1st deliveries.

QUALITY—

In buying this car load of Furniture, we tried to keep away from the cheap, undersize, poorly made trash, and we also avoided the frail and delicate expensive furniture.

But, we did buy aplenty of the strong, sturdy, medium priced goods which seemed to us to be the best Furniture for the money.

Look us over, folks, at this February Sale and learn what we mean by our slogan "A Good Place To Trade."

DELIVERY—

Our own truck will deliver your purchase to your door; we will do this as soon as desired after the close of this sale.

EQUAL CHANCE—

We do not remove any Furniture from our floor during the seven days of this sale. Whether you come the first day or the last day you will have the same chance to see all of the Furniture and make your selections from our full stock.

LOW PRICE—

Did you know that 85% of all Furniture Business is done the first six months of the year? Stores that sell nothing but Furniture must either lay off their help in the summer and fall season or carry them through at a loss.

Not so with us; our Furniture business is only one department of a large General Store. We shift our help according to the season, from one department of the store to another; different departments have their rush months at different times of the year. During the Holiday season we crowd our main floor with help, and in February we shift them upstairs to work with the Furniture.

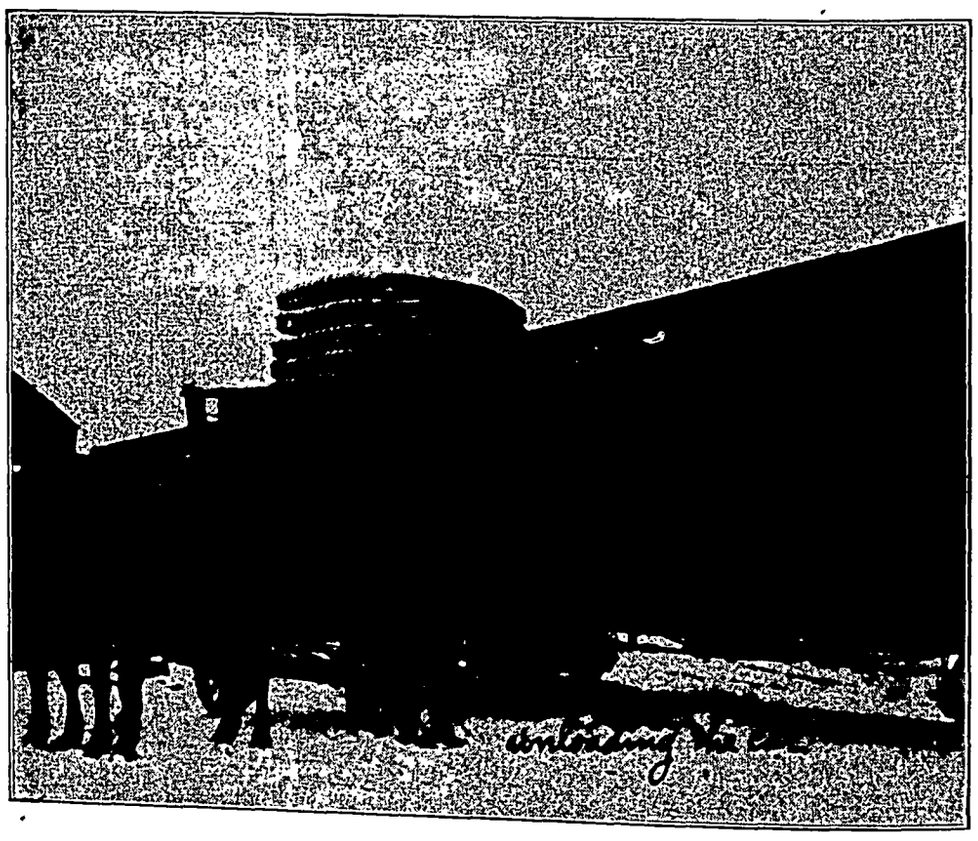
It is not necessary for us to hire extra salespeople for this Furniture Sale, and we are not offering a lot of brooms or pans for one cent each., but we are giving you the best Furniture for the money that you will find displayed anywhere in Hancock County in, this year 1929, and can do this too because our cost of handling and selling Furniture is the lowest.

TERMS—

When you buy from us at this February Furniture Sale we ask for your check which we pin to your order, not to be cashed until the day we deliver your Furniture.

Wellemeyer Company

Klemme, Iowa



Our first carload of Furniture arrived Feb. 14, 1908. The picture above shows Ell Bros. drayman unloading the car at the Klemme Station.

Our 39th Carload of Furniture is now on display in our Store and we invite you to call, look around and make such purchases as you will need for spring.

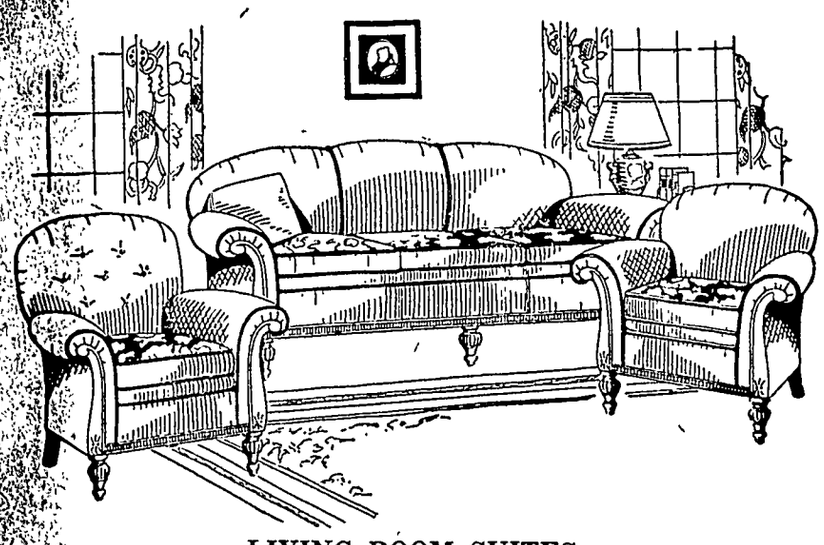
There is scarcely a week in the year but what some shipment of Furniture arrives, but in the early Spring, when business is heaviest we buy Furniture in Car Lots.

Wellemeyer Company

A Car Load Of Furniture Arrives--

HERE IS A GROUP OF OUR CUSTOMERS

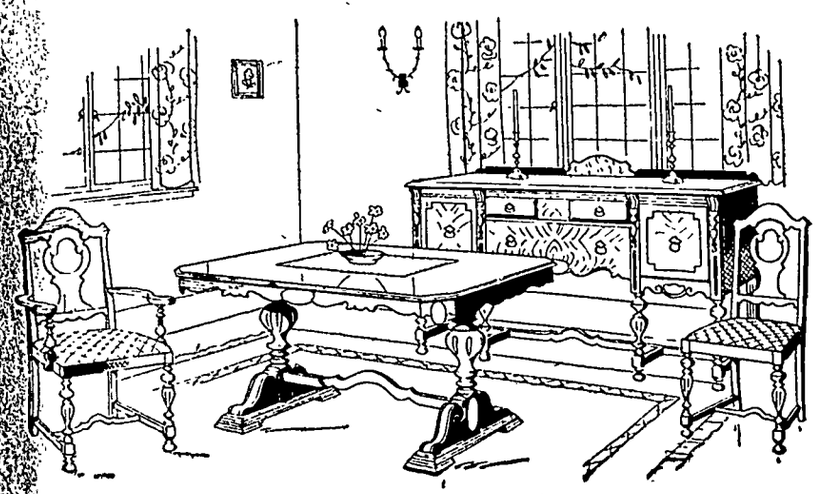
It is our job to supply them with food to eat, with things to wear and with furniture for the comfort of their homes. We strive to give them our best, so as to merit their continued friendship. This picture was taken 15 years ago in front of our old store building on the occasion of a special furniture sale.



LIVING ROOM SUITES

We have seven complete Suites on our floor in Mohair, Tapestry and Velour. Some with pillow arms from $68.00 up to $155.00.

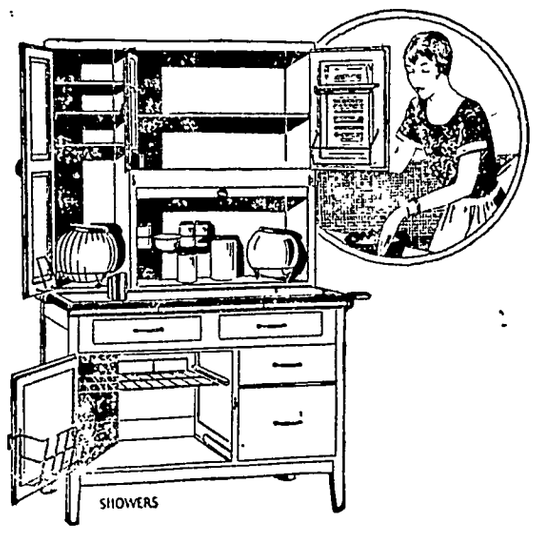
The Suite shown above is of Jac Velour, reversible cushions, well made, 2 pieces.... $68.00



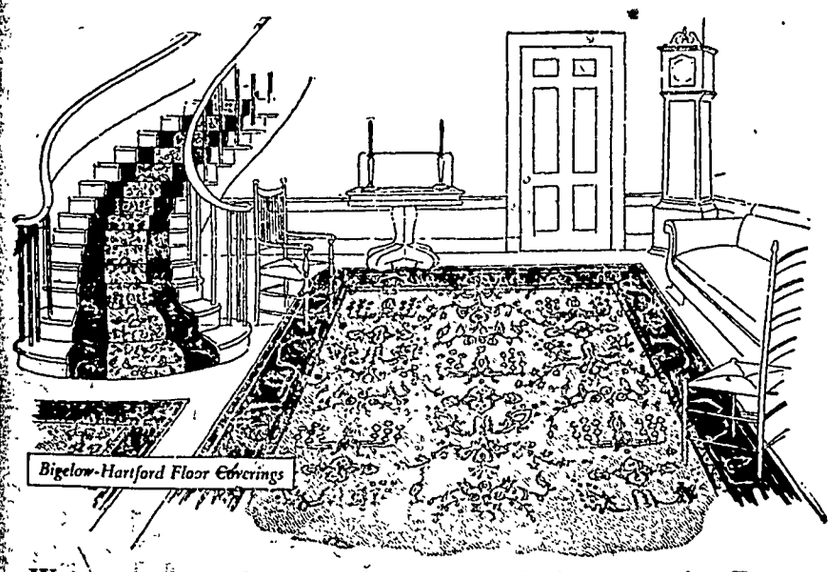
Our Dining Room Suites are lovely this year. We have nine different styles in Complete Suites. We also have odd Buffets, odd Tables and many kinds of Chairs.

The 8-piece Walnut Suite shown above is our best and sells for $128.00

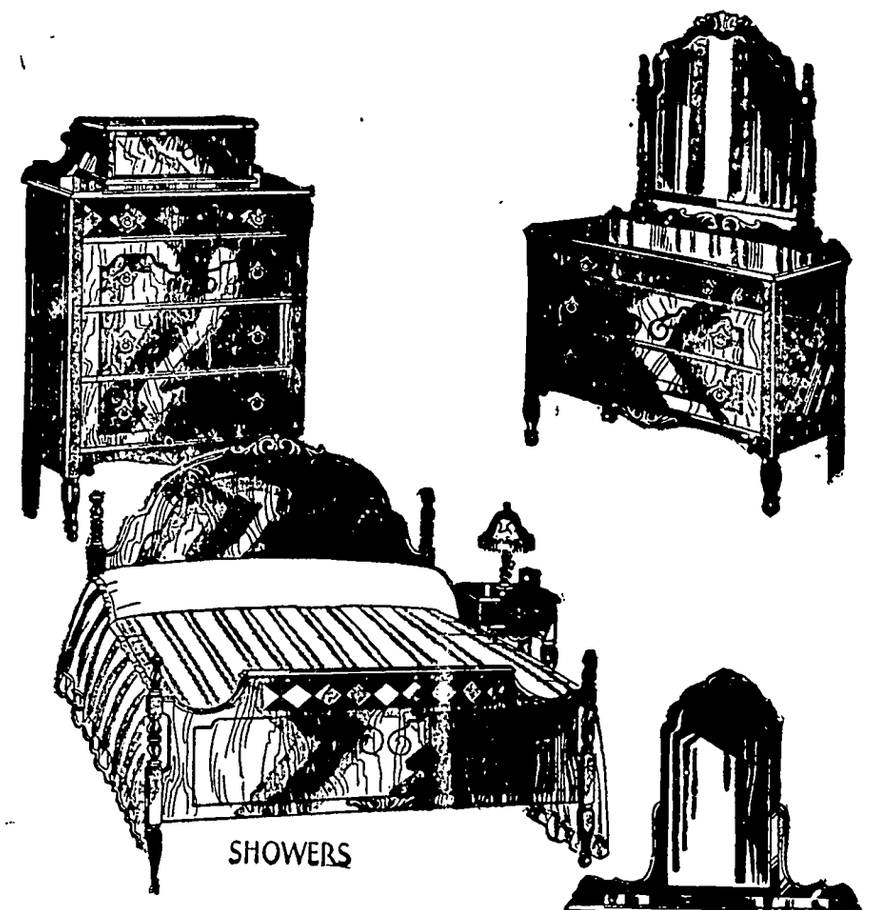
Other Suites as low as $69.00



Kitchen Cabinets now come in Colors. Besides Oak, we have Gray, Green, Ivory and White. They are beautiful and our line of Cabinets is the largest we have shown for years. Price range.. $26.50 to $55



We are prepared to supply your needs in room size Rugs. We have equipment to lay Permanent Linoleum Floors, and carry in stock Linoleum Rugs and Congoleum Rugs.



One Of Our New Bed Room Suites

We have exactly twenty kinds and Styles of New Dressers on our floor, and we have Beds, Vanity Dressers and Chests of Drawers to match them all, so that you can make up your own Matched Bed Room Suite from our stock at just the price you want to pay. These Dressers range in price from—

West Point Cadets in the Inaugural Parade
Washington Arriving in New York for His Inauguration
HARRIS & EWING Photo
Wilson and Taft

By ELMO SCOTT WATSON

ALTHOUGH President-Elect Hoover soon let it be known that he desired his inauguration on March 4 to be as simple as possible, a horde of visitors will soon be crowding into the capital to witness the ceremony. Mr. Hoover's request that the size of the inaugural parade be limited to one requiring not more than two hours in passing and his announcement that he would attend no inaugural ball, either official or unofficial, will make his induction into office less of an imposing event than those of other Presidents in recent years, but it is probable that more Americans will hear Herbert Hoover take the oath of office and listen to the spoken words of his inaugural address than has been the case of any President in the history of the United States. The great radio hook-ups will make that possible. Just how many persons will be in his "audience" it is impossible to estimate, but the number will run into the millions.

This fact represents additional evidence of the amazing growth of our nation during the 140 years that it has been ruled by a President elected by the people. For it was just 140 years ago (lacking eight weeks) that George Washington became the first President of the United States. That was on Thursday, April 30, 1789, and the scene of the inauguration was New York city, then the capital of the United States.

A stage had been built on the steps of the federal building (where the present subtreasury building in Wall street now stands, and the Washington statue there is believed to stand upon the exact spot where Washington stood when he took oath of office). The first congress of the United States of America took its place on the stage. Escorted by General Morgan Lewis, a distinguished figure ascended the steps—the man who had led the Continental armies to victory and who had been chosen the first leader in peace—Gen. George Washington. A great cheer went up from the people who were watching the scene. Then took place one of those curious incidents which often happen to mar the impressiveness of historic occasions. Over the throng came a mighty stillness and heads were bared: Chancellor Livingston was about to rise to administer the oath. Instead he kept his seat. There followed a whispered conference with Gen. Jacob Morton, marshal of the day. At the conclusion, General Morton hurried out into the street to the Old Coffee house at Wall and Water streets, the meeting place of St. John's lodge of Masons, of which he was master.

The marshal was absent only a few seconds, and when he returned he was carrying an open Bible resting on a cushion of crimson velvet, the property of St. John's lodge. Then it was known to those on the platform at least that while the other details had been carried out, no Sacred Book had been provided for the oath.

Washington's second inauguration, in Philadelphia, was less spectacular than the first. When John Adams was inaugurated in the same city in 1797 Washington was the dominant figure. He was retiring from public life, and the people had eyes only for him. Many of them cried. Adams, notoriously vain and jealous, was much embarrassed.

Jefferson was the first President inaugurated in Washington. Despite the picturesque tradition of his horseback ride to the Capitol, critical research discloses that the author of the Declaration of Independence did not ride. He went afoot, which was democratic enough. The historical record shows that he was escorted by a battery of artillery and that a salute of guns was fired as he entered the Capitol. He took the oath after making his address in the senate chamber and then walked back to his lodgings.

The installation of James Madison in 1809 was attended by much more ceremony than attended the inauguration of Jefferson. The day was ushered in with salutes of cannon. Madison rode to the Capitol in a richly appointed carriage, escorted by troops of militia.

John Quincy Adams refused to attend the inauguration of his successor, Andrew Jackson, the two men being on the worst possible terms. Jackson was in Washington for two weeks before his inauguration, but didn't go near Adams. Frontiersmen, Indian fighters and thousands of humble citizens crowded around the Capitol to see Jackson sworn in. Washington had never beheld such a horde of visitors.

Jackson and Van Buren rode together from the White House to the Capitol in 1837 in a phaeton made from the timbers of the old frigate Constitution.

It was what took place after the inauguration, however, which made this one perhaps the most remarkable in American history. It is described by Frederick Austin Ogg in "The Reign of Andrew Jackson" in the Yale University Press' "Chronicles of America" as follows:

> According to custom, the inaugural program came to an end with a reception at the White House; and arrangements were made to entertain a large number of guests. Police control, however, proved wholly inadequate, and when the throng that followed the President up the Avenue reached the executive grounds it engulfed the mansion and poured in by windows as well as doors, until the reception rooms were packed to suffocation. Other guests, bidden and unbidden—"statesmen and stable boys, fine ladies and washerwomen, white people and blacks"—continued for hours to besiege the doors. "I never saw such a mixture," recorded Judge Story; "the reign of King Mob seemed triumphant. I was glad to escape from the scene as soon as possible." The President, too, after being jostled for an hour, very willingly made his way by a side entrance to the street and thence to his hotel.
>
> A profusion of refreshments, including barrels of orange punch, had been provided, and an attempt to serve the guests led to a veritable saturnalia. Waiters emerging from doors with loaded trays were borne to the floor by the crush; china and glassware were smashed; gallons of punch were spilled on the carpets; in their eagerness to be served men in muddy boots leaped upon the damask-covered chairs, overturned tables, and brushed bric-a-brac from mantles and walls. "It would have done Mr. Wilberforce's heart good," writes a cynical observer, "to have seen a stout black wench eating in this free country a jelly with a gold spoon at the President's house." Only when some thoughtful person directed that tubs of punch be placed here and there on the lawn was the congestion indoors relieved. When it was all over, the White House resembled a pigsty. "Several thousand dollars' worth of broken china and cut glass and many bleeding noses attested to the fierceness of the struggle." It was the people's day and it was of no avail for fastidious Adamsites to lift their eyebrows in ridicule or scorn.

William Henry Harrison rode to the Capitol on a white horse, and there was a great display of marching clubs, with log cabins, barrels of hard cider and a loom in operation. Harrison read his address—the longest on record—from the eastern portico. Standing for an hour without hat or overcoat, he contracted a cold and died within a month. His successor, John Tyler, refused to take any part in the inauguration of President Polk, but left Washington on the morning of March 4, 1845.

He intended to go by steamer, but arrived at the wharf just as the boat was leaving. Some one called out to the captain:

"Wait a minute! Here's President Tyler wants to go with you!"

But the captain shouted back: "Who the —— is Tyler? I don't know him."

And he steamed away without waiting for the ex-President.

If Tyler was thus insulted as he was leaving the White House, Polk, his successor, was also insulted on his way to that mansion. He was the first "dark horse" in American political history and throughout the campaign his opponents had raised the derisive cry of "Who is James K. Polk?" As he drove to the White House after his inauguration, he heard that same cry from loafers along the street. The exceptional thing recorded for Polk's inauguration is that Morse brought his telegraph instrument to the portico of the Capitol and transmitted news of the events to Baltimore.

The most momentous and impressive inaugural parade that ever moved through the streets of Washington was when Lincoln first took office. Buchanan, an old man in swallow-tailed coat, hobbled along with Lincoln to the carriage. Lincoln was attired in a new black suit and a shining high hat. He carried a gold-headed cane. All the liquor saloons in the city had been ordered closed, and careful plans had been made to thwart any attempt at assassination and prevent disorder among the thousands of hostile persons in Washington.

Between double files of cavalry the Presidential carriage moved along Pennsylvania avenue while soldiers marched in front and behind. Riflemen were stationed on roofs commanding the thoroughfare and cavalry guarded every approach to the Capitol. The journey was made in safety. Stephen A. Douglas, Lincoln's life-long rival, held the hat of the new President as he read the inaugural.

At Lincoln's second inaugural procession there was shown a model of the Monitor, with its turret revolving and its guns firing at intervals. A battalion of negro soldiers had an honorable place in the long procession. It had been raining and the day was gloomy. As Lincoln was about to take the oath, however, the sun burst through the clouds, an omen which he said made his heart jump.

Grover Cleveland's first inauguration marked the return of the Democratic party to power after an absence of a quarter of a century, and there was great enthusiasm. The day was clear, and the city was in gay attire. An account of the parade said that "no such pageant ever before in time of peace was seen on Pennsylvania avenue."

Perhaps the most impressive of all inaugurations was that of Theodore Roosevelt in 1905, in that it was a sort of super-Wild West show, made so by the escort of his Rough Riders, the cowboys, Indians, and other mounted men who rode up Pennsylvania avenue with him. More than 200,000 people were in Washington for the ceremony.

The inauguration of Taft offered the best argument in favor of changing the traditional date of March 4 to a day later in the year. On March 4, 1908, Washington was buried under a snow storm and hundreds who were on their way to the capital were marooned.

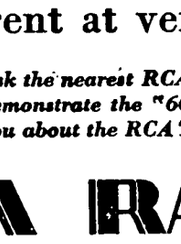
Scandinavian Color

Other states may have their Browns, their Joneses and their Smiths, but Minnesota has its Andersons, Johnsons and Petersons. Taking St. Paul, the capital of the states, as a representative Minnesota city, it is learned there are 2,870 Johnsons, as compared to 1,050 Browns; 2,350 Petersons, compared to 630 Smiths, and 1,570 Andersons, compared to 280 Joneses. Other Scandinavian names predominate in St. Paul, as is shown from the following figures obtained from the city directory: Carlsons, 770; Ericksons, 880; Jensens, 400. The population of St. Paul is about 250,000.

"Lucile is the Happiest Girl"



So many mothers nowadays talk about giving their children fruit juices, as if this were a new discovery. As a matter of fact, for over fifty years, mothers have been accomplishing results far surpassing anything you can secure from home prepared fruit juices, by using pure, wholesome California Fig Syrup, which is prepared under the most exacting laboratory supervision from ripe California Figs, richest of all fruits in laxative and nourishing properties.

It's marvelous to see how bilious, weak, feverish, sallow, constipated, under-nourished children respond to its gentle influence; how their breath clears up, color flames in their cheeks, and they become sturdy, playful, energetic again. A Western mother, Mrs. H. J. Stoll, Valley P. O., Nebraska, says: "My little daughter, Roma Lucile, was constipated from babyhood. I became worried about her and decided to give her some California Fig Syrup. It stopped her constipation quick; and the way it improved her color and made her pick up made me realize how run-down she had been. She is so sturdy and well now, and always in such good humor that neighbors say she's the happiest girl in the West."

Like all good things, California Fig Syrup is imitated, but you can always get the genuine by looking for the name "California" on the carton.

Not Exactly

Blinks—I always count ten before I speak when I am angry.

Jinks—That's commendable—

Blinks—No, hardly; you see, I use the time it takes to think up meaner things to say than I could if I spoke right out.—Cincinnati Enquirer.

A man should devote one day a week to doing the things he "put off until tomorrow."

Color Picture by Wire

Successful transmission of a colored picture by wire from New York to San Francisco is one of the latest developments of the wire-transmission process, says Popular Mechanics Magazine. The feat was accomplished by using three negatives, a red, a blue and a yellow, each being sent separately and then put together at the receiving end. The entire picture was transmitted in 30 minutes.

A Raw, Sore Throat

eases quickly when you apply a little Musterole. It penetrates to the sore spot with a gentle tingle, loosens the congestion and draws out the soreness and pain.

Musterole brings quick relief from sore throat, bronchitis, tonsillitis, croup, stiff neck, asthma, neuralgia, headache, congestion, pleurisy, rheumatism, lumbago, pains and aches of the back or joints, sprains, sore muscles, bruises, chilblains, frosted feet, colds on the chest.

To Mothers: **Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.**

The Legion and Auxiliary had a meeting Tuesday evening to lay out plans for the future. The Auxiliary will start the ball rolling by having a Bake Sale this Saturday morning beginning at 10:00 o'clock at the Kluckhohn store.

Mr. and Mrs. Will Lemke are the proud parents of a fine baby boy, weight nine pounds, born last week Thursday, January 31st. The young man has been named Lorice Allen, and acording to "Bill" the little fellow is a rare specimen.

Supervisors Urich and Oxley and Co. Engineer Merten were in town Saturday viewing the condition of the county road leading west out of Klemme. The result of the conference was that the county snow plow was brought down from Garner and the drifts cleared out.

Mrs. Verner Lewis was the victim of a happy surprise party this afternoon when a number of ladies, neighbors, friends and relatives came with well filled baskets and miscellaneous gifts. Mr. Lewis came to town with a bob sled to get the town ladies, and the country ladies were picked up on the way out. All report a fine time.

Ed. Jacobs is making further improvements at his hardware store. At the present time he is having the interior refinished and installing some new shelving and remodeling other display fixtures. Ed. has as nice a hardware store as can be found in Northern Iowa and has a large stock of goods. The store will present a nifty appearance when the work has been completed.

BACKACHE

If Bladder Weakness, Getting Up Nights, Backache, Burning or Itching Sensation, leg or groin pains make you feel old, tired, pepless, and worn out, why not make the Cystex 48 Hour Test? Don't give up. Get Cystex today at any drug store. Put it to a 48 hour test. Money back if you don't soon feel like new, full of pep, sleep well, with pains alleviated. Try Cystex today. De Laval Separtors--

FAMOUS FLOATING BOWL—
The "floating bowl" used on De Laval Separators is the most wonderful separator bowl ever made. It is self-balancing, runs smoothly without vibration, skims cleaner under all conditions of use, delivers a smoother, richer cream, and requires less power to operate. It is easy to take apart to clean and wash. It is the most efficient bowl ever built.

ALL GEARS ENCLOSED—
All gears are completely enclosed, thus insuring durability. The appearance of the machine is also enhanced.

TURNABLE SUPPLY CAN—
The supply can may be turned so that the tinware and bowl can be put in place even though the supply can is filled with milk. This is a handy, convenient arrangement.

OIL WINDOW—
An oil window or "sight guage" enables you at a glance to see the quanity and condition of your oil—no guessing!

OTHER DE LAVAL "Golden Series" FEATURES—
All model De Lavals are easy turning, easy to clean, skim clean, are durably made—the result of 51 years of separator building. They come in all sizes and hand driven, power and electric drive. A style to suit your needs.

For All Separators—Use De Laval Oil For Best Results
Let Us Tell You More About De Laval

THE KLEMME TIMES

VOLUME 33.—NO. 37. KLEMME, IOWA, THURSDAY, FEBRUARY 14, 1929. $2.00 Per Year In Advance—Outside of Iowa $2.

P. T. A. PROGRAM TUESDAY NIGHT

KLEMME WON ONE SECOND IN COUNTY DECLAMATORY

First Place Speakers Will Compete At Garner Tuesday Evening

At the final Declamatory Contest on last Monday evening the best that Klemme could do was win a second in the Oratorical class by Raymond Barz. But the competition was strong and excellent work was observed there. First were won by the following: Oratorical class, Mildred Brummond of Kanawha, who read "What Price Peace." Dramatic, by Betty Carr, of Garner, who read "Peter and the Angels." and in the Humorous class, June Cope of Hayfield, who read "Sister in the Medicine Closet." This is an honor for the eastern half of the county who won two of the three firsts.

Our firsts from our local contest, Oral Gibson, Lucile Kraus, and Thelma Kluckhohn, will compete at Garner Tuesday evening, February 26 against that school and Kanawha. We hope many can and will go to hear this program. We predict splendid speaking there and keen competition.

Cagers Have Hard Going

Our basket ball team was nosed out last Friday night by Garner high school, the score being 13 to 15. We also lost to Corwith on Tuesday of this week on Corwith's floor by a slightly wider score. Our grades also lost to Garner last week end.

P. T. A. Program Tuesday

Rev. Walsh, of Garner will be heard at our next P. T. A. program here next Tuesday night, Feb. 19. We hope to be able to provide some music or other form of entertainment the same evening. We believe Rev. Walsh may speak on "Our Boys and Girls." We hope every parent represented in our schools will try to hear Rev. Walsh.

May Play Clear Lake Here

We are trying to get Clear Lake's Seconds here for a game next Monday night. Our boys defeated them on Clear Lake's floor in January and should repeat on our own floor.

We go to Crystal Lake on next Friday night to play basket ball and hope to take their measure. Let's all go.

Intelligence Tests Given

Too much dependence must not be given intelligence tests but they were relied upon by our government during the war to help find men who might be depended upon for leadership in the great death struggle. Since then they have been used in our better schools to help teachers discover, if possible, abilities not otherwise revealed. With many exceptions observed, it is generally true that students who are winning A's and B's tend to win the highest grades in intelligence tests, and those awarded low marks in school do not do so well in these tests. Occasionally a good student will surprise us in making a relatively high score. No student should be made to feel inferior because he fails to score high on one or two of these tests. The government did not rely solely on such tests but took into consideration many other facts obtainable concerning each individual.

We are giving for what they may be worth the three highest ranking pupils in each grade from seventh to twelfth inclusive. It is very likely that another such test some of these names would be replaced by others.

Standing first in Grade 7 were: Velma Bredbenner, Harold Jost, Alvin Gimer.

Grade 8: Raymond Drake, Irene Von Larsen.

Grade 9: Gladys Schlichting, Hazel Gimer, Ila Steeman.

Grade 10: Esther Greiman, Floyd Mildred Gast.

Grade 11: Clarice Wellemeyer, Ridge, Wayne Pavey.

Grade 12: Marie Carson, Laurence Greiman, Lucile Kraus.

The highest score made by any one in high school was made made by a modest sophomore girl, a country girl, Esther Greimann. Her score was 188.

A score of 113 was the middle score for the high school, which means that as many pupils made less than made more than 113. The lowest score made in high school was 49, the lowest in the grades was 33. Highest in grades was 122.

The Junior Class as a whole scored highest, as all but one scored 113 or more and their middle score was 144. The standard middle score for that grade is but 138.

Among the upper one-fourth of the high school were 6 seniors, 8 juniors, 2 sophomores and 1 freshman. We should add that there were a few absent February 1 when this test was given. We repeat that some students do not do themselves justice in such tests and that too much dependence must not be placed in them. Seldom, however, do those making high scores lack in ability. They may lack in other qualities that are very necessary for success in life which are possessed in greater degree by individual scoring less in such tests. Those of greatest mental ability are by no means always the most successful in life's work. Many individuals possessed of lower mentality are often preferred becaue of their finer personal traits, their honesty, their patience, their kindliness, their dependability and industry.

MISS RUBY GOLL BECOMES THE BRIDE OF AARON STROMER

Wedding Ceremony Held At Elltown Wednesday Afternoon

At 4:30 o'clock Wednesday afternoon of this week occured the marriage of Miss Ruby Goll t Mr. Aaron Stromer at the Elltown Reformed parsonage, the ceremony being officiated by their pastor, Rev. C. A. Schmidt This ceremony had been scheduled to take place the previous Friday, but on account of the death of Mr. Wm Kaetter, grandfather of the groom, it was postponed until this time. Following the wedding, which was a quiet affair and witnessed only by the immediate relatives, a wedding dinner at 6 o'clock was served at the home of the bride's parents. No reception had been planned at this time.

For the next couple of weeks the young couple will visit among relatives in this vicinity and will take an extensive wedding trip later.

They will go to house keeping on the Stromer farm northwest of this place, where Aaron has been farming for himself for several years. The place is tenanted by Jacob De Veries and wife up until this time.

Mrs. Stromer is the eldest daughter of Mr. and Mrs. John Goll, who reside northwest of Klemme. She is a graduate of the Garner High School of the class of 1926 and has since been a successful teacher in a rural school in Garfield township.

The groom is a son of Mr. and Mrs. Herman Stromer who live two miles north of Klemme. He is an industrious young man and is a successful farmer, which he has proved himself to be the past few years when e ad charge of one of his father's farms northwest of Klemme.

The Times joins the many friends of this happy couple in wishing them a most pleasant and prosperous journey through life together.

Mrs. Frank Pringnitz Mother Died At Iowa Falls

January 21st Mrs. Frank Pringnitz was called to Iowa Falls to the home of her sister, Mrs. Anton Duit, on account of the serious illness of her mother, Mrs. Oswald Heinz. She helped care for her until Sunday noon, Jan. 27 when death came to relieve her terrible suffering. Funeral services were held at the St. John's Church at Ackley, Iowa, and burial made in the Ackley cemetery, on Wednesday, Jan. 30th.

Comes Long Ways To Attend His Mother's Funeral

Mr. Frank Jahnke arrived in this city this morning from Canada, being called here by the death of his mother, Mrs. Fred Jahnke.

MRS. FRED JANKE DIED MONDAY

FUNERAL SERVICES HELD AT REFORMED CHURCH TODAY

Had Resided In Klemme For About Fifteen Years

Again we must report the loss of one of our old residents of Klemme, namely, Mrs. Fred Yanke, who died early on Monday morning, February 11, 1929. Death came to her without warning, as only a few hours before she had spoken to her husband and she seemed to be in good health. Apoplexy was given as the cause of her sudden death.

Mathilda Emelie Janke nee Fromm was born on the 21st of September, 1851 at Strassburg, Uckermark, Kreis Prenzlau, Germany. She was brought to Holy Baptism and received her religious instruction in the Lutheran Church of Strasburg.

On the 2nd of May, 1875, she was joined in marriage to Mr. Fred Janke. This union was blessed with seven children, two of them dying in infancy.

In the year 1878 the family came to this country, and made their home on a farm near Ackley, Iowa, where they remained 11 years. From there they moved to Meservey and six years later to this community. About 15 years ago Mr. and Mrs. Janke came to the town of Klemme, where they have lived ever since.

Mrs. Janke was a quiet, homeloving mother. Of her own sufferings others knew little, for she would not complain. For the needs of others she always had a sympathetic heart and an open hand.

She died at the age of 77 years, 4 months and 20 days. She is survived by her husband, two sons, three daugthers, thirty-two grandchildren and seven great grandchildren.

The sons and daughters were all present at the funeral service. They are: Mrs. Ernest Kluismann, Clear Lake; Mrs. John Newberger, Klemme; Henry Janke, Garner; Frank Janke, Alberta, Canada; and Mrs. Wm. Waddingham, Klemme.

Funeral services were conducted Thursday afternoon at 1:30 o'clock at the Klemme Reformed Church, with Rev. Grosshuesch in charge. Burial was made at the Klemme cemetery.

MARRIAGE LICENSES ISSUED IN HANCOCK COUNTY

Business Fairly Brisk In Clerk's Office This Month

Following is a list of the marriage licenses issued by Clerk Chris J. Johansen the past two weeks:

Jan. 26, 1928: Lyle K. Pearce, Britt, Iowa, and Vesta G. Mills, of Corwith, Iowa.

Jan. 29, 1928: Henry Walter Luedeke, Fairmont, Minn., and Thora Alice Benson, Fairmont, Minn.

Jan. 29, 1928: Aaron F. Simmons Garner, Iowa, and Rosa M. Vondiacek, Britt, Iowa.

Jan. 30, 1928: Charles Hipp, Woden, Iowa, and Recca Loeschen, Woden, Iowa.

Feb. 6, 1929: August F. Chris and Lottie Baade.

Feb. 8, 1929: Elmer A. Refshaw, Minnesota, and Guda Euji, Minn.

Feb. 12, 1929: William H. Schutje, Wesley, Iowa, and Leota Elizabeth Denniss, Titonka, Iowa.

William G. Boehnke, Ventura, and Mabel Roenfang, Clear Lake, Ia.

Feb. 13, 1929: Aaron Stromer of Klemme, Iowa, and Ruby Goll, of Garner, Iowa.

REEMTSMA'S SALE DATES

Saturday, Feb. 16. P. Schwartz, household goods, Klemme.

Wednesday, Feb. 20. C. Brandt, farm sale, 2 miles east and ½ mile north of Kanawha.

Thursday, Feb. 21, C. C. Cook, 4 miles north of Thornton.

Friday, February 22, Geo. Buseman, 3-4 mile south and 3 miles east of Klemme. Farm sale.

OBITUARY OF WM. KAETTER

(By Rev. C. A. Schmidt)

"O God who is like unto Thee! Thou which hast showed me great and sore troubles, shall quicken me again, and salt bring me up again from the depths of the earth." Rs. 71:20. May these words also be a comfort to you in the hour of sorrow when it has pleased God to call from your midst, the husband and father: Wm. Kaetter.

He was born in Ladbergen, Kreis Tecklenburg, Westphella, Germany, on the 28th of March 1859. He was baptized there in the Reformed Faith. In August of the following year, 1860, his parents decided to find a new home in America, so they came with him and his older brother and settled at New Knoxville, Ohio, where there already was a settlement from Ladbergen. Here he attended the public and religious schools and at the age of 15, in the year 1874, was confirmed in the Reformed church by Rev. Kuckherman. In the same year the family left New Knoxville and came directly to Hancock County, Iowa, and settled on a farm 1½ miles southwest of here known as the Kaetter farm. Here the deceased resided with his parents until the time of his marriage to Miss Anna Greimann of Clayton Co in 1882, when they moved on a farm ½ mile further south to establish a home of their own. This has been their home ever since. Here they were privileged to share joy and sorrow together for nearly 47 years. Mrs. Wm. Kaetter is a sister to Wm. and Fred Greimann. This union was blessed with 5 children, they are: Mary, Mrs. Herman Stromer; William; Louis; Arthur, and Alma.

Having come here at a time when this country was but sparcely settled and no church had been established, he became one of the founders of this congregation. He did much to help support and build up this congregation and has ever since remained a faithful member of the same. Last year he was privileged to help celebrate its fiftieth anniversary.

The congregation at various times entrusted him with the office of Deacon and Elder.

It is with sorrow and heartfelt grief that we must now record the incident of his death. He met a seemingly untimely death, yet, we know that nothing comes by chance but by the fatherly hand of God. On Tuesday morning, while cutting off the top of a tree which was endangering one of his buildings he fell from a height of about 25 feet upon the ground, He was so badly injured that it was found necessary to take him to the hospital, but in vain, the impact and shock was too severe. He died in the hospital Wednesday afternoon, February 6, at about 1:50 o'clock.

He leaves to mourn his death, his wife, the five above named children, four grandchildren, four sisters and three brothers, as well as many other relatives and friends.

May God comfort you with his grace and mercy for every mans destiny is in His hands.

The relatives in attendance from a distance were: Mr. and Mrs. Fred Kaetter, and Harold Wittenberg, of Minneapolis, Minn.; Aug. Obermiller and Chris Bierbaum, of Garnavilla, Iowa; the Henry Greimann sons of Blue Earth, Minn.; the Oelker Brothers of Sheffield, Iowa; and Bertha Harnack, of Remsen, Iowa.

Card Of Thanks

The undersigned hereby extend their sincere thanks to all those who assisted them so nobly during the time of their bereavement, also for the many words of comfort and consolation.

Mrs. Wm. Kaetter
Wm. Kaetter, Jr.
Louis Kaetter
Arthur Kaetter
Alma Kaetter
Mrs. Herman Stromer.

KLEMME REFORMED CHURCH

Calvin Grosshuesch, Pastor

10:00 a. m. English service.
Offering for Foreign Missions.
11:00 a. m. Sunday school.
The Young Peoples' Bible Clase will meet Tuesday evening at 8:00.
Choir practice Sat. evening, 8:00.
The Confirmation class meets on Tuesday and Saturday at 1:30 p. m.

STOCK SHIPMENTS ARE INCREASING

STOCK SHIPMENTS LIVELY THE PAST TWO WEEKS

Thirteen Cars Last Week; Eight In Saturday Shipment

Stock shipments from the Klemme yards have been more than holding their own the past two Saturdays, according to Agent M. O. Barr of the Rock Island here.

On the week ending February 2, there were a total of thirteen cars in the Saturday night shipment.

Last Saturday night the shipment fell off a few cars in number but at that there were eight car loads.

The Klemme Shipping Association loaded out 3 car loads of hogs for Iowa Falls. C. A. Larsen shipped three cars of hogs to Iowa Falls and a car load of cattle to Chicago. D. Schwichtenberg shipped a car load of cattle to Chicago.

Electric Lights For Yards

An item of news that will be of great interest to live stock men is the fact that it is practically assured at this time that electric lights will be installed at the local stock yards in the near future. The plans call for adequate lighting over all pens, chutes and scales, according to M. O. Barr who has been pushing the proposition to get the lights installed. This wil be a great convenience for live stock shippers and is an improvement which has long been needed here.

When the lights are being installed at the yards we hope that pressure can be applied to have the railroad company install lights in and about the depot also, as it certainly is needed. A petition from the business men will help, no doubt.

COUNTY TOURNY AT BRITT ON NEXT FRIDAY

Klemme And Garner Will Play The Opening Game at 7:00

At the close of the Declamatory Contest at Garner Monday evening places were drawn for the annual county basket ball tournament to be held at Britt beginning Friday, Feb. 22 at 7:00 p. m. Byrnes Missman had the privilege of drawing for Klemme and drew Garner as the opening game. Corwith and Hayfield play at 8:00; Kanawha and Crystal Lake at 9:00. Britt drew a bye.

Saturday p. m. at 3:10 the winners of the Klemme-Garner game play the winners of the Hayfield-Corwith game. At 4:10 the winners of the Kanawha-Crystal Lake game play Britt. At 9:00 p. m. the winners of the afternoon games play for the county championship.

The grade teams play as follows: Britt and Garner at 2:00 p. m. Friday. Corwith and Hayfield at 2:50. Klemme and Crystal Lake at 3:40. Kanawha drew a bye. Saturday afternoon the winner of the Garner-Britt game vs. winner of Corwith-Hayfield game compete for position. At 2:20 winner of Crystal Lake-Klemme game vs. Kanawha. At 8 p. m. afternoon winners play for the grade championship.

SON OF MR. AND MRS. CARSON MARRIED MICHIGAN GIRL

Mr. And Mrs. Harry Carson Will Reside At Charlevoix, Mich.

Harry Carson and Miss Lorraine Kenney were married at Albion, Michigan, on February 2, 1929.

Mr. Carson is a son of Mr. and Mrs. George Carson of Klemme. He is an expert fish culturist and for the past three years has been employed by the government and has traveled over forty-three states in the interests of his profession.

The newly-weds will reside at Charlevoix, Michigan where Mr. Carson will be the superintendent of a large fish hatchery. He visited in Klemme with his parents last summer and will be remembered by some of our townspeople.

FARM ACCOUNTY SCHOOL TO BE HELD HERE FEBR. 21st

Farmers Can Learn Of Good Way To Keep Farm Records

During the week of Feb. 18, the Farm Bureau of Hancock County will hold five meetings in Farm Accounting. Mr. J. C. Galloway of the Extension Service will be in charge of the work. He will discuss the methods of keeping a simple farm account book and help start anyone interested in keeping these accounts. He will also close and analize the books of those who have been keeping these accounts for the past year. There are a number of farmers in the county who have been keeping this account.

The meetings will be held as follows:

Monday, Feb. 18. Britt at Farm Bureau Office.

Tuesday, Feb. 19. Kanawha at First National Bank basement.

Wednesday, Feb. 20. Goodell, at State Savings Bank.

Thursday, Feb. 11. Klemme First National Bank.

Friday, Feb. 22. Garner, at the Farmers National Bank.

These meetings will begin at 10 a. m. and continue until 4:00 p. m. Anyone interested in attending the meetings should write to the Farm Bureau Office for full particulars.

METHODIST CHURCH NOTES

H. E. Whyte, Pastor

The protestant churches are more and more each year recognizing the importance of the lenten season and making it a time for the cultivating and reviving the spiritual life of their constituency. In keeping with this idea we are planning two weeks of Evangelistic meetings in our church at Klemme, beginning Sunday, Feb. 24th and ending on Sunday, March 10th. You are urged to keep the dates open so far as possible and plan to be present as often as you can. Preaching the first week will be done by Rev. J. T. Snyder, of Belmond, and the second week by the pastor. The subject for the sermon Sunday morning will be, "The value and meaning of Lent." In the evening the subject will be, "Measuring up to our Christian responsibility." Our newly organized Junior Choir will sing at this service. Come and hear them.

BEET EXHIBIT CAR COMING TO KLEMME WEDNESDAY

The special sugar beet exhibit cars will be in Klemme all day on Wednesday, February 20th, arriving in the morning and leaving the next morning.

We understand that there are several cars in the special exhibit, including display cars and a car for lectures and motion pictures.

This should be of special interest to farmers, whether or not they are in the sugar beet raising industry.

The First One Hundred Years Are The Hardest

Herman Schuldt was most agreeably surprised at his home Wednesday evening when a number of his neighbors and friends, about twenty-five in number, came with baskets heavily laden with good things to eat and informed him they had come to celebrate his birthday. The affair was a complete surprise to Mr. Schuldt who has come to regard a birthday as nothing out of the ordinary. The evening was pleasantly spent and at the proper hour the baskets were opened and a delicious lunch was served. All report that a most enjoyable evening was spent.

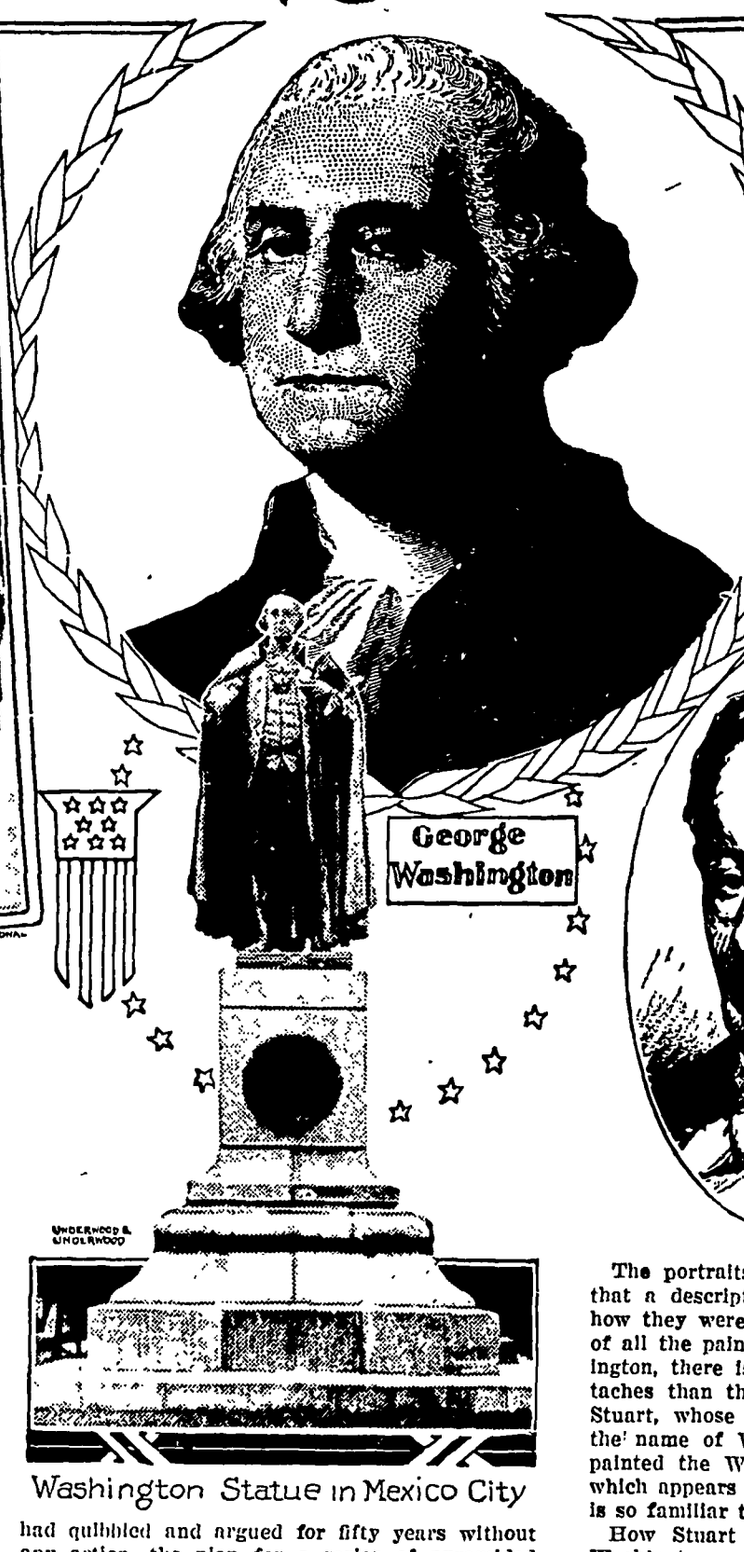
Mr. Schuldt was reminded by his young son, "Well, dad, you're a half century old." But says Herman, "the first hundred years are the hardest, so the next fifty should be easier."

Former Klemme Farmer Moving To Amboy, Min.

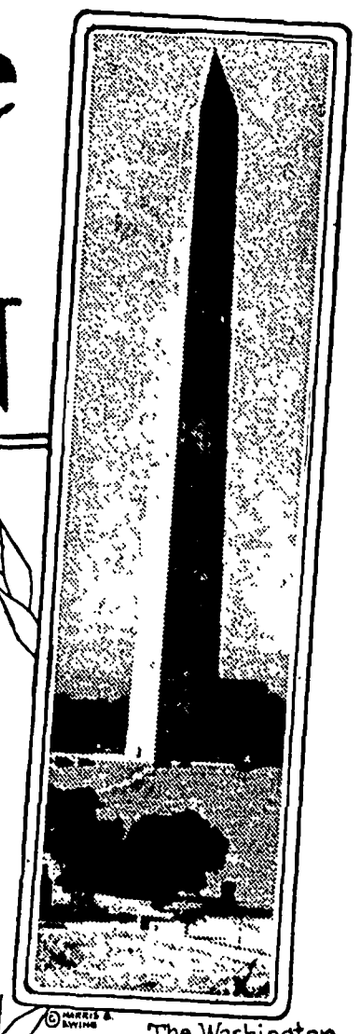
We are in receipt of a letter from Albert Fuller, Good Thunder, Minn., notifying us to change the address on his Times to Amboy, Min., to which place he is moving onto a farm. If fishing is good at Amboy, send us the news Albert!

SERVING the MEMORY of WASHINGTON

Washington Statue in Wall Street, New York City



George Washington



The Washington Monument

Gilbert Stuart

Washington Statue in Mexico City

By ELMO SCOTT WATSON

CONSIDERING his importance in our history, it is not remarkable that Americans should honor the name of George Washington, but it is remarkable the number of ways in which his memory is preserved. For it is doubtful if the name or likeness of any other man in all history has been kept before the attention of a people in their everyday life as much as is the case with this first President of the United States.

His portrait appears upon the postage stamp which carries the bulk of the letters written by Americans and upon several denominations of our currency. It will be even more familiar on the latter after July 1 of this year when the new smaller-sized currency goes into circulation and the Washington portrait appears upon the one-dollar bills. Not a day passes that his name does not appear in our newspapers many times, for the capital of the nation, from which so much important news comes, bears his name. And there is not a state in the Union which does not have either a county, township, city, town or village, or a street or avenue in one of the latter three, bearing the name of Washington. One of the forty-eight states bears his name, and he is the only President who has that distinction. The annual celebration of his birthday is one of the holidays in the American calendar which are legal holidays throughout the nation, and only one other President shares that distinction with him.

Thousands of Americans bear his name as their two given names. In fact, so common was this practice in the early days of the Republic that it called forth a quaint and vigorous protest from the editor of one of the first newspapers published west of the Mississippi. Writing in the Missouri Intelligencer at Franklin, Mo., in the issue of April 20, 1823, the editor said:

> This is the Christian name of one-eighth of the masculine inhabitants of the United States. This name was dear to every American when it conveyed the idea of the father of freemen, but now it serves no other purpose than that of distinguishing one part of mankind from the other. It is universally made a very packhorse. Every stupid blockhead thinks it the greatest tribute of respect he can possibly pay to the memory of the hero to call a son, a negro or a grog-shop by the same name. It is a practice scandalously common for publicans to paint the likeness of the hero on a board, hang it up to the vulgar to gaze at as at a monkey, and to beguile silly travelers to become their guests, who judge of what is in the house by the sign. What has the father of liberty done that his name should thus be consigned to infamy and his likeness to contempt?

Aside from the everyday reminders of the name and fame of George Washington, there are many other ways in which his memory is preserved. While there may be more statues of Lincoln erected in various places throughout the United States, Washington has been honored thus more in foreign countries. The Latin American republics have not only memorialized him in bronze and stone, but Simon Bolivar is known quite as much as the "Washington of South America" as he is "The Liberator," and Mexico had a Benito Juarez, whom history calls the "Washington of Mexico." So there is a special element of appropriateness in the fact that in the Colonia Juarez in the capital of Mexico there should stand a statue of George Washington.

In this country the outstanding memorial to Washington is the famous obelisk which dominates the skyline of our national capital. The Washington monument originally was intended as a tomb for the first President. The proposal to erect the monument as a tomb was made by a congressional committee, which launched the project immediately after Washington's death. Permission to remove the body from its burial place at Mount Vernon was refused by the general's brother.

Charles Custis, a leader in the movement, proposed an earthen pyramid as a memorial. His plan was to have all soldiers who had served under Washington go to the capital, each depositing a shovelful of earth in a designated spot. The appeal proved popular and was seriously considered until it was pointed out mathematically that before the memorial could be near completed the Revolutionary veterans would be dead.

As late as 1836, after congress and committees had quibbled and argued for fifty years without any action, the plan for a series of pyramided temples was proposed. It was this plan that had been agreed upon when John Marshall, then eighty years old, headed a national society, members contributing $1 each toward the monument.

But not until July 4, 1848, was the cornerstone actually laid. By that time the plans had been revised until the present shaft was agreed upon, although a Grecian temple to be erected around the base was still a part of the builders' conception. After the shaft had been raised to 154 feet, the Civil war came and construction was halted and was not resumed until 1880 under the auspices of congress. The capstone, weighing 13,000 pounds and pointed with aluminum, 555 feet from the ground, finally was set in place in 1884.

Yet, with all its majestic 555 feet of height, the Washington monument is not yet finished. It has a noble head but no proper feet. The fine shaft lacks a base to match.

Architects have pointed out that sound proportions call for, not a mound of greensward, but a massive and stately marble terrace.

The monument itself cost $1,187,710, and a sum at least this large would be required to provide a base such as architects recommend. With the celebration of the two hundredth anniversary of Washington's birth approaching a movement is now under way to have a suitable base constructed in time to make its completion a part of the celebration.

A site was given by congress several years ago to the George Washington Memorial association for the specific purpose of erecting the kind of a memorial it had proposed to build and endow. The cornerstone was laid by President Harding; since then foundations have been completed and paid for through the efforts of the association. The site is at Seventh and B streets, where once stood the old Pennsylvania railroad station. In a public meeting Chief Justice Taft urged that the whole nation should contribute to the project, which he described as one of great national utility.

The main feature of the building will be a vast auditorium with a seating capacity of from 7,000 to 11,000 people. Besides this, it will have several smaller auditoriums of varying capacity for conferences, lectures and reunions. Each state in the Union and each territory or colony would have a room in the building which will belong to it in perpetuity. When completed the memorial will be under the government of the Smithsonian institution.

One of the features of the great auditorium will be the finest organ that can be built; concerts free to the public will be given on Sunday afternoons and also on other occasions. In a word, the memorial will be a people's building.

Although there are many statues of Washington in various cities of the United States—the latest addition to the number being the beautiful equestrian statue which was unveiled in recent months and now stands before Washington's headquarters at Morristown, N. J.—two are perhaps the best known of them all. One stands on the steps of the subtreasury building in Wall street in New York city and the other stands in the rotunda of the state capitol at Richmond, Va. The latter, the work of the famous French sculptor, Houdon, is of special interest because it is acknowledged to be the most exact likeness of Washington in existence. Art connoisseurs place its value at a million dollars.

The portraits of Washington are so numerous that a description of them all and the story of how they were painted would fill a volume. But of all the painters who made portraits of Washington, there is none to whom more interest attaches than the famous Rhode Islander, Gilbert Stuart, whose renown is so closely linked with the name of Washington. It was Stuart who painted the Washington portrait (shown above) which appears on our two-cent stamps and which is so familiar to all Americans.

How Stuart became the most famous of all Washington portrait painters was told in an article which appeared in the Kansas City Star during the celebration of the centenary of Stuart's death last year as follows:

For many years Stuart had had in the back of his mind plans for painting George Washington. He didn't know precisely how he was going to realize this ambition, but he never let the thought of it die away. So when he landed in New York in 1792 he began to make arrangements to have the famous revolutionary leader sit for him. It was not until two years later, however, that he succeeded in this purpose.

While congress was in session in Philadelphia Stuart went there with a letter of introduction to Washington from John Jay. He met the President at a public reception and was greeted by Washington with "dignified urbanity." Washington had heard of the painter and did not require the letter of introduction. He said he would be pleased to put himself at the disposal of Stuart at such a time as the latter's arrangements and his own public duties would permit. A series of sittings soon was arranged and Washington presented himself with his customary punctuality.

The first sitting proved unsatisfactory. It largely was Stuart's fault. For the first time in his career he became nervous. He who had jested with kings and played pranks upon his famous teacher, West, was unnerved in the presence of this great man. It always had been a custom with him to draw out the subject's true personality in the course of conversation while painting. But Washington's manner precluded any possibility of such a method resulting successfully. Although not austere, he was calm and not communicative. The hard lines of his face, produced by those years of strife, had not yet softened into a genial expression sufficient for Stuart's aims.

However, Stuart went to work with nervous energy and painted a portrait showing the right side of the face. Afterward he destroyed it, declaring it unsuccessful. But he made copies of it, the best known of which is the "Gibbs-Channing" portrait now in the Metropolitan museum, New York. At the second sitting Stuart executed a full-length portrait showing the left side of the face. This painting is in the Lansdowne collection in London.

But the best of all was the result of a third sitting. It is said Washington rebelled against this third portrait, but yielded to his wife's entreaties. Another account is that Stuart was intentionally late on the afternoon of this sitting in the hope of getting a show of displeasure on the countenance of the punctual President. He wanted some of the rough vigor he always liked in portraits of strong-willed men he so loved to paint.

The resulting portrait, known as the "Athenaeum head," showing the left side of the face, is the one now so widely accepted as a faithful likeness of the great man. Mark Twain once said, in facetious mood: "If George Washington should rise from the dead and should not resemble the Stuart portrait he would be denounced as an impostor!" The original hangs in the Boston Museum of Fine Arts. But Stuart, with an eye for business, made fifty copies of it. So today, any art collection worthy of the name can boast its Stuart portrait of Washington.

This "Athenaeum" canvas never was finished. Stuart, it is said, had promised to present this portrait to the family when it was completed. But he was so pleased with it and found the business of making replicas so profitable that he intentionally left the costume unfinished, although the face was perfect. When Mr. Curtis, father of Mrs. Washington, made a trip to Boston to remind Stuart of his promise, the artist merely showed him the canvas and said: "But you see, my dear sir, that it is not finished." And it never was.

Stuart's failure to finish Washington's coat also may be explained by the fact that he never cared to spend much time on backgrounds. His interest always centered on the face. "I copy the works of God," he declared, "and leave clothes to tailors and mantua makers."

Stuart's last years were embittered by constant fights against those who made copies of his famous portrait of Washington and sold them as genuine Stuarts. One of these copies even got into the White House for a time.

ATWATER KENT RADIO

IT'S ALL TRUE

—when you have the right radio

RADIO *does* bring the city "up close." It *does* mean more to farm families than to anyone else.

BUT *you've got to have a good radio.* Radio that reaches out. Radio that sounds natural. Radio that's always ready when you are. The best evidence that Atwater Kent Radio is good radio—that it really does the job as everybody wants it done—is the fact that it is and has been for a long time the best seller in *both* the city and the country. After listening, after comparing prices, most people want it—because they find it's the kind they want.

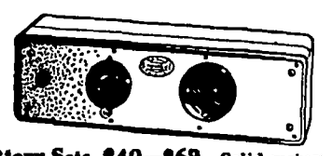
From a lamp-socket or from batteries

Some homes have electricity, some haven't. Either way, you get fine Atwater Kent performance and proved dependability. If you do not happen to have power from a central station, you can enjoy the broadcasting with the improved, powerful 1929 Atwater Kent battery set. It, too, is perfected.

The main thing is: *Don't wait.* The air is full of wonderful programs—today—tonight—and they're meant for *you.* Get what's coming to you—as more than 2,000,000 other families do—with an Atwater Kent.

Model 40 (Electric), $77. For 110-120 volt, 50-60 cycle alternating current. Requires 6 A. C. tubes and 1 rectifying tube. $77 (without tubes).

Model 56. The new all-in-one set that fits beautifully anywhere. FULL-VISION Dial. For 110-120 volt, 50-60 cycle alternating current. Requires 6 A. C. tubes and 1 rectifying tube. Without tubes, $97.



Battery Sets, $49—$68. Solid mahogany cabinets. Panels satin-finished in gold. FULL-VISION Dial. Model 48, $49. Model 49, extra powerful, $68. Prices do not include tubes or batteries.

Prices slightly higher west of the Rockies

On the air—every Sunday night—Atwater Kent Radio Hour—listen in!

ATWATER KENT MANUFACTURING CO., *A. Atwater Kent, President,* 4764 Wissahickon Ave., Philadelphia, Pa.

Sad Fact

"It's tough," growled the Gloomy Brother.

"Now, what?" smiled the Cheerful Brother.

"That while a coal pile goes down with the mercury it won't come up with it," retorted the G. B.

KEEP THE Children Well

Growing children need a mild pleasant remedy to cleanse the stomach and bowels and ward off minor illness.

If your children toss in their sleep are fretful, feverish, take cold easily or suffer from upset stomach, constipation or worms, Mother Gray's Sweet Powders give quick relief.

Mothers have used and recommended them for over 30 years.

For Free Sample package and a Mother Gray Walking Doll, address Mother Gray Co., Le Roy, N. Y.

Ask your druggist for

Mother Gray's SWEET Powders FOR CHILDREN

PISO'S Coughs

Quick Relief! A pleasant, effective syrup—35c and 60c sizes. And externally, use PISO'S Throat and Chest Salve, 35c.

Garfield Tea

Was Your Grandmother's Remedy

For every stomach and intestinal ill. This good old-fashioned herb home remedy for constipation, stomach ills and other derangements of the system so prevalent these days is in even greater favor as a family medicine than in your grandmother's day.

For Wounds and Sores

Try HANFORD'S

Rock Island

Choice Wheat Lands

PANHANDLE-PLAINS COUNTRY

OF TEXAS AND ADJACENT STATES

along the Rock Island Lines

Good plains land, ready for the plow, producing abundantly high content protein wheat and other crops. Unexcelled for live stock, dairying and poultry.

A New Railroad is being built by the Rock Island from Amarillo, Texas, to Liberal, Kansas—145 miles—opening up a fine wheat country and affording many opportunities.

Attractive Prices and Terms

Progressive citizens of 22 counties (organized as the Panhandle-Plains, Inc.) are cooperating in development of this agricultural Empire.

Good land from $25 upward per acre can be secured on very easy terms.

TIMELY HINTS FOR BUYING STALLION

Keep in Mind Importance of Pure Breeding.

In buying a stallion one should keep in mind the importance of pure breeding, soundness, individual excellence, potency, and the reliability of the party from whom purchased.

It should be remembered that pure breeding is important in a breeding sire as it means that his type has been fixed by a long line of ancestors of similar type, and that he will therefore transmit his qualities with more certainty than the grand sire. It is well to keep in mind also that there are certain families within every breed that stand out because of their superior excellence, and that such families are especially desirable.

It is a good safeguard to have a horse examined and certified sound by a competent and reliable veterinarian before buying. If this is not possible, a guarantee should be secured that the horse will pass the requirements of the stallion registration board, and payment should be withheld until a license has been secured.

A horse may be pure bred and sound, and yet an undesirable individual. A horse which would not himself be a high-priced gelding if castrated can hardly be expected to sire high-priced geldings.

In buying, a guarantee should be secured that the horse will prove a 50 per cent foal getter, under conditions with which you can comply, and that failing to do so the purchase price will be refunded in cash. Remember that such a guarantee is of little value unless given by a responsible party.

Before buying a stallion it is well to inform yourself as to the reliability of the party with whom you expect to deal. There are plenty of reliable breeders and dealers from whom good stallions can be secured and they are worthy of your patronage. There are also men in the business of selling stallions who are not reliable and it is well to avoid them.

The color and markings should be carefully examined to see that they correspond with those called for in the pedigree. The age as shown by his teeth should also be checked with the date of foaling.—Bulletin No. 7, Minnesota Stallion Registration Board.

When Ewe Disowns Lamb Stanchion Comes Handy

Occasionally a young ewe, and even an older one that is in poor condition with a scant milk supply, will not own her lamb. A little patience on the part of the shepherd will usually bring favorable results. The ewe will have to be held for the lamb to suckle and when the milk flow starts she will usually take to the lamb. If the ewe becomes ferocious and fights the little one she should be confined in a stanchion, made by driving two panels into the ground and wiring them at the top. In this way she cannot injure the lamb and it will suck in spite of her efforts.

If the ewe has more milk than the lamb will take she should be milked out clean at least once a day for several days. The first milk appearing within the udder is intended to be consumed only at the beginning of the lamb's life, and if retained in the udder for a number of days it is likely to sicken the lamb.

In case a lamb dies and the mother has lots of milk it is often advisable to put the twin lamb of another ewe with her. The best way to do this is to skin the dead lamb, pulling the legs out like stripping off a stocking, sprinkling a little salt over the inside, and then fastening the skin on the twin lamb that is to be transferred. The ewe will generally by the scent accept it as her own. Often by sprinkling some of the ewe's milk over a lamb, and by rubbing some of the secretion about the udder on the lamb, she will adopt it.

Live Stock Items

To give sheep perfect health, there should be salt and chemicals available.

* * *

A good herd sire should never be sacrificed because he is ugly. Build a bull pen.

* * *

Strive to keep live stock comfortable, thereby favoring more profitable production.

* * *

In a barn used for horses only self-feeders for hay are very handy and entirely practical.

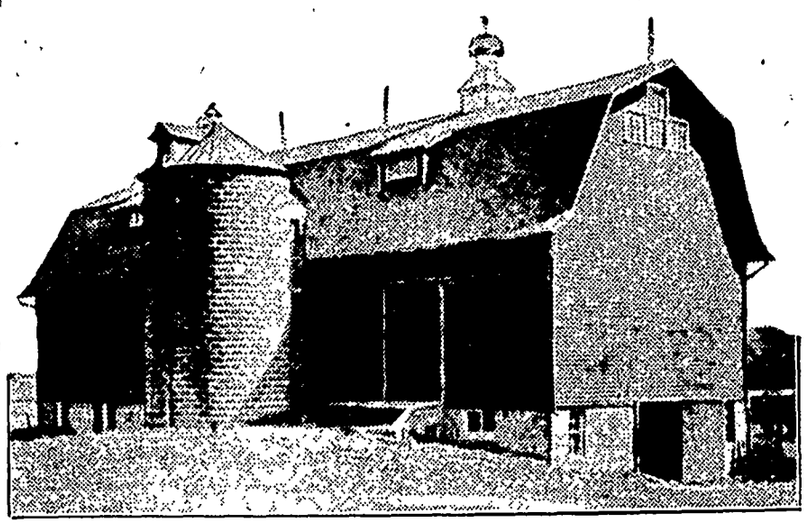
* * *

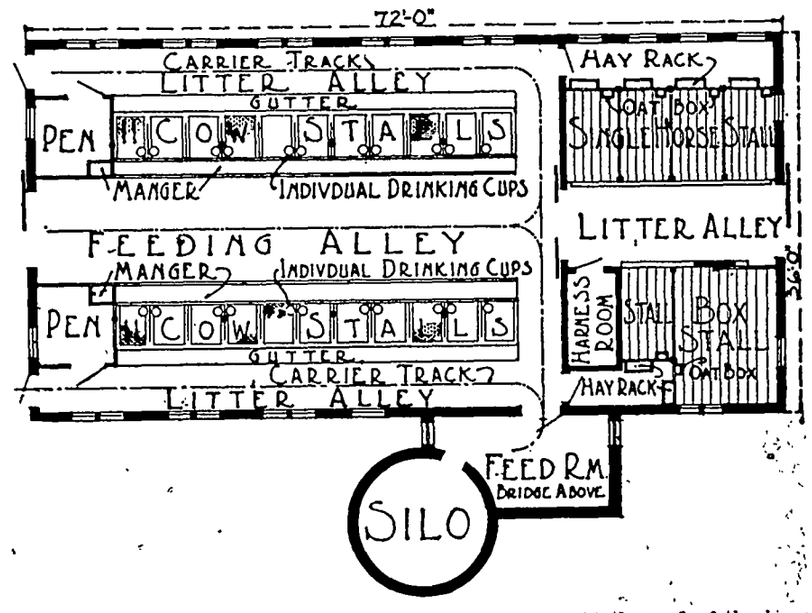
The market preference for lightweight fat cattle together with the economical gains made by calves in the feedlot favors the feeding of young cattle. Well bred, rugged, blocky calves must be selected for satisfactory results.

* * *

A little attention given to the feet of colts and young horses may make a great difference in the value of the horse when ready for work. When the colts' feet are allowed to become uneven and crooked, it is almost sure to affect the feet and legs permanently.

Bank Variety of Barn Provides Splendid Shelter for Live Stock





By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The popularity of the bank barn is perhaps a sufficient argument for the soundness of this type of construction, where the lay of the land is favorable. Such barns may be made highly efficient, as is shown by a glance at the picture and floor plan shown above.

The big barn will take care of twenty-two cows and six horses, and keep them in top-notch condition. The cow stalls are floored with cork brick, warm and springy; they have steel stalls and stanchions, and individual drinking cups. At the end of the barn there are two maternity pens, one on each side of the wide feeding alley. The cows face in, and are of course fed from the carrier that brings the silage and concentrates from the feed room.

The silo is of concrete blocks, and the chute is inside the feed room, so that in bad weather the feeding job is not aggravated by the discomforts of exposure.

Although it is a bank type, this barn has plenty of light and air. There are twenty-eight windows, and a complete ventilating system. It is easy to keep sanitary, as the concrete litter alley on each side is served by overhead litter carriers. They run out to a manure pit. The horse stalls are floored with hardwood. Here, the litter alley of concrete has no carrier track, but is easily served by the carrier that runs over the litter alleys in the dairy part of the barn.

Buying Home Is Job That Needs Thought

Buying or building a home proves a greater task than anything ever tackled before, apparently, and the head of the family and the helpmate scrutinize with all their powers to select that which will suit, the means financially being foremost in the consideration.

In practically all instances, where a home is purchased, the real estate man or representative, or seller personally, sets out the virtues of the home in particular.

The good qualities are given in all of their ideals, the accommodations which are to be had in the home itself and the locality are told of without reservation.

It is a fact that many homes have been sold because of some peculiarity of the same, handsome fixtures, beautiful approach, convenience to car line, fireplace, kitchen, light in the house, etc. Writers have stated that electric fixtures have attracted more attention than any other thing, while others say that closets in homes have had wonderful effect.

The statement has been made that many people who are looking over homes to purchase see more in fixtures and decorations than in walls, foundations and constructions. The eye of the wife is credited with many purchases of homes. Something attracts her vision and a sale is almost consummated.

While good construction, substantial foundations, walls, roofs and other work about a home are essential and there is no intent to in the least criticize, still there are many other things which hold out a strong persuasive hold and are carefully presented.

Salesmanship is essential in many instances and it is this fact that brings out the qualities as above stated, decorations, fixtures, furnishings, doors, closets and so on.

The greater number of people, it is pointed out, are interested in conveniences and beauty; in short many sales are made where the home attracts the eye.

Home buying is an important step in the life of any man, for it gives that feeling obtained in no other way. There are few men in the world who are not happy to walk up to and through his own door. The fact that a debt has been contracted on which there must be consideration given for many a day is overcome with the feeling of home owning.

Comparative Cost

The first cost of a well-constructed, durable and fire-safe residence of modern proportions is only from 5 to 10 per cent more than the cost of one in which cheap and destructible materials are used.

Experts Should Build Windows of a Home

The casement window ranks higher in favor with the European home owner than it does with the American. This is not through any fault of the casement window, as such, for it is an extremely efficient affair if it is well made, but because it is so often poorly made that it has not appeared to give the service that might reasonably be expected of it.

When you hang a window sash on hinges and swing it out in the wind you should be prepared to say that the hinges are of high-grade material, well put on, and that the adjustment hardware by which you are able to fix the sash in any position is substantially and soundly secured, or else you may as well expect to find the sash, some day after a gust of wind, torn away from the hinges and lying in the flower bed at the foot of your wall.

Furthermore, if the locking hardware has not been put on so that the sash may be drawn up tight against the frame you will have wind leaks, heat losses, rattles and general dissatisfaction. Poor workmen cannot make a good casement window. Good workmen can make a thoroughly satisfactory window of this type.

The market affords many types of special casement windows, and of casement window adjusters that are most excellent devices. If you like this kind of window make sure of what you are getting.

Colorful Ceramic Tiles Add Luxury and Beauty

If you are building or remodeling a home you want it to have beauty and a measure of luxury. Even if it is a very small house it must be the best, the most beautiful you can afford.

Ceramic tiles permitting an endless choice of color, design and texture, you will find to be a beautiful, long-lasting material. Water and steam do not harm them. Many years of treading over them does not wear them down. Furniture dragged across them does not scratch or mar their surface.

Ceramic tiles, produced at very high temperatures, resist the heat of the ordinary flame. The materials used in setting tiles are also fireproof. Tiles are nonabsorbent, sanitary, and easy to clean.

Rusty Pipes

Rusty pipes never get any better. They gradually fill up until water can barely trickle through. Meanwhile, lingerie and linens are ruined from the rust in the wash water. And the family's disposition is wrecked from seeing red every time the water is turned on.

Velvet Beans Are Soil Improvers

Best Way to Plant This Crop for Good Results Is With Corn.

Velvet beans, while not recommended for hay, are as valuable for soil improvement as soy beans or cowpeas and at the same time cost only half as much.

"The best way to plant this crop for good results is with corn," says E. C. Blair, extension agronomist at the North Carolina State college. "They will do as well or better with corn than if planted alone and the grower will receive a profit from the corn in addition to improving his soil."

Plant in Alternate Rows.

The corn and beans should be planted in alternate rows, three feet apart, dropping the beans six inches apart on poor soil and about one foot apart on rich soils. Cultivate the corn until the bean vines have covered the middle. In this way a ton or more of vegetation, worth $14 in plant food alone, will be added to each acre planted to these crops.

On light sandy land or on very poor soils velvet beans make a much better growth than do soy beans, while on good land they make equally as good a growth and are much more valuable as a fall grazing crop. Cattle may be turned into the fields at frost and grazed until the vines and seed are gone.

Plant for Grazing.

Where the beans are planted for grazing purposes, it is a good plan to plant two rows of corn to one of velvet beans. This gives a clear space between rows for harvesting the corn and will also furnish sufficient grazing for the average farm animals.

Mr. Blair states that velvet beans and the Biloxi variety of soy beans grow together with excellent results. The heavy stalks of the soy beans help to hold up the beans, which makes for a larger growth and a corresponding increase in value to the land as well as grazing.

Prune Grapes in Winter to Get Best Results

Winter is the season for pruning grapes—anytime when the wood isn't frozen, for then the vines are brittle and will snap off if handled.

Pruning grapes is in reality thinning the crop. The idea is to remove enough wood so that the strength of the vine will be thrown into fewer bunches, and make them larger and finer. In general this result will be best gained by pruning the vine to about 30 or 40 buds distributed over four or five canes.

The size of the canes is important. According to Michigan studies the best yields are from canes about one-fourth of an inch thick, measured between the fifth and sixth buds. Big canes have spent their strength in producing wood and are poor producers of buds.

There are several different systems of pruning and training grapes, and your agricultural college will be glad to give you the best advice for your section.

Cut Out Over-Wintering Cankers to Cure Blight

Get after the fire-blight during the dormant season by cutting out the over-wintering cankers, for they are the sources of next year's infection. The cankers are often found at the base of blighted twigs and are dark-sunken areas in the bark. The cankers should be cut out beyond the discolored part of the inner bark. The wound should be disinfected with corrosive sublimate and painted over with white lead paint, or coal tar. Blighted twigs and branches should be cut off during the growing season about six inches below the blighted part and the stub disinfected. The disinfecting can be quickly done with a swab on the end of a stick which is carried in a bottle of disinfectant. A fast growing tree is more susceptible to fire-blight than a slow-growing one, and a tree in full bearing is usually less susceptible than a young tree.

Around the Farm

All work and no play generally makes a grouch.

* * *

An inch of compost manure put on your lawn now will give good green grass next spring.

* * *

Cutting the weed trees in the farm woodlot will improve the quality of the stand in future years.

* * *

Protecting farm machinery from the weather during the winter will save heavy drains on the bank account next spring.

* * *

A farm inventory and a credit statement will tell where you stand in the farming business, and may help you get the loan you need to expand that business.

* * *

Much heavier dressings of barnyard manures may be applied to garden soils during the winter than while the vegetables are growing. In fact, chicken droppings may be safely applied for some plants at no other time of the year. One ton of such fertilizer is equal to two or three tons from the dairy barn.

THE nurse never hesitates to give her patient the quick comfort of Bayer Aspirin. She has heard doctors declare it *safe*. She has seen it relieve so many kinds of suffering, and knows it to be dependable. These perfectly harmless tablets ease an aching head without penalty. Their increasing use year after year is proof that they do help and can't harm. Take them for any headache; to avoid the pain peculiar to women; many have found them a marvelous aid at such times. The proven directions with every package of Bayer Aspirin tell how to treat colds, sore throat, neuralgia, neuritis, etc. All druggists.

PROOF OF DYES is in the dyeing!

Words won't dye a dress, or coat, or sweater. It takes real anilines to do that. That's why Diamond Dyes contain from three to five times more anilines than any other dye—by actual test.

It's the anilines in Diamond Dyes that do the work; that give the colors such brilliance; such depth and permanence. It's real aniline that keeps them from giving things that re-dyed look; from spotting or streaking.

Next time you have dyeing to do—try Diamond Dyes. *Then compare results.* See how soft, bright, new-looking the colors are. Observe how they keep their brilliance through wear and washing. Your dealer will refund your money if you don't agree Diamond Dyes are better dyes.

The *white package* of Diamond Dyes is the original "all-purpose" dye for any and every kind of material. It will dye or *tint* silk, wool, cotton, linen, rayon or any mixture of materials. The *blue package* is a special dye, for silk or wool only. With it you can dye your valuable articles of silk or wool with results equal to the finest professional work. When you buy—remember this. The *blue package* dyes silk or wool only. The *white package* will dye every kind of goods, including silk and wool. Your dealer has both packages.

Little Change in 70 Years.

"Seventy years that have seen the transformation of the world have witnessed relatively little change in the principality of Liechtenstein, tucked away between Switzerland and Austria in a mountain valley near the source of the Rhine," says a bulletin from the Washington (D. C.) headquarters of the National Geographic society.

"The standing army of 80 men hurried off in 1866 to the Austro-Prussian war, but got to the front too late to fight. An army that can't find a battle ought to hunt other work, Prince Johann decided. He ordered his infantry to turn in their equipment The muskets and leather helmets of the late Liechtenstein army can be seen today in the royal chateau museum. Demobilization was probably the prince's first important reform.

"Of course electricity has come to Liechtenstein The Rhine rushing along the national border gives up its energy to light the towns, operate telephones and run the elevator which has been built into the massive walls of the ancient Burg Vaduz fortress-palace Prince Johann at eighty-four finds an elevator useful.

"When weekly movies first flickered at Vaduz, all Liechtenstein rocked with the news. The coming of a spinning mill to the capital and of a cotton weaving factory to Triesen could be considered equivalent to the rise of steel at Pittsburgh and of automobiles at Detroit. Yet dairying with mild-eyed Swiss cattle remains the basic industry. Liechtensteiners are farmers even unto many generations.

"Prince Johann crossing from one side of his tower room to the other can look upon most of his Graustarkian domain. Sixty-two square miles is Liechtenstein; eight square miles less than the District of Columbia. The comparison does not complete the picture. Washington's miles are reasonably square; Liechtenstein's tend toward cubes. A dozen peaks in this miniature kingdom tower more than a mile in the sky. Liechtenstein is five miles wide, twenty miles long and one mile high.

Chateau Towers Over Capitol.

"The royal chateau caps a crag above Vaduz, the capital, much like Monticello commands a hill above Charlottesville, Va. A single misstep and Prince Johann would tumble in upon his government! The Regierung, or capitol building, stands directly under the precipice which the chateau surmounts.

"It is truly said that no visitor can remain a stranger within the gates of neighborly Liechtenstein. 'Sgott' is the password of greeting offered without introduction. The village barber knows the nationality, business and marital state of every one who stays overnight. An American who visited the principality tells that while watching the weekly movie at the inn he distinctly heard a voice in the dark say, 'He has had a hot bath at the hotel every night since he came.'

"Absentee monarchy best describes Liechtenstein's government. Prince Johann rules his 11,000 subjects from Vienna most of the year. The system works well. Trust of his people has been repayed with affection and obedience. By wiping out the public debt and keeping the Liechtenstein budget down to $7 per person, he merits the generous honor of the title Johann the Good.

"Liechtenstein is today the only German state which is still a monarchy."

Sawdust Saving Worth Millions of Dollars

New York.—By making thinner saws, which will save as little as one-sixteenth of an inch in the width of cuts made in wood, an annual waste of sawdust amounting to more than $60,000,000 may be saved for the American lumber industry.

This report was made recently to the American Society of Mechanical Engineers by a special research committee on saws and knives.

Efficient standardization of saws, the committee said, might accomplish the saving. The annual waste in saw logs was estimated at $30,000,000 with an additional sawdust waste of $33,000,000 in manufacture of logs into boards. A "doubtful" saving of $4,000,000 in power with thinner saws was estimated, bringing the grand total of value of sawdust waste that might be avoided to $67,000,000.

Oh, Well, All Right

Paris.—Feminists are arguing vigorously for the right of women to be guillotined. Three women are in jail under sentence of death. Lest public opinion become averse to their execution, feminists have asserted that, while the death penalty should be abolished, nevertheless while in force it ought to apply equally to men and women.

NOTICE OF PROBATE OF WILL

STATE OF IOWA,
Hancock County, ss.
To ANY WHOM IT MAY CONCERN:

YOU ARE HEREBY NOTIFIED, That an instrument of writing purporting to be the last Will and Testament of Henry Medaus deceased, dated Jan. 9, 1920, having been this day filed, opened and read, Monday the 25th day of February, 1929 is fixed for hearing proof of same at the Court House in Garner, Iowa before the District Court of said County or the Clerk of said Court; and at 2:00 o'clock P. M. of the day above mentioned, all persons interested are hereby notified and required to appear, and show cause, if any they have, why said instrument should not be probated and allowed as and for the last Will and Testament of said deceased.

Dated at Garner, Iowa, January 28, 1929.

CHRIS J. JOHANSEN,
Clerk of District Court.

(Pub. Jan. 31, Feb. 7-14, '29)

Mr. and Mrs. Ed. Jacobs drove to Des Moines Wednesday where Ed. will take in a convention of hardware manuafcturers and dealers. The program will contain interesting talks and demonstrations and all the latest in hardware will be on display. Special entertainment will be provided for the visiting ladies.

Mr. Jacobs very seldom misses a convention and says he gains a lot of useful knowledge and ideas by the experience of others given at these meetings.

READERS, NOTICE!

The Times is unduly late this week on account of the editor and publisher being forced to bed on account of an attack of grippe or flu. Much important news has been left out because of this, but we hope to recover sufficiently to make up for lost time. We regret that is was impossible to secure a relief printer but it happens that they are about as scarce as "hen's teeth," a this time.

Kindly overlook any lack of news and typographical errors this week

MISS BLANK ENTERTAINS CAMP FIRE GIRLS

Girls Costumed As Advertisements From Magazines

Miss Marie Blank, leader of the local Camp Fire Girls, entertained the girls and their assistant, Miss Adella Kuhlman at a party at the Blank home Thursday evening of this week.

Each girl was asked to come dressed as some advertisement in the newspapers or magazines. To decipher the advertisements proved of great interest.

At the selected time Miss Blank served a delicious lunch.

The girls all declare they had a fine time and that their leader is a royal entertainer.

GOODELL HIGH SCHOOL WILL PUT ON PLAY HERE

The "Yakahoma Players," of the Goodell High School will put on a home talent play at the Idle Hour theatre this Friday evening, beginning at 8:00 o'clock. The title of the play is "Paying the Fiddler."

The masquerade dance given by the Auxiliary Ladies Wednesday evening was well attended. Mrs. W. F. Pavey won the prize for being the most comical dressed lady. She received a box of fine stationary given by the Times Print Shop. Mrs. Harry Gram fooled the judges and won the prize for the most comical gentle man. She received as a prize the sandwich tray given by Dr. D. P. Anderson. Floyd Cramer, Garner, best dressed man, received a shaving set given by the Wilson Pharmacy, and Lucille Kraus, best dressed lady was given ½ dozen silver tea spoons given by E. F. Jacobs. The orchestra acted as judges of the contest.

The M E. Ladies Aid gave their Lincoln birthday supper at the Parish House Tuesday evening, which was quite well attended. The dining room had been attractively decorated with flags, bunting and crepe paper. The center piece of each table contained a group of small flags and crepe streamers, The ladies have recently purchased new chairs and more dishes and have extra tables so that they are now equipped to give quick service and no need wait. The proceeds amounted to $24.20 which was not so bad for cold weather and bad rodas. Those who mised this supper missed a re... "feed". The ladies wish to thank those who contributed and assisted in any way.

Boxed Stationery, latest tints 50c, 60c, 75c, $1.00 and $1.25. The Times Print Shop.

Rare Find of Fossils in Heart of London

Remains of prehistoric animals were recently discovered in excavations in Trafalgar square in the heart of London. The finds were unearthed in digging operations for the foundations of a new building close to the Admiralty arch, and include limb bones and teeth of the rhinoceros, straight-tusked elephant, bison, giant ox and great cave bear, and the skull and antler of an early fallow deer. Experts believe the fossils belonged to the Pleistocene age, having been found in Pleistocene gravel some 40 feet below the surface. The remains have been presented to the Natural History museum, South Kensington, and will be available for the use of students, but not exhibited to the general public.

Old Tunes That Pay

Listening to a street band in London which had played in succession "Dolly Gray," "Bluebells." "The Honeysuckle and the Bee"—those popular songs of a quarter of a century ago, a Daily Chronicle contributor asked the leader the reason for playing such old tunes. He explained that he had found it much more profitable to confine himself to these erstwhile favorites. The response that they awakened in the middle-aged was greater than that given to the youth of the day by modern jazz tunes.

Need Better Laboratories

Outside of a few of the larger colleges, the laboratory facilities for chemical studies are denounced as deplorable by some leading chemists, who have recently had the opportunity of making a tour of these institutions of learning. The large industrial laboratories are so far in advance of our colleges that it seems almost useless for teachers to spend a large part of their time attempting the petty problems that their lack of equipment confines them to.

Irish Genius Wins

An Irishman in the Argentine is making roads of calcined sand which may practically be described as glass.

He is R. H. King, a Dublin civil enginer, who, finding stone almost unobtainable, brought his bottle-making experience in Ireland to bear.

Huge traveling furnaces, blowing terrific heat into the sand, leave in their trail calcined strips that withstand the heaviest traffic.—Nation Magazine.

BANKERS IN NATIONAL MOVE FOR UNIFORM FINANCIAL PRACTICES

Would Promote Greater Consistency Among All the State Laws in Respect to Banking Conditions—Uniformity of Practice and Understanding Will Make for Greater Convenience, Efficiency and Safety for All Business.

By S. J. HIGH
President State Bank Division, American Bankers Association

RAPID interchange of business and the quick transportation of goods in the United States, coupled with almost instantaneous means of inter-communication by telegraph, telephone and wireless, have welded the country into an economic unit. The nation is not, in a business sense, conducting its affairs in water-tight compartments, as in a measure it did in the days of slow travel and remote places, but styles, methods, commodities and business practices flow freely today in all directions. Therefore it is desirable that finance, trade and industry throughout the country operate along generally uniform or at least consistent lines, so that a contract or an agreement or obligation in connection with business transactions shall mean virtually the same thing in all parts of the country. Particularly necessary in this connection is the establishment of uniform financial and banking practices so as to facilitate the flow of trade along accepted and understood lines.

S.J HIGH

Banking in the United States is recognized as a semi-public type of business and is therefore subject to laws to define the scope and character of its activities. These laws at present set up a great diversity of conditions under which banking is conducted in various parts of the country since they come from both state and federal authorities The national banks are all chartered by the federal government and therefore operate on the same lines in every state of the Union, but there is no such regularity in respect to the conditions under which the state banks chartered by the respective forty-eight states must conduct their business. All state banking codes, while they have similarities, also have many great dissimilarities in respect both to the national bank laws and the banking laws covering state bank operations in other jurisdictions.

Bankers Move for Uniform Laws

The State Bank Division of the American Bankers Association, which latter includes in its membership banks of all descriptions throughout the country subject to all the variations of state and federal banking laws, is committed to the effort to bring about greater consistency and uniformity among the statutes of all these various jurisdictions. This body is conducting a vigorous nation-wide campaign urging that active steps be taken to secure greater co-ordination in banking legislation, more equitable conditions and more uniformly efficient public supervision of banks in the several states

The organization is particularly concerned with fostering this movement to bring about more uniformly desirable conditions throughout the United States in respect to the public supervision of banking institutions by the state banking departments. It is on record as favoring the policy that the important office of state bank commissioner should be kept as free from entangling partisan politics as the judiciary itself and should be completely detached from all other functions of state government.

It is also on record as favoring the policy that the tenure of office of state bank commissioners should be made more secure and lasting than is now the case in many state jurisdictions and that this important public officer be granted sufficient compensation and discretionary power so that the office shall attract and retain the services of men of outstanding executive ability and successful banking experience.

It is also a part of this policy that the bank commissioner's ability to serve well should be strengthened by providing him with adequate forces of bank examiners, selected on the basis of merit from men having the requisite qualifications of honesty, ability, training and banking knowledge to carry out the duties of their offices on the highest plane of usefulness to the public as well as to banking

The Trend of State Laws

The Association's State Bank Division has recently concluded a nation-wide survey of state banking legislation and conditions and in general has discovered a definite trend along the following lines:

There is a distinct tendency among the states to raise the minimum capital required for banking institutions to $25,000 and also to give the bank commissioners or the banking boards sole power as to the granting of charters for new banks, thus enabling them to use discretion as to the need or desirability of added banking facilities or the fitness of the organizers to enter the banking field In this connection many states are creating banking boards to act in an advisory capacity with the state bank commissioners.

There has also been observed a tendency to increase the compensation of the bank commissioners and to lengthen their terms of office and to give them power to appoint necessary deputies and examiners so as to build up an adequate force to carry out their responsibilities and duties An important augmentation of the powers of bank commissioners in some states is found in laws giving them complete charge of insolvent banks and their liquidation as distinguished from more costly liquidation through the courts.

In the Public Interest

Distinctly in the public interest are laws prohibiting or limiting an officer or director of a bank from borrowing from his own bank unless his collateral security is approved by a majority of the board of directors of the bank. Also there is recent legislation noted providing for closer supervision and regulation of building and loan associations, credit unions, finance companies and private banks.

In some states measures have been enacted broadening the field for investment of funds of savings banks and trust companies, which have materially enhanced the service that these institutions can render, particularly in the way of co-operation with their customers in personal financial management. Another type of legislation, important especially to banking in view of the frequent efforts to defraud banks, is that which makes the issuance of worthless checks a misdemeanor with specific penalties.

The State Bank Division of the American Bankers Association endorses in the fullest degree in principle the development of banking laws along the foregoing lines and is actively engaged in fostering the spread of such legislation wherever its services are considered useful both to banking and to the public. Uniformly sound banking institutions and practices, together with common methods and understanding, will materially add to the convenience, efficiency and safety of business in serving the well-being of the public in all parts of the nation especially in those transactions involving dealings between different localities.

AMERICA LEADS THE WORLD IN SAVINGS

The past year saw the greatest gains in savings in a single twelve-month ever recorded in the United States, bringing the total savings deposits in banks to over $28,400,000,000 on Juno 30, 1928, held in more than 53,000,000 individual accounts, it is reported by the American Bankers Association. These are the biggest figures in this field shown by any country in the world.

These figures are indicative of prosperity more general than any time since the business depression of 1920, the report declares. Only three states failed to show a gain and the 1928 volume of savings constituted an increase of more than $2,327,000,000 above the 1927 figure The gain per inhabitant for 1928 over 1927 was $17 and the gain in number of savings depositors was 2,496,079, an increase of 5.2% as against a growth in the population of the country of 1.2%.

The gain in savings per inhabitant in New England and the Middle Atlantic states over the previous year was $36. These groups of states, with 29.9% of the population of the United States and 52.8% of the total savings deposits, have the largest savings rate $461 per inhabitant, of any area in the world. The per capita savings for the United States as a whole this year stands at $237 as compared with $220 last year

"An acre of alfalfa for every cow in Howard County, Iowa," is the slog adopted by the county bankers association there after watching seve hundred thousand dollars go out their county last winter for feed.

NEWS REVIEW OF CURRENT EVENTS

Congress Determines We Shall Build 15 Cruisers Within Three Years.

By EDWARD W. PICKARD

DISREGARDING the wishes of President Coolidge and defiantly rejecting the demands of the powerful lobby of church and peace organizations, the senate passed the fifteen-cruiser bill with the time limit clause included. The senators—with the exception of twelve who voted in the negative—decided that fifteen cruisers and one airplane carrier were necessary to the national defense, and that those vessels must be built within a set time. The airplane carrier and five cruisers must be b gun before July 1 next, five more cruisers before July 1, 1930, and the remaining five before the middle of 1931. The President and the lobby mentioned wished the time limit clause left out, and the lobby made an unsuccessful attempt to have the number of cruisers reduced to nine.

The twelve senators who voted against the bill were: Black (Dem., Ala.), Borah (Rep., Idaho), Brookhart (Rep., Iowa), Burton (Rep., Ohio), Dill (Dem., Wash.), Frazier (Rep., N. D.), McMaster (Rep., S. D.), Norris (Rep., Neb.), Nye (Rep., N. D.), Shipstead (Farmer-Labor, Minn.), Thomas (Dem., Okla), and Walsh (Dem., Mont.).

The house bill was amended, at the instance of Senators Borah and Reed of Missouri, by the adoption of a clause declaring "that the congress favors a treaty or treaties with all the principal maritime nations regulating the conduct of belligerents and neutrals in war at sea, including the inviolability of private property thereon," and that "such treaties be negotiated, if practically possible, prior to the meeting of the conference on the limitation of armaments in 1931."

Two days later the house concurred in the senate amendments without sending the measure to conference and thus a plan of the pacifists to filibuster on a conference report was frustrated. The bill went to the President and it was expected he would sign it despite his dislike of the time limit clause. Representative Britten said that if the President failed to act promptly in sending in a budget recommendation for the funds to start on five cruisers, an amendment to the naval bill would be offered appropriating the necessary amount.

During the senate debate over the cruiser measure Heflin of Alabama precipitated an angry dispute by offering an amendment forbidding the flying of any flag or pennant above the American flag on any navy vessel. He was hitting at the church pennant flown during religious services aboard ship, in the ignorant belief that the St. George's cross which it bears is the symbol of the Catholic church. Bruce of Maryland, Walsh of Massachusetts and others squelched the Alabaman as completely as he is capable of being squelched and his amendment had only ten affirmative votes.

ONE member of the Hoover cabinet is now known to a practical certainty, although the information does not come from the President-Elect. Henry L. Stimson, governor general of the Philippines, issued this statement in Manila:

"It is true that at the request of the President-Elect of the United States I am about to leave the Philippines in order to take up another duty. What the nature of that duty is I prefer to leave to Mr. Hoover to announce. I expect to sail in about two weeks."

It was stated in Manila that Mr. Stimson told Manuel Quezon, president of the island senate, that he had accepted the post of secretary of state, which accorded with the opinion of the political correspondents.

Mr. Hoover is reported to be much amused by the guesses as to his cabinet, and the only definite information from him on the matter was that most of the guesses were wrong. Last week, after receiving a number of callers, he went fishing in the Gulf stream and then left on Saturday for a boat trip around to Naples on the west coast. He was to be in Fort Myers on Monday to help Thomas A. Edison celebrate his seventy-seventh birthday, and then planned more fishing and an inspection trip across the everglades and around Lake Okeechobee.

THAT $24,000,000 additional appropriation for prohibition enforcement, which the house rejected in defiance of orders from the Anti-Saloon league, was the death of the deficiency supply bill to which it was attached as a rider. The conference committee could not reach an agreement on this item and it was admitted that the bill would be allowed to die. House leaders made plans to include the more urgent appropriations in a second deficiency bill, and thereupon the drys, mostly those from the South, came forward with the statement that they would not abandon the fight. Senator Harris of Georgia, author of the $24,000,000 amendment, asserted he would offer the same proposal as an amendment to every appropriation bill still to come before the senate.

COL. CHARLES A. LINDBERGH, flying a big Sikorsky amphibian plane and accompanied by a mechanic and a radio operator, opened a new international air mail and passenger route last week, between the United States and Panama. He started from Miami and, stopping briefly at Havana for refueling, ended the first leg at Belize, British Honduras. The second day found him at Managua, Nicaragua, and on the third day he landed at France field in the Canal zone, finishing the flight of 2,327 miles. Lindy tried to avoid ovations at his several stopping places but was not very successful in this. When he had checked out his mail at Balboa he was the guest of Admiral Wiley aboard the battleship Texas, and next day witnessed the aviation part of the tactical fleet exercises. Sunday he started on the return flight to Miami.

Capt. Frank Hawks, a veteran air mail and racing pilot, established a new record for a nonstop flight from Los Angeles to New York. In a Lockheed Vega monoplane he covered the distance in 18 hours 21 minutes 59 seconds, bettering Art Goebel's record by about 37 minutes. He encountered stormy weather throughout most of the route and lost considerable time by reason of it.

ELIHU ROOT, former secretary of state, has consented to be President Coolidge's unofficial emissary in an effort to seek an understanding among world powers on America's reservations to her adherence to the World court. Last week Mr. Root was in Washington conferring with members of the senate foreign relations committee. President Coolidge still hopes and believes the stumbling blocks in the way of this country's membership in the court can be removed. The chief of these is the senate reservation denying the right of the court to render an advisory opinion involving the United States without the previous consent of this country to consideration of the case.

USE of federal reserve credit for speculation, either directly or indirectly, must be restrained, declared the federal reserve board Wednesday evening in a statement calling attention to the growth of speculative credit during the year, the loss by the country of some $500,000,000 in gold and advances in the cost of credit for commercial uses. Whereupon the stock gamblers—and that includes a considerable part of the population—threw a fit and unloaded a lot of their holdings, bringing prices down with a rush. The bear movement was aided by an increase of 1 per cent in the Bank of England's discount rate, checking the flow of gold from England to New York.

Some of the lawmakers in Washington and various other persons severely criticized the federal board, not so much for its action as for its alleged subserviency to the urgency of Montagu Norman, governor of the Bank of England, who had just made a visit in the national capital. He was the guest of Secretary of the Treasury Mellon and conferred with several members of the board, and was said to have advised the board to try to check stock market speculation, his real desire being to ameliorate the British financial situation.

As for the stock market financiers, one authority had this to say:

"It is not the fear of an increase in the rediscount rate that alone is causing all the uneasiness in Wall Street—it is the danger of even more drastic measures. The financial district is growing more and more convinced that the latest 'gesture' of the board has something big behind it, and Wall Street knows the present speculative situation will not bear too close investigation."

CARDINAL GASPARRI, papal secretary of state, announced to the diplomatic body accredited to the Vatican that the Holy See and the Italian state had reached an agreement that ends the estrangement between them which has existed since 1870. On Sunday the pact was signed. It is a two-fold treaty, one part dealing with conciliation between church and state and the other part composed of three sections, containing a concordat regulating the future relations between the Holy See and the Italian kingdom.

In the agreement the Vatican has subordinated claims to added temporal power to recognition of its principles of moral law in Italy.

Various concessions are made the church by the Italian state relating to the power of the pope in the Vatican area. Regarded as even more important than these, however, is the agreement of the Italian government to do its utmost to secure observance of the church's canon law throughout Italy. The canon law, codification of which was completed only in 1927, contains 2,414 canons, or rules, regulating faith, morals, conduct and discipline of church members.

While there is to be only a small addition to the Vatican grounds—the pope having refused the Villa Doria enlargement offered him—the pope is to be ruler supreme within its confines. His domain is to be known as the "Vatican City" or the "Vatican State."

A monetary indemnity of 2,000,000,000 lire (about $105,000,000), of which 1,000,0000,000 lire is payable in cash or Italian government bonds immediately, is allowed. The remainder will be paid in yearly installments with interest being paid meanwhile.

STALIN'S determination to deport Leon Trotzky and his followers from Soviet Russia is said to have caused a serious split in the government at Moscow. Commissar Rykov and nineteen other Communist leaders demanded that Stalin drop his severe measures, but the dictator was unwilling to compromise. It was reported from Latvia that Trotzky was on his way to Moscow to face Stalin's charges of plotting to overthrow the present regime.

MARIA CHRISTINA, queen mother of Spain, is dead, but her long and determined opposition to the dictatorship of Primo de Rivera may soon bear fruit. Through the strict censorship creep rumors that de Rivera's dictatorship is soon to end, to be replaced by a provisional government under General Berenjier, chief of the king's military household. After the abortive rebellion at Ciudad Real, another outbreak, in Valencia, was squashed; but the unrest in both the army and navy seemed undiminished. Sanchez Guerra, who was held responsible for the Ciudad Real affair, was sent to a military prison on the island of Minorca.

RUSSIA has promised Rumania it will renounce its claims to Bessarabia, and in return Rumania was to sign a special protocol to the Kellogg treaty outlaying war between the two nations.

Eamon de Valera was arrested for trying to enter northern Ireland in contravention of a seven-year-old order.

Bloody battles between Hindus and Pathans took place in Bombay.

Baron von Huenefeld, transatlantic flyer, died in Berlin while under anesthetic for an operation.

The German reichstag and the diet of Poland ratified the Kellogg anti-war treaty.

Vicente Colindres was inaugurated president of Honduras, and escaped an assassin's bullet.

Severe earthquakes were experienced in Afghanistan and northern India.

Denver Boy is a Winner

Every mother realizes how important it is to teach children good habits of conduct but many of them fail to realize the importance of teaching their children good bowel habits until the poisons from decaying waste held too long in the system have begun to affect the child's health.

Watch your child and at the first sign of constipation, give him a little California Fig Syrup. Children love its rich, fruity taste and it quickly drives away those distressing ailments, such as headaches, bad breath, coated tongue, biliousness, feverishness, fretfulness, etc. It gives them a hearty appetite, regulates their stomach and bowels and gives tone and strength to these organs so they continue to act normally, of their own accord. For over fifty years, leading physicians have prescribed it for half-sick, bilious, constipated children. More than 4 million bottles used a year shows how mothers depend on it.

Mrs. C. G. Wilcox, 3855½ Wolff St., Denver, Colorado, says: "My son, Jackie, is a prize winner for health, now, but we had a lot of trouble with him before we found his trouble was constipation and began giving him California Fig Syrup. It fixed him up quick, gave him a good appetite, made him sleep fine and he's been gaining in weight right along since the first few days, taking it."

To avoid inferior imitations of California Fig Syrup, always look for the word "California" on the carton.

Spoiled boy—spoiled man.

Grandmother Knew

there was nothing so good for congestion and colds as mustard. But the old-fashioned mustard plaster burned and blistered.

Musterole gives the relief and help that mustard plasters gave, without the plaster and without the blister. Gently rub it in. See how quickly the pain disappears.

Try Musterole for sore throat, bronchitis, tonsillitis, croup, stiff neck, asthma, neuralgia, headache, congestion, pleurisy, rheumatism, lumbago, pains and aches of the back or joints, sprains, sore muscles, bruises, chilblains, frosted feet, colds of the chest (it may prevent pneumonia).

Better than a mustard plaster

Help Kidneys By Drinking More Water

Take Salts to Flush Kidneys and Help Neutralize Irritating Acids

Kidney and bladder irritations often result from acidity, says a noted authority. The kidneys help filter this acid from the blood and pass it on to the bladder, where it may remain to irritate and inflame, causing a burning, scalding sensation, or setting up an irritation at the neck of the bladder, obliging you to seek relief two or three times during the night. The sufferer is in constant dread; the water passes sometimes with a scalding sensation and is very profuse; again, there is difficulty in voiding it.

Bladder weakness, most folks call it because they can't control urination. While it is extremely annoying and sometimes very painful, this is often one of the most simple ailments to overcome. Begin drinking lots of soft water, also get about four ounces of Jad Salts from your pharmacist and take a tablespoonful in a glass of water before breakfast. Continue this for two or three days. This will help neutralize the acids in the system so they no longer are a source of irritation to the bladder and urinary organs, which then act normal again.

Jad Salts is inexpensive, and is made from the acid of grapes and lemon juice, combined with lithia, and is used by thousands of folks who are subject to urinary disorders caused by acid irritation. Jad Salts causes no bad effects whatever.

Here you have a pleasant, effervescent lithia-water drink which may quickly relieve your bladder irritation.

Working Overtime

"Please, ma'am, come quickly. Master has bitten himself."

"What do you mean?"

"He has sat on your false teeth."—Berlin Der Wahre Jakob.

Will Cold Worry You This Winter?

Some men throw off a cold within a few hours of contracting it. Anyone can do it with the aid of a simple compound which comes in tablet form, and is no trouble to take or to always have about you. Don't "dope" yourself when you catch cold; use Pape's Cold Compound. Men and women everywhere rely on this amazing little tablet.—Adv.

One man can lead another to liquor, and not be able to make him drink; but sometimes, two can.

WHAT DR. CALDWELL LEARNED IN 47 YEARS PRACTICE

A physician watched the results of constipation for 47 years, and found that no matter how careful people were of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to relieve it when it comes. Dr. Caldwell, therefore, was in favor of getting as close to nature as possible, hence his remedy for constipation, known as Dr. Caldwell's Syrup Pepsin, is a mild vegetable compound. It can not harm the system and is not habit forming. Syrup Pepsin is pleasant tasting, and youngsters love it.

Dr. Caldwell did not approve of drastic physics and purges. He did not believe they were good for anyone's system. In a practice of 47 years he never saw any reason for their use. Syrup Pepsin will empty the bowels as promptly.

Do not let a day go by without a bowel movement. Do not sit and suffer, but go to the nearest druggist and get one of the generous bottles of Dr. Caldwell's Syrup Pepsin, or write "Syrup Pepsin," Dept. BB, Monticello, Ill., for free trial bottle.

Great motives cause great actions and great efforts result in great happiness.

Why He Succeeded

Honored politically and professionally during his lifetime, Dr. R. V. Pierce, whose picture appears here, was a successful man. He have equally successful pure herbal remedies which stood the test of many years and are still among the "best sellers." Dr. Pierce's Golden Medical Discovery is a blood alterative which makes the blood richer. It clears the skin, beautifies it; pimples and eruptions vanish quickly. This Discovery, "G M D", of Dr. Pierce's puts you in fine condition. All dealers have it in liquid or tablets.

Send 10 cents for trial pkg. of tablets to Dr. Pierce's Clinic, Buffalo, N. Y., and write for free medical advice.

When Food Sours

...ots of folks who think they have "digestion" have only an acid condition which could be corrected in five ten minutes. An effective anti-acid Phillips Milk of Magnesia soon tores digestion to normal.

Phillips does away with all that uess and gas right after meals. It vents the distress so apt to occur hours after eating. What a pleas- preparation to take! And how d it is, for the system! Unlike a rning dose of soda—which is but nporary relief at best—Phillips lk of Magnesia neutralizes many es its volume in acid.

Next time a hearty meal, or too rich diet has brought on the least dis- mfort, try—

PHILLIPS Milk of Magnesia

Wisdom of Youth

Magistrate—Are you old enough to be married?

Young Man—Yes; but not silly enough.

It May Be Urgent

When your Children Cry for It

Castoria is a comfort when Baby is fretful. No sooner taken than the little one is at ease. If restless, a few drops soon bring contentment. No harm done, for Castoria is a baby remedy, meant for babies. Perfectly safe to give the youngest infant; you have the doctors' word for that! It is a vegetable product and you could use it every day. But it's in an emergency that Castoria means most. Some night when constipation must be relieved—or colic pains—or other suffering. Never be without it; some mothers keep an extra bottle, unopened, to make sure there will always be Castoria in the house. It is effective for older children, too; read the book that comes with it.

Fletcher's CASTORIA

Of Course

"I adore Ibsen."

"That so, girlie? What have you read?"

"Can't I adore him without reading the stuff?"

HAD TO WORK TOO HARD

Lydia E. Pinkham's Vegetable Compound Gave Her Strength

Carmel, Pa.—"After my second was born I had to work too hard and be on my feet too soon because my husband was ill. After his death I was in such a weakened and run-down condition that nothing seemed to help me. I am starting the fourth bottle of Lydia E. Pinkham's Vegetable Compound and feel a deal better. I am much stronger don't get so tired out when I wash work hard. I do housekeeping and making and I highly recommend Vegetable Compound as a tonic. I willing to answer any letters I re- asking about it."—Mrs. Gertrude ..., 414 S. Market, Mt. Carmel, Pa.

N. U., DES MOINES, NO. 7-1929.

SERVICE FOR OIL FILTERS IS NEED

Abrasive Matter Recovered Emphasizes Necessity of Renewal.

Half a pint of abrasive matter taken from the oil by the oil filter in 10,000 miles' driving, emphasizes the necessity of motorists having the oil filter renewed every 10,000 miles.

This amazing discovery was made after repeated tests by research engineers who burned a cloth filtering unit taken from an oil filter that had done service for 10,376 miles.

Composition of Residue.

The residue was composed of one-third sand and two-thirds metal oxides, and was of such a highly abrasive nature that it could be used as an effective knife sharpener.

While the abrasives were trapped by the oil filter before doing damage to cylinders, pistons and other internal parts of the engine, engineers warn that after about 10,000 miles the filtering unit usually becomes so filled that the oil filter needs servicing, necessitating installation of a renewal cartridge which will make the filter as good as new again.

Time for Renewal.

The manufacturers' oil changing recommendations are based on the use of an oil filter and that it is being renewed every 10,000 miles, therefore it is important that the filter be serviced after this mileage.

Light Tells if Spark Plugs Attempt to Loaf

A new French car, said to have the smallest straight eight engine built for an automobile, tells the driver whether all the spark plugs are working properly.

Eight small neon tubes are fitted on the instrument board with a switch by which they can be thrown into circuit with the plugs. Failure of any tube to glow indicates a faulty plug.

The eight-cylinder engine has a French rating of nine horse power, or 15 horse power according to the English and American system of measuring. The cylinders are cast in a single block with a bore of 1.11 inches and a stroke of 3.22 inches and gives 30 miles to the gallon.

The car has a top speed of 70 miles an hour.

"Modern" Traffic Code Was Thought of in 1845

Parking on only one side of a narrow street, credited with being a new idea, appears to date from 1845.

It was proposed by Alphonse Karr, the novelist, as part of a comprehensive plan to relieve the traffic congestion that even in those days of leisurely life and horse-drawn vehicles was considered intolerable. Even then he urged that big trucks be kept off the "busy" streets at certain hours, and that carriages drive into court yards whenever possible.

None of those things, except the parking rule, has been adopted, but the trade paper of French chauffeurs in a general survey is proposing something of the same sort now, 83 years after they were first suggested, and predicts that in 10 years there will be neither auto busses nor street cars allowed in the downtown district.

Driving Moderately and Steadily for Best Time

Drive moderately and steadily to make the best time on long trips. This method will cover more ground than tremendous bursts of speed followed by periods of relaxation, and also will sharply advance the safety of highway traffic. The steady driver at 45 miles per hour—and at the most not over 50—reaches his destination ahead of the tense, excited driver who flashed by at 70. The calm driver is always in a mental condition to maintain his pace. The spasmodic, high-speed driver seldom is.

Racing of Auto Engine Collects Toll in Wear

One of the first admonitions given pioneer automobile buyers two decades ago was "don't race your engine!" From then until now motorists have been warned against the practice, and yet it persists, much to the detriment of motors.

That the car owner cannot race his engine as a day-in-day-out procedure and come off without being the loser through a loosened, prematurely worn-out power plant is the contention of Oscar Coolican, director of the Automotive Trade association, who again sounds a note of warning against a practice "which is doing infinite harm to fine automobiles every day.

"Racing is probably the most harmful punishment the motorist can inflict upon his car and, incidentally, his own pocketbook. Racing is an extraordinary strain on the bearings, often overloading them before stiff oil can thin out and provide a protection. Furthermore, it is an obvious ripping and tearing process which loosens the engine from end to end," declares Mr. Coolican.

Handy Lighting Fixture Arranged for a Garage

A differential cover plate from a junked automobile can be made to serve as a base for an electric-light fixture for the garage or workshop. A hole is drilled in the center of the plate to receive the end of a 6-foot length of ½-inch pipe. The end is split with a hacksaw and, after it is

Handy, Adjustable Garage-Lighting Fixture Made From Pipe and Fittings.

inserted in the plate, spread out. The assembly is then turned upside down and the plate filled with concrete. Lengths of pipe and fittings are used to make the rest of the fixture as detailed in the drawing. A flexible electric cable is run from a convenient supply socket over pulleys to the lamp, which is balanced by means of a counterweight, as shown. The worker thus can adjust the light to any position, the cable is never in his way and is kept from coming in contact with grease and oil.—Popular Mechanics Magazine.

AUTOMOBILE NOTES

Don't try to "hog" the road. Keep to the right.

* * *

There is every accessory to an automobile except a holder for a police dog.

* * *

There are certain ways of pressing the button of an automobile horn that make it sound like swearing.

* * *

The average car owner is quite likely, in the desire to give the rear wheels all the attention they need, to forget the front wheels.

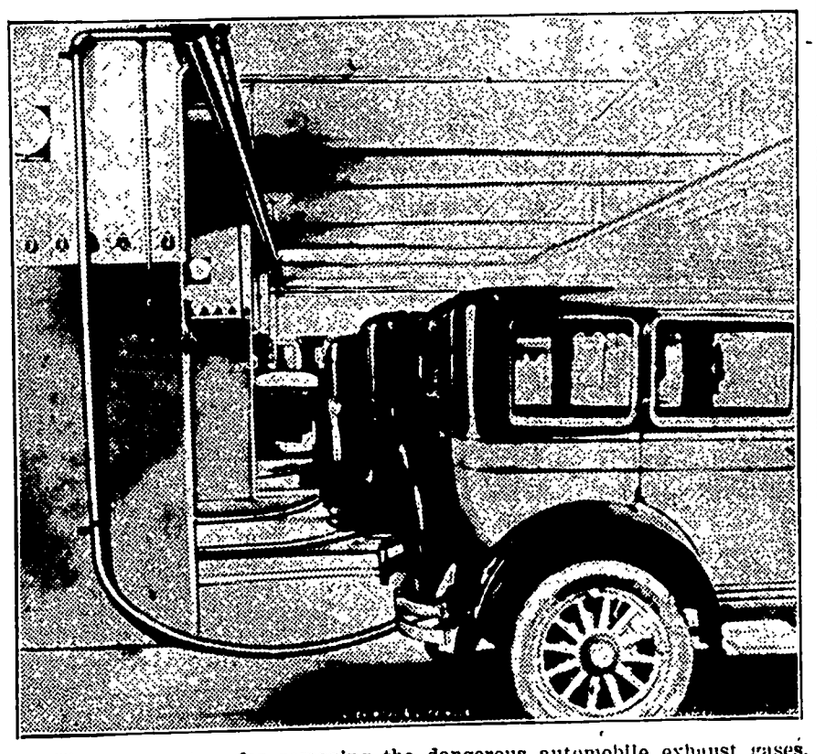
* * *

If the automobile field is unionized the police courts may be able to charge time and one-half for parking overtime.

* * *

Before the days of the automobile men walked. Only a comparative few of them used street cars and even street cars were impossible for most journeys. The street car lines were limited.

SYSTEM FOR REMOVING GAS EXHAUSTS



The new system for removing the dangerous automobile exhaust gases, installed in a prominent garage at Amsterdam, Holland. While motors are being tested and timed and the like, the individual tubes are attached to the exhaust pipe. The tubes are connected with a main tube which carries the poisonous gases out into the open.

Mother and Baby Gain Health, Strength and Flesh

"I am so grateful for what Milks Emulsion has done for me that I am writing you this letter.

"I had a terrible cough and for four months was so weak that I had to rest on the bed several times while dressing. In fact, after putting on one stocking I would have to lie down and rest before putting the other on. People thought I had tuberculosis, but they don't think so now. I was so weak that I could not care for my baby, who was not getting sufficient nourishment to give him any strength. But after taking your Emulsion for a few months I regained my health and now I weigh 145 pounds. My baby is one year old and weighs 30 pounds. We are both in perfect health and we thank Milks Emulsion for it.

"You can publish this letter if you care to. I shall always praise Milks Emulsion." Yours truly, MRS. ED. ROUSE, Shelbyville, Ind, R. R. No. 9.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

The famous basilica of St. John Theologos, built by the Emperor Justinian and other remains from the time of Emperor Constantine, third century A. D., have been brought to light by the Austrian Archeological institute.

Large, Generous Sample Old Time Remedy Sent Free to Every Reader of This Article

More than forty years ago, good old Pastor Koenig began the manufacture of Pastor Koenig's Nervine, a remedy recommended for the relief of nervousness, epilepsy, sleeplessness and kindred ailments. The remedy was made after the formula of old German doctors. The sales soon increased, and another factory was added. Today there are Koenig factories in the old world and Pastor Koenig's Nervine is sold in every land and clime.

Try it and be convinced. It will only cost you a postal to write for the large, generous sample.

Address: Koenig Medicine Co., 1045 No. Wells St., Chicago, Illinois. Kindly mention your local paper.

When Wifey Calls

"How many stenographers have you?"

"Two."

"I've been only one of them."

"Well, I've got a worse-looking one to show my wife."

Patience is a necessary ingredient of genius.—Disraeli.

Absentminded Again

Wife—Do you realize, dear, that it was twenty-five years ago today that we became engaged?

Absent-Minded Professor—Twenty-five years! Bless my soul! You should have reminded me before. It's certainly time we got married.

On the Boys

"There seems to be more girls here than boys." "Yeah. The petting is two to one."—Life.

Tough Luck

Friend—What became of all your plans to become a great author?

Bibbler—Oh, I went to work and fixed up a nice workroom, where I thought it would be easy to work, but after I got it fixed up it was too nice to spoil the place by working.

Her Status

"Isn't she chic?"

"Y-yes—without the 'en.'"—Detroit News.

The ideal, delicious *food for children*

LEADING doctors, interested in the welfare of children, recommend delicious Karo as the *Ideal* energy food for growing children—

Because it is so easily digested—and supplies *quickly* the energy growing children need daily.

Karo, these doctors have found, does not cause a child to develop an abnormal taste for sweets—

Nor does Karo spoil the digestion or appetite.

There are 120 calories per ounce in Karo—almost twice the energy value of eggs and lean beef, weight for weight.

The mother of the large family finds Karo very economical too—costing much less than many other staple foods.

Serve plenty of Karo—keep the children strong, healthy and happy.

Walter Ridder went to Minneapolis Saturday. Now we wonder—!

Mrs. Dan Miller of Goodell, was a Klemme shopper Wednesday.

FARM FO RRENT—Mrs. E. H. Patet, Klemme, Iowa. 1tc.

Bill Kirkwood is sick this week with a bad cold.

Mis Ruth Johnson, of Mason City spent the week end at home.

Mr. and Mrs. A. D. Gimer and children were Mason City visitors on Saturday.

Mr. aud Mrs. C. G. Waterman and daughter, Marian, were at Mason City on business Saturday morning.

The train broke all former records Saturday when it was so late that it did not arrive until noon.

A large crowd attended the Leonard Sampson sale Tuesday and it is reported that everything sold good.

Mr. and Mrs. Arthur Kudje and daughters were entertained at the R. A. Jorgenson home Sunday.

Mr. and Mrs. Levi Ridder of Manly were over Sunday visitors in Klemme.

Mr. and Mrs. Harlan Trees of Ventura were Klemme visitors Monday.

Mrs. E. G. Ell of Mankato, Minn., was here to attend the funeral of Mrs. Fred Janke.

Miss Ruth Johnsom, of Mason City spent Wednesday visiting with her parents.

Miss Irene Johnson has been unable to attend school since Monday on account of a sore eye.

George Buseman will have a closing out farm sale next week Friday. His sale ad appears in htis issue.

Mrs. Earl Finn and children visited at the parental L. H. Wilson home at Goodell this week.

Mr. and Mrs. Clarence Newberger were at Belmond Saturday on business.

Ed. Jacobs and family spent Sunday at the Chris Jacobs home at Garner.

Mrs. Levi Klotzbach and Allen were Sunday callers at the Henry Schuldt home.

Mrs. Charles Smith who has been visiting with her sister, Mrs. Wm. Bachman, returned home Friday.

Mr. and Mrs. Aug. Baack and son were entertained at the C. Kluckhohn home, Sunday for dinner.

Mrs. Chris Anderson returned home Friday from her stay at the Hanson home in Garner.

Mr. and Mrs. Lew Newberger went to Ackley Saturday to attend the funeral of an uncle at that place.

Max Barz has been absent from school several days on account of sickness this week.

Mrs. Ely and son, Frank, of Belmond visited with Mrs. W. F. Missman Wednesday.

Chris Anderson and daughter, Mavis drove to Garner Friday morning where Mavis took the county eighth grade examinations.

Mr. and Mrs. Conrad Quandt and Gracka, and Mr. and Mrs. Fred Kluckhohn and Thelma took in a show at Mason City Sunday evening.

Mrs. Alex Groh and children left for their home in Chicago Saturday evening from Garner. Mr. Groh and his son have been working in Chicago for several weeks.

Mrs. Worthy Usher, of Rowan, came Wednesday to remain at the Blank home to recuperate from a bad cold.

R. C. Ludeke's pure bred Poland China sale held this week Thursday was well attended and his hogs brought a good price. Mr. Ludeke holds two sales every year.

Mr. and Mrs. Klusman, Sr., of Ventura, were in Klemme Monday, called here by the sudden death of her mother, Mrs. Fred Janke.

A car load of farm machinery arrived at the Northern Lumber Company Monday. The Northern will handle a full line of machinery here.

Rev. and Mrs. Fred Griewe came Monday and remained here until Wednesday visiting relatives and friends. They now reside at Whitten, Iowa.

Mr. and Mrs. Albert Yahnke and daughter, Alva, and Ernest Yahnke, of Garden City, Minn., came Wednesday to attend the funeral of Mrs. Fred Janke.

The Auxiliary Ladies took in the neat sum of $16.50 at their Bake Sale Saturday. They wish to thank all who contributed and purchased food, and thank the Kluckhohns for the use of the store.

The Auxiliary Ladies have two extra good pictures booked for the Idle Hour. This Saturday evening they will show "The Cat and the Canary," a wonderful mystery play. Next week Saturday they will show "Plastered in Paris."

Mr. and Mrs. Sumner Trumbell visited with Sumner's parents Sunday at Mason City. Mrs. Emma Gibbs acompanied them and visited with her son Charles and family. Mrs. Gibbs' grandson now weighs 15 pounds.

The Northern Lumber Company are putting in a full line of farm implements and machinery. They had a man from Mason City unload the machinery and set it up. Tuesday the machine man got one of his fingers mashed and had to go home for a few days.

Mr. and Mrs. P. M. Wilson and P. W. Johnson and family were entertained at the R. W. Elder home for a six o'clock dinner Sunday evening. Mr. Elder came to town with his bob sledsled to get the party and they joyed both the bob sled ride and the dinner very much.

Mrs. Frank Rosendahl was very much, and pleasantly, surprised Sunday when all of her children and her nephew, Gilbert Schaeper and family came to her home to have dinner with her on her birthday. The dinner had been prepared and was already to serve when she came ome from church.

Friends gave Jahn Read, som of Mr. and Mrs. Walter Read, a party last Wednesday evening, in honor of his approaching marriage to Miss Viola Jorgenson of Clear Lake. The evening was spent in games and dancing and a mock wedding was staged and the evening was enjoyed by all. Refreshments were served and before departing the guests presented Mr. Read with a purse and wished him much happiness.

A deporable thing happened at the school house last Firday evening. Six chairs and a transome glass over a door were broken some time during the evening. It so happens that the room was ocupied by the Garner basket ball boys as a place to change their clothing. We do not know who is responsible for such an action but it is regrettable that such things should happen. A little fun is alright but property must always be respected. We understand the Garner school board has been presented a bill for the damage done.

John Newberger and his bride returned from their southern wedding trip this week. They made over 4,000 miles, went through fourteen states and only had one flat tire. They went through Iowa, Missouri, Kansas, Arkansas, Oklahoma, Texas, Louisiana, Mississippi, Alabama, Florida, Tennesse, Kentucky, Indiana, and they visited with relatives at Jennings, La. The first snow they struck was at Nashville, Tenn., and they saw people mowing lawns in New Orleans. Mr. and Mrs. Newberger will go to house keeping on his father's farm south of Ventura.

DOINGS AT SCHOOL THIS PAST WEEK

BASKET BALL TEAMS PLAY IN COUNTY TOURNAMENT

Declamatory Speakers Will Compete At Garner Tuesday Evening

Our County Tourney will begin at Britt Friday afternoon of this week. Our grade boys will leave early Friday afternoon for Britt to play the Crystal Lake grade team at 3:10.

Our high school team is scheduled to meet Garner at 7:00 o'clock the same evening. It is not impossible to win both games and we must go with that deetrmination. That Garner defeated our lads here recently should not frighten us in the least. There have been many surprises in basket ball and folks who think we are defeated before the game is played may be in for a surprise. Our grade boys should win against Crystal Lake and all Klemme should go to see them win.

Will Play Post Season Game

Our high school will play a post season game with Hayfield at Hayfield next Monday evening. We shall take our grades there for a game also.

Declamatory Contest Next

On Tuesday evening Oral Gibson, Lucile Kraus and Thelma Kluckhohn will represent our school in the first round of the state series of Declamatory Contests at Garner. There they will meet Garner and Kanawha in a triangular contest. We are hopeful of victory in one or more of the three classes.

Glee Club In Contest

We regret that the musical contest at Mason City in which our girls glee club has been entered must be held on the same date as our County Tournament. Our glee club will make the journey to Mason City Saturday afternoon and sing that evening. There will be several schools within a limited radius of Mason City who will be represented orchestras, bands, soloists, vocal and instrumental, and the program will greatly interest those interested in the musical education of our young people. We regret that our delegation must be divided on this occasion. Those who attend either of these programs, athletic or music, will aid us and be apreciated. Both Mr. Lewis and Mr. Heiden have been doing their best with our students for these contests and we wish parents especially would give all the support they can. Not all can go but some should be able and we believe will.

Our P. T. A. program this week was very well attended considering the wintry weather and snow. Besides having music by our girls glee club we had an interesting address by Rev. Walsh of Garner. Rev. Walsh is a very enthusiastic speaker and a very well informed man.

Our Agriculture Class now studying farm animals and who last semester studied farm crops were taken down to the the Rock Island's Improvement Exhibit on Wednesday afternoon where they saw in the subject made more live vid than they can usually be t school. Many of our class m the farm and appreciated hey saw and heard.

SUCKOW SPENDING WINTER IN CALIFORNIA

Ed. Schaefer, of Klemme, reword from her neice, Miss uckow, authoress, and who o California last fall to spend ter there, that she will not to owa until the snow banks ar.

HANCOCK CO. OFFICERS ARE ALL BONDED

Interesting Items Regarding Our Own County Officers

In the hope that it may be of interest to our readers we have dug up some items regarding our county officers, their salaries, and bonds. We may err slightly in some of the figures as we used only the material at hand and did not make a special trip. However, the following report will be found quite accurate as to salaries and bonds of the men and women working for Hancock County.

At a recent meeting of the Hancock County board of supervisors that body approved bonds for the various township and county officers.

Chris Jacobs, Auditor; Chris J. Johansen, Clerk; Fern Peck Katter, Recorder; E. H. Wahlert, Sheriff, all provide bonds of $5,000 each.

Bernice R. Schultz, deputy treasurer; Bruce Orr, deputy sheriff provide $2,500 bonds.

County Attorney V. S. White is also on the $5,000 list, as well as the treasurer.

Miss Marjorie Hanan is the deputy clerk, and Miss Verna Katter is the deputy recorder. We presume their bonds are likewise $2,500.

County Engineer C. F. Merten draws a salary of $2,700 plus 10c per mile traveling expense. Mr. Merten's bond is $2,500.

Practically all of the assessors furnish a bond of $500.

Justices of the Peace, H. L. Suckow and Frank Carpenter of Ell each furnish a $500 bond.

The deputy treasurer receives a salary of $100 per month; deputy clerk, $75; deputy recorder, $75; deputy sheriff, 90; clerks in auditor's office $75.

J. C. Ford, Garner, was appointed to collect delinquent personal taxes.

Township clerks have to put up a bond of $1,000 each, and constables, $500.

The various county officers draw the following yearly salaries in this county:

Auditor, $1,800; treasurer, $1,800; clerk, $1,800; sheriff, $1,700. county superintendent, $1,800; recorder, $1,600; county attorney, $1,100; janitor, $1,200. county farm steward. $1,680.

WILL HANDLE CASE FARM IMPLEMENTS

DES MOINES MAN WILL MANAGE FARM MACHINER DEPT.

Northern Lumber Company Has Put In Line Of Machinery At 3 Yards

Mr. Dwight H. Osborne, of Des Moines has been secured to manage the new farm machinery department at the Northern Lumber Co. here.

Mr. Osborne is a fine young man who is experienced in farm machinery. He spent over a year at the J. I. Case factory and has put n two years in the retail part of the machinery business. He come here highly recomended.

The Northern Lumber Company, with headquarters at Estherville, are putting machinery into their various yards in North Iowa. So far they have put in a line of farm machinery at three of their yards: Estherville, Gruver and Klemme.

They handle the J. I. Case line of farm implement and supplies.

The stock of machinery here is being assembled at the old Farmers Lumber Co. building, which was purchased sometime ago by the Northern Lbr. Co.

GIMER URGES THAT CREAM BE BROUGHT TO QUALITY

Quality, Rather And Quantity Desired By Creameries Now

The Creamery Board has fixed the date of the 15th annula Creamery Meeting which will be on next Thursday, February 28, at 1:00 p. m. at the Idle Hour theatre. Not only stock holders are urged to be present but patrons or any others interested in the success of the local creamery are welcome.

The business of the past year has shown a large volume of business which is largely due to the fine spirit of co-operation manifest.

Mr. Gimer has outlined what he declares is the next important step to take. The Creamery has worked to procure a large volume of business which they now enjoy. Now he thinks they should extend themselves along another line: t owork toward a igher quality as the only safe and sound way towards further success This requires that the creamery receive a larger per cent of sweet cream in the future. The creamery is equiped, it is true, with appliances to use in determining the soumness, or acidity, as they express it, and the product is neutralized. But they can't do the impossible thing, that of making sour cream sweet. This is up to the farmer to keep his cream sweet. A fine, sweet flavored butter absolutely requires that it be made of sweet, nicely flavored cream.

The co-operation of all is urged to make quality the watchword for 1929 and future years, and the local creamery can further forge ahead and be the best in North Iowa.

Mr. Gimer states that the officers now and always have been the very best men in the comunity, giving of their time and patrons and all must pull together to make the creamery even more successful.

PENROD ELECTED TO HEAD THE SCHOOLS ANOTHER YEAR

At the meeting Tuesday night the school board re-elected M. F. Penrod as superintendent for another year. The decision of the board is, we believe, in acordance with the wish of the majority of the patrons of the school. Mr. Penrod is well qualified and his fine work of the past few years bears out this statement. Not only is he an excellent school man, but he takes an active part in the life of our community and churches and is ever ready to render assistance. The school has grown under his direction and we believe much credit is due Mr. Penrod. We are glad to have him with us for at least another year.

FAMOUS DAIRY COW DIED LAST WEEK THURSDAY

V. A. Cook's Cow Had Enviable State Record

Dr. D. P. Anderson reports that "Granny," the famous Grade Holstein high producing cow owned by V. A. Cook died last Thursday. The cow was widely known and held the record of being the highest producing grade Holstein in the state testing asociation. Last year she produced 818 pounds of butter fat. In the past seven years she cleared the neat sum of $1,400 above her feed cost. She was about ten years old. Dr. Anderson says Mr. Cook has a fine herd and has some young stock with "Granny" blood which shows indications of making some fine records.

The passing of old 'Granny" is keenly felt by Mr. Cook and is a loss to the entire dairy industry. It is not often that such money earning cows are raised.

COUNCIL PROCEEDINGS

Regular meeting of the Town Council held at the Mayor's office.

A. Wellemeyer, Wes Schuldt and H. L. Suckow members of the council present

Motion made and seconded to allow the following bills:

Wayne Kirkwood, Glen Bridges, Erwin Schwartz J. H. Steeman, Shoveling Snow	$ 4.91
Lloyd Lau, Hauling Coal and Gravel	2.30
Partridge Scotford Co. 50 Dog Tags	3.00
Community S. S. Co., 100 gallons Gasoline	18.50
E. F. Jacobs, December Supplies	3.68
Klemme Grain Co., 2260 lbs. Coal	12.15
Central States Electric Co. Dec. Street Lights	52.68
Fred Gates, December Salary	60.00

Bills allowed.

Be it resolved by the Council of the Town of Klemme, Iowa, all able bodied male residents, between the ages of 21 and 45 shall after the 1st day of Feb. and before the 1st day of October of the year 1929 pay in money the sum of $4.00 to the Clerk as poll tax for the year 1929.

Motion made to adjourn.

A. J. Kudje, Clerk.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

"If you want to work in the kind of a church,
Like the kind of a church you like
You need'nt slip your clothes in a grip
And start on a long, long hike.
You'll only find what you left behind,
For there's nothing that's really new:
Its a knock at yourself when you knock your church;
It isn't the church, it's You.

Real churches aren't made by men afraid,
Lest somebody else go ahead;
When every one works and nobody shirks,
You can raise a church from the dead.
And if while you make your personal stake,
Your neighbor can make one too,
Your church will be what you want to see
It isn't the church, it's you."

Let us remember that Sunday, Feb. 24th we are to begin our two weeks of Evangelistic Services to which every one is cordially invited. You cannot afford to stay away as they are planned with only one purpose in mind and that is to do good. With your earnest and hearty - operation these meetings cannot fail to bring a spiritual blessing not only to yourself but likewise to the church and the community as a whole. The subject for the Sunday morning sermon will be "The Bane of a Sub-Normal Religion." In the evening the cure will be recommended. Then too, you will not want to miss hearing the new Junior choir sing at the evening service.

Beginning on Monday night the Rev. J. T. Snyder of Belmond will be the preacher for the week. Lot us fill the church for this first week night meeting.

JOHN REED NOW A MARRIED MAN

CLEAR LAKE GIRL MARRIES KLEMME YOUNG MAN

John Read And Viola Jorgenson Married Last Thursday

(Mason City Globe-Gazette)

CLEAR LAKE, Feb. 14.—The Zion English Lutheran church, North Fourth Street, was the scene of a pretty wedding ceremony today, which unted John Read, Klemme, and Miss Viola Jorgenson. The nuptial vows were exchanged at high noon, the Rev. C. M. Granskou, Waldorf college, Forest City, reading the single ring ceremony. The couple was attended by Miss Vivian Butterfield and Miss Ersul England as bridesmaids and little Rose Mary Watts was flower girl. Fifty guests were present.

The bridal party took its place at the altar while Miss Edna Thompson sang "Oh, Promise Me." Accompanying her at the piano was Miss Genevieve Hansen. The vows were repeated under a bower of pastel streamers, the bride's chosen colors. Large baskets of yellow snapdragons stood on either side of the steps to the altar.

The bride wore an exquisite sleeve less dress of nile green satin with a maline ruffled skirt. She carried a shower bouquet of pink roses and sweet peas. Her slippers were silver with batik designs and she wore silver hose to match. Her veil was trimmed with small bows and green velvet ribbon.

The bridesmaids were dressed in pink silk crepe dresses trimmed with ecru lace. They carried bouquets of sweet peas tied with maline bows. Little Miss Watts was charming in a dress of yellow crepe de chine. She threw sweet peas from the basket she carried in the path of the bridal pair. The party left the altar to the strains of Lohengrin's wedding march. Closing the service Miss Thompson sang "I Love You Truly."

A three course dinner was served the bridal couple and guests in the church parlors immediately after the creemony. The guests were seated at tables which formed a square elaborately decorated with streamers of the pastel colors and white wedding bells. At the honored guests table a pyramid cake and ivory tapers tied with maline bows and wound in smilax formed the centerpiece. The dinner was served by intimate friends of Mrs. Read, Mrs Albert Christensen and Mrs. Jay McGowan

Mrs. Read is the younger daughter of Mr. and Mrs. Andrew Jorgenson, North Fourth street, and grew to womanhood in Clear Lake. She was graduated from the local high school with the class of 1925 and later was graduated from Hamilton's business college, Mason City. She was employed as stenographer at the Dunn & Dunn law office and the pat year has been employed in the Ira Jones attorney office, Clear Lake.

The bridegroom is the only son of Mr. and Mrs. Walter Read, who reside near Klemme. He attended the Klemme High School. The couple expects to reside in Clear Lake, where Mr. Read will be employed in a garage.

Out of town guests at the wedding were Mrs. Ernest Lehman, Zearing, a sister of the bride, Mr. and Mrs. Walter Read and Mrs. Ernest Helps of Klemme.

KLEMME REFORMED CHURCH
Calvin Grosshuesch, Pastor

Sunday:
10:00 a. m. German service.
11:00 a. m. Sunday school.
Tuesday:
1:00 p. m. Confirmation Class.
8:00 p. m. Bible Class.
Wednesday:
2:00 p. m. Meeting of Ladies Aid.
Saturday:
1:30 p. m. Confirmation Class.
8:00 p. m. Choir.

AN APPEAL TO SPORTSMEN OF KLEMME AND VICINITY

The Editor is in receipt of a letter from A. N. Ahrenkeil, of Goodell asking the sportsmen of Klemme and vicinity to donate what they will to a fund to help keep the fish alive at East Twin Lake.

The severe winter has made it necessary to do a lot of extra pumping at the lake to provide the fish with air. Funds for this work has been exhausted, but good fellows are not laying down on the job but keep right at and Jay Griggs has been pumping for the past two or more weeks. This requires gasoline, oil and coal. The pumping must be kept up until warmer weather arrives or the fish will die.

As most of you perhaps know the little lake is full of all kinds of fine game fish: pike, pickerel, sun fish, perch, crappies, blue gills and bullheads. Fishing was getting good there last fall and this spring many fine catches will be made.

Our grand state of owa is weak in many of its game laws. It spends money to stock lakes with fish and thens does practically nothing to protect them 'n winter when some lakes require pumping. That is the case at East Lake. Sportsmen have come to the rescue before—they should do it now.

All who fellows who like to fish let's come acros with a dollar or and do our share. The Times volunteer to take contributions he Just mail your check to the Edito and we will credit you up as a good sport. The money will be turn over to banker W T. Butts, Goodell, who is helping with the work.

Come on fellows, bring or mail your money AT ONCE!

ELL TOWNSHIP FARM BUREAU LADIES MET FRIDAY

Miss Johnston, Demonstrator, Gave Interesting Sewing Lesson

Friday, February 15th was a fine day for the meeting of the Ell township Farm Bureau Ladies, their new home demonstration agent, Miss Myrtle Johnston, and a number of visitors who met at the home of Mrs. Carl Wille for an all day program of sewing.

This was the first lesson in the fourth year Clothing Course and Miss Johnston had very interesting demonstrations and lessons in store for the ladie, on Sewing Equipment, ewing boxes, chalk tracing board the use of bees wax, emery bag tailoring halk and commercia spool racks. The ladies feel that a very useful lesson was demonstrated and as a result all will have very handy sewing baskets.

At the noon hour a lunch was served cafeteria style.

The ladies present report that the meeting was very interesting a nstructive and all will benefit.

LIBERTY NO. 8 SCHOOL HAS A VALENTINE PROGRAM

School No. 8, Liberty Township, where Miss Mabel Schaefer, of this place is the teacher, enjoyed a Valentine Box and a program to which the mothers of the district were invited. After the close of the program cake and fruit salad were served Everyone there had a fine tim according to reports.

An annual event is the waffle supper at the home of Mr. and Mrs. C. F. Keraus when the teachers are treated to this fine dish. Mrs. C. G. Waterman and Mrs. R. A. Jorgenson presided at the irons, and after the teachers had goten away with a fair sized mountain of waffles, Mr. and Mrs. Keraus, C. G. Waterman family, R. A. Jorgenson and fa and Mr. and Mrs. Frank Kluckh took their turn at the table. The waffles and Mrs. Keraus' hom made sausages sure hit the spot

And, the political pot has started to boil as this is the year for town election in Klemme. If we are correctly informed the date is th Monday in March—not so far and no doubt a caucus, or seve will soon be held. Klemme is one the few towns in the state to hold elections on an "off" year. Nearly all towns hold elections on the "even" years.

Honor Two Great Generals

LEE AND HIS GENERALS

By ELMO SCOTT WATSON

IN DECEMBER of last year the following news story was sent out from Baltimore, Md.:

"Because they were his boyhood heroes, provision for the erection of a monument to Robert E. Lee and Thomas J. 'Stonewall' Jackson, Confederate generals, was made in the will of the late J. Henry Ferguson, president of the Colonial Trust company, who died November 24 last.

"The will specified that $100,000 be used from Mr. Ferguson's estate for the monument, and provided that it be erected within ten miles of the City hall in Baltimore and that it represent the parting of the two Confederate leaders prior to the battle of Chancellorsville.

"In his will Mr. Ferguson explained the provision for the erection of the monument by saying: 'They were my boyish heroes and maturer judgment has only strengthened my admiration for them. They were great generals and Christian soldiers. They waged war like gentlemen, and I feel their example should be held up to the youth of Maryland.'"

In most of the states which once were a part of the Confederacy and especially in Virginia, January 19 and January 21 are dates of special significance because they are the anniversaries of the birthdays of Robert E. Lee and "Stonewall" Jackson respectively. And while other sections of the country do not obeserve these days, as is done in the South, by the flying of both the Stars and Stripes and the Stars and Bars from public buildings each day from sunrise to sunset on January 19 to January 21 inclusive, all Americans can understand and applaud this latest project to honor the memory of two "great generals and Christian soldiers."

The careers of Lee and Jackson up to the opening of the Civil war were as follows:

Robert E. Lee was born at Stratford, Westmoreland county, Virginia, January 19, 1807, the youngest son of Major General Henry Lee, called "Lighthorse Harry." He entered West Point in 1825, was graduated four years later, second in his class, and given a commission in the U. S. Engineers corps. In 1831 he married Mary Custis, who was the daughter of G. W. P. Custis, adopted son of Washington and the grandson of Mrs. Washington. By 1833 he had attained the rank of captain and took part in the Mexican war, repeatedly winning distinction for conduct and bravery.

After the war engineering work engaged him until 1852, when he was appointed superintendent of West Point, and during his three years there he accomplished many important changes.

The career of Lee from the time of his appointment to the post at West Point until April, 1861, when Virginia seceded from the Union was closely identified with the Federal army. While personally opposed to the principle of secession, Lee felt that his greatest duty was to Virginia. He refused the command of the field army, about to invade the South, becoming instead the highest ranking officer in the army of the Confederacy.

"Stonewall" Jackson was born at Clarksburg Va. (now West Virginia), January 21, 1824. Beginning his military life with a nomination to West Point, Thomas Jonathan Jackson took part, after being graduated in the Mexican war as second lieutenant in the First U. S. Artillery.

In 1851 he obtained an appointment as professor at the Virginia Military Institute at Lexington where for ten years he taught natural science, the theory of gunnery and battalion drill. Though he was not a good teacher, his influence both on his pupils and those few intimate friends for whom he relaxed the gravity of his manner was profound.

A thorough appreciation of this quality of leadership gave Jackson the command of the corps of V. M. I, when Virginia seceded in 1861. By July of that year he had been promoted to the rank of brigadier-general, and had so well employed this short time for training his men that on the first field of Bull Run they won for themselves and their brigadier, by their rigid steadiness at the critical moment of the battle, the historic name of "Stonewall."

While those simple biographical details tell of what they did, it is in such records as two books which have appeared recently that the story of what kind of men they were will be found. One of these is "An Aide-de-Camp of Lee," being the papers of Col. Charles Marshall, edited by Maj. Gen. Sir Frederick Maurice and published by Little, Brown and company. The other is "Stonewall Jackson, the Good Soldier," written by Allen Tate and published by Minton, Balch and company. As aide-de-camp, military secretary and assistant adjutant general on the staff of General Lee from 1862 to 1865, Colonel Marshall had an unusual opportunity for knowing Lee as few men had ever known him. That "the Union of the North and South was made indissoluble at Appomattox," as Colonel Marshall says, was shown in a dramatic fashion during the Spanish-American war when a son of Colonel Marshall performed for a son of Grant the same functions which from 1862 to 1865 the father had performed for Lee! If the "real Lee" is to be found within the pages of Marshall's book, it is not less true that the "real Jackson" is to be found in the book written with rare biographical sympathy by Allen Tate, a southerner.

A reading of these two books will convince one of the appropriateness of the proposed Maryland memorial to the two great generals, for they were so closely associated in their brilliant military achievements and, although so totally different in temperament, so much akin in many ways that

GENERAL "STONEWALL" JACKSON DRAWN FROM LIFE ABOUT 1861

GENERAL ROBERT E. LEE

future ages will probably find it easier to think in terms of "Lee and Jackson" than in terms of "Lee" and "Jackson" alone. One reviewer of Tate's biography has commented upon this fact as follows:

The figure of "Stonewall" Jackson occupies a unique place in the history of the great struggle. In point of romantic interest, he stands alone, "wrapped in the solitude of his own originality." He was the South's greatest crusader—a mystic, a zealot, a Christian soldier in whose character were blended the fanaticism of a Peter the Hermit, the daring and inflexible purpose of a Cromwell, and the subtlety of a Francis Marion. For the soldiers of the Confederacy he became, after the first Bull Run, a center of inspiration and a bulwark of confidence. And there are historians who say— among them his present biographer—that it was not at Gettysburg that the backbone of the Confederacy was broken, but at Chancellorsville with the bullet that sped out of the darkness and put an untimely end to "Stonewall" Jackson's military career. When that event occurred, the one man who understood the heart and soul and genius of Jackson, Robert E. Lee, said, "I have lost my right arm."

There were few among his associates in the war who did understand "Stonewall" Jackson. Perhaps Lee was the only one. Some regarded him as a dullard, some as a fanatic, some even as a madman. He explained himself to no one and his plans only to Lee. There was a strange understanding between these two men—an intuitive trust in each other. They were of a single mind. Had the conduct of war the first two years been left to these two, unhampered by the vacillations of Jefferson Davis and Judah P. Benjamin and the intrigues of the southern politicians, a different story might have been written of the war—unless the great result was really "written in the stars."

Jackson was the one man whose military judgment and genius Lee implicitly trusted, whose failures even he never questioned. He sent Jackson alone on the expeditions intrusted to his execution, but he remained with Longstreet. Jackson's peculiar genius for suddon, secret and overwelming attack, Lee could always depend upon for a master stroke. Longstreet, stout in battle, was given to argument and delay. He argued and delayed at Gettysburg and it was after that battle that Lee paid his greatest tribute to "Stonewall" Jackson. "If I had had Jackson at Gettysburg," he said, "I should have won the battle, and a complete victory there would have resulted in the establishment of southern independence." But the God of battles, to whom Jackson prayed, had decreed otherwise—His leaden messenger at Chancellorsville, sped in a moment of victory, took from Lee's side the one man he needed in a fateful hour.

One of the most disputed points in Civil war history has been whether or not Lee or Jackson was responsible for the great flank movement at Chancellorsville which sent "Fighting Joe" Hooker's big army flying out of the Wilderness before the much smaller force of Confederates. In regard to this General Maurice, the editor of the Marshall papers, says:

This is the question which, it seems to me, Colonel Marshall settled conclusively. He says not only that the plan was Lee's, but that Jackson at first demurred to it as being too hazardous. However, on learning that Lee had decided that a frontal attack on Hooker's entrenchments in the Wilderness was out of the question, and that a way had been found round Hooker's flank, Jackson at once accepted Lee's plan and threw himself with enthusiasm into the task of carrying it through . . .

We now have Lee's statement to Mrs. Jackson that he had told her husband that he was opposed to a frontal attack and that the attack must be made by the Confederate left; Talcott's statement that Jackson said to Lee, "Show me what to do and I will try to do it;" Jackson's statement: "Most men will think I planned it all from the first, but it was not so;" and finally Marshall's statement that "Jackson was at first opposed to the flank movement." That accumulation of evidence is decisive, and should settle forever a matter which has been debated for sixty years.

The scene at which this plan was discussed is one of the most famous in American history. In the chapter in Tate's book dealing with the battle of Chancellorsville there is a chapter subhead, appropriately called "Two Cracker Boxes," in which the scene is described as follows:

After midnight, Lieutenant Smith, Jackson's aide, woke, chilled by the damp night air. He sat up and looked round. A hundred feet away, up a slope among the trees two dim figures were gathering pine twigs and throwing them on a little fire, warming their hands as the blaze rose. They sat down on two cracker boxes left by the retreating Federals the day before. The wind rustled the pines. Their loneliness was absolute; not another man could be seen. One of the figures holding his face so that the flickering light played over it, had on a felt hat and wore a short beard which was gray. The second figure sat humped over the fire, his head drawn down into his coat collar, his long, dark beard on his chest. Down low over his forehead rested the visor of a forage cap, hiding his eyes; the dim light threw shifting beams on his sharp, aquiline nose. To Lieutenant Smith drifted the murmur of voices; the words were caught up in the breeze and lost in the pines; he fell asleep again.

The men talked on in the night. . . . It was just daylight . . . when Lee turned to Jackson and said:

"How shall we get at those people? General Jackson, what do you propose to do?"

"Go round there," he said, running his finger over the map.

"What do you propose to make the movement with?"

"With my whole corps," he said.

"What will you leave me?"

"The divisions of Anderson and McLaws."

Lee thought about it a moment, then he said:

"Well, go on!" He took a pencil and moving it up and down gave Jackson his last instructions. Jackson sat smiling and nodding his head. Then getting up from his cracker box he saluted.

"My troops will move at once, sir!"

If the plan was Lee's, the execution of it was Jackson's and the result is history—how this surprise attack on Howard's corps rolled the right of the Union army back in confusion, how the panic spread through Hooker's army and how Jackson saw his chance to destroy the whole Federal force. Then in the moment of his victory this brilliant leader of his devoted "Stonewall Brigade," who would have followed "Old Jack" anywhere, was struck down by the bullets of his own men who saw a shadowy group of horsemen and thought they were Federal cavalry.

Lee, hearing of the tragedy, wrote Jackson a note. He said: "I cannot express my regret at this occurrence. Could I have directed events, I should have chosen for the good of the country to be disabled in your stead. I congratulate you upon the victory, which is due to your skill and energy." There spoke the great man who would give praise to a subordinate for success and who would have been equally quick to have assumed full responsibility for that subordinate's failure, if he had failed. When Lee's aide brought Jackson the note, he said: "General Lee is very kind, but he should give praise to God." The next morning Jackson seemed to be getting better and Lee sent this message: "Give him my affectionate regards and tell him to make haste and get well, and come back to me as soon as he can. He has lost his left arm, but I have lost my right."

But though his wounds were healing, pneumonia, brought on by his exposure before Chancellorsville, developed. Tate described the end of this great warrior as follows:

His little girl was brought in, and he brightened; then he fell into delirium. He talked, talked. He was on the battlefield. Now he was at Lexington. For a long time he lay still. Then he cried:

"Order A. P. Hill to prepare for action! Pass the infantry to the front! Tell Major Hawks—"

He lay still again. After awhile he said in a clear voice:

"Let's cross over the river and rest in the shade of the trees."

Weighing and Wanting

Wife—I don't trust our new housemaid a bit.

Husband—But you can't go by appearances with these girls.

Wife—I'm not; I'm going by disappearances.—Everybody's Weekly.

Girl at the Top in Health Test

Millions of boys and girls all over the world, thousands of them right here in the West are being restored to health and strength by the purely vegetable tonic and laxative known as California Fig Syrup and endorsed by physicians for over 50 years.

Children need no urging to take it. They love its rich, fruity flavor. Nothing can compete with it as a gentle, but certain laxative, and it goes further than this. It gives tone and strength to the stomach and bowels so these organs continue to act normally, of their own accord. It stimulates the appetite, helps digestion.

A Kansas mother, Mrs. Dana Allgire, 610 Monroe St., Topeka, says: "Bonnie B. is absolutely the picture of health, now, with her ruddy cheeks, bright eyes and plump but graceful little body and she stands at the top in every health test.

Much of the credit for her perfect condition is due to California Fig Syrup. We have used it since babyhood to keep her bowels active during colds or any children's ailments and she has always had an easy time with them. She always responds to its gentle urging and is quickly back to normal."

Ask your druggist for California Fig Syrup and look for the word "California" on the carton so you'll always get the genuine.

Both Stars

"My uncle was a gridiron star."

"That so? Mine was a well-known cook, too."

Mrs. John Durrum Says Could Write All Day and Not Say Enough Good About Milks Emulsion

"Have been thinking for some time of writing you in regard to Milks Emulsion.

"When I wrote you last fall I was very much discouraged. Doctors had told me for five years that I had T. B. Five doctors told me last fall that I was in advanced stages of T. B.

"I have taken your wonderful medicine all winter. Sometimes I would neglect taking it every hour, but would take several doses a day, and this is the first winter for seven years that I haven't spent most of the winter in bed. I haven't been in bed sick this winter, and for two years I had been so sore across my abdomen I couldn't bear to press on it. That is all gone. I do all of my housework now except washing; weight 117 pounds, and feel fine.

"I can't praise your Emulsion enough. I tell every one I talk to what it has done for me and feel ashamed if I neglect it sometimes when I know what it has done for me and what it means for me.

"I could write all day and could never write enough good words about Milks Emulsion." Yours truly, Mrs. John Durrum, 451 W. Green St., Frankfort, Ind.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

An old dog won't take exercise, but a man thinks that he, himself, knows better.

You Can't Dye a Dress with Promises!

You can't dye a dress—no matter how careful you may be—without real color. That's the idea behind Diamond Dyes. They are made to give you real service. They contain from three to five times more aniline than other dyes on the market.

Next time you want to dye, try Diamond Dyes. See how easy they are to use them. Then compare results. Note the absence of that re-dyed look; of streaking, or spotting. See how soft, bright, new looking the colors are. Then observe how they keep their brilliance through wearing and washing. If you don't agree Diamond Dyes are better dyes, your dealer will refund your money.

The *white package* of Diamond Dyes is the original "all-purpose" dye for any and every kind of material. It will dye or *tint* silk, wool, cotton, linen, rayon or any mixture of materials. The *blue package* is a special dye, for silk or wool only. With it you can dye your valuable articles of silk or wool with results equal to the finest professional work. Whichever you buy—remember this. The *blue package* dyes silk or wool and the *white package* will dye every kind of goods, including silk and wool. Your dealer has both packages.

Diamond Dyes *Perfect results* *Easy to use* AT ALL DRUG STORES 15¢

FARM STOCK

HULLED OATS ARE BEST FOR SWINE

Valuable Because They Produce Growthy Pigs.

An average of the 1927 and 1928 tests at the Ohio experiment station gives hulled oats a value 46 per cent greater than corn when the corn was left out of the ration entirely and 62 per cent more pound for pound when used as only a partial substitute for corn. Hulled oats proved profitable in these tests despite the comparatively high price at which whole oats were charged, 48 cents, against 91 cents for corn.

The most efficient ration ever fed at the Ohio station, according to Robinson and Gerlaugh, was that of hulled oats, tankage and alfalfa meal in 1927 when less than 300 pounds of feed produced 100 pounds of gain. A higher quality, more efficient protein in the groat or kernel of the oat grain, makes hulled oats more valuable than corn for hogs and is responsible for more rapid gains and more pounds per unit of feed.

Although the 1928 tests at Ohio were not quite as favorable for hulled oats as those during the preceding year, a lot of pigs fed hulled oats, corn, tankage, and linseed meal, ground alfalfa and minerals, gained more rapidly than any lot on test. This same lot had the smallest feed requirement for each 100 pounds of gain with the exception of one other, that in which all the corn was replaced by hulled oats. Despite their higher efficiency, hulled oats proved a little too expensive in 1928, partly because of the high price at which oats were charged and partly because of the expense of hulling. Unlike previous results, gains from their use cost slightly more than with corn as the only grain.

At both the Iowa and Illinois stations, hulled oats proved more efficient than corn. Each of these stations recommend their use if they can be obtained at the same price per pound as corn, and possibly at a price slightly higher. Like Ohio, they have had best results by substituting hulled oats for only part of the corn.

Pure-bred men find hulled oats particularly valuable because they produce growthy pigs which weigh well and measure well with the tape line. Hogs fed for market can sometimes be pushed along more rapidly with this efficient feed and sold before the usual drop in prices comes during the fall months.

How to Care for Ewe Flock During Winter

Breeding ewes deserve a good ration and good care during the winter. Experience has shown that their principal feed should be a legume hay, says W. E. Morris, a live stock specialist of the University of Minnesota. When such hay is not available in quantity it can be limited to two pounds per head a day by feeding in addition roughages of prairie hay, oat straw, or corn stover supplemented with corn silage or roots such as turnips, mangels, or sugar beets. Roots and silage add to the desirability of the ration, but should not be fed in excess of two pounds a day per head. If poor roughages only are available a little grain should be fed along with them.

Six weeks before lambing, a half pound of oats, corn or barley should be added to the ration of the breeding ewe and should be continued until pastures are good. If the ewe is thin about one pound of grain should be fed daily. As lambing time approaches the ewes become heavy and do not like to exercise. By spreading the hay some distance from the barn and sheds they will be made to take the needed exercise. Rapid driving or chasing should not be permitted.

Making Success With the Sheep on Farms

Don't Pet Bees in Early Spring

Disturbing Hive on Warm Day May Expose Them to Danger Later.

Spring exuberance should not lead the beekeeper to disturb his hives too early in the season, with the mistaken idea that he is doing them a kindness. Any such disturbance may cause the insects to start their work too early, and expose them to danger when cold spells come later, it is pointed out by Virgil N. Argo, extension specialist in beekeeping at the Ohio State university.

Start Brood Rearing.

"Manipulations in the early spring are emergency measures only," says Argo. "If the bees have been properly prepared for winter, there should not be many things to do when brood rearing starts in the spring.

"But the beekeeper will do well to visit all hives that are not well packed and lift them a little from the bottom board to determine whether they are too light in stores. Should they weigh little he should feed the bees some thick sugar sirup at once—granulated sugar, two parts, and one part of water. The water should be hot when the sugar is stirred into it, and the sirup fed to the bees at night from a friction top pail which has had the lid punched full of very fine holes. The lid is squeezed into place and the pail inverted over the hole in the honey-board or inner cover of the hive.

Place on Sticks.

"It may be placed on two sticks, holding it an eighth of an inch above the honey-board, enabling the bees to cluster freely over the whole surface of the lid. An empty super is now placed on top of the honey-board and the space inside that is not occupied by the pail is filled with some material so that the heat of the bees below the honey-board is not allowed to escape."

Fertility Depends Much on Management of Soil

Although virgin soil is supposed to be fertile, there are new areas that fail to yield good crops. The reasons are as various as the types of soil. Sometimes it is a sandy soil that fails to support the plants, and other times a deep black soil is a failure. Generally the loams that have been recently cleared average up the best of all the new clearings.

It is always safe to treat new breaking to a good dressing of stable manure. The one difficulty seems to be that new farms are short of manure. In fact that also applies to old-fashioned farms these days. There is a general shortage of stable manure in many districts, and there is great waste of the elements of fertility in places where manure is procurable.

Manure is valuable on account of the beneficial bacteria it contains, and the life it imparts to the soil. As far as the elements that go to make up plant food are concerned, they can be got perhaps more cheaply from chemical fertilizers.

Poultry Water Heater Useful During Winter

When poultry water fountains cannot be given frequent attention on near-zero days, the commercial fountains heated by a small lamp often prove a good investment. Hens will not eat much dry mash if they cannot wash it down with water and the mash needs to absorb quite a lot of moisture while in the crop. Only a small lamp is used in a safety compartment under the fountain and some need filling but once a week.

It is not necessary to give the hens hot water in winter or even warm water. The water that they seem to relish the best is just pleasantly cool. These lamp-heated fountains do not make the water very warm, but just keep it from freezing. When poultry houses are insulated and ventilated, it is often possible to give the hens water just as it comes from the well without danger of having pails full of ice before the water is used.

Farm Notes

Don't use cold storage as a resting place for inferior fruit.

* * *

If manure is handled out and spread daily during the winter months it saves double work in the spring.

* * *

The current floods of seed catalogues are proof enough that hope springs eternal in the human breast.

* * *

A load of manure on the fields where it can do good is worth two on the manure pile where it only wastes away.

* * *

Plan to thin an acre of your young timber this winter. You will get wood for the fires, an appetite for buckwheat cakes and sausage, an improved woodlot, and a lot of satisfaction out of the job.

* * *

Irish potato growers are buying more certified seed each year. Certified seed is safe for it has been found to be fairly free from disease, does not contain varietal mixtures, and has shown high yielding ability. In some cases, uncertified seed is just as good as certified but more often it is not.

POULTRY

MOLASSES HAS EDGE ON CORN

Good Results at Ohio Station Have Been Obtained.

Cane molasses in the poultry ration possesses certain distinct advantages over corn, when substituted for that grain in quantities up to 10 per cent of the ration. This has been established by two years of experimental work by the poultry husbandry department of the Ohio State university. The molasses has replaced corn on a pound-for-pound basis. "It has given equally good results in rations for starting and growing chickens, laying hens and fattening birds," says Prof. A. R. Winter of the poultry department, in discussing the results of the tests.

In a test with laying hens, those fed on a ration containing 5 per cent of molasses laid 16.93 per cent more eggs than a group fed with corn and no molasses. At the same time the mortality among them was only 5 per cent as compared to 12.5 per cent among the hens which got no molasses. The test was carried on during the fall and winter months.

Growing chicks, at eight weeks of age, weighed 17.7 per cent more when fed a 5 per cent molasses ration, and suffered a mortality of only 7.32 per cent as against 12.39 per cent for the chicks which received corn instead of molasses. When fed 10 per cent molasses the chicks weighed only 16.5 per cent more, but the mortality had been reduced to 4.88 per cent.

"The cane molasses carries some vitamine B and furnishes carbohydrates in easily available form," says Professor Winter. "The potassium salts in the product serve as a mild laxative. It is believed that the carbohydrates create a condition in the intestine unfavorable to the development of coccidiosis and other harmful bacteria. This theory is under investigation at the present time."

Milk Solids Favored for All Kinds of Fowl

Skim milk solids are fundamental in the poultry rations recommended by Massachusetts Agricultural college in Extension Leaflet No. 6. Laying mash formula is: 100 pounds bran, 100 pounds middlings, 200 pounds yellow corn meal, 100 pounds ground oats, 50 pounds meat scrap, 25 pounds "powdered milk," 25 pounds alfalfa leaf meal, 5 pounds fine salt, 25 pounds steamed bone meal; and the grain formula is 100 pounds each of cracked corn, whole corn, wheat, or barley and oats. In addition the leaflet recommends: "Feed skim milk whenever available . . . When all the skim milk the bird will consume is available, meat scrap need not be fed." For chicks, the laying mash with an additional 25 pounds of dry skim milk is recommended, together with chick grain, 200 pounds fine cracked corn, and 100 pounds cracked wheat. Milk solids in the laying mash amount to 4 per cent; in the chick mash to 8 per cent.

Sprouted Oats Needed by the Laying Hens

"Sprouted oats for laying hens," is a formula that should be in every poultryman's feeding guide, says G. L. Stevenson, of the South Dakota State college. It's not very expensive either. However, it does require a warm room or basement.

Equipment needed for sprouting oats may be homemade. The boxes should be shallow, not over three or four inches deep. In preparing the oats for sprouting, it should be soaked overnight in a bucket or tub. A few drops of formaldehyde added to the water in which the oats is soaked will prevent mold from developing. Moldy grain is often fatal to poultry.

After the oats has been soaked and drained it may be spread out in the boxes and kept in a warm room or in a heated sprouting device. In a few days when the oats sprouts have attained a length of two or three inches, they will be ready for feeding.

Broody Hen Care

When several broody hens are sitting in coops close against one another, it may save much potential trouble if each bird is tethered by a long, thin cord from one leg to her nestbox. This will insure that, after her spell off duty, she joins her own nest and not a neighbor's, as she is otherwise liable to do. A hen may settle down for a short time on a strange nest, but soon she finds out her mistake, jumps up, and so allows the eggs to be chilled.

Use for Vitamine D

Vitamine D, which is found in cod liver oil, is useful in helping to properly assimilate minerals. This vitamine is furnished by the direct rays of sunshine. During winter months, sunshine does not contain as many of these helpful rays as in summer. When sunshine passes through ordinary glass a great deal of the helpful influence is lost. These two factors make it possible to utilize cod liver oil to advantage in winter rations for laying hens.

HOW

VAUDEVILLE "STRONG MAN" GETS AWAY WITH TRICK — Strong men on the music hall stage are fond of lying on their backs and having placed on the chest an anvil, which is subjected to blows from a heavy sledge hammer. As a "turn" it invariably creates astonishment but any man could do it, provided he were strong enough in the first place to support the heavy anvil. The blows inflicted by the sledge hammer are negative.

Scientists explain this by what is known as action and reaction, which are always equal The anvil strikes the hammer as forcibly as the hammer strikes the anvil, and should the anvil be heavier than the hammer, it will not be moved Suppose the hammer weighs 10 pounds and moves with a velocity of 16 feet per second. It will strike the anvil with a force of 160 pounds; but the anvil, perhaps, weighs 220 pounds, and in consequence will not be moved. Thus the "strong" man is able to receive the weight of the blows without discomfort.

How Phrase "To Walk Spanish" Is Explained

"To walk Spanish" refers to an old sport among boys in which one boy seizes another by the collar or the scruff of the neck and the seat of the trousers and forces him along on tip toe. "To walk turkey" is used in the same sense. Apparently the former expression originated in New England. At any rate, the earliest known uses of "to walk Spanish" occur in writings from that section. The application of "Spanish" in the phrase is obscure. It may, as some suppose, allude to the manner in which the old Spanish pirates are reputed to have handled their prisoners when starting them out on the plank. "To walk Spanish" has acquired a large variety of meanings in popular parlance. We make another walk Spanish when we discharge him from his job, when we make him step along gingerly, or when we compel him to do anything against his will. Likewise a person is said to walk Spanish when he struts, and also when he walks with an unsteady gait. More often the term is equivalent to "toe the line" or "come up to the mark."—Exchange

How Snowflakes Form.

Snow forms over an ascending air current in which there are solidified cloud particles for nuclei. But whatever the nuclei may be, as soon as the initial crystals are formed further condensation takes place, the vapor condensing directly into the solid state without first going through the liquid state. The crystals of water are hexagonal prisms, explains the Scientific American, and water in the crystalline state in the atmosphere shows all the wonderful shapes that this form of crystalization can take. Having once started, the crystals may grow either along their central axis, giving rise to long thin prisms, or along their six axes to form hexagonial plates. Sometimes a growth is uniform, so that the result is a perfect hexagonal plate; at others the growth along the axes is more rapid than in the space between. This gives rise to star-shaped crystals.

How Emeralds Are Mined.

A great many of the emeralds on the market today are obtained from the republic of Colombia. The Muzo emeralds of that country occur in calcite veins. The bank may prove worthless after months of work, for no one can estimate the probable value of any particular section of a deposit. In this way emerald mining is different from most other branches of the industry. The tools used are steel bars about five feet long, weighing 30 pounds, and shovels. The bars are forged to a point at one end and made wedge-shaped on the other. Great care must be exercised in mining emeralds owing to the risk of breaking them. Skilled natives are generally employed to do this work.

How to Clean Grass Rug.

Wash the rug with water in which bran has been boiled, or in weak salt and water. Dry it well with a cloth. To remove grease from the rug wet a nailbrush in slightly salted water, rub on soap and scrub the place hard. Have the water boiling. Continue to scrub with soap until the spot disappears. Wash with clean cloth and rub dry. Always rub lengthwise of the grain.

How to Remove Rust.

To remove rust spots from nickel-plated surfaces, apply petrolatum (vaseline) and after several days wipe with a cloth dipped in ammonia. In case the spots are particularly stubborn, add a few drops of hydrochloric acid to the ammonia, but be sure to dry the metal quickly; then rinse it with water and polish thoroughly.—Popular Science Monthly.

How Money Makes Money.

New York's oldest savings account was opened with $10 in 1819; $5 were added the following year, and no further deposit has ever been made.

The original bank book, held by the descendant of the depositor, recently showed approximately $2,500 in accumulated interest.

WHY

Colds Often "Run in the Family."

When colds "run in the family" it is no sign that the family is constitutionally subject to colds. It may be that some member of the family is acting as a carrier, just as some people are typhoid carriers, suggests Dr. P. Watson-Williams in a report to the practitioner of observations made on ninety consecutive patients. Sometimes one child is known for starting colds among his brothers and sisters. This same child may become immune to colds himself, but still harbor cold germs and be able to pass them on to others. If he grows up and has a family he may still be starting colds in the family, although they are no longer traced to him.

The reason for this may be an unsuspected infection of his nasal sinuses, the honeycomb structures back of the nose and eyes. This same infection may be the reason for some children growing a second set of adenoids when the first ones have been removed with the tonsils, Doctor Watson-Williams thinks.

Doctor Watson-Williams also reports a tendency for families that are prone to colds to have infections in the abdomen, for instance in appendix and gall bladder. The body cells that fight disease germs are weakened by resisting the germs always present in nose and throat and become an easy prey to those germs that find their way to the abdomen.—Kansas City Star's Science Service.

Why Paint Sometimes Refuses to "Stay Put"

Experiments and observations of the behavior of paint under varying conditions and circumstances indicate that paint does not really adhere to wood at least after the paint has dried out thoroughly, but hangs on chiefly by gaining mechanical grips in minute openings in the surface of the wood Where there are plenty of openings the paint hangs on, but where the openings are too few, or too small, as in very dense wood, the paint does not hang on so well.

To understand how the grain of wood may affect paint retention it is only necessary to observe paint failure on woods having wide annual growth rings and in which there is a sharp contrast between spring wood and summer wood. In such woods the summer wood is much denser than the spring wood. Paint scales off more quickly than it does off the bands of spring wood.

Why Earth Is Changing.

Just as the tidal movement of the ocean is affected by the position of the sun and moon, so is the earth's surface influenced and there is constantly going on a heavy pronounced change in the contour of our globe. It is constantly rising and falling and while this movement is imperceptible except to scientific observers it is nevertheless quite pronounced and in the course of time is responsible for some very great changes. The pressure exerted on spots of the earth's crust by the rising tide of the ocean is another thing that makes it heave and fall Atlantic tides have caused an observed earth bulge 800 miles away, and it is thought probable that this influence girdles the world.

Why Known as "Dumbbells."

Why do we call the wooden exercises we swing dumbbells? Why dumb? Because centuries ago a favorite exercise was in the pattern of the apparatus by which the heavy bells of a church are swung—a task which calls for considerable energy on the part of the ringers. This apparatus was used sometimes for the purpose of training bell-ringers, and it is probable that its use as an exerciser was first suggested in this way. Later on, less cumbersome means of taking exercise were evolved, but "dumbbell" was still kept as the name.

Why Baptize Babies.

It is held by those churches which believe in the baptism of infants that the Old Testament covenant was applicable to all members of the family from the youngest infant to the oldest man. They believe the New Testament covenant is equally to be applied and that baptism is the sign and seal of participation in this covenant. It is for this reason that most Christian churches baptize infants, at the same time requiring their parents to obligate themselves to bring the children up in the Christian faith.

Why Ermine Is "Royal."

The beauty of ermine caused it to be worn by royalty and King Edward III made it a punishable offense for any persons except those of royal birth to wear it. This restriction has long been removed, but the fur still enjoys royal favor.

Why Bodies Were Embalmed.

In ancient Egypt bodies were embalmed because it was believed that they would some day be restored to life.

Why "Capital" Punishment.

Hanging is called "capital" punishment from the Latin, caput, the head. Beheading was once the usual death penalty.

Mythological Term.

In Norse mythology the expression "twilight of the gods" refers to the final destruction of the world and the regeneration of gods and men.

Farme

Meals and Lun

Farmers are especi invited to eat their di here when in town. specialize in good dinne well cooked, appetizing generous helpings. Whether it's a piping hot cup of coffee and a sandwich, a piece of homemade pie or a short order, you will find us ready to give you courteous, prompt se vice.

NEWS REVIEW OF CURRENT EVENTS

Engagement of Anne Morrow and Lindbergh—Doings of Congress.

By EDWARD W. PICKARD

JUST as he was landing at Havana on his return flight from the Canal Zone, Col. Charles A. Lindbergh's engagement to Miss Anne Spencer Morrow was announced by the young lady's father, Dwight W. Morrow, ambassador to Mexico. The colonel declined to talk about it to the reporters. It was understood in Mexico City that he would fly there late this month and that, though no plans had been made for the wedding, it might take place this spring. Anne is twenty-two years old and vivaciously pretty. She is a graduate of the Chapin school in New York and of Smith college, and while in school showed ability to write quite good poetry. When Colonel Lindbergh was in Mexico City as the guest of Ambassador Morrow he took Anne for several short flights, but her sister Elizabeth also was his passenger, and the gossipy reporters were uncertain then as to which one might become his fiancee.

Colonel Lindbergh had no sooner landed at Miami from his Central American trip than he started out again on two rescue flights. The first was over the Florida keys in search of a plane from which two persons were taken by a ferry boat after it was forced down; the second was made to try to find Pilot Harry Rogers, who had gone in search of the first plane and was himself missing for a time. Concerning the Panama mail route he had just inaugurated, he said:

"There is not a great deal to be done before daily service can be inaugurated between Miami and Panama. Better facilities for communication are being installed and other facilities to aid flying are being put into condition to augment the service."

As to passenger traffic between the North and South Americas, Colonel Lindbergh said it was not planned to haul passengers "until the most minute details of transportation and communication have been worked out."

THERE is now no doubt that Hoover and Curtis were elected President and Vice President of the United States last November. Congress in joint session last week received and counted the electoral vote and Vice President Dawes announced that the tally sheets showed the Republican nominees had received 444 electoral votes and the Democratic nominees 87. Thereupon he formally declared Hoover and Curtis elected. These proceedings were supposed to be solemn and stately and the Vice President had requested that there be no applause or other manifestation of approval or disapproval, but the senators and representatives soon broke loose and indulged in gales of laughter and vigorous applause, enjoying especially the confusion and mistakes of some of the tellers and declining to be subdued by General Dawes' gavel-hammering.

PRESIDENT COOLIDGE feels that the major work of his administration is ended and already is packing up his belongings for return to his home in Northampton, Mass., where he probably will reside for at least a year. He and Mrs. Coolidge expect to leave the White House the afternoon of March 4, immediately after the inaugural ceremonies, and because of the illness of Mrs. Coolidge's mother they will lose no time in starting northward.

On Wednesday the President signed the bill for the building of fifteen cruisers and one airplane carrier and approved the appropriation of funds to begin the construction of these vessels at once.

Naval officials and adequate navy advocates in congress hailed the approval of the bill with enthusiasm. Secretary of the Navy Wilbur expressed gratification. In his opinion, the construction of the fifteen cruisers marks the beginning of a wholesale replacement program which will result in the modernization of the fleet and eventually in an American navy second to none.

Representative Fred A. Britten, chairman of the house naval committee, said his committee will begin new hearings next fall to determine how many more ships should be authorized as replacements for the rapidly ageing battleships, cruisers, destroyers and submarines in the battle and scouting fleets.

PRESIDENT-ELECT HOOVER had been expected to remain in Florida until a day or two before the inauguration, but last Wednesday he announced that he had a lot of work to complete in Washington in preparation for the new administration, and therefore would leave Miami for the national capital on February 18 or 19. The latter part of the week was devoted to a trip of inspection through the flood and reclamation district of central Florida. The Edison birthday party at Fort Myers on Monday was a great success and was much enjoyed by Mr. Hoover; but the weather was too blustery for good fishing on the west coast.

Secretary of Agriculture Jardine removed himself from the Hoover cabinet possibilities by the announcement that he had accepted a position as counsel for the Federated Fruit and Vegetable Growers, with his offices in Washington.

CONGRESS was asked by the President to appropriate $9,210,500 for the construction of new public buildings in 92 cities scattered throughout the country. This is the amount needed to meet building costs during the first year. The projects when completed would represent an outlay of $46,760,500. Mr. Coolidge also approved budget bureau estimates for the expenditure of $48,000 to remodel and furnish the weather bureau station at Mount Weather, Va., as a summer home for Presidents, this plan being in accord with his suggestion made last fall. Mount Weather, near Bluemont, Va., and about 60 miles from Washington, is an 84-acre tract, high in the Blue Ridge mountains, on which the weather bureau, until a few years ago, conducted some of its most important observations.

INTERNATIONAL experts selected to consider the matter of German reparations began on Monday in Paris the conference that is expected to result in a revision of the Dawes plan, the fixing of the total sum Germany must pay and the subsequent evacuation of the Rhineland by the allies. Owen D. Young, one of the unofficial American delegates, was the unanimous choice for chairman, and after the necessary ceremonies he lost no time in setting the commission to work. Germany had its innings first and Dr. Hjalmar Schacht, president of the reichsbank, presented his country's case in a way that seemed to make an excellent effect on all the delegates except the French. He was moderate and made no specific demands but insisted Germany cannot continue to pay the annuities of two and a half billion gold marks provided for by the Dawes plan. He was questioned closely about the tax burdens of Germany, which the allies assert are less than their own. He offered to prove that this was not true. Doctor Schacht and his associates continued through several days. Correspondents said it was becoming apparent that the French and German points of view were not so divergent as was feared and that the success of the conference seemed assured.

THIS is the most severe winter Europe has experienced for many scores of years, and the suffering throughout the entire continent is most grievous. Extremely cold weather, deep snowfalls, ice and furious storms prevail. Many human beings have perished, and the loss of live stock is tremendous. Transportation is disorganized in many regions and towns are suffering for food and fuel. Harrowing stories of death and suffering come especially from central Europe.

HAVING given Gen. Bramwell Booth his chance to be heard, as ordered by the English courts, the high council of the Salvation Army again voted to depose him as commanding general, and then elected Commissioner Edward John Higgins to succeed him. The final count was 42 votes for Higgins and 17 for Evangeline Booth, head of the Army in America.

General Higgins has been chief of staff since 1919. He was born at Highbridge in Somerset and educated at Doctor Morgan's school at Bridgewater, Somerset.

LEON TROTZKY, with his wife and two children, was taken to Constantinople on a Soviet steamship, secretly landed and confined closely in the Russian embassy. It was said the authorities feared he might be attacked by "white" Russian refugees that are numerous there. The campaign against Trotzky sympathizers in Russia continues, the latest incident reported being the closing of the Kronstadt naval academy and the expulsion of its 3,700 students. Twenty of their leaders were arrested as Trotzkyites. A Leningrad paper says the Soviet war commissariat discovered a lack of loyalty among the students, who are openly discussing the possibility of a new Napeleon appearing in Russia to save the country from the hands of the Communists.

REV. DR. E. S. SHUMAKER, superintendent of the Indiana Anti-Saloon league, is now milking cows and cleaning their stalls on the state penal farm at Putnamville. He suddenly abandoned his long fight against the sentence of sixty days on the farm for contempt of the Indiana Supreme court, and began serving his term. Shumaker was cited for contempt in 1926 by Arthur L. Gilliom, then attorney general, following his criticism of members of the State Supreme court in the American Issue, the Anti-Saloon league publication. He was found guilty by a Supreme court vote of three to two.

MISS BOBBY TROUT went up in the air over Los Angeles and regained the laurels taken from her by Miss Elinor Smith of New York. Bobby not only established a new endurance record for women aviators—17 hours 5 minutes 37 seconds—but also captured the women's night flying and distance records. Bobby is twenty-three years old and flies a Golden Eagle monoplane.

PRESIDENT PORTES GIL of Mexico narrowly escaped death last week when his train was blown up by dynamite in the state of Guanajuato. The explosive had been placed on the track at a point where it ran over a bridge. The fireman was killed instantly when the engine overturned, and two coaches were derailed. Another bomb, unexploded, was found fixed to the track. The attempt at assassination followed closely on the execution of Jose Toral, who murdered General Obregon, and in official circles in Mexico City it was said to be the work of the League of Religious Defense. Several members of that organization were arrested near the scene of the explosion, and it was said a number of prominent persons would be taken into custody.

MOST notable of the week's deaths was that of Lily Langtry, Lady de Bathe, who was for years the leading beauty of the English stage. She passed away at her home in Monte Carlo. The Jersey Lily, as she was known, was a good though not a great actress, and was also a clever theatrical manager. In the days when King Edward was the prince of Wales and her admiring friend she was prominent in English social affairs, and she was also well known in the United States.

John II, prince of the little state of Lichstenstein and dean of ruling monarchs, died at a ripe old age and was succeeded by his brother.

ROME was en fete the beginning of the week because of the signing on Monday of the peace pact between the Vatican and the Italian state. There were imposing ceremonies, gay celebrations and exchanges of rich gifts and decorations. The general feeling throughout the world is that Premier Mussolini scored a great triumph in the negotiation of the treaty, settling an old and troublesome dispute with little expense to Italy.

DISCARD AMBER TRAFFIC LIGHT

Red and Green Alone Accomplish Desired Results.

The amber traffic light, designed to increase safety of pedestrians and prevent intersection collisions, is fast being forced into the discard.

While traffic experts are still at odds as to the value of the amber light in combination with red and green lights, there is a widespread movement to discard the "warning" or "get ready" signal because drivers misinterpret its meaning.

New York, Buffalo, Albany, and dozens of smaller cities throughout the country have adopted a system of red and green traffic lights, omitting the yellow light, and have reported their success.

Most cities still use the three-color lights, but there is a widespread difference in the combinations used and the interpretation placed upon the center light.

The experts agree that if the yellow or amber light is used mainly as a warning of a change it should be discarded. There is a tendency for traffic to start while the yellow light is showing, which is undesirable. Many of the experts say that the red and green alone accomplish the desired result with less confusion.

That there are wide differences in interpretation of the amber light's meaning is shown by a study just completed by the American engineering council. Twenty-six cities using the three-color traffic signal interpret the amber as a caution signal; 27 use it as a warning of change; 17 to clear the intersection of traffic and 11 for pedestrian movement.

Eighty-five cities are using the three-color signal system, of which 76 use the amber after red and green. Eight have recognized the undesirability of using it after the red, and consequently use it only after the green is flashed. Eighteen cities use the amber in combination with the red or green.

The experts agree that use of the amber in combination with red, as is the custom in Washington and several other large cities, should not be continued. The amber light in such cases is taken as a signal to start.

Most of the men who have studied the problem see some merit in the use of amber with the green light, because it should bring moving traffic to a halt in preparation for a change. The exponents of the two-color system, red and green only, say that the desired result can be obtained without the amber light.

Three cities have inaugurated systems of only red and green lights, but provide a period of darkness to clear the intersection for the change. Nine have overlapped the red and green in all directions.

Working on the information that persons who are to some extent color-blind constitute 5 per cent of the population, the bureau of standards has selected colors which are disinguishable to most if not all persons having defective color vision.

Chicago Man Using Home on Wheels to Travel

F. H. Buzzacot, aged sixty-nine, of Chicago, has completed a cruiser car which he believes is unique among vehicles used in overland travel. The car is 20 feet long and 8 feet high from the ground. It has sleeping accommodations for four people, front and rear observations, radio, kitchenette, shower bath, and other conveniences. He plans to travel abroad in the car until 1933, when he will return to Chicago to exhibit it at the World's fair.

Horn Blowing Irritates and Also Meaningless

Only the thoughtless motorist blows his horn when his car is in a traffic jam, according to President Charles M. Hayes of the Chicago Motor club, who pointed out that horn blowing under these conditions is useless and meaningless.

Such a practice hinders rather than helps, Mr. Hayes declared. It irritates the nerves of the man in front and of the traffic policeman on duty; it doesn't clear the jam; it frequently angers all concerned and further delays the movement of traffic, Mr. Hayes asserted.

The proper place to make liberal use of the horn, according to Mr. Hayes, is when driving on curves; on mountain roads or when approaching blind intersections on country roads. In such places the motorist who has the horn-blowing habit may indulge to his heart's content with a resultant reduction of the accident hazard.

Clogged Exhaust Pipes Easily Scraped Clean

Cleaning out an automobile exhaust pipe from end to end, removing all the carbon, can be readily done by means of the device shown in the picture. A strip of sheet iron is bent to a U-shape, the free ends being curved to fit the inside of the pipe. Holes drilled through the scraper, near the bend, provide for tying it

Simple Device for Scraping Carbon From Exhaust Pipes.

securely in the center of a length of rope as indicated, the ends of the rope being fastened to suitable supports. In use, the exhaust pipe is slipped over the rope and the scraper, and by moving the pipe back and forth, the carbon will be removed in a short time.—G. A. Luers, Washington, District of Columbia, in Popular Science Magazine.

AUTOMOBILE FACTS

A campaign has been started in Illinois for a state drivers' license.

* * *

The most dangerous part of a car is often the nut that holds the steering wheel.

* * *

It might have a suggestive salutary effect to make steering-wheels in the form of a harp.

* * *

Among the distances shortened by the automobile is the one between the introduction and the altar.

* * *

According to rubber companies, the average tire expense per car is now less than any other item required by a motor vehicle.

* * *

A new French eight-cylinder car is equipped with eight small neon tubes mounted on the dashboard. If a spark plug fails to function properly, it is noted by the failure of one of the tubes to glow when the switch is turned on.

NEW OFFICIAL LICENSE PLATE DISPLAYED

With the return of President-Elect Herbert Hoover to Washington, a new official license plate was displayed for the first time by the powerful motor car carrying heavily armed secret service guards which convoys Mr. Hoover's car about the streets.

Photograph shows the convoy car and its distinctive U S S S (United States Secret Service) plates standing at the door of Mr. Hoover's office in Washington.

Are You Ready

When your Children Cough for It

Baby has little upsets at times your care cannot prevent them. But can be prepared. Then you can do any experienced nurse would do—most physicians would tell you to give a few drops of plain Castoria sooner done than Baby is soothed lief is just a matter of moments you have eased your child without of a single doubtful drug; Castoria vegetable. So it's safe to use as as an infant has any little pain cannot pat away. And it's also ready for the crueler pangs of colic constipation or diarrhea; effective for older children. *Twenty-five million bottles were bought last year.*

Fletcher's CASTORIA

K·R·O Kills Rats Only

This new powder kills rats and mice but nothing else

Get rid of rats without danger to your children, livestock, pets or poultry

Think what this means to you!

K-R-O may be used freely in the home or poultry house with absolute safety. Rigid tests have proved that it kills rats and mice every time but other animals and poultry not injured by the largest doses.

Not a Poison

K-R-O does not contain arsenic, phosphorus or barium carbonate. Made of squill by a new safe way urged by government experts. At your druggist, 75c. Large size (4 times as much) $2.00. Or sent direct from us prepaid if he cannot supply you. *Satisfaction guaranteed.* K-R-O Company, Springfield, Ohio.

Clears out cold in head or chest

A home remedy of tested and tried ingredients, safe, dependable.

HALE'S HONEY OF HOREHOUND AND TAR

30c at all druggists

For aching teeth use Pike's Toothache Drops

God gives all things to industry.

Attend the Party In Spite of Colds

Don't despair some day your social calendar is full, and you awake with a miserable cold. Be rid of it by midnight. You can, if you know the secret. Pape's Cold Compound soon settles that cold, yes, even one that has reached deep in the throat or lungs.—Adv.

Keep busy and avoid the blues.

A WOMAN'S HEAD is level and judgment is when she has her faith in Dr Pierce's vorite Prescription. There no beauty without health. Nor expects to come beautiful by the use of complexion beautifiers. Bright eyes, skin, and rosy cheeks, follow the use of the "Prescription." All dealers

Every woman requires a tonic nervine at some period of her life. Whether suffering from nervousness, dizziness, faintness or general debility, the "Prescription" benefits.

Mrs. Annie Anderson of 522 W. Main St., Ottumwa, Iowa, said:—"Dr. Pierce's Favorite Prescription was a blessing to me at a time in life. It relieved me of the various ailments which came upon me at that time. It deserves much praise."

A MOTHER'S PROBLEM

Is, how to treat her child who is peevish and fretty, yet not seriously sick. Many Mothers say they always keep a package of Mother Gray's Sweet Powders on hand for use when needed. They break up colds, relieve feverishness, wind, constipation, headache, teething disorders and stomach troubles and act as a tonic to the whole system. Equally good for children people. Sold by Druggists everywhere.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

"COME IN, THE WATER'S FINE!"

IN A certain part of Africa there is a tribe of natives that makes a fetish of dirt. Water to them is an abomination except for internal use. It is not a pretty tribe to look at. And while it is a far cry from those denizens of darkest Africa to the sleek cleanliness of today's highly groomed civilization, yet the fact remains that in this richest country on earth automobiles are owned by a greater number of people than are bathtubs. What do you think of that?

It goes without saying that you likely own both a car and a tub, but if perchance your ownership is limited to the former, drive around to the nearest used car establishment and cash it in. You need water on your skin regularly; and the other fellow's car is still left for you to enjoy!

There are baths and baths—salt baths, vapor baths, electric baths, sulphur baths, steam baths and so on. There is almost any kind of a bath to appeal to your particular fancy. But the point to be emphasized in this connection is that the plain, common or garden variety of water bath is all most folks need. The fancy ones should be taken only upon the advice of a physician who can note the reactions and thus follow the good or ill effects derived from them.

There is sufficient variety in the water bath to make it interesting. Consider, for example, the cool or the cold shower. Taken in the morning, it is a great bracer. It also tones up the skin, thus developing a natural resistance to insidious drafts or other exposures that result in colds. A note of warning, however. Neither this type of bath nor the cold plunge should be taken without the consent of your physician. He can scientifically interpret your reactions to this Spartan treatment. If left to their own judgment many people can be harmed by it.

A warm cleasing bath should be taken three times a week. Many scrupulous people insist upon one a day. For this rite, bed time is the ideal hour. The water temperature should be between 95 and 97 degrees. Very hot baths taken occasionally are good for some but by no means for all. Care must be exercised so that cold does not result from this practice, even though one jumps right into bed immediately thereafter. If exhaustion follows the practice, then avoid it by all means.

Health demands a clean body—inside as well as out. Drink plenty of water and keep your "pipes" in condition. Nothing is more conducive to a sense of mental and physical well being than a properly and carefully bathed body. So," come in, the water's fine!"

* * *

THE GREAT RESTORER

IF FOOD is the one thing that most people overdo, sleep is the one thing that is underdone. Both practices are bad and tend to shorten life.

Sleep starvation is almost epidemic. The fact that there is too much to do in a day and that people insist upon doing it, accounts for this sad state of affairs. Minor laws of nature can frequently be disregarded with apparently little suffering but with sleep the matter is entirely different. It is one of the cardinals. It is one of life's big league players. In truth it is the very keystone of long and healthy life.

What many fail to appreciate is that the body was made long before the movies, radio, all night dances and midnight cabarets. No greater or more senseless egotism exists than the idea that because of man's superiority he can positively disregard the fundamental laws of nature and suffer no harm because of it.

Airplanes, skyscrapers, wireless and all the wonders of the machine age place man upon the high pedestal of marvelous achievement. But with all his intelligence, his remarkable strides and amazing inventions, the human body remains the same old model as in the year one.

[illegible] perhaps is not comforting to our [illegible] but the fact remains that when [illegible] to our bodies we are practically bound down by the same rules [illegible] cats, dogs, horses, cows and animals. And if we break the requirements we break our-

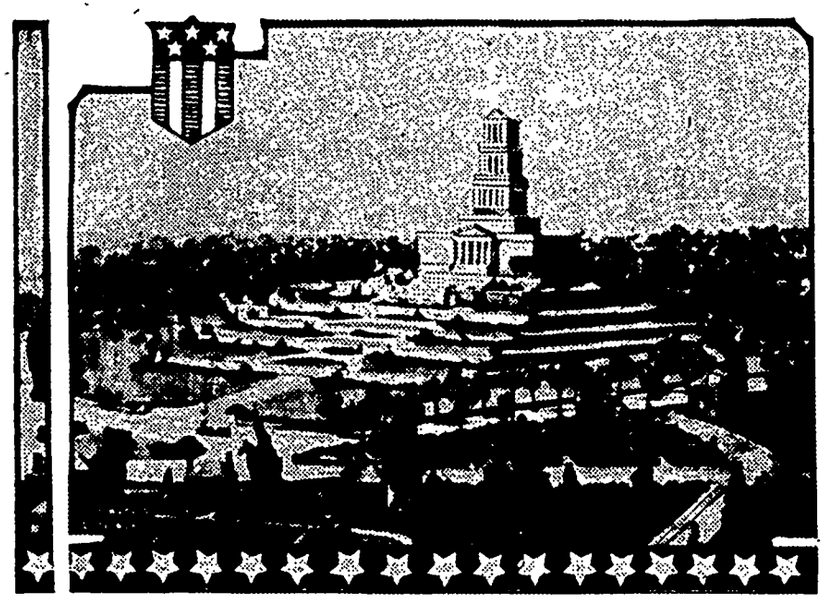
[illegible] is a miracle. Sleep mysteriously revives the cells and body tissues. Eight hours sleep out of the twenty-four is an absolute necessity for the vast majority of people. It is sleep to be despotic. Give it the eight hours due each and every night, long life and abundant health will certainly pass you by unless you obey this injunction.

(©, 1929, Western Newspaper Union.)

Drastic English Law

"An act of pains and penalties" is a form of legislation passed in England providing for the imposition of punishment without trial upon anyone suspected guilty of treason or similar high crimes. No capital punishment, however, can be imposed under such a statute. In the United States such legislation never has been enacted, nor ever could be, since there is a constitutional clause forbidding the passage of attainder.

Great Masonic Testimonial



Rising on the heights overlooking Alexandria, Va., only six miles from Washington, is a $4,000,000 memorial to George Washington, testimonial of the Masonic fraternity to a noted fellow member. The tiered temple is surrounded by 35 acres of land and surmounts the uppermost of seven terraces. The building will stand 235 feet high. The main building is 177½ feet wide by 195½ feet long. New Hampshire pink granite predominates in the construction. The foundation contains 9,000 cubic feet of concrete reinforced by 720 tons of steel. When completed the memorial will be visible for many miles. The land on which it stands was owned by the Father of His Country and was once selected by Jefferson and Madison and favored by John Adams as the site for the national capital.

Hailed as First Military Genius

Historians seem to have acknowledged that nothing new can be said on Washington's character, statesmanship or patriotism. Nothing old can be said on these subjects with much chance of being better phrased than Byron's immortal summary of him:

The first, the last, the best,
The Cincinnatus of the West,
Whom envy dared not hate;

or Kipling's more detailed presentment in "If." But in spite of all that has been written on the man, few students have taken Washington's full measure as a soldier, and fewer still realize how far he prefigured the scientific and industrial age in which we are living today.

The average person thinks of a great general as one who commands a great army. It would be possible to get farther from the truth than that, but not without prolonged effort. There is a point at which the mere size of an army taxes the genius of its commander; but that point was not reached until the Twentieth century. Judged by the real test, that of achievement in proportion to means and obstacles, Washington is one of the four or five greatest commanders produced by the English-speaking race; probably the greatest.

Greatly Handicapped.

Consider his difficulties. To begin with, he was serving a revolutionary committee, not a real government; and was not backed by any of the governmental powers which supported European commanders. The congress of that day could not levy taxes, could not enforce conscription, could not pay its men or provide supplies. The men were enlisted for varying terms, almost always for short terms. The officers had little training. The different colonies were unaccustomed to act together. There was only the beginning of a national feeling and national consciousness, and the British, whatever their weaknesses, had splendidly disciplined troops and held the sea.

Yet, in the face of obstacles like these, Washington kept an army together and made headway against the enemy until he could deal the finishing blow at Yorktown. The skill with which he nailed Clinton to New York while the Continental army was making its 400-mile march to catch Cornwallis at Yorktown is fully equal to that by which Napoleon caught General Mack asleep at Ulm.

No Errors Mar Record.

On one point of military genius, indeed, Washington is superior even to the Corsican Caesar, who in all things else ranks at the head of the martial world. No man can put his fingers on any point in Washington's campaigns and say: "Here this man made a serious mistake." The soundness of his judgment was almost uncanny.

Perhaps this judgment was due in some measure to the scientific quality of his mind. His approach to science was more practical than that of Franklin, but equally zealous. Washington conducted experiment after experiment in drainage, crop rotation, different methods of fertilizing. His notes on these matters are worthy of attention from agricultural colleges today. He berated Virginia's dependence on tobacco as bitterly as, more than a century later, statesmen lashed the dependence of the Gulf states on cotton.

Always seeking better and more economical methods of production, always trying to utilize by-products, always ready for a "flyer" in land, which was the Eighteenth century substitute for industrial promotion, Washington was startlingly modern in many aspects of his mind. Where this modernism falls, it might pay us to get closer to the Washingtonian viewpoint even at the cost of being somewhat old fashioned.

George Washington, who is well known to be first in war, first in peace, may also be described as first in the ranks of American road builders. In his trips to the frontier he not only surveyed the courses, later to be followed by roads, but he actually cut his way through the forested hills and mountains to western Virginia and Pennsylvania.

Washington as a Mason

George Washington joined Fredericksburg lodge, No. 4, Fredericksburg, Va., in 1752. Dual or plural membership was common in old lodges at that time as it is today in some British lodges. Washington was also a member of Alexandria lodge No. 39, which was chartered by the Grand lodge of Pennsylvania but transferred to the jurisdiction of Virginia in 1788. George Washington is named as the first worshipful master of this lodge under the new charter.

Project That Failed

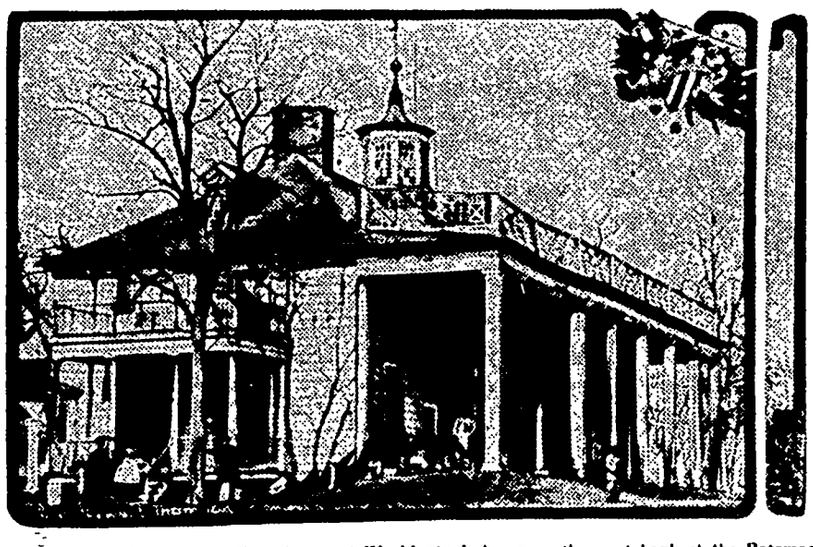
George Washington, in his will, created a fund to establish a university. Shares of the James River and Potomac River Canal company, with a par value of upward of $200,000, had been bestowed upon him by the legislature of Virginia, to be held for public uses, and this sum, he believed, would form a beginning for a national university in the national capital. His wish has not been fulfilled, however, as the securities set aside for the purpose greatly depreciated in value.

Ranks With Noblest

Thoroughly human, absolutely fearless, conqueror of himself, we may put George Washington's record under the microscope of criticism and yet say, with the English historian: "No nobler figure ever stood in the forefront of a nation's history."

Washington—a fixed star in the firmament of great names, shining without twinkling or obscuration, with clear, beneficent light.—Daniel Webster.

Mount Vernon as It Was in 1858



Of unusual interest is this picture of Washington's home on the west bank of the Potomac river at Mount Vernon in Fairfax county, Va., as it looked in 1858 when it was bought by the Ladies' Mount Vernon association. Slaves owned by the Washington family are seen on the veranda. After 115 years of use (home having been built by Lawrence Washington, George Washington's grandfather, in 1743) the Washington mansion even in 1858, when this picture was made, was badly in need of repairs.

Around Orchard

POLLINATION IS NEED OF APPLES

Scarcity of Bees in Orchards Affects Size of Crop.

Lack of pollination is one of the causes of the failure of apple trees to set fruit following a heavy bloom, and is largely responsible for the light set of some varieties in western New York.

Investigations carried on in that section and in Ithaca by the Cornell university experiment station, show that the problem of pollination of apple blossom in the state is becoming increasingly important. Professor MacDaniels attributes this to the shift from mixed plantings of many varieties to solid blocks of fewer varieties, and the popularity of the variety McIntosh, which almost always fails to set a full crop unless cross pollinated. Rhode Island Greening, Cortland, and Northern Spy are in the same class, but Baldwin, Wealthy, and Oldenburg are more likely to hold their crop if poorly pollinated, and nearly always bear if the trees bloom, although the set of fruit is better when the blossoms are cross pollinated.

The present scarcity of pollen carriers, especially bees, has also contributed toward the failure of fruit to set. Bumblebees have largely disappeared, cutting woodlands has deprived wild bees of a home, and fewer farmers keep bees.

Pruned and Sprayed Tree Will Produce Good Fruit

A well-pruned tree if not sprayed may not produce any perfect fruit. An unpruned tree fairly well sprayed will produce a high percentage of good fruit. A well-pruned, sprayed tree will produce the maximum of good fruit, says the Iowa Homestead. In an orchard located a few miles east of Des Moines, that has been pruned, sprayed and cultivated, only one crop has been lost since 1920 and that was due to a late freeze. This orchard was sprayed seven times last season. The crop ran 98 per cent clean in a yield of nearly 10,000 bushels. Most of the fruit was sold at the orchard at from $2 to $3 a bushel. Later some of the Delicious sold as high as $5 a bushel.

To get the above results, the owner did a thorough job of spraying. This year owners of farm orchards should plan to put on not less than four applications.

Rabbits Acquire Taste for Bark of Apple Tree

Certain rabbits seem to acquire a taste for apple bark which is insatiable. Why this is so no one seems to know. Perhaps it becomes a habit, like chewing tobacco, or perhaps they do it for health's sake, like eating bran flakes. At any rate we have had trees injured by rabbits in midsummer on several occasions, and once a number of young trees were destroyed by rabbits in August, with knee-deep alfalfa growing between the trees, says the Rural New Yorker. A veritable rabbit-heaven round about, and yet they went for the trees! Somehow this is one of the things which try a fruit man's soul; a last straw, as it were.

Reduce Visible Supply of Rabbits by Shotgun

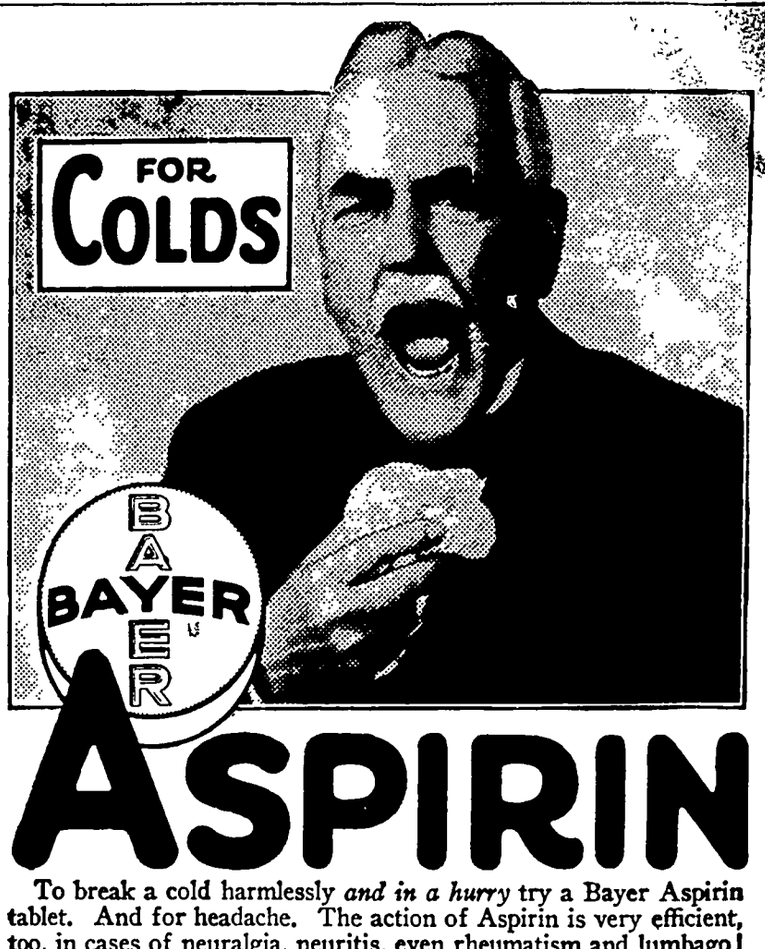
The ferret and shotgun method is undoubtedly one of the best methods for reducing the visible supply of rabbits, such as poisoning and gassing, but we are not recommending them because our knowledge of the game laws is rather hazy on that point, says the Rural New Yorker. We must always remember that the rabbit is one of our sacred, or game, animals which are carefully conserved, for special slaughter, by the high priests of sport. These animals live and eat on our land and sometimes they destroy our crops, but they do not belong to us.

Everbearing Strawberry Most Delicious Variety

Everbearing strawberries have other good points than supplying our tables with their delicious fruit after the main strawberry is done. The two leading varieties of everbearers, Progressive and Superb, are very hardy, and exceptionally resistant to leaf spot diseases. The Progressive stands middle western winters better than almost any other sort, except the Dunlap, which is one of its parents. Another strong point in favor of everbearers is that if frost kills the bloom, they soon flower again. This makes them especially valuable in regions subject to late spring frosts.

Avoid Cheap Trees

It is not good economy to buy runty and weak fruit trees just because you may think they are cheap. You should not try to fool yourself into thinking that you can mother along the little weakling trees that were cheap, and develop them into trees as good as the larger, stronger, and more vigorous ones that cost a little more. No orchard can ever be much better than the trees it had to begin with when the orchard was set. A strong, vigorous tree is always best.



To break a cold harmlessly *and in a hurry* try a Bayer Aspirin tablet. And for headache. The action of Aspirin is very efficient, too, in cases of neuralgia, neuritis, even rheumatism and lumbago! And there's no after effect; doctors give Aspirin to children—often infants. Whenever there's pain, think of Aspirin. The genuine Bayer Aspirin has Bayer on the box and on every tablet. All druggists, with proven directions.

Physicians prescribe Bayer Aspirin; it does NOT affect the heart

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Old Reliables

"There are several things I can always count on."

"What are they?"

"My fingers."

Seems to Be Misnamed

Why is a man called noble? His natural inclination is to break the laws of nature and nation, says the Atchison Globe.

That Million-Dollar Feeling

"Bill, you're playing like a champion."
"Always do, the day after I take NR.
Makes a fellow feel like a million."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

Furniture Talk--

Deep snow, drifting winds and zero weather did not keep all of the Buyers away from our Furniture Sale of last week. We did a very satisfactory business. Our advertising expense and our operating expense is low, and our plan is to give the difference to our Customrs in Lower Prices on Furniture—which I am sure all who came to this sale did appreciate.

40 Miles is a long ways to come to buy Furniture. A young couple from near Lu Verne bought a nice order from us. They said Harry Bonwell was their mail carrier and that he had ecommended our store to them. (Thanks very much Harry for your loyalty to your Klemme friends.)

We have many Good Customers in and around Thornton, but nary a one got here for the February Sale, but then, our Thornton friends have no airplanes and there was no other way to get over the mountain range of snow drifts between here and there; ever the Clear Lake-Thornton Highway was closed most of the time.

But listen folks: We are buying heavy right now on Furniture, Rugs and Linoleum and early in April we plan to give you a big sale and very special prices on these items, just when your hens are laying best and just when you need the furniture and rugs for House Cleaning.

Wellemeyer Co.

A WORTHY EXAMPLE FOR ALL TO FOLLOW

Washington set an example in thrift that we all should follow. Thrift was not always a matter of necessity with him, but he was farsighted enough to realize its benefits to himself and to his followers, hence he practiced it regularly. Start a thrift account with this bank, today, in his honor.

The First National Bank

THE KLEMME TIMES

VOLUME 33.—NO. 39. KLEMME, IOWA, THURSDAY, FEBRUARY 28, 1929. $2.00 Per Year In Advance—Outside of Iowa

DINGS AT SCHOOL THIS PAST WEEK

ONTESTANTS WILL GO TO GARNER FRIDAY EVENING

lemme Basket Ball Team Plays In Sectional Today At Britt

Our Preliminary State Declamatory contest scheduled for Tuesday night at Garner had to be postponed because of the snow blockade. It will be held on Friday night of this week instead. We wish many might go from Klemme and hear our contestants. They will observe a lot of improvement.

Glee Club Awarded 2nd Place

Our girls Glee Club went to Mason City Saturday afternoon and sang here Saturday evening against Plymouth. Sheffield also entered but did not show up and Klemme was awarded second place, Plymouth winning first.

The contest was poorly attended but the work of the musicians deserved a larger crowd than was present. Hampton won in class B both in girls and in boys glee club contests. Mason City, it seemed, won most of the solo contests.

Pedagogs Delayed By Snow

Mr. Lewis and Miss Trumbell were detained in Belmond Monday night where Miss Trumbell had consented to judge a Declamatory Contest. She could not easily refuse since we had judges from Belmond schools for our Sub-County contest here As the roads did not permit the return by auto the Chrysler was left for a few days in Belmond while Mr Lewis and Miss Trumbell made their way back next morning on the Rock Island, arriving after school had been in session an hour or more.

Six Weeks Period Closes

This week marks the close of the first six weeks period of this second semester and next week parents will again be sent reports of pupils' progress and standing. We hope they give them the attention they deserve and where necessary and possible use their influence toward improvement As we have previously stated there should be on the part of many students more home study. Students who do little of it while in high school may find it irksome when compelled to do it at college.

We are pleased to learn of the success of some of our last year's graduates now doing fine work in college. Success in high school usually insures good work elsewhere.

Both Harvey Nelson at Morningside and Gladys Wilson at Drake are doing better than average work.

Basket Ball Team At Britt

Our Basket Ball team took the noon train to Garner, thence on to Britt from Garner on the Milwaukee to attend the sectional tournament at Britt and play Lone Rock at 4:30 this afternoon. If they should win they will play Livermore on Friday afternoon at 4:00 o'clock.

The game which was to have been played on Monday night with Hayfield was cancelled for this year at Hayfield's suggestion because of the snow blockade.

TEN CARS STOCK SHIPPED THE PAST WEEK

Nine Car Loads Shipped From Yards Here Saturday Night

There were a total of ten car loads of live stock shipped from the local stock yards the past week.

Last Wednesday C. A. Larsen had a load of hogs billed for Iowa Falls.

In the Saturday night shipment the Klemme Shiping Association had one car load of hogs billed for the Falls, and two car loads for the Chicago market. They also shipped two car loads of cattle to Chicago.

C. A. Larsen shipped four cars of hogs to Chicago.

C. A. Larsen and John and Ted Albers went into Chicago on the stock train.

OLD LANDMARK AT GARNER IS DESTROYED BY FIRE

Carl Schneider Hardware & Grocery Store Burned Saturday A. M.

Fire completely destroyed the old frame building and nearly all of the contents of the Carl Schneider store at Garner Saturday morning at about 1:30 o'clock. When the fire was first discovered flames were coming from the roof and the store was like a fiery furnace. A dozen stoves was about all of the merchandise which could be saved The loss is placed at $20,000.00 and was well covered with insurance.

So intense was the heat from the burning building that plate glass windows on the other side of the wide Main street were cracked and broken. Nearby buildings were at numerous times afire, but the fire department centered their attention at saving other buildings when it was found the Schneider building was beyond control and losses to other property owners consists only of broken windows, damaged roofs and building sides due to the intense heat

The Schneider store was one of the old landmarks of Garner and many of the old timers traded there when Charlie Schneider was the owner, and sinceh is death, his son Carl, has had charge of the business.

NOTICE OF ANNUAL MEETING

Independent School District Of Klemme, Iowa

Notice is hereby given

to the qualified electors of the Independent District of Klemme, in the County of Hancock, State of Iowa, that the annual meeting of said District will be held at the Town Hall on the second Monday in March, 1929, at 12 o'clock noon and closing at 7:00 o'clock P. M

A Director will be elected for a term of Three years to succeed J N. Day.

A Treasurer will be elected for a term of Two years to succeed F. A. Arnold.

The meeting will be open for the transaction of such business as may legally come before it.

PAUL GRANGE,
Secretary.

Dated February 21, 1929.

METHODIST CHURCH NOTES

H. E. Whyte, Pastor

While the Evangelistic Meetings at the Methodist Church were postponed this week on account of unfavorable weather, we do plan to carry them forward again next week when we hope to have the Rev. J. T. Snyder with us to do the preaching at least part of the time.

The subject for Sunday morning will be "Loosing Jesus Unaware" and for the evening "Performing Miracles out of Ordinary Things." You are cordially invited to attend these services and likewise those thru out the remainder of the week.

There will be no service on Monday evening due to the fact that the sub-district Epworth League Rally which was planned for some weeks ago will be held in Klemme. Our young folks are urged to be out in full force for this rally. A good program and social hour is being planned.

KLEMME REFORMED CHURCH

Calvin Grosshuesch, Pastor

10:00 a. m. English Service.
11:00 a. m. Sunday school.

The Young People's Bible Class has decided on a vacation until road and weather conditions have improved.

The country pupils will meet at 3:00 o'clock Tuesday. All other classes will be held at the regular time.

The choir will meet at 4 o'clock Tuesday afternoon instead of Saturday evening.

BASKET SOCIAL

There will be a Basket Social at Ell No. 4, Friday, March 8th. Everyone is invited to come. Ladies please bring pie or basket. Miss Francis Haberkamp, teacher; Herman Barz. director. 1tc

BRITT HIGH SCHOOL WINS CO. TOURNY

BRITT HIGH AND GRADE TEAMS WN COUNTY TOURNY

Klemme Lost Out In First Round In Game With Garner, 31-17

The Britt high school and grade teams won a grand slam in the annual race for the unty basket ball championship, at Britt Saturday evening. The high school team defeated Kanawha Saturday afternoon in the second round and then came back at night to defeat Corwith who in the afternoon had defeated Garner.

Corwith was held to one field goal and five free throws while Britt piled up 36 points. The Britt grade team defeated Crystal Lake 24-8.

First Round—Grades

Britt 11, Garner 2.
Corwith 10, Hayfield 8.
Crystal Lake 13, Klemme 10.

High School

Garner 31, Klemme 17.
Corwith 27, Hayfield 17.
Kanawha 28, Crystal Lake 21.

Second Round—Grades

Britt 16, Corwith 7.
Crystal Lake, Kanawha, forfeit.

High Schools

Corwith 25, Garner 23
Britt 42, Kanawha 27.

Finals—Grades

Britt 24, Crystal Lake 8.

Finals—High School

Britt 36, Corwith 7.

MILDRED NIEMAN AND CLARENCE TANNER MARRIED

Marriage Ceremony Performed At Garner Saturday Afternoon

At the Methodist parsonage at Garner Saturday afternoon ocurred the marriage of Mr. Clarence Tanner, of west of Klemme, and Miss Mildred Nieman, of near Kanawha. Luther Tanner, brother of Clarence and Miss Margaret Nieman, sister of the bride, were the attendants and the marriage ceremony was performed by Rev. C. H. Van Metre.

The bride is the daughter of Mr. and Mrs. Ben Nieman. She is well versed in the ways of home-keeping and should prove a fine farm wife. Clarence is the oldest son of Mrs. John Tanner and has for the past few years managed the farm. He is a capable young man and already has proven his successa s a farmer. We understud Mrs. Tanner will move to town and the young couple will go to housekeeping on the home place after a honeymoon trip visiting relatives and friends.

The Times extends congratulations!

BOOZE RUNNERS GET HEAVY FINE BEFORE KEPLER

Women Caught With Carload Of Alcohol Try To Bribe Sheriff

Carrie Newberger of Sioux Falls, South Dakota, and Dorothy Brooks of Sioux City, rum runners arrested by Sheriff E. H. Wahlert on the road west of Garner Friday night, were taken before Judge M. H. Kepler at Northwood Saturday and fined the sum of $2,993.00 and costs.

They pleaded guilty to the possession and transporting of 140 gallons of alcohol. The nearly new Olsmobile sedan which they were driving was also confiscated.

One of the women was carrying a gun at the time of the arrest and they offered the sheriff and his deputy, Bruce Orr, a bribe of $540 to be allowed to go unmolested.

When the women returned to Garner after paying their fine they were met by a younger brother of one of the women and driven away in a Cadillac car.

The women were caught when the sheriff acted on a tip and found them stuck with their car in a snow drift west of Garner.

RUTH LENZ AND HAROLD HABERKAMP MARRIED FEB. 20th

Last Wednesday afternoon, February 20th, Miss Ruth Lenz, oldest daughter of Mr. and Mrs. Wes Lenz, and Harold Haberkamp, son of Mr. and Mrs. August Haberkamp were quietly married at the home of the bride's parents, with the Rev. C. A. Schmid, pastor of the Elltown Reformed Church officiating.

For several years the bride has been a successful teacher in the rural schools of this county. She had her training at the Garner high school Later she entered the Iowa State Teachers College. The groom is an industrious young man and is well versed in farming. The newlyweds will later take up housekeeping on the Haberkamp farm, as Mr. and Mrs. Haberkamp are retiring and the young couple will run the farm.

Wednesday evening approximately seventy-five young people gathered at the Lenz home and tendered the young couple a reception. At a late hour delightful refreshments were served

The Times joins in extending congratulations.

MARRIAGE LICENSES ISSUED AT COUNTY CLERK'S OFFICE

The following marriage licenses were issued in Hancock County the past week:-

Harold Haberkamp, Garner, and Ruth Lenz, Garner. Feb. 19, 1929.

Clarence Vern Tanner, Klemme, and Mildred Ruth Neiman, Kanawha. Feb. 23, 1929.

Verle G. Church, Garner, and Regina O'Connell, Charles City. Feb. 23, 1929.

LOUIS SAMPSON DIED WEDNESDAY

FUNERAL SERVICES WILL BE HELD HERE SUNDAY

Had Been A Resident Here Many Years

After several months illness Mr Louis Sampson passed away early Wednesday morning at the home of his daughter, Mrs. Levi Klotzbach.

Mr. Sampson had lived in Hancock County the greater part of his life and was truly one of the early pioneers, for he came to this county with his parents in 1852 or '53.

Deceased was born July 9th, 1852 in Ohio and at the age of six months came with his parents by steamer to Guttenberg, Iowa. Soon after the family moved to Hancock County.

On January 9th, 1880 he was united in marriage with Miss Mary George of Germana township (now Liberty) and they took up the task of farming on a farm four and one-half miles southwest of Klemme and resided there for twenty-seven years. Mr. and Mrs. Sampson were blessed with eight children. Four sons preceeded the parents in death, two in infancy. Fred died 18 years ago at the age of 21 years; and Clarence passed away sixteen years ago at the age of 27 and is survived by a wife and children of St. Paul.

The daughters are Mrs. Lydia Lenz, of Spooner, Wis., Mrs. Esther Klotzbach, Klemme, and Mrs. Florence Smith and Mrs. Viola Belstner both of Fort Atkinson, Wis. Seventeen grandchildren and one great-grandchild also survive Mr. Sampson.

In 1908 Mr. and Mrs. Sampson moved to Klemme and resided in the northeast part of town. For a number of years Mr. Sampsom held the office of Assessor for Klemme and was also employed in the Hocum elevator. Mr. and Mrs. Sampson resided in their own home until a couple of years ago, when on account of advanced years and feebleness they came to live at the home of their daughter, Mrs. Klotzbach. Soon after Mrs. Sampson became ill and passed away.

Funeral services will be held on Sunday afternoon at the Methodist church with Rev. Whyte in charge.

LAST SNO WSTORM WAS REAL OLD TIMER

Roads Entirely Blocked After Snow Storm Tuesday Morning

Monday night and Tuesday morning the heaviest single sno wstorm of the season put a finishing touch on our severe winter that makes even the old timers scratch to think up a wilder tale of how it used to be way back in—.

According to official reports 12 inches of snow fell and made the total level pile up to 27 inches.

This snow storm drifted the roads shut so tight that at this writing the highways are still blocked in most places over north Iowa.

Wednesday there was not even a sled track on the Wilson between Klemme and the Elltown church. Aaron Greiman came in from the farm on snow shoes and reports the above.

Many roads were even impassible with teams and bob sleds. Summer Trumbell road a horse on his mail route and even then could not get through some roads.

Dr. Anderson has been making a number of calls on horse back the past few days.

There are snow drifts in Klemme of rare height. One drift at the Northern Lbr. Co. comes up to the roof of the office; another at the rear of the Ford garage is just as high.

Trains are running many hours late.

This is one winter which will be long remembered.

SURPRISE CELEBRATION ON MR. AND MRS. HENRY JOSTEN

Relatives Stage Dinner, Friends And Neighbors Gather In Evening

On the 24th day of February 1904 Mr. Henry Josten and Miss Bertha Priebe were united in marriage by the Rev. Albert Muehlmeier at the Reformed Church of Klemme, Iowa.

On the 24th day of February, 1929 —twenty-five years later, relatives gathered at the Josten home to celebrate the Silver Wedding Anniversary of this wedding day.

Plans for the celebration were made without the knowledge of the couple and the event came as a complete surprise to them. A fine dinner, which the guests had prepared was served at noon. After an enjoyable afternoon luncheon was served and a gift of silver coins was presented to Mr. and Mrs. Henry Josten, the guests departed, first making arrangements for another celebration 25 years hence.

The sleigh rides to and from the celebration will long be remombered by all the guests.

The following families were present: Julius Priebe and family; Herman Priebe and family; Mr. and Mrs. John Josten; Erick Josten, Peter Josten and family; George Thieman, Mr. and Mrs. Geo. Bona, and Calvin Grosshuesch and family.

Celebrate In Evening

Another surprise celebration was staged in the evening when neighbors and friends, numbering about thirty people, came to the Josten home with baskets well laden with sandwiches, cake and ice cream.

After a most enjoyable evening was spent in visiting and recalling old times a delicious lunch consisting of coffee, sandwiches, ice cream and cake was served.

Those who were present in the evening were Louis Newberger and family; Chris Back and family; W. H. Jurgemeyer and family; Mr. and Mrs. Ernest Helps; Aug. Baack and family; Fred Walker and family; Erwin Smith and family; and Alfred Josten and family.

The Times extends congratulations to Mr. and Mrs. Josten.

KLEMME SPORTSMEN LIBERAL WITH DONTAIONS

Appeal For Help To Protect Fish At East Twin Is Successful

The sportsmen and fishermen of Klemme and vicinity responded liberally to the appeal for funds with which to carry on pumping at East Twin Lake to save the fish there from smothering under the ice.

Here's the list of good sports who "came across" with donations:-

J. C. Thomas, R. A. Jorgenson, P. W. Johnson, Conrad Quandt, Lt. George Zinn, Martin Brinkman, L. O. Deal, Emil Barz, Clarence Waterman, George Carson, H. Lau Sons, William Lau, J. E. Stille, Rev. H. E. Whyte, Wm. Wenz, Sanford Knutson, William Kirkwood, Paul Grange Chris Gram, John Suckow, Roland Runge, Paul Muller, Arley Blickenderfer, Pete Moulton, Dr. W. F. Misman, Lloyd Carpenter, George Lawhorn, Ed. Jacobs, Frank Terhuren, Arthur Wellemeyer, Erick Josten and Milvern Lau.

There are perhaps a number who were not called upon and those who wish may leave check at Times office and any money received will be forwarded to W. F. Butts, secretary of the Association at Goodell.

The Times Office has turned over $21.60 and we have another check on hand for $1.00, and 50 cents yet due.

The Association wishes to thank all you men for your prompt and needed financial aid.

NEWS REVIEW OF CURRENT EVENTS

Cruiser Bill Fight Nears the End; Supply Measures for Army and Navy.

By EDWARD W. PICKARD

BROUGHT to time by threats of night sessions made by Senator Hale, chairman of the naval affairs committee, the senators opposing the fifteen cruiser bill abandoned their filibuster tactics and consented to limitation of debate on the measure. This was to take effect at noon on February 4 and the prospect was that a vote would be reached by the middle of the week. If the pacifists succeed in attaching amendments to the house bill making necessary the appointment of a conference committee, there might be a final filibuster against the conference report. One amendment was favored by President Coolidge—the *elimination of the clause fixing dates* for commencement of the construction of the cruisers. It was made known at the White House that if the bill passed even without the time clause, the President will ask for an appropriation for an immediate start in the building program.

Representative Britten of Illinois, urging passage of the bill, said early in the week that he was "sure the time limit will be pleasing to President-Elect Hoover." But that gentleman immediately telegraphed to President Coolidge that he had made no public or private statement upon this question, and added: "As you know, I warmly support your views and you may so inform others if you wish to do so." This telegram was handed to Senator Hale, who read it to the senate, and at the same time he read a message from Paul V. McNutt, national commander of the American Legion, urging passage of the bill with the time clause, on behalf of the Legion.

Senators Borah and Walsh both spoke in favor of elimination of the time clause, arguing that such action was proper as a preliminary to another disarmament proposal. Senator Reed of Missouri, who retires to private life on March 4, delivered what will be one of his last speeches, exercising his great powers of ridicule and sarcasm against the pacifists and arguing strongly for preparedness.

RESPONDING to the appeals of Secretary of the Navy Wilbur, the appropriations committee of the house reported a naval supply bill calling for approximately $351,000,000 and providing funds for the addition of 500 enlisted men to the naval establishment. This would bring the navy personnel up to 84,500. The recommendations of the budget being thus exceeded, the committee, in order to make up the deficit, advised the decommission of older ships and the transfer of their crews to newer vessels. The bill's total is about $15,000,000 less than was appropriated for the current fiscal year and $70,000,000 less than the estimates submitted to Secretary Wilbur by the heads of the naval bureaus.

The War department supply bill, which had been passed by the house, was reported to the senate by its appropriations committee with an addition of $5,000,000, for purely military activities, made to the $447,000,000 total of the house measure. Of the funds added by the senate committee, approximately $3,000,000 will go for the purchase of new bombing, pursuit and training planes for the air corps, $626,000 for the National Guard maintenance, new construction and an increase in the ration allowance, and approximately $1,000,000 will be turned over to the organized reserves.

Other senate changes included the addition of two items providing $81,000 for forage for 1,000 horses owned by army officers and $82,500 for the purchase of 500 additional horses for the cavalry, engineers and artillery. Both items were approved by the budget, but had been stricken out by the house.

PRESIDENT COOLIDGE, delivering his farewell address at the semi-annual meeting of the business organization of the government, dwelt upon the extraordinary prosperity which the nation is enjoying, but warned the country that this can be continued only by the exercise of rigid economy in federal, state and local expenditures. While admitting that as a result of the expansion of the country federal expenditures show a tendency to rise, Mr. Coolidge warned that the greatest menace to continued prosperity now lies in the rapidly mounting costs of local and state governments. This heavy drain on the earnings of the people, he said, "is a red flag warning us of the danger of depression and a repetition of the disaster that overtook the country in the closing days of 1920."

The President warmly defended his policy of drastic economy in federal expenditures, and was seconded in this by Director of the Budget Lord.

RECEIVING few political visitors and devoting part of each week to fishing, Herbert Hoover is having a fine time down in Florida. Most interesting of his callers last week was Al Smith, who was stopping in Coral Gables. With John J. Rascob and W. F. Kenney, the recent Democratic standard bearer drove over to Belle Island and spent half an hour chatting with the man who defeated him. Later he said to the newspaper men: "I found Mr. Hoover very friendly and affable. We told each other some of the funny things that happened during the campaign to each of us, but did not talk of anything important. I can't go into that any more."

Thursday Mr. Hoover, still eager to catch a sailfish, went to Long Key on the yacht Saunterer. His guests were Justice and Mrs. Harlan F. Stone, Verne Marshall of Cedar Rapids, Iowa, and Mr. and Mrs. Mark Sullivan.

Correspondents at Miami Beach now believe that Mr. Hoover has decided on his cabinet but will not announce his selections until immediately after his inauguration. They are satisfied that neither Ambassador Morrow nor Ambassador Fletcher will be secretary of state. There was a report that that portfolio or the attorney generalship might be offered to Thomas Nelson Perkins, the Boston lawyer who is one of the American alternates in the reparations conference of experts. It was believed Mr. Hoover wanted a New Englander in the cabinet.

Mr. Coolidge also was in Florida last week, but only for a brief period. Accompanied by Mrs. Coolidge and a few others, he ran down to Mountain Lake and on Friday delivered an address at the dedication of the bird sanctuary and singing tower established by Edward W. Bok. After a dinner and brief rest at Mr. Bok's home, the party returned to Washington, arriving Saturday evening.

FOR the time being Gen. Bramwell Booth is winner in his fight to retain his personal control of the Salvation Army. But the high council hasn't given up yet. The chancery court in London decided that the council's action ousting the aged general was void because the commander's legal representatives were not permitted to plead his cause before the council voted against him. Therefore the council had to start its proceedings all over again. One of the leading members said that the position of the reform element had been consolidated by the legal proceedings, and that there was no doubt the council would reiterate its previous decision and proceed to elect a new general without further parley. It was said the outstanding candidate for the position was Evangeline Booth, sister of the general and commander of the Army in the United States.

UNDER proclamation by the Nationalist government all China celebrated "Customs Autonomy day" on Friday because Japan, the last of the powers to hold out, has finally recognized the new Chinese tariff and thus admitted China has the right to regulate its own customs rates. As the proclamation says, China "is at last able to throw off the economic yoke imposed eighty years ago by European imperialists."

The proclamation points out the benefits expected to accrue to China as the result of customs autonomy, the first of which is the enhancement of China's position in the family of nations. Second, it opens a new chapter in China's foreign diplomatic relations; third, marks the downfall of foreign imperialists, and fourth, opens the way to Chinese national economic development, enabling China to enter the world's markets on an equal footing. Lastly, the change is declared to mark the definite passing of unequal treaties, including the abolition of extraterritoriality, the rendition of foreign concessions, as well as the termination of foreigners' rights to navigation in Chinese inland waterways.

SPAIN had another of her abortive rebellions last week. In Ciudad Real, a hundred miles south of Madrid, a body of artillery revolted and ran their guns out into the streets ready to shoot up the city; and in some other places there were incipient uprisings. The government troops were sent into action promptly, and promises of immunity to all privates and noncommissioned officers induced the mutineers to return to their barracks. Their officers were all arrested for trial by court-martial, and Sanchez Guerra, former Conservative party leader, was seized at Valencia.

WALDEMARES, dictator of Lithuania, said he had uncovered a plot against his regime by men who were acting with the knowledge of President Smetona, and he caused the arrest of the chief of staff of the army and eighteen high officers of the Kovno garrison. The dictator's opponents declare he has been supporting the Soviet policies against Poland.

LEON TROTZKY, that thorn in the side of the Russian Soviet government which he helped to create, has reaped the reward for his continuous plotting against it. He was taken from his place of involuntary retirement in southeastern Russia and doomed to exile. At first no country could be found that would receive him, but finally Turkey consented to let him be sent there. So he, at latest reports, was on his way to Angora. His friends, in Berlin and elsewhere, believed he would be assassinated on the way, and there was a rumor that the murder already had been committed.

IN THE case of Glen Jennings, coast guard charged with the fatal shooting of J. D. Hanson, secretary of the Niagara Falls lodge of Elks, the jury could not agree on a verdict and was discharged. Jennings will be tried again, probably in May. The jury deliberated for twenty hours and at one time stood 11 to 1 for conviction.

ELINOR SMITH, the "flying flapper" who is only seventeen years old, went up from Mitchel field in an open cockpit plane in extremely cold weather and established an endurance record for women of 13 hours. 16 minutes and 45 seconds. This broke by one hour, 5 minutes and 45 seconds the record made recently by Miss Bobby Trout of California.

OSCAR UNDERWOOD, former United States senator from Alabama and for years one of the ablest leaders of the Democratic party, who died at his country home in Woodlawn, Va., was buried at Birmingham, Ala., with simple but impressive rites. Mr. Underwood was the last survivor of the big figures of the Democratic convention of 1912 at Baltimore. In that convention and again in 1924 in New York he was an active candidate for the Presidential nomination. His service in congress was long and distinguished. He retired voluntarily from the senate in 1927.

Ogden Mills, New York financier and father of Ogden L. Mills, under secretary of the treasury; George J. Charlton of Chicago, passenger traffic manager of the Alton railway; Alexander T. Brown of Syracuse, N. Y., inventor of shotguns and typewriters, and Robert L. Slagle, president of the University of South Dakota, were among others who died last week.

GOV. HENRY S. JOHNSTON of Oklahoma pleaded not guilty to eight impeachment articles voted by the lower house of the state legislature, and announced he was ready for immediate trial before the senate court. The case was set for February 11. Members of the state Supreme court also are under fire, grave charges against them being made by witnesses before a legislative subcommittee that is making a general investigation.

Markton Oats Proven Immune to All Smut

Yields as Well or Better Than Other Varieties.

Farmers of the Northwest each year are growing more Markton oats, a variety which is smut-immune, and which, in addition, yields as well as or better than other varieties of oats.

In 1914, D. E. Stephens, superintendent of the branch Oregon experiment station at Moro, recognized in Markton, which was then growing in nursery rows, a high-yielding oat variety. It was that year that he transferred Markton oats from the nursery to the plat experiments. Markton was grown continuously in the plats during the ten years following and not only proved smut-immune, but outyielded other standard varieties grown in the Columbia Basin dry-farming wheat district.

In Washington wheat-growing areas, also, Markton has consistently proved to be the highest-yielding variety. This has also been the experience at the Judith Basin sub-station at Moccasin, Mont. Markton has proved its merit not only in the dry-farm areas, but has also given excellent yields on the irrigated lands and under subirrigated conditions.

Markton is an erect, short to midtall, mid-season variety, with branching panicles. Kernels of Markton are yellowish-white, long and slender, with a rather thin hull; the lower kernel of the spikelet usually carries a fine to coarse awn. At the Washington experiment station, Markton was compared with a Silver Mine type oat which was the best variety for eastern Washington, as to quality and yields. There were 193 kernels of this Silver Mine oat in five grams, and only 178 of Markton. The proportion of hull to kernel was 28.4 in the Silver Mine and only 26.8 for Markton. The bushel weights of the two varieties were practically identical.

This smut-immune oat is proving a blessing in many sections of the Northwest where it is hard to control covered smut. Necessity for seed treatment is eliminated and higher quality and better yields are resulting.

Save Larger Percentage of Valuable Farm Manure

What can be done to save a larger percentage of the crop producing value of our manure? When manure can be hauled to the field daily as it is produced the loss of plant food is reduced to a minimum or to practically nothing, provided the liquid portion is saved through absorption by bedding or otherwise. This cannot always be done, of course. However, an effort can be made to get the bulk of the manure hauled early in the spring. On many farms manure can be hauled daily during the winter season, especially when the land is not too rolling and subject to erosion. One cannot outline any general procedure, but the subject of manure conservation is of enough importance for each farmer to give it his closest attention and do the best he can under his own conditions.

Good Bulletins for Use of Hog Raisers

Some excellent bulletins for hog raisers are Bulletin 243, "Equipment for Swine Production," Kansas State Agricultural college, Manhattan, Kan., and Circular 69, "Handy Equipment for Swine Raising," Iowa State college, Ames, Iowa.

These bulletins take up the proper construction of hog houses both of the permanent and the individual types, their proper lighting and ventilation, feeding floors, self-feeders, hog waterers, feed troughs, movable fences and creeps, breeding and castrating crates, loading chutes, shipping crates, and so on. In most cases, bills of materials as well as brief construction plans are given. Copies of these bulletins may be obtained by writing to the proper colleges.

Selection of Breed for Eggs or Market

A large part of the selection of a breed for either broiler or egg production is the matter of selecting a breed that suits the personal preference of the one who is handling the flock. Light breeds do not make good broilers, in spite of the fact that they mature probably earlier than any of the other more common standard breeds of chickens.

Heavier breeds should be used for broiler production, even though they do mature slightly less rapidly than light breeds. Any of the heavier breeds will be found satisfactory—the particular breed adopted for the purpose depending for its success upon the way it is handled.

Grinding Feeds for Live Stock on Farm

The latest thing in grinding feed for live stock on the farm is to let it grind itself. Many farmers are now arranging their feed grinders to let the unground grain drop from the bin into the hopper of the grinder, and, by attaching a fan to the grinder, blow the ground feed into another bin where it is stored for future use. Some are even eliminating all handling of the grain and feed by running spouts from the feed bin to the feed boxes or mangers where the animals contentedly munch their breakfast and dinner. "Just press a button and let 'er zip!" is the new motto in the modern feedyard.

POULTRY

BROOD CHICKS BY ELECTRICITY

Easier to Run Than Those Heated by Coal or Oil.

"Electric brooders are excellent for brooding chicks when the weather is mild. In New York state they may usually be used satisfactorily after April 15, or at any time in a room that does not depend entirely on the brooder for its heat," says Prof. L. E. Weaver of the poultry department at Cornell university, Ithaca, N. Y.

In answer to the question—can chicks be satisfactorily and economically brooded with electricity?—Professor Weaver says, "the answer is yes, but with reservations."

"Electric brooders are far more simple to run than are coal or oil brooders. When once regulated there is almost no more work or worry with them. But they must be in a room that is at least moderately warm, for the electric brooder confines the heat almost entirely to the space under it. It does not warm the room as is the case with coal or oil brooders. The chicks will not do well if the room is cold, and the cost of heating just the brooder alone gets too high even with a low rate for the current under such conditions.

"In purchasing an electric brooder one should be sure that it is provided with a positive heat regulator, that it is well insulated to prevent unnecessary loss of heat, and that provision is made for ample ventilation.

"Electric brooders are of two types, those with a curtain and those without. The curtain type requires less current but is apt to be poorly ventilated or not ventilated at all. The curtainless type with a good ventilating arrangement is probably the most desirable," says Professor Weaver.

When to Market Ducks to Make Most Money

Green ducks at eight weeks of age should weigh 9 pounds to the pair, and at ten weeks ought to reach 10 to 11 pounds. They command best prices about the first of May, and from then on until July the price gradually drops. From July 1 to September prices remain unchanged, but by September to November they are up again.

The general laying season starts about February and continues until the last of August. The first eggs of the season are rarely fertile. Fertility and vitality are the keynotes of success in duck culture.

One way to make money out of ducks is to be ready with a good supply at the opening of the season, writes Michael K. Boyer in the Farm and Ranch. Another important item is the value of the manure, that of duck ranking second to hog for growing vegetables.

The trade for ducks is largely found in the restaurants and mountain and shore resorts, where they are served in quarters—the carcass being cut into four pieces. Consequently, a duck weighing 4 or 5 pounds, served in that way, will command just as much money as one weighing 2 pounds more.

In all large cities, where there is a large Jewish population, live ducks are in demand. In Chinese sections there is also a heavy call for this favorite fowl.

Poultry Facts

Lameness is one of the first symptoms of tuberculosis in poultry.

* * *

Plan on sufficient brooding space and equipment, all you have room for. Figure how many chicks you can brood and then write several hatcheries and decide where you want to order, and then order early.

* * *

There are six steps in raising healthy chicks from hatching to maturity. They are clean chicks, clean houses, clean litter, clean feed, clean management and clean ground or close confinement.

* * *

It is necessary to have the brooder large enough—and it is better to have it too large than to take chances on overcrowding.

* * *

Milk has been found to be the best single source of animal protein for laying hens, it being easily digested and rich in protein and minerals.

* * *

If you are sending away for baby chicks have the brooder all ready for them, warm and comfortable, and clean. They get chilled if they have to wait while you "make up the bed."

* * *

Duck eggs are successfully hatched in incubators, but geese eggs are not. Geese will lay about three dozen eggs per year.

* * *

The highest egg production has been secured by using milk with some form of meat, such as fresh meat, tankage, or meat scraps.

* * *

Some farmers feel that the birds will gather sufficient insects while on the range to make up for the lack of protein in the ration, but tests do not bear out this belief.

Makes Life Sweeter

Children's stomachs sour, and n an anti-acid. Keep their sys sweet with Phillips Milk of Magne

When tongue or breath tells of condition—correct it with a spoo of Phillips. Most men and women been comforted by this unive sweetener—more mothers should voke its aid for their children. It pleasant thing to take, yet neutral more acid than the harsher things often employed for the purpose, household should be without it.

Phillips is the genuine, pres tional product physicians endorse general use; the name is import "Milk of Magnesia" has been the registered trade mark of the Che H. Phillips Chemical Co. and its decessor Charles H. Phillips since

WHEN CHILDREN FRET

It isn't right for the little tots to fret and they wouldn't if they felt right. Constipation, headache, worms, feverishness, bad breath; any of these will make a child fret. They need the pleasant remedy—MOTHER GRAY'S SWEET POWDERS. They regulate the bowels, break up colds, relieve feverishness, teething disorders and stomach troubles.

TRADE MARK

Used by Mothers for over 30 years. All druggists sell Mother Gray's Sweet Powders. Ask today. *Trial package* Free. Address THE MOTHER GRAY CO., Le Roy, N. Y.

PISO'S Coughs

Quick Relief! A pleasant, effective syrup—35c and 60c sizes. And externally, use PISO'S Throat and Chest Salve, 35c.

Quart of Water Cleans Kidneys

Take a Little Salts if Your Back Hurts, or Bladder Is Troubling You

No man or woman can make a mistake by flushing the kidneys occasionally, says a well-known authority. Eating too much rich food creates acids, which excite the kidneys. They become overworked from the strain, grow sluggish and fail to filter the waste and poisons from the blood. Then we get sick. Rheumatism, headaches, backache trouble, nervousness, dizziness, sleeplessness and urinary disorders often come from sluggish kidneys.

When the moment you feel a dull ache in the kidneys, or your back hurts, or if the urine is cloudy, offensive, full of sediment, irregular of passage or attended by a sensation of scalding, begin drinking a quart of water each day, also get about four ounces of Jad Salts from any pharmacy; take a tablespoonful in a glass of water before breakfast and in a few days your kidneys may act fine.

This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for years to flush and stimulate the kidneys; also to help neutralize the acids in the system, so they no longer cause irritation, thus often relieving bladder weakness.

Jad Salts is inexpensive; makes a delightful effervescent lithia-water drink which everyone should take now and then to help keep the kidneys clean and active and the blood pure, thereby often avoiding serious kidney complications.

Cuba's Gift Vase

A marble vase seven fet high and weighing six tons, carved from the original memorial raised in Havana to the memory of the men who went down with the battleship Maine, has been presented by the Cuban government to the United States. The vase will be placed in Potomac park.

A MOTHER'S FIRST DUTY

should be the care of her little one's constitutional habits during childhood.

Keep your children well and healthy by giving them Mother Gray's Sweet Powders when they complain of headaches, stomach disorders or are constipated. They break up colds and regulate the bowels. Recommended by mothers for over 30 years. They always give quick relief and satisfaction.

ALFALFA HAY IS FINE FOR SWINE

Becoming Generally Used as Protein Supplement.

During the last few years alfalfa hay is becoming quite generally used as a protein supplement for feeding hogs. In some instances alfalfa meal has been used for this purpose and to determine the relative value of alfalfa in the form of alfalfa meal or alfalfa hay as compared with oilmeal when fed with a ration of shelled corn, tankage and minerals to hogs, the Michigan experiment station conducted a test in 1927 with five lots of pigs weighing 57 pounds each at the beginning of the test.

This experiment indicated that alfalfa hay produced greater gains with less feed than did either alfalfa meal or oilmeal when fed with the ration of tankage, shelled corn and minerals.

That alfalfa meal required a greater amount of feed with a ration of tankage, shelled corn and minerals.

That the addition of oilmeal to a mixture of tankage and alfalfa meal reduced the gains.

The addition of alfalfa hay to tankage and oilmeal produced larger gains and required less feed for the gains produced than did the addition of alfalfa meal with tankage and oilmeal when fed with a ration of tankage, shelled corn and minerals.

The conclusions that must be reached from this experiment are that alfalfa hay is more profitable for feeding hogs than alfalfa meal; that it produces greater gains with less feed than does alfalfa meal; also that alfalfa hay when fed to swine together with oilmeal produces greater gains with less feed than does alfalfa meal with tankage and oilmeal.

Many swine producers in those sections where alfalfa hay is produced have adopted this as a general practice in their swine herd with very satisfactory results. It is a practice that will no doubt continue to grow from year to year.—Dr. George W. Conn., Stephenson county, Ill.

Johne's Disease of Cattle Increasing

Most stockmen have become aware that chronic bacterial dysentery of cattle, more commonly called Johne's disease or paratuberculosis, has gradually been increasing in prevalence. Possibly it always has been as prevalent, but was not regarded as a specific disease, or it was thought to be tuberculosis in an advanced stage, or a form of scouring induced by damaged feed.

Anyhow, it has been taking its toll of life and as no remedy has been found for the malady and destruction of affected animals has come to be the adopted course of procedure by the state authorities, stockmen have been concerned over the outlook. However, there will be some satisfaction in knowing that the federal government now grants indemnities for animals found affected.

It is probable that various states, especially those where dairy cattle are numerous, will also offer indemnities for animals slaughtered on account of Johne's disease. Wisconsin has already taken that step and owners will now feel more inclined to have the test applied to cows that suffer from a chronic form of dysentery.

In some of the European countries Johne's disease has become seriously prevalent. The disease is contagious, the germs being voided in the feces. The disease may, for a time, lie dormant, but when it shows up it always proves fatal.

Live Stock Hints

Hogging down crops is a way to grow pork with less labor.

* * *

Sell your feedstuffs to your own live stock and cut out the middleman's profits.

* * *

It is a pretty well settled fact that it doesn't pay to grind corn for fattening steers.

* * *

Ames has demonstrated several times that grinding corn for steers does not pay.

* * *

Hulled oats make an excellent feed for hogs, more valuable pound for pound than corn.

* * *

Home butchering gives the family a meat supply that is much cheaper than that purchased each day from the meat market.

* * *

Where cattle and hogs run together in a pasture or barnyard and it is known that the hogs have tuberculosis it is almost positive evidence that the cattle have the disease also.

* * *

The education of the foal should not be postponed until it is desired to "break" him as a three-year-old. The foal needs to be taught obedience from the start and not allowed to become willful or headstrong. Break to use of the halter early; be kind and patient. A foal responds quickly to the treatment received.

LATEST NOVELTY IN TRAFFIC SIGNALS

The latest to be brought out in the line of traffic signals is one which can be operated from a button placed conveniently in the supporting post. It is particularly adapted to crossings near schools where one of the children, acting as a monitor, can press the button and thus assure a safe crossing for herself and schoolmates.

PROFICIENCY OF BOYS IS COUNTED

Marks Help Advancement in School.

Edward J. Tobin, Cook county (Illinois) superintendent of schools, has announced that the proficiency of members of the schoolboys' patrol will be graded and that that mark will be considered in their advancement from grade to grade as much as their standing in arithmetic and other studies.

Patrol Fostered by Club.

Mr. Tobin made the statement after a conference with representatives of the accident prevention department of the Chicago Motor club, which for nine years has fostered the patrol as a means of preventing traffic accidents among school children.

"Education should comprise 'practical' instruction, as well as knowledge from books," explained Mr. Tobin. "Members of the school boys' patrol are selected because of their qualities of character, manliness and leadership. They stand at corners in the vicinity of schools before and after the classes, and assist their classmates and younger pupils across the streets during lulls in traffic. They must be on duty for at least a total of an hour a day, outside of their school hours. Their work as a member of a patrol is bound to give them a broader knowledge of taking care of themselves and others, and I believe they should be given tangible credit for efficient performance of this task."

Part of Achievement Course.

Under the new plans, the patrol becomes a part of the achievement course of the county schools. This course comprises 22 projects, such as the study of music, agriculture, live stock and similar subjects. Each pupil must enroll for one or more subjects. Boys who aspire to membership on a patrol must be nominated and approved by the other members of his particular achievement course, the teacher and the director of education. Patrol members must serve 30 weeks in order to obtain a mark, which will be determined by the teacher, the director of education and the accident prevention department of the Chicago Motor club.

Mr. Tobin recently asked the Motor club to assist him in placing a patrol in every school under his jurisdiction. The members of these patrols are supplied with white Sam Browne belts and badges by the club without charge.

Spring Control Devices Require Good Attention

Occasionally mechanical or frictional spring control devices will need attention, just as any other useful accessory on the car.

If you're not positive that they need attention, however, there is a way to decide the point without wasting a lot of time. Take off the instrument that is the most likely to be in need of attention.

This is always the rear one nearest the exhaust pipe. It becomes heated and is certain to give trouble in time if any grease is used in its mechanism.

The heat thins this grease and tempts it to work out where it doesn't belong.

In the case of some devices it renders them useless until taken off and cleaned. Obviously if the hardest working device is all right there is little point in touching the other three

New Automobile Safety Device Is Quite Helpful

The car rests on the small solid rubber-tired extra wheel when there is a flat tire. The car may thus keep

Pneumatic Tired-Wheel Permits Driving Ahead Despite Flat Tires.

right on going without injuring the pneumatic tire. The extra wheel can also be used as a jack, by simply driving up a wooden block.

Faulty Spark Plugs Are Cause of Motor Missing

When an automobile engine misses at high speed or in climbing hills the trouble can often be traced to the spark plugs, according to engineers.

Much of this trouble, they say, is due to the spark plug points being set too far apart or because the plugs are worn out.

The gap between the points should not have more than .025-inch clearance or .020-inch in high-compression engines.

As spark plug trouble is often mistaken for valve or piston-ring trouble, the proper thing to do before making repairs, the engineers say, is to have the plugs inspected, which will save unnecessary expense.

AUTOMOBILE NOTES

Better to ride slow in an auto than fast in an ambulance.

* * *

There are two sides to everything but in motoring, keep to the right side.

* * *

Reckless drivers who fail to observe the "Stop" sign are on their way to a "Go" funeral.

* * *

"Get a new body and have your top repaired," says an advertisement. Don't you wish you might?

* * *

San Antonio, Texas., has one of the latest union terminals for bus lines to be erected. It was built at a cost of $300,000.

* * *

Front-wheel bearings are benefited greatly by semiannual baths. It is well twice a year to remove, clean, grease and adjust them. The cleaning process is most successful if a stiff brush and gasoline are used

FARM POULTRY

HATCH TURKEYS IN INCUBATORS

Eggs Given Same Treatment as the Ordinary Hen.

It takes 28 days but turkey eggs can be hatched in incubators just the same as hens' eggs. Turkey raisers in several parts of Colorado are saving hours and days of hard labor that way and in the eastern part of Wyoming it is almost the universal practice.

The big job is to get enough eggs together at one time for a full-sized setting. They should not be held for more than ten days, according to Charles N. Keen of the Colorado agricultural college, should be kept at a temperature of from 50 to 60 degrees Fahrenheit, and turned daily. The incubator should be thoroughly cleaned and disinfected then warmed to the correct temperature.

The temperature of hatching turkeys' eggs in the case of small machines, where the heat is at the top, may be one-half degree to one degree lower average than for hens' eggs. As a guide for those who do not have the instructions for their machine, the average temperature starts at about 101 degrees and increases to about 103 or 104 degrees the last week. If the eggs carry good fertility, the body heat from the developing poults will gradually bring up the temperature of the machine.

Additional moisture is needed as with hens' eggs. (A tray of sand kept wet will supply it.) Turkey poults should not be taken from the incubator until they are thoroughly dried off and appear strong on their legs.

When the eggs are set under hens or turkey hens, steps should be taken to insure freedom from lice or mites as these parasites cause very serious losses among the young poults. The nest boxes should be sprayed before the eggs are set. The setting hen should be dusted thoroughly with saponified sodium fluoride or some other good lice powder at least three times during the latter part of the setting period, but prior to the twenty-fifth day.

Define Good Litter for Brooder House

There is no best litter to use in the brooder house, but there are certain requirements a litter must meet to be satisfactory. It should be light in weight, thus allowing the droppings and dirt to work to the floor so the chicks are less likely to come in contact with contaminated material; it should be absorbent, and therefore capable of keeping the floor of the brooder house dry; cheap, so one can afford to replace it every five days after the first four weeks; and should be clean, which means free from mold, mustiness and dust.

Shavings, cut straw and cut hay meet these requirements. These are not the only materials that one can use, but they are among the best. Straw or hay used for litter, should always be cut. If the straw or hay is not cut it becomes matted and covered with droppings, and is therefore of no value for litter.

Bacillary white diarrhea, coccidiosis, and intestinal worms are spread to a large extent by dirty litter, the Cornell experiment station warns. One rule in brooding chicks that should be followed, if all others are forgotten, is "clean the brooder house every five days." This means removing the litter, sweeping the floor of the brooder house, and putting in clean litter.

Poultry Hints

Do not condemn the late molting old hens, for they are very often our best and most continuous layers.

* * *

If the poultry house is not provided with ample window space so that the entire floor may be well lighted even during the winter days, additional windows should be put in.

* * *

The use of cod liver oil in rations for baby chicks that are hatched in early spring has been well established.

* * *

Egg-shell formation necessitates the use of large amounts of lime. Poor egg-shell texture is due to faulty supply or utilization of lime for the purpose.

* * *

Fewer chicks on new ground with good management will bring better returns than many chicks hatched and but few saved, by raising them with the flock on old ground.

* * *

Keep pullets away from the old hens so that they can be fed and handled differently.

* * *

Feed for setting hens should consist mostly of whole grains, such as corn and wheat. Green feeds and meat tend to make them desire to quit setting and begin laying.

* * *

Provide plenty of hopper space to give each chick a chance to eat. If the chicks are raised with hens there should be a feed coop that the large chickens cannot get into.

A Sour Stomach

In the same time it takes a dose of soda to bring a little temporary relief of gas and sour stomach, Phillips Milk of Magnesia has acidity completely checked, and the digestive organs all tranquilized. Once you have tried this form of relief you will cease to worry about your diet and experience a new freedom in eating.

This pleasant preparation is just as good for children, too. Use it whenever coated tongue or fetid breath signals need of a sweetener. Physicians will tell you that every spoonful of Phillips Milk of Magnesia neutralizes many times its volume in acid. Get the genuine, the name Phillips is important. Imitations do not act the same!

PHILLIPS Milk of Magnesia

Tyndale's Great Work

The printing of Tyndale's translation of the New Testament was completed at Worms (Germany) in 1526.

Neal's Mother Has Right Idea

Within a few months there will be no more feverish, bilious, headachy, constipated, pale and puny children. That prophecy would surely come true if every mother could see for herself how quickly, easily, and harmlessly the bowels of babies and children are cleansed, regulated, given tone and strength by a product which has proved its merit and reliability to do what is claimed for it to millions of mothers in over fifty years of steadily increasing use.

As mothers find out from using it how children respond to the gentle influence of California Fig Syrup by growing stronger, sturdier and more active daily they simply have to tell other mothers about it. That's one of the reasons for its overwhelming sales of over four million bottles a year.

A Western mother, Mrs. Neal M. Todd, 1701 West 27th St., Oklahoma City, Okla., says: "When my son, Neal, was three years old he began having constipation. I decided to give him California Fig Syrup and in a few days he was all right and looked fine again. This pleased me so much that I have used Fig Syrup ever since for all his colds or little upset spells. It always stops his trouble quick, strengthens him, makes him eat."

Always ask for California Fig Syrup by the full name and see that the carton bears the word "California." Then you'll get the genuine.

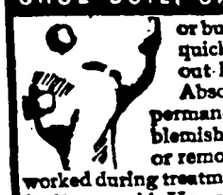
One doesn't have to be unorthodox to believe in science. Just let science happen; at least, it does.

FIND "FRIEND IN NEED"

Mother and Daughter Praise Vegetable Compound

Johnson City, N. Y. —"My daughter was only 20 years old, but for two years she worked in misery. She was all run-down, nervous, had aches and pains and no appetite. I was taking Lydia E. Pinkham's Vegetable Compound with good results so she decided to try it. Before she had taken two bottles her appetite was better, she was more cheerful and was able to work. I cannot praise your medicine too highly. It is wonderful for mothers and for daughters. It's surely 'a friend in need'."—Mrs. L. E. Hall, 223 Floral Avenue, Johnson City, N. Y.

SHOE BOIL, CAPPED HOCK



or bursitis are easily and quickly removed without knife or firing iron. Absorbine reduces them permanently and leaves no blemishes. Will not blister or remove the hair. Horse worked during treatment. At druggists or $2.50 postpaid. Horse book 6-S free.

Surprised user writes: "Horse had largest shoe boil I ever saw. Now all gone. I would not have thought that Absorbine could take it away so completely."

ABSORBINE

W. F. YOUNG, Inc. 510 Lyman St., Springfield, Mass.

HOW "MAD AS A HATTER" HAS UNDERGONE CHANGE.

There has been much speculation as to the original application of "hatter" in "mad as a hatter." It is probably merely a corruption of "adder" in the older phrase "mad as an adder," which obviously alludes to the ostentatious manner in which the adder shows anger or irritation. In Anglo-Saxon and Old English "mad" was used in the sense of furious, angry, and even venomous, and it is still widely used for angry in English dialect, as well as in the United States. Originally "mad as a hatter" meant very angry or furious; now it is more frequently used in the sense of violently insane. There is probably no truth in the oft-told story that the phrase originally referred to a crazy hat-maker who was elected to the English parliament from Southwark in the early part of the Nineteenth century. It is sometimes stated that "mad as a hatter" was first employed in 1863 by Charles Lutwidge Dodgson in "Alice in Wonderland." That is incorrect. The phrase was used by Thomas Chandler Haliburton in "The Clockmaker; or The Sayings and Doings of Samuel Slick of Slickville," which was first published between 1837 and 1840. Haliburton wrote: "Sister Sall . . . walked out of the room, as mad as a hatter." In 1849 William Makepeace Thackeray wrote in "Pendennis": "We were . . . chaffing Derby Oaks—until he was mad as a hatter."—Pathfinder Magazine.

How Mountain System of "Andes" Got Name

The origin of "Andes" as applied to a system of mountains in South America has not been definitely ascertained. It is supposed, however, that the name is derived from a native Peruvian word meaning copper, or perhaps metal in general. According to the Pan-American union, the Incas seem to have used the words "Anta," "Anti," "Antas," "Antis" and "Antisuya" to designate districts in the mountains where metals existed. The Spanish conquerors gradually dropped the "t" and replaced it with "d" when referring to the mountains containing minerals. In succeeding years the entire mountain system between Panama and the Strait of Magellan became known as the Andes Another theory deserves to be mentioned—namely, that the name of this mountain chain is a corruption of the Spanish "anden," meaning shelf, and that the name originally referred to the numerous shelf-like terraces built by the Incas for agricultural purposes on the western slopes of the Andes.—Exchange.

How an Idea Is Born.

We get many an idea for a work of art which gradually sinks into our unconsciousness, reaching a condition which we think and speak of as forgetfulness. But it continues to figure in our experiences, mysteriously drawing sustenance from them and developing independently of our efforts or knowledge. And one day it may happen to emerge again out of the depths of the mind. It is remarkably altered, and seems to admonish us: Now at last I am ripe for the purpose which I was meant to serve from the beginning; now for the first time we are worthy of each other. Let us both fulfill our destiny; create your work.—Arthur Schnitzler in Vanity Fair.

How Axioms Repeat.

Certain axioms expressed in different ways are to be found among practically all peoples and tongues. Take for instance "Taking coals to Newcastle," referring to the folly of sending that product to the point at which it is mined. Horace said: "It would be silly to carry sticks into the forest." The Greeks had a proverb about "carrying owls to Athens," the city abounding in those birds. Australians of today may like to amend it to "carrying fish to the Hellespont." And one could easily invent many more—such as carrying wheat to the prairies, carrying rock to British Columbia, or carrying yarns to the bay of Fundy.

How Glass Is Graded.

All flat glass contains some imperfections and the principle employed in grading is to exclude all defects that would be objectionable in a given grade. This is difficult to do since there are no sharp lines of demarcation between grades, and experienced inspectors will differ in judgment as the quality of the glass approaches the limits of the grades. Small lights must be quite free from imperfections as compared with larger ones, and the center of any sheet should be clear, whereas the edge may contain more pronounced defects.

How to Harden Potatoes

To harden or petrify potatoes make a solution of 4 four parts of sulphuric acid in 50 parts of water. Treat peeled potatoes with this solution for 36 hours. Dry the mass between blotting paper and subject to great pressure. By using very strong pressure billiard balls have been made closely resembling ivory. The material can be carved.

WHY

Silver Quarter Is Called "Two Bits."

"Bit" has been applied in England to coins for centuries. It was one time thieves' slang for money in general. Thomas Dekker so used the term in "A Knight's Conjuring: Jests to Make You Merie," which was first printed in 1607. Later "bit" came to be applied to any small silver coin. Even yet the British use it in such phrases as "sixpenny bit." Our use of the term in "two bits," meaning a quarter of a dollar, originated in the West Indies, especially Jamaica, where "bit" was originally applied to small silver coins forming fractions of the Spanish dollar. It was applied specifically to the real, which was equal to one-eighth of the dollar then in use Examples of the term in that sense date back to the Seventeenth century When the Spanish dollar disappeared from circulation in the United States, a quarter was called two bits, and a half dollar four bits. Twelve cents and a half is never called a bit, although in some sections of the country fifteen cents is called a long bit, and ten cents is a short bit.—Pathfinder Magazine.

Why Sleeping in Open Promotes Good Health

Contrary to old-fashioned ideas sleeping in the open is not harmful and night air is now held to be invigorating. When the sun sets and night falls night air is the only kind obtainable and it is considered far better have plenty of night air than to breathe foul or stale air. Night air acts as a tonic, says Dr. Harvey Wiley, authority on health. One of the sins of civilization, he claims, is the invention of the house. If there were no houses there would be no tuberculosis, he asserts. Tuberculosis, however, is not the only disease the house is responsible for. Cutting off the proper supply of fresh air reduces the vitality of the body to such an extent that not only tuberculosis germs, but germs of other infectious diseases may more rapidly take hold. This problem can be best handled, he says, by making use of sleeping porches. Every house, whether in the crowded city or in the country, has one or more porches. These porches can easily and should be fitted out as sleeping porches.

Why Variation in Wind.

The weather bureau says that owing to the friction at the surface of the earth, the air near the ground always has less velocity than the air a few hundred feet above it. In the daytime this faster air is mixed up with the surface air by convection induced by surface heating In this way the surface air is given a greater velocity than it would have if not mixed with the upper and faster wind. At night, when there is no surface heating and no convection, the upper wind, except when quite strong, glides over the lower air, which is held relatively quiet by surface friction. When the upper winds are very strong they mix with the lower air by mechanical turbulence and the surface wind remains as strong by night as by day.

Why Anomaly of Frost.

Frost forms only when the temperature of the object on which it occurs, and the immediately adjacent air, is at or below the freezing point, 32 degrees Fahrenheit. The temperature of the grass, for instance, especially in low spots and on still, clear nights, may be 32 degrees Fahrenheit, or lower, while that of the air a little distance away, and 20 to 30 feet higher, may be 40 degrees Fahrenheit, or over. This explains the anomaly of frost at 40 degrees Fahrenheit. It was 40 degrees Fahrenheit, say, where the thermometer was, but not where the frost was.

Why We Say "Piping Hot."

"Piping hot" is a relic of the ancient custom of a baker blowing his pipe in the village street as a signal to his customers that his bread was at that moment hot from the oven. The baker was evidently an unpopular member of the community in those far-off days, for in the minds of those of a superstitious nature he was synonymous with the devil! So we get the term "baker's dozen." The devil's dozen—13—was the number of witches supposed to gather in evil conclave at set periods, and the spiteful minds of the ill-willed readily substituted "baker" for "devil."

Why Mirage Forms.

A mirage is due to conditions existing in the atmosphere. As a result of deviation of the rays of light caused by refraction and reflection, objects seen with the eye appear in unusual positions and often multiple or are inverted. One cause of a mirage in the desert is the diminution of the density of the air near the surface of the earth, often produced by the radiation of heat, the denser stratum being thus placed above instead of, as is usually the case, below the rarer

Why Bubble Is Round.

A soap bubble is round because it has a surface tension which causes equal pressure in all directions. The soap bubble is covered with a film and the tendency of liquids covered by such a film is to assume a spherical shape.

Why Known as "Pirate."

The Latin word "pirata" means to "attack or assault," and the Italian "piratare" means to "rob by sea." The English word is derived from these.

LIBERTY TOWNSHIP NEWS NOTES

(By Special Correspondent)

Mr. and Mrs. Emil Beier visited at the Aug. Ridder home Thursday.

Mr. and Mrs. Floyd Franklin visited at the O. E. Carlson home last Sunday.

Mr. and Mrs. Frank Bredlow and children were entertained at the Herman Gast home Sunday.

Mr. and Mrs. Wilbur Haefner were visiting at the Emil Beier home Sunday. Grandma Beier has not been as well as usual lately and they came over to visit her especially.

Mr. and Mrs. Geo. Schoenwetter and children were guests at the Art Schoenwetter home Sunday.

Dick Carolus is at Lake Cornelia this week assisting his brother-in-law, Jake Ter Hark move. They are moving to near Meservey.

Next Sunday is King's Heralds Sunday. Here is hoping the weather will permit a full service. The minister, Rev. Whyte was unable to be present the last two Sundays.

Mr. and Mrs. Lew Griffen and daughters and Mr. and Mrs. Wm. Velau and Eva Darlene and Mrs. Beier and Billie visited at the Will Lemke home Sunday.

Mrs. Welsh, mother of Mrs. John Velau, is visiting at the Velau home. She accompanied them from Waterloo Monday where they had been to attend Mrs. Velau's brother's funeral.

ANNUAL CREAMERY MEETING HELD THIS AFTERNOON

E. J. Arnold Is The New President Of Board Of Directors

The annual meeting of the Klemme Co-Operative Creamery was held at the Idle Hour this afternoon.

Miss Edith Haupt read a report of the annual statement which showed a gain over last year in the business of the creamery. The report is published in this issue of Times.

Mr. E. J. Arnold was elected President and Mr. W. H. Gr... Vice-President. J. E. Stille was elected Treasurer, and Peter ... was elected Secretary.

Three directors went off the ... this year and so three new dir... were elected, W. H. Lemke for ... year term, Wm. Schlawin for ... year term, and Otto Pirngnitz ... 1 year term. Lippo Blank and G. Lenz remain on the board. H. Lemke was a member of the board and was re-elected One member, Ben Katter is ... to Minnesota.

On roll call forty share holders responded, which was a very ... representation. A number of ... are now scattered over the ... States.

Phone 80 GARNER, IA.

Max Dietrich out-guesed the old weathe man when he moved Monday, despite the bad roads. He had teams and sleds haul his goods to Klemme where it was loaded on trucks and taken to Ventura where it was again transferred to sleds and hauled to the farm northwest of Ventura which he has rented. The next day all roads were blocked, but Max had beat the weather man.

Urged to Cut Ablutions

In a proclamation urging strictest economy in the use of water, the municipality of Barmen, Germany, has suggested that the citizens eliminate their habitual morning bath. The city is suffering from a chronic shortage of water which of late has become more accentuated every day on account of increased production in the Barmen silk industry. As a large part of the working population of Barmen depends on the silk industry, it is impossible to cut down its water supply, the city fathers assert.

Record Birth of Lambs?

Five lambs at a birth is the unusual record established by a cross-bred Rambouillet-Cotswold ewe owned by George Rust, of Victor, Idaho. Twin lambs are common, triplets occasional; but more than that is very unusual according to J. E. Nordby, of the University of Idaho, who reports the occurrence in the Journal of Heredity. The lambs were permitted to remain with their mother for a few days, after which three were removed and reared as bottle lambs.

White "Blackberries"

A. T. Fish, of Industry, Maine, brought to Madison, Maine, a basket of whiteberries, or rather, white blackberries. He found the bush in the woods a year or two ago, took it up and set it out at his home. It has thrived and spread so that he now has a large patch of the bushes. The berries are not large, but are very sweet.

Half the Battle

"I see Madge is going in for aviation."

"Madge who?"

"Madge Bahr. You know, that girl who wears such skimpy clothes."

"Oh. Well, she ought to make a good aviatrix; she's had lots of practice in taking off."—Boston Transcript.

Shop Talk

"The mercury went up to 91 at noon," announced the large man, fanning himself.

"How," asked the inveterate market player, "did it close?"—Wall Street Journal.

The Dear Girls

Madge—I always admire Ethyl; she has the freshest complexion at all times.

Mayme—Why shouldn't she? She puts it on every five minutes.

Catch as Catch Can

She—I wonder if Claire will marry the chap she's running with.

He—She probably will if he doesn't speed up.

We Wish To Announce That We Handle A Complete Line Of

J. I. CASE FARM Machinery

We wish to announce that we will carry a full and complete line of FARM MACHINERY, THRESHERS and TRACTORS, made by the J. I. CASE COMPANY. We wish to invite you to come in and look this line over when you are in Klemme. If you are in need of any new machinery for spring work it will pay you to see our line. We further wish to announce that we have a complete line at two other points—Estherville and Gruver, and at any time we might need assistance in the line of machinery we do not have on hand we can get quick service from these two points.

On March 1st Mr. Dwight H. Osborne of Des Moines will be in charge of the Machinery. He has been in the services of the Case people heretofore and has also had practical experience with the Case line and we believe that he can answed any question along the machinery line.

Watch this space for next week's advertisement as we are going to make another announcement which will be more interesting to farmers who want new machinery this spring, summer or fall. We are going to give away a piece of machinery on our Opening Day which we are under the impression will be March 8th. At this time we hope to have some of the machinery set up so that you can inspect it and see it tested out.

We sold a man a manure spreader the other day and one of the first qustions he asked was if we would stand back of our machinery. We told him we would stand back of everything—but the manure spreader!

Northern Lbr. Co.

Klemme, Iowa

WHY

Keyboard of Typewriter Is So Arranged.

Explaining why the keys on the typewriter are placed as they are one typewriter company says: "The first commercially successful typewriter, which was placed on the market about fifty years ago, contained a keyboard almost identical with that used at the present time. The retention of this keyboard is undoubtedly due to the fact that hundreds of thousands of typists have learned it, so that it has become practically universal, and prejudice against a change causes manufacturers to continue arranging the letters in accordance with the desires of the majority of those who use it. When all is said and done, the present arrangement is a pretty good one. To attempt to make a radical scientific change would, in our opinion, not be feasible. J and K might be rearranged with advantage. We do not know why these particular letters were placed on the second row of keys. Certainly their position is not the best for a touch typist. However, touch typewriting was not known in the early days of the typewriter, so that the position of J and K was not so important at the time the order of letters was arranged. The reason for the present arrangement has never been satisfactorily explained so far as we know. We think the printers' case had something to do with the arrangement, and also that the arrangement was affected by the fact that the keys were in a circular basket and this arrangement to some extent prevented the keys from clashing. We think also that whoever arranged the letters had some thought for the sequence of the letters and tried, as far as possible, to harmonize the different points we have mentioned."

Why So Many Dislike to Walk Under Ladder

There is an old superstition, which is still quite common, that it is unlucky to walk under a ladder. How the belief originated is not known. One writer suggests it may have arisen from the fact that in early times culprits were often hanged from ladders propped against buildings. Another believes that the superstition is the natural outgrowth of the danger incident to walking under ladders. According to the most usual version of the superstition, ill luck will follow a person who walks under a ladder, unless he stops to make a wish, in which event no ill luck will befall him. Moreover, the wish made under such circumstances will come true. In England the superstition has a special provision, namely, if an unmarried woman walks under the ladder she will not be married within a year. It is also considered unlucky to walk on a ladder lying on the ground.—Exchange.

Why Wesley Rose Early.

John Wesley, the great preacher, was anxious to waste no time unnecessarily in sleep. Finding he woke every night about one and lay sleepless for some hours, he concluded that he was lying in bed longer than nature demanded. He determined, therefore, to rise an hour earlier than usual. Rising at seven, he found himself still waking in the night, so the next morning rose at six and the next at five. Still there was the wakeful interval, though a shorter one. The fourth morning he rose at four. That night his sleep was unbroken, and at four he continued to rise every morning. "By the same experiment," he suggested, "rising earlier and earlier every morning, anyone may find out how much sleep he really wants."

Why Windows "Sweat."

The sweating of windows is due to imperfect ventilation, and if perfect ventilation could be obtained it would probably give the most effective results. In many cases openings are made in the sash, top and bottom, so that a current of cold air may cover the interior side of the glass. In some instances, where the sweating of windows is not bad, 55 grams of glycerin is dissolved in 1 liter of alcohol (63 per cent), to which a little amber oil is added. As soon as it is thoroughly mixed, it may be rubbed on the inside surface of the window with a chamois or linen rag. A thin coat of pure glycerin applied to both sides of the glass will prevent moisture.

Why "Wild Goose Chase."

A phrase with an interesting history is "a wild goose chase." The term was first used to describe a kind of horse-racing which resembled the follow-my-leader flight peculiar to wild geese. Two horses would run a hundred and twenty yards; then the jockey who had the lead was at liberty to take whatever ground he pleased, the other being bound to follow within a specified distance or else be whipped-in by judges who rode by; the passing and repassing of one another went on until one horse fell out through sheer exhaustion, thus giving the other equally overdriven animal a final lead.

Why the Term "In Clover."

A person is said to be in clover when he is lucky, in prosperous circumstances or in a good situation. The phrase alludes to cattle feeding in clover fields, the best kind of pasture imaginable.

Why Captain Is "Skipper."

The term "skipper" as applied to the captain of a vessel is derived from the Dutch, who calls a ship a "schip," and the chief "schipman" or sailor, the "schipper."

HOW

SIXTH SENSE IN MANKIND BESTOWED ODD POWER.—Despite the progress of physiology the study of the human body is full of mysteries. Some of its well-known organs have never revealed either their uses or the reason of their creation. The part played by the spleen in human life was discovered but recently. It is now regarded as one of the chief agents in the circulation of the blood. But there are in the marvelous human organism mysterious parts which it is possible that no savant, however profound his learning, may ever understand. For instance, in the skull, behind the cartilage of the nose there is a little cavity of unknown origin. Physiologists believe that at one time, several thousand generations ago, it contained a gland consisting of two lobes joined by their common base.

This cavity, the delta turcica is, in the opinion of certain authorities, the vestige of a sixth sense which was of great use to the antediluvian ancestors of man. It is believed that this little gland enabled them to see in the darkness when they had not yet learned the secret of procuring light; that it was the seat of the mysterious sense of direction or locality, the power to orient their course, the sense so highly developed to this day in savages and certain animals. The theory is plausible, but it is doubtful whether man will ever acquire any real knowledge of the reason for the existence of the delta turcica.

How Artificial Nests Aid in Bass Culture

It has been ascertained that black bass culture is greatly aided by artificial construction of nests. The male small-mouthed bass builds its nest by sweeping the stones of a lake bottom bare of sand in a three-foot circle. Alternately using his nose and his tail the fish makes a saucer-shaped nest ready for the eggs of his mate; but he will readily use a nest that has been prepared for him. Accordingly, the fish experts expedite his home-building.

For the big-mouthed bass nests are made of moss embedded in concrete, as this species prefers a fibrous bed for its eggs. Ponds with basins six feet deep in the center and with shallower water elsewhere are so prepared. Wild fish caught by the hook are put in to mate here, to the great increase of reproduction. Proper assortment of the fish and the prevention of crowding accomplish excellent results.

How Trees Affect Future.

If this nation is to continue to maintain commercial prosperity, the forestry situation becomes a world problem. What does it mean to this prosperity when such great manufacturing centers as Pennsylvania, New York, Michigan, and Ohio have to import lumber in billions of feet every year to keep their factories going? New York, imports about 3,000,000,000 feet annually, the American Tree association says. Many other states import great quantities. What will it mean to state and national prosperity when industries have to slow down and cut pay rolls because of the mounting cost of forest products? We think of California as one of the states with thousands of acres of uncut forests, yet the state uses more than it produces. This all means something to every person of school age today—the citizen and taxpayer of tomorrow.

How Glass Can Be Cut.

A method of cutting glass clean and straight without the aid of a glass cutter is given as follows: Dip a piece of common string in alcohol and squeeze reasonably dry, then tie it around the glass on the line of cutting. Touch a match to it and let it burn off. While the glass is hot plunge it under water, letting the arm go well under to the elbow, so there will be no vibration when the glass is struck. With the free hand strike the glass outside the line of cutting, giving a quick sharp stroke with a stick or knife. Of course this will leave a sharp edge around the cutting.

How X-rays Save Trees.

Hidden defects and diseases in tree trunks are revealed by means of an X-ray outfit which shows conditions that cannot be detected by ordinary examination.

The outfit is one of the first to be developed and has since been improved into a more compact form. The apparatus is also useful in inspecting poles that carry power or other wires, to determine if any of them are dangerously decayed inside.—Popular Mechanics Magazine.

How the Trees Grow.

Christmas trees can be grown in from six to ten years, says the American Tree association. The best trees for this purpose are Norway, red and white spruce and balsam fir. For posts, the best trees are the locust and oak. They can be grown in from 12 to 20 years. For poles it generally requires 25 to 30 years or more. Good larch, spruce and cedar poles can be grown to a small size in this time.

WORDS OF WISDOM

Sin is merely a st[illegible] of mind.

Empty talk is easily [illegible]mized.

Originality provokes origi[illegible].

It isn't hard to be poor; it's [illegible].

He who laughs last—has no spo[illegible]taneity.

When a vice becomes a bore, one can reform.

In a flat, you never can elude your wife's company.

Most friendships are real, but they're too rare.

Literary talent without a soul tends to become spiteful.

The Almighty IS. Theology is man's effort to explain him.

True freedom is to be utterly contemptuous opportunity.

Any town proud of its smoke and its traffic jams isn't big enough yet.

The rich are like beasts of burden, carrying treasure all day.—St. Augustine.

Every time a man tears a leaf off the calendar he realizes that his days are numbered.

The busy bee never gets stung. If there is any stinging to be done he does it himself.

It is often a great disadvantage for a young man to begin a career with superior advantages.

Dead men tell no tales; but they frequently leave large quantities of unpublished manuscript.

The greatest grace of a gift, perhaps, is that it anticipates and admits of no return.—Longfellow.

SEES REPLACING OF CLOTH BY ALUMINUM

The day is not far distant when people will wear clothing made of aluminum, says Dr. James Rubinfeld, metallurgist expert, of Berlin.

He points out that thin aluminum already is used successfully for the interior decoration of airplanes, for the outside covering of shoes and on fancy pocketbooks and ladies' vanity bags.

From this, Doctor Rubinfeld argues it is but a step toward the use of aluminum as a substitute for cloth.

"Already," he says, "Germany exports to Italy aluminum brocades—that is, brocades for ladies' garments woven of fine aluminum threads. There is little danger that these materials will tear or crumple, because the sensitive metal has been neutralized and been made capable of stretching through layers of cellulose superimpressed upon it."

National War Forces

Great Britain has the largest navy in the world; the United States the second largest. China has the largest active army in the world; Russia the second largest. The four nations which have the largest air forces are Great Britain, the United States, Italy and France. No accurate statistics are available on the strength of the foreign air forces, so that it is not possible to tell which of these countries rank first.

New Cloth From Plants

Soon you may be wearing clothes made of kendyr. This is the name of a fiber plant, discovered recently growing in large quantities in Asia, and found to produce textile yarn of high quality. A cloth made half of kendyr and half of cotton, tests show, is attractive and durable. Two tons of kendyr a day is to be turned into cloth by a new machine built for the purpose.—Popular Science Monthly.

Women to See Monastery

To celebrate the one thousand six hundredth anniversary of the consecration of their ancient chapel on the island of St. Honorot, near Cannes, which was the retreat of Bernard Shaw during his recent stay at Antibes, the monks will be permitted to show women over their beautiful monastery. Thousands of pilgrims and tourists are expected at Cannes to take part in the religious ceremonies.

Need Two Now

Peewit—A man can hardly wed now unless he can show the girl two licenses.

Dismuke—Two licenses?

Peewit—Yes; marriage and automobile.—Exchange.

Popular Word Study

The period in world history known as the dictionary epoch refers to the great interest that is now being taken in living foreign tongues as well as in our own. Cross-word puzzles, too, have stimulated the study of words.

Uncertainty of Opinion

"Leonidas used to think he was always right," said Mr. Meekton's wife.

"How did you cure him of that?"

"I got him a job as a weather forecaster."

And Adam Couldn't

Adam—I want you to stop flirting with Eve; she's my wife.

Serpent—I'll bet you can't show any marriage certificate.

WHAT DID OUR EX-PRESIDENTS DO?

By ELMO SCOTT WATSON.

WHEN Herbert Hoover of California takes the oath of office as President of the United States on March 4, Calvin Coolidge of Massachusetts will become a member of one of the exclusive organizations in the world. At no time in its history has it had more than five members and that occurred only once, in 1862. Since then there have never been more than two members in this club at any one time and since Wilson's death on February 3, 1924 it has had only one, William Howard Taft. For this organization, a very important one, even though it is small in membership, is the unofficial "Ex-Presidents of the United States club."

Just what Calvin Coolidge will do when he joins the "Ex-Presidents' club" was unknown at the time this article was written, although it may be announced by the time it appears in print. When that question came up some time ago, he is said to have remarked that he was "just going to whittle," which may have been the New England way of saying that he was going to spend a leisurely vacation before taking up any other occupation. There has been talk of his resuming his law practice in Northampton, Mass.; talk of his joining a New York law firm and also talk of his becoming an important official in various business firms. If eventually he turns to politics there will be plenty of ex-Presidential precedent. Three ex-Presidents occupied important federal positions after they left the White House. John Quincy Adams was elected to the United States house of representatives. Andrew Johnson was elected to the United States senate. William Howard Taft became and is now chief justice in the Supreme Court of the United States.

Despite his historic "I do not choose," it is even possible that he may decide sometime to put the so-called tradition against the third term to a test and again run for President. In this he again will have precedent from his predecessors.

Martin Van Buren was the first ex-President to attempt a come-back. Before the New Yorker all the American Presidents had served their two terms save the two Adamses. Van Buren slipped miserably in his two attempts, failing despite strenuous efforts to get the nomination of 1844, and, in 1848, with the nomination failing to gather a single electoral vote.

After him Fillmore tried with scarcely better success. General Grant was the first man to attempt to fill a third term, running well for the nomination on the first 36 ballots, but finally giving way to James A. Garfield. That was in 1880.

Cleveland was the only ex-President to regain the crown. Several before him tried to turn the trick; Roosevelt exactly twenty years later attempted the same thing. All failed where Cleveland succeeded. For defeated in 1888 by Benjamin Harrison, Cleveland waged a campaign that found him on March 4, 1893, riding to the Capitol.

Cleveland was the only man to make this ride more than three times. In 1885, he rode with the outgoing President Arthur; in 1889, he gave over the reins to the incoming President Harrison; in 1893, he took them back from the same man; in 1897, he rode the trail for the last time, carrying with him the ill-fated William McKinley.

Of the careers of the other ex-Presidents William A. Millen, writing in the Washington Star, offers this concise summary:

George Washington retired to the quiet of his beloved Mount Vernon after he surrendered the Presidency on March 4, 1797 but lived only a couple of years to enjoy his well-earned rest. True, he was recalled to Philadelphia in 1798, when war seemed about to break with France, the old ally of the United States, and spent some time reorganizing the army, which he had led so well in the strenuous years of the nation's birth. A cold contracted while riding about his broad acres caused his death, following a brief illness, on December 14, 1799. He was sixty-seven years old.

John Adams, a signer of the Declaration of Independence and veteran of the Continental congress, retired from the Presidency on March 4, 1801. He died July 4, 1826, at his native Quincy, Mass., at the ripe old age of ninety years, having lived to see his eldest son become the sixth President of the United States.

Thomas Jefferson surrendered the Presidency March 4, 1809, and, curiously enough, died on the same day as his predecessor in office, both of them passing away on the birthday of Calvin Coolidge, July 4. He retired to private life at his residence, Monticello, in Virginia. In 1819 he took a leading part in the founding of the University of Virginia at Charlottesville, and was rector of that institution until his death in 1826, at the age of eighty-three years.

James Madison left the Chief Executiveship on March 4, 1817. He retired to his estate at Montpelier, Orange county, Va., to enjoy private life. He was a delegate to the Virginia Constitutional convention of 1829, and was rector of the University of Virginia. He died June 28, 1836, age eighty-three.

James Monroe laid down the duties of the Presidency on March 4, 1825, and died July 4, 1831, at the age of seventy-three years. He retired to his farm at Loudoun county, Virginia, and in the Virginia Constitutional convention of 1829, in which Madison likewise served, he was chosen president of that group. He moved to New York city in 1831 and died there.

John Quincy Adams left the White House March 4, 1829, a coincidence in that Coolidge, another man from Massachusetts, stepped out of the Presidency in 1929. Adams was defeated as candidate for governor of Massachusetts in 1834, but the Bay state elected him to the house of representatives as a Whig to the Twenty-second and the eight succeeding congresses, serving from March 4, 1831, until his death at the Capitol on February 23, 1848, of a paralytic stroke, at the age of eighty years.

Andrew Jackson closed yet another chapter in his colorful career when he left the Presidency on March 4, 1837. Then he retired to the Hermitage, his home near Nashville, Tenn., and died there June 8, 1845, of tuberculosis, at the age of seventy-eight years.

Martin Van Buren bade farewell to the White House officially on March 4, 1841. Defeated for re-election as the Democratic candidate in 1840, eight years later he was the antislavery candidate for President. He died in his native Kinderhook, N. Y., July 24, 1862, during the Civil war, aged seventy-nine years.

John Tyler surrendered the reins of office on March 4, 1845. He was delegate to the peace convention in 1861, which tried to avert the Civil war, and served as its president. He had lived quietly on his estate up to that time. With the approach of the conflict he plunged into politics again and after the proposals of the peace convention had failed, he threw in his lot with his native Virginia and voted for secession. He was elected to the Confederate congress, but died before it assembled in Richmond, Va., expiring January 18, 1862, in the Old Dominion capital, at the age of seventy-one years.

James Knox Polk lived but a short while after he was freed from the duties of the Presidency on March 4, 1849. Death came to him on June 15, 1849, in Nashville, Tenn., at the age of fifty-three years.

Millard Fillmore laid down the onerous duties of the Presidential office on March 4, 1853, after having been defeated for renomination, as the Whig candidate by Gen. Winfield Scott. He resumed his law practice in Buffalo, N. Y., and was chosen as the National American candidate for the Presidency in 1856. He was president of the Buffalo Historical society, and during the Civil war he commanded a corps of home guards. He died March 8, 1874, at Buffalo at the age of seventy-four years. Franklin Pierce turned over the affairs of state to his successor in the Presidency on March 4, 1857. He spent the latter years of his life in traveling extensively in Europe and died October 8, 1869, at Concord, N. H., at the age of sixty-four years.

James Buchanan, left the White House on March 4, 1861, and died June 1, 1868, at the age of seventy-seven years. He had retired to his home in Wheatland, near Lancaster, Pa.

Andrew Johnson, who was nearly ousted by the senate, left the White House with the expiration of his term on March 4, 1869. By an ironical turn of fate, he was elected to the very body that would have turned him out of the Presidential office with one vote more. He first retired to his home in Tennessee and was defeated as a candidate for the senate before the legislature in 1870. He was defeated as an independent candidate for the Forty-third congress, but having been a senator before his election to the Presidency, he was re-elected to the senate and served from March 4, 1875, until his death, July 31, 1875, at the home of his daughter in Carters Station, Carter county, Tenn., at the age of sixty-six years.

Ulysses Simpson Grant, intrepid soldier, laid down the task of the Presidency on March 4, 1877. With his wife and youngest son he made a tour of the world, returning in 1879. He was boomed for a third term in 1880, but popular sentiment against this course proved too strong. In New York city, to which he moved, he became president of the Mexican Southern railway and a special partner of the firm of Grant & Ward, but in 1884 this firm failed, the former general suffering an acute financial loss. In 1885 congress restored him to the rank of general, giving him full pay on the retired list. To recoup his fortunes he began to write his memoirs, but a cancerous growth in the throat placed a painful handicap upon him and he died July 23, 1885, at the age of sixty-three years, at Mount McGregor, N. Y.

Rutherford Birchard Hayes, who also had been a general in the Civil war, stepped out of the Presidential office on March 4, 1881. Until his death on January 17, 1893, his days were given over to education and philanthropy. At the end he was seventy years old.

Chester Alan Arthur left the White House on March 4, 1885, and retired to New York, where death overtook him on November 18, 1886, a little more than a year after he had left the Chief Executiveship, at the age of fifty-six years.

Grover Cleveland stepped down from his high office as leader of the nation for the second time on March 4, 1897. He had first served from March 4, 1885, to March 4, 1889, but during the intervening four years this lone American, who is the only one in all history who was able to come back to the White House after he had left it, retired to New York to engage in the practice of law. He was called away from his briefs, however, by re-election to the Presidency in 1892. Accordingly, he served the second time for four years, beginning March 4, 1893. When his second term had been completed, Cleveland settled down in Princeton, N. J. At Princeton university he delivered an annual course of lectures on public affairs and wrote numerous articles. He died June 24, 1908, at the age of seventy-one years.

Benjamin Harrison bade an official farewell to 1600 Pennsylvania avenue on March 4, 1893. This grandson of President William Henry Harrison then returned to the practice of law and delivered a course of lectures at Leland Stanford university on constitutional law. He served as counsel for Venezuela in the Anglo-Venezuelan Boundary Arbitration commission. He represented the United States in 1899 as a member of the Peace conference and became one of the International Board of Arbitration. In 1897 he had written "This Country of Ours." He died March 13, 1901, at Indianapolis, Ind., at the age of sixty-seven years.

Theodore Roosevelt left the White House on March 4, 1909, to plunge into another phase of his spectacular career. Following the outdoor life of which he was such an ardent advocate, he hunted and explored over a wide stretch of territory in Africa and South America. Disagreeing with his successor, Taft, he lost his fight to be chosen as the Republican standard-bearer in 1912 and formed his famous Bull Moose party, making a strenuous campaign and being rewarded for it by the voters in running ahead of the regular Republican candidate. His offer to raise a division to aid America in the World war was rejected, but he was active in its cause with the pen. He died of heart trouble at Oyster Bay, N. Y., on January 6, 1919, at the age of sixty-one years.

William Howard Taft surrendered his Presidential toga on March 4, 1913, and is now the only former President living. He taught law at Yale until 1921, the year Harding appointed him Chief Justice of the Supreme court, the post he now holds.

Woodrow Wilson, the World war President, who like his Democratic predecessor Cleveland, had lectured at Princeton but later became its president, closed a strenuous and momentous eight years in the White House on March 4, 1921—a broken man. He entered a law partnership with his old friend Bainbridge Colby and maintained an office in Washington. Death summoned him on February 3, 1924, at the age of sixty-seven years.

ORCHARD GLEANINGS

BIG DIFFERENCE IN FRUIT PROFITS

Limiting Production Should Be by Less Acreage.

The fruit grower has a different set of problems, but in many ways the same procedure should be followed as that the wise general farmer uses, says the Illinois Farmer.

Costs per bushel or per package of fruit bear a very close relationship to the production per tree and per acre. It costs no more to spray a tree with 20 bushels of apples on it than it does to spray a tree the same size with five bushels on it. The pruning of the two trees also costs the same amount. The cultivation costs the same per tree, the same amount of fertilizer was given each. The amount of taxes each should bear was the same. Each should bear the same share of interest charges which the business pays out.

These charges on the tree which has 20 bushels of apples may amount to 15 cents a bushel. On the tree with five bushels on they would be 60 cents a bushel.

There is the other class of charges which does not change per bushel with the size of the crop such as the charge for the package and the cost of picking, packing, hauling to the car and such. These costs may be about 50 cents a bushel. This class added to the other, on the tree which yielded 20 bushels gives a total cost of 65 cents as a result. On the tree which yielded only five bushels the total cost is $1.10.

The significance of this in a year of poor prices is at once strikingly apparent. Any price between 65 cents and $1.10 is a profitable price in one case and extremely unprofitable in the other.

Thus while it is necessary to limit production of horticultural products it must be done not on the basis of smaller yields per acre but decreasing the acreages.

This should be kept in mind by the fruit grower when he is urged to reduce his production. If he has more orchard than he can care for properly the ideal chance exists to eliminate a few unprofitable blocks whose average yield per acre is low and increase the yield on the better blocks. Even if the result is a stationary production his profits will show a good increase.

Nematodes Attack Roots of Young Orchard Trees

In sandy or sandy loam soils nematodes (eel worms) are frequently found and attack the roots of young orchard trees, causing small knots to appear on them. Trees so affected are usually weak and die before they come into bearing. Occasionally trees come from the nursery with knots (nematodes) on the roots, and under no condition should such trees be planted. When the orchard site has been selected the roots of the crop growing in the soil there should be examined to determine whether the soil is infested with nematodes. If knots are found on the roots of these plants a new orchard site must be selected.

Horticultural Notes

Fruit trees that are expected to produce a good crop of fruit should be watered from time to time for best results.

* * *

Any rabbit will eat apple tree bark when snow is deep and food scarce, and when rabbits are plentiful under such conditions, look out!

* * *

Where a tree has been girdled to the extent that the top dies, it is best to let a sprout start from below, and later graft this or plant new trees.

* * *

The grape should be pruned in the fall, early winter, or at least before early spring, to prevent excessive "bleeding" caused by pruning in the late spring.

* * *

Strawberries are set out in April or early May. If plants are dry when received from the nursery, dip them in water and place in a cool, moist place for a few hours before planting.

* * *

The autumn-fruiting or so-called everbearing raspberries can be recommended only as a novelty for the home garden. The autumn crop is usually light, the quality is not high, and the berries are often poorly developed.

* * *

Berry patches and asparagus beds make a good poultry range at certain seasons. The plants furnish shade and the poultry helps to keep down the weeds. A small hole in the garden fence next to a poultry range is a great help in fighting garden pests.

* * *

Farmers who have young orchards and are bothered with rabbits and other vermin gnawing their trees will do well to save the blood of hogs or beef. If the trunks of the trees are washed with this blood, nothing will bother them.

What Wil you do

When your Children Cr for It

There is hardly a household hasn't heard of Castoria! At least million homes are never without i there are children in your fa there's almost daily need of its fort. And any night may find you thankful there's a bottle in the h Just a few drops, and that coli constipation is relieved; or diar checked. A vegetable product; a remedy meant for young folks. Planes Without Pilots

Airplanes without pilots have been made to loop the loop by wireless control from the ground. Many other difficult performances have been made possible by a delicate new system within the plane, operated by wireless waves.

A receiving set in the plane, designed to interpret and act upon impulses transmitted from a ground control station, acts as the mechanical pilot's "brain." The controls are operated by compressed air motors actuated by the wireless set.

Cold Need Cause No Inconvenience

Singers can't always keep from catching cold, but they can get the best of any cold in a few hours—and so can you. Get Pape's Cold Compound that comes in pleasant-tasting tablets, one of which will break up a cold so quickly you'll be astonished.—Adv.

Crayon portraits went out because the enlarged photograph filled the bill.

A woman is never miss-understood after she gets married.

NEW BAGGAGE CAR FOR CARRYING AUTOS

The new baggage car for carrying automobiles—introduced by the Southern Pacific railroad at Los Angeles. A party of tourists is shown about to back up the runway into the car which has doors at the ends instead of at the sides. The new system has been found to be much more efficient in that a great deal of time is saved by the doors at the end of the car.

MOTORISTS NEED WIDER HIGHWAYS

18 Feet Decidedly Too Narrow to Provide Proper Clearance.

(Prepared by the United States Department of Agriculture.)

Do you know that you drive your car or truck by instinct? You do, for engineers of the bureau of public roads have been watching you. They have made observations to see how far from the edge of the pavement you drive and what you do at curves and on down grades.

Having marked off pavements into one-foot sections, the engineers, by watching the right rear wheels of passing vehicles, find that on straight and level roads of various widths from 14 to 24 feet, with shoulders in fair condition, passenger car drivers habitually maintain a distance of from 1½ to 4 feet between the outer wheel and the edge of the pavement. Truck drivers operate somewhat nearer the edge, but prefer not to approach closer than 1½ feet. Drivers will sacrifice clearance between their own and passing vehicles rather than drive closer to the edge than they instinctively feel is safe.

Pavements Too Narrow.

The bureau's observations indicate that pavements less than 18 feet wide are decidedly too narrow since they provide no clearance for passenger cars or trucks operating in the usual paths. While the 18-foot width is apparently great enough for passenger cars in two-lane traffic, it is not quite wide enough for trucks. The 20-foot width gives ample clearance for trucks and is not excessive for automobiles.

In moving down hill on light grades, traffic moves slightly toward the center of the road. Light down-grades do not suggest reduction of speed, hence traffic takes the precaution of moving slightly away from the edge of the pavement. No such tendency was observed on heavy grades where the speed is reduced, and the fear of the pavement's edge is lessened.

In rounding horizontal curves, traffic, in general, shifts toward the inside edge, but the trucks shift courses toward the inside of the curve less than passenger vehicles. Under all circumstances, truck drivers are found to adhere more closely to the edges of the pavement than operators of passenger vehicles.

Traffic Shifts Its Course.

Traffic moving on the outside of the curve shifts its course farther in the direction of the inside than traffic moving in the opposite direction, which is limited in its choice of a course by the proximity of the edge of the pavement. Unless, therefore, the pavement is widened on the curves, the normal straight road clearance between the two lines of vehicles is reduced.

The used width of a pavement may frequently be considerably less than its apparent width, the observations disclosed. On straight roads, as well as on curves, the outer foot of the surfaced section is sometimes totally ineffective because of a bad shoulder. A closely set guardrail, a steep crown, a bad gutter, or an uneven, bumpy condition of the surface near the edge will cause the driver instinctively to seek the center of the road. In one case, a 24-foot pavement was found to have an effective width of not more than 20 feet because of the abutments of an overhead railroad bridge which were crowded close to the edge of the pavement.

Smooth, white concrete shoulders at the edge of a block surface seem to lure the traffic toward the side. Center lines on straight roads, as well as on curves, exert a marked separatory influence.

Car Dollar Worth More Than It Was in 1927

One dollar spent in the purchase of a new automobile at present is worth 16.7 cents more than it was in 1927, according to reports of the United States bureau of labor statistics to the American Motorists' association. In December, 1927, the motorist's dollar, based upon the average purchasing power of a dollar for all wholesale commodities, would buy but 92 cents' worth compared with 108.7 cents' worth of machinery at the present time.

Proper Care of Battery During Winter Weather

Because of the heavier load it will get in winter the battery must be up to its highest efficiency.

The motorist can help it much by seeing that all contacts to batteries are tight and clean. Corrosion should be brushed off with a solution of baking soda.

It may also be necessary to have the generator adjusted so that a heavier charge will go into the battery. The nights are long and the battery is called upon to do more work than is required of it in summer. The charge, however, should not g above 20 on the ammeter dial and would best be maintained at about 15.

Never add acid to the battery but add pure water to keep the solution well over the tops of the plates.

At intervals also the battery should be checked up to see that it does not fall below a specific gravity of about 1,200. Although it will still be useful at this point it will approach the danger point when hand cranking may have to be resorted to.

Once or twice during the winter a good charging is a good thing. The old radio charger will do it.

"Spirit of 1899" Still Carrying On in Boston

Losses through leaking piston rings commence with the suction stroke when there is a vacuum of as much as ten pounds per square inch, slightly decreasing and debasing the incoming charge. On the compression stroke the leakage increases, under a pressure of as much as sixty or seventy pounds.

What you do When your Children Cry for It

There is hardly a household that hasn't heard of Castoria! At least five million homes are never without it. If there are children in your family, there's almost daily need of its comfort. And any night may find you very thankful there's a bottle in the house. Just a few drops, and that colic or constipation is relieved; or diarrhea checked. A vegetable product; a baby remedy meant for young folks. Castoria is about the only thing you have ever heard doctors advise giving to infants. Stronger medicines are dangerous to a tiny baby, however harmless they may be to grown-ups. Good old Castoria! Remember the name, and remember to buy it. It may spare you a sleepless, anxious night. It is always ready, always safe to use; in emergencies, or for everyday ailments. Any hour of the day or night that Baby becomes fretful, or restless. Castoria was never more popular with mothers than it is today. Every druggist has it.

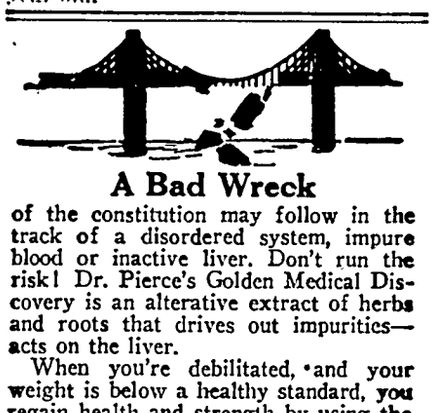
Fletcher's CASTORIA

Falling to Pieces

The intractable Joseph was playing among his dilapidated toys after a joyous Christmas of introspection.

Mother, viewing the wreckage, said despairingly: "It makes me sorry Joseph, to see your gifts go to pieces."

"Your new bird is falling apart, too, mother. His fur is all over the cage," replied the calculating four-year-old.



A Bad Wreck

of the constitution may follow in the track of a disordered system, impure blood or inactive liver. Don't run the risk! Dr. Pierce's Golden Medical Discovery is an alterative extract of herbs and roots that drives out impurities—acts on the liver.

When you're debilitated, and your weight is below a healthy standard, you regain health and strength by using the "Discovery." It builds up the body.

Mrs. Eugene Powell, 119 W. 6th St., Sioux City, Iowa, said:—"When my husband was recovering from an injury he took the 'Discovery' as a tonic and nothing could have done more for him."

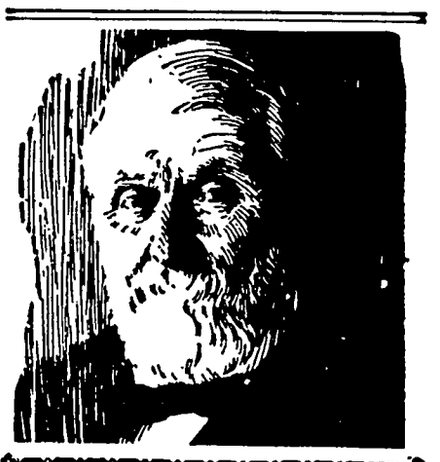
Sold in tablet or liquid form. If your dealer does not have it, send 65 cents for the tablets to Dr. Pierce's Invalids Hotel, Buffalo, N. Y.

Home, Sweet Home

"Don't you ever put your foot down on things at home?" demanded the hard-boiled guy of Henry Peck.

"Only on the rugs," sighed Henry.—Cincinnati Enquirer.

Weakness of prophecy is that when one hits the bullseye, once, he tries to do it again.



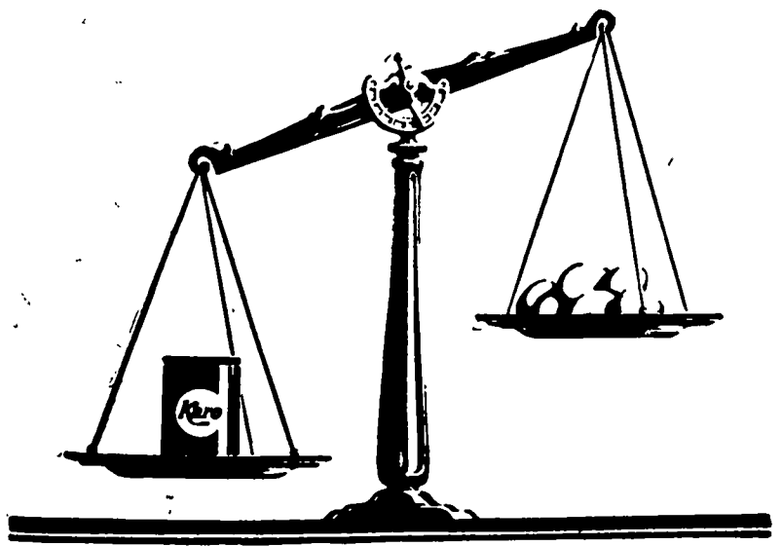
OLD FOLKS SAY DR. CALDWELL WAS RIGHT

The basis of treating sickness has not changed since Dr. Caldwell left Medical College in 1875, nor since he placed on the market the laxative prescription he had used in his practice.

He treated constipation, biliousness, headaches, mental depression, indigestion, sour stomach and other indispositions entirely by means of simple vegetable laxatives, herbs and roots. These are still the basis of Dr. Caldwell's Syrup Pepsin, a combination of senna and other mild herbs, with pepsin.

The simpler the remedy for constipation, the safer for the child and for you. And as you can get results in a mild and safe way by using Dr. Caldwell's Syrup Pepsin, why take chances with strong drugs?

A bottle will last several months, and all can use it. It is pleasant to the taste, gentle in action, and free from narcotics. Elderly people find it ideal. All drug stores have the generous bottles, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois, for free trial bottle.



...KARO contains almost twice the energy value of eggs...*pound for pound*

There are 120 calories per ounce in Karo—almost twice the energy value of eggs and lean beef, pound for pound—

And, of course, this means that Karo is not only a *delicious* syrup but a great energy-giving food.

The energy Karo gives is supplied *immediately*—without taxing the digestive system—as in the case of many other foods.

Convince yourself that Karo is very economical too—compare the price of Karo per pound with other staple foods.

Serve lots of Karo to the entire family—especially the children, who like Karo and who thrive on it.

Keep them strong, healthy and happy.

AVER... TWIN LAKE ...WS ITEMS

(By ...ecial Correspondent)

...rman Bruns hauled hogs to ...lemme last Friday.

A great many neighbors attended the Geo Buseman sale Friday.

Mr. and Mrs Dick Swalve were Mason City shoppers last week.

Jim Youny, of Garner, was a caller in this vicinity recently.

Harry Sandrey hauled corn Monday which he purchased last week.

Herman Bruns of Twin Lake was a caller in Klemme last Thursday.

Ernest Schwichtenberg was a caller at the Dick Swalve home Friday.

Carrie Swalve was absent from school several days the past week on account of illness.

Lyle, Clara and Morris Neuhring spent Sunday afternoon at the Aug. Neuhring home

Miss Esther Buseman is assisting with work at the Emil Lau home during Mrs. Lau's illness.

Miss Madeline Griffen has returned from the Iowa City hospital and is much improved.

Adolph Kramer had a birthday Sunday and a number of his friends aided him in celebrating the event.

Francis Buseman and Ronald Tandy are on the sick list this week with mumps

Mr. and Mrs. Dick Swalve and son Clarence were Sunday evening callers at the Ben Swalve home.

Bennie Schaper spent Saturday at the home of his cousin, Verner Priebe.

Fred Albers and some neighbors of near Goodell attended the Geo. Buseman sale.

Henry Buseman and family were visiting at the Geo. Buseman home recently.

Miss Florence Swalve spent last Friday visiting with Mrs. Edwin Josten.

Arnold Neuhring of Garner is assisting with work at the home of his brother, Owen, who is ill with the mumps.

Mr. and Mrs. U. G. Smid, and Mr. and Mrs. Emery Schaefer and son, Donald, were entertained to dinner at the Dick Swalve home Sunday.

Mr. and Mrs. Carl Wille and Arlene spent Sunday at the home of Mrs. Wille's parents, the G. Goll family.

Arlene, daughter of Mr. and Mrs. Carl Wille, spent Friday efening and Saturday at the Herman Priebe home.

Mr. and Mrs. Dick Swalve went to Ackley Monday afternoon on a business trip. They returned home Wednesday morning.

Harry Carpenter is again able to be up and around after having been very ill for some time with after effects of the flu.

Mr. and Mrs. Herman Priebe and family attended the Silver Anniversary wedding celebration of Mr. and Mrs. Henry Josten Sunday. Mrs. Josten is a sister of Mr. Priebe.

Clarence Tanner went to Des Moines one day recently and bought a new Ford, but due to the impassible roads had to leave it in Klemme.

Mrs. Haupt assisted with housework at the home of her daughter, Mrs. Elmer Schlei last week. Mrs. Schlei was very ill with mumps. We are glad to report that she is better at the present time.

Pirate Gold

The pirate captain was declaiming a spell-out square; it reads, "It is a glorious thing to be a pirate king." The enigma being shouted by the crew is the familiar couplet from "Treasure Island": "Fifteen men on a dead man's chest, yo-ho-ho and a bottle of rum." The rebus on the scroll spelled "Pirate treasure"—Pyre, Eight, Trays, Ewer. The pirate carrying the chest announced that it was filled with "ingots and pieces of eight"—in G. OTS and a broken eight.

Old, but Green

Chauncey M. Depew, at a reception in his New York home, criticized a June-December marriage after his usual crisp fashion.

"Old John Bullion is a healthy chap," a banker had observed. "He'll live to a green old age, old John will."

"Humph. He's reached it already," said Mr. Depew. "I met him downtown last week, and he told me he just married a chorus girl forty-two years his junior who loved him for himself alone."—Pittsburgh Sun.

Concerning Canaries

The biological survey says that the actual origin of the canary as a cage bird is obscure. It seems probable that captive canaries were first secured from the Canary islands, but it is doubtful that this stock has furnished ancestors of all our birds of this kind. The serin finch of middle and southern Europe is so similar that it may often have been captured and accepted as a canary and interbred until all distinguishable differences were lost.

Thoughtful Driver

Policeman on Point Duty—Why didn't you put out your hand when you turned this corner?

Pretty Little Motorist—Well, you see, it's this way. I've just been out with Jack, and he gave me the most thrilling diamond ring—isn't it a beauty?—and I knew only too well that if I put out my hand the headlights of the car behind would shine on the diamond and dazzle the driver, then anything might happen!

FOR SALE—Poland China Brood Sows. Karl Kraus. 2tc

Mrs. Leonard Sampson was a Garner caller between trains Tuesday.

Yes, winter is still with us and there are still no signs of spring.

Ole Peterson, of Britt, was in this city on business Saturday morning.

Mr. and Mrs. Fred Ridder were at Garner Friday on business.

Geo. Buseman and family have moved into the Albert Schmidt place in north Klemme.

The W. F. M. S. will meet at the home of Mrs. Henry Ludeke Thursday, March 7th, at 2:00 p. m.

Mrs. Ely of Belmond came Wednesday for a visit at the Dr. W. F. Missman home.

Samford Knutson went to Swea City Saturday evening for an over Sunday visit.

Miss Eunice Braund went to Williams the latter part of the week for several days visit with her parents.

Mr. and Mrs. U. G. Smid spent Sunday visiting at the Dick Swalve home south of Klemme.

Irene Johnson spent the week end with friends at Belmond, returning to Klemme Monday morning.

Ted and Jack Albers returned on Wednesday from Chicago, where they went Saturday with a shipment of live stock.

Well, folks, its about time for someone to spring that old gag, "I saw a robin this morning." Who will be the first this year?

The Boy Scouts performed a fine good turn Tuesday after school when they cleaned the snow and ice away from all the fire hydrants in town.

Doris Ludeke had a birthday party Friday to which grades 3 and 4 were invited. A good time is the report the youngsters gave.

Paul Grange went to Des Moines Tuesday evening to take in a lumbermen's convention. He expects to return to Klemme Friday.

Mrs. Chas. Medaus and family are now settled in the Greiwe house in Klemme. Mrs. Medaus purchased the property a couple of weeks ago.

H F. Jost and family moved to their new home in north Klemmee yesterday. Mr. Jost purchased the property last fall.

Quite a number of Klemme basket ball fans went to Britt Friday afternoon and evening to take in the first rounds of the county tournament.

The roads have been extra bad the past week and at this time the main roads are still blocked. Snow plows are at work every day clearing the deep drifts from the roads.

Rev. Grosshuesch took a load of glee club girls to Mason City Saturday for the contest. As he could not remain, Mr. and Mrs. Art Gimer brought them home again.

Mr. Wellemeyer remarked the other day that this was the first time since he has been in the furniture business that he had to make deliveries with a bob sled and team.

Mr Arthur Wellemeyer, Ruth and Nora were at Charles City Sunday to visit Art's mother, who has been in poor health all winter but is now getting much better.

"Buck Privates," is the feature attraction picture this week, and next week Friday and Saturday, "Street Angels" will be shown at the Idle Hour Theatre. 1tc

The open season is now on for the holding of Town Caucuses. The election for selecting town officers s to be held the fourth Monday in March, and the new equalization board meets the following Monday. All right, let'er go boys!

Mrs. Ralph Ludeke is enjoying a visit from her mother, Mrs. Hartzel. Mrs. Hartzel has also been visiting with her other daughter here, Mrs. Lester Stille, for some time.

The first round of the district Declamatory Contest will be held at Garner Friday evening. The Klemem high school will be represented by Oral Gibson, Lucile Kraus and Thelma Kluckhohn.

Mrs. Marlin Croner has so far recovered from her illness that she was able to be up for a short time Monday, and each day sits up some. Her many friends are glad to hear she is recovering.

Miss Madeline Griffen returned over a week ago from the hospital at Iowa City where she has been for several months. She is getting along fine at this time and is on the road to recovery.

Bad weather, like we have been having the past week hits the newspapers as well as other lines of business. Getting news now-a-days is like trying to find hen' teeth or like looking for a needle in a hay stack. It just cannot be done!.

Mrs. Elmer Schlei had the mumps last week and her mother, Mrs. Fred Haupt took care of her. She came back to town Saturday as her patient had recovered. Edith Haupt and Adella Kuhlman kept house during her absence.

The secretary of the school board, Paul Grange, would like some information regarding the present owner of Klemme School Warrant No. 15, for $100.00. The warrant is still in circulation, but due to its being passed from one person to another the present whereabouts are unknown. The Board wants to pay the warrant if the owner can be found. It was issued Aug. 27, 1923.

Mr. and Mrs. A. D. Gimer and M. F. Penrod drove to Mason City Saturday afternoon to take in the music contest. The Klemme high school girls appeared in the class C Glee Club contest and were awarded the second place. They brought some of the Klemme girls home with them.

Irene, daughter of Mr. and Mrs. John Suckow, had a birthday last Thursday and treated grades one and two. In the evening a six o'clock dinner was given at which she entertained her grand parents, Mr. and Mrs. H. L. Suckow and Mrs. E. H. Schuldt. Mrs D. P Anderson made her a fine birthday cake for the occasion.

Two men arrested at Sioux City confessed that they stole chickens by "gassing" them with gasoline and ammonia.

The Misses Golda Moberly, Fern Stille and Irene Carlson spent Sunday at the Henry Griffen home, to have a visit with Madeline, who had just returned from the Iowa City hospital.

Miss Gladys Wilson, student at Drake University, Des Moines, enjoyed a short visit at home, Friday until Sunday. Drake University had a short vacation on account of Geo. Washington's birthday Friday.

Donald Gibbs came home fro Morningside College, Sioux City la Thursday night for a short visit home. The college had a vacati on Washington's birthday. Dona "hitch-hiked" and had fine going far as Spencer where a lot of sno was encountered and between the and Algona had to shovel a lot snow. From Algona he took t evening train to Garner and fr Garner walked to Klemme, arrivi here after midnight.

MANY MOVED IN THIS COMMUNITY

LOOK OVER THIS LIST TO FIND YOUR OLD NEIGHBORS

Weather And Roads Made The Annual Moving Job Difficult

As has been the custom for several years, The Times again this year publishes the "Annual Moving List" of this community. We have been inquiring of farmers and others for more than the past month gathering data and getting an accurate report as to where farmers are moving and as to who will occupy the places vacated. Here is the list as we have gathered it together.

Perhaps one of the first to move this spring was Mr. and Mrs. Bert Auchampach, who for a number of years resided on a farm northeast of Klemme. Bert purchased a home some time ago at Ventura, and after holding a closing out sale moved to his new home in February. Harm Christians is now the new tenant on the farm vacated by Auchampach.

Leppo Wessels and family who have resided on a farm nearer Ventura have moved to the Wellemeyer farm, or the place vacated by Harm Christians.

Walter Read, another of the first farmers to move is now settled on the Bielefeld farm south and east of Klemme about five miles. Mr. Read and family for several years lived on the old Bloom place, better known as the Red Cloud Ranch. This was recently purchased by Mr. Adolph Schlichting. Peter Trampel bought part of the Ranch, while Schlichting purchased the part with the buildings. The Schlichting family are not new residents of this community as they formerly lived southwest of Klemme and in more recent years on a farm near Meservey.

While we are out in that neighborhood we will say that Herman Merkel, who has been residing on the Zinn eighty, southeast of Klemme, has moved to a farm vacated by Earl Smith Earl Smith moved to the farm vacated by Eldon Isaccson, northeast of Klemme, and Isaccson moved to a farm near Dows. Dick Geiger comes from a farm near Goodell and has moved to the Zinn eighty vacated by Merkel.

Right near the edge of Klemme we now find Werner Schlawin and family residing on the Wm. Smith farm. This is the place which for a number of years past has been tenanted by Mr. and Mrs. Charlie Fritzel. Mr. and Mrs. Fritzel have not moved far from the neighborhood as they are now located on the Tice farm, which for the past year has been tenanted by the Max Dietrich family. This latter family last week moved to a farm about three miles northwest of Ventura.

Skipping back again to where the Werner Schlawin family formerly resided on the old Dan Webner farm owned by Dr Zinn, we find Jake Tebbesn, Jr. as the new resident at that place.

Again over in that neighborhood we find another change. Verner Halverson and family who lived on the Joe Lawhorn farm northeast of Klemme have moved to a farm north of Ventura. Irwin Smith and family who come from north of Garner now live on the Lawhorn farm.

Jumping east from Klemme we find that Albert Tanner and family have moved closer to Klemme and now reside on the old Henzie farm southeast of Klemme.

We did not learn who will occupy the farm vacated by Tanner.

George Buseman started another round of moving. A few weeks ago he had a public sale, after which he moved to town, renting the Albert Schmidt property in north Klemme. Jacob De Veries and wife who have lived on the Herman Stromer farm northwest of Klemme for several years, have moved to the farm east of Klemme vacated by Buseman. A few weks ago Aaron Stromer and Ruby Goll were married and they are now keeping house on the Stromer farm, vacated by De Veries.

Lloyd Carpenter has moved from the Elmer Arnold farm, southeast of Klemme to a farm near Twin Lake which was formerly occupied by the Glenn Latch family. Ray Christie moves to the Arnold farm.

Leonard Sampson, who has been in poor health the past year, recently held a public sale and disposed of his stock and farm equipment. The Sampson family still reside on the farm. Mr. Sampson intends to go to a hospital and the family may move to some other location At present we are told arrangements are being made that Hamo Beek will farm the land. He may move there later and some of his sons will farm the place he is now on southeast of Klemme.

Emet Kahler has also moved to a farm near Forest City. He was employed by Harry Gibbs the past year.

Mrs. Charles Medaus, having purchased the Griewe residence in this city has moved to her new home. The Medaus farm is now rented by John Meinderts and family who formerly lived on the "Slim" Elder place near Goodell.

Another change northeast of this town we now find Archie Bowers of near Garner on the farm formerly tenanted by Carl Swanson and family, who have moved to the Frank Meter place where the Christianson brothers formerly lived.

Lee Hawkins, who for the past year resided at the Albert Schmidt residence in north Klemme, a few weeks ago moved to the Geo. Albers tenant house on the Albers farm.

Walter Lauden and family have moved to a farm near Forest City. John Kaduce from near Alexander, is the new tenant on the Tyrell farm just north of Klemme vacated by Lauden.

Mr. and Mrs. Hess now reside on the place south of Klemme vacated by the Alec Groh family who moved to Chicago a few weeks ago.

Tom Nelson, Jr. and son Verner exchanged places southeast of Klemme.

Mr. Spayde and family of Wesley have moved onto the Mrs. Eldred farm, vacated by John Meinders who moved to the Mrs. Medaus farm east of Klemme.

Mr and Mrs. Gus O'Krueg, west of Goodell, have moved into their new modern home which they built on the Harmon Section. Harry Ruka and family have moved onto the O'Krueg farm

Another change in the vicinity of Goodell is as follows: Clifford Chase and family have moved to the Anderson place, as the old Chase farm was sold last fall to Herman Lauen and which will be occupied by his son, John and wife, who were recently married.

Pearl Swartz and family, who have been residents of Klemme but a few months, and who lived in one of the Ell houses are moving to a farm in Minnesota, northwest of the Twin Cities a couple of hundred miles.

Henry Jost and family moved last week from the Wiles house near the park to the home they purchased in North Klemme. There has been but little moving in town. About the only other change being Mrs. Chas. Meduas moving into the Griewe place, and Emil Patet and family moving to the house they purchased in Morningside Addition.

TWO TICKETS UP FOR TOWN ELECTION THIS MONTH

Grange Heads Citizen's Party And Gruetzmacher The People's

The first Town Caucus, that of the People's Party was held at the City Hall Monday night and resulted in the selection of F. Gruetzmacher as the candidate for Mayor to head the ticket. J. E. Stille, H. F. Jost, C. A. Larsen, Wes Schuldt and Conrad Quandt were nominated candidates for the Council; Joe Johnson, assessor and C. G. Waterman, treasurer.

The Citizen's Party held their caucus Tuesday evening and named Paul Grange, present mayor to again head their ticket at the town election to be held the last Monday in March. As candidates on the ticket for Councilmen they named Dr. W. F. Misman, A. Wellemeyer, H. L. Suckow, H. F. Jost and C. A. Larsen. G. A. Goll was named as their choice for assessor and C. G. Waterman was endorsed as treasurer.

NEW CASES FILED FOR MARCH TERM

PETIT JURY CALLED FOR DUTY MONDAY, MARCH 18th

Judge J. J. Clark Will Begin March Term Of Court The 11th

Hon. J. J. Clark, Judge, will open the spring term of Court at Garner on Monday, March 11th. However, the grand jury will not appear until the 12th for duty, and the petit jury will report Monday, March 18th at 10:00 a. m.

There are now a total of 138 cases piled up on the docket Of this number there are 75 listed as "old causes," or cases not disposed of at former terms of court, 42 new causes, or cases filed since the November term and which are yet to be tried; and 21 probate causes, dealing with wills, estates, guardianships, etc. There were no criminal causes listed on the docket.

Following are the new cases listed for the March term:

John Gjertson, guardian vs. Leonard Johnson, et al. Plaintiff asks for $10,000 on account of personal injuries.

L. A. Andrew, Receiver, vs. Emma Grace McNary, et al. Plff. asks for judgment of $214 30 and foreclosure of mortgage on lot 1 and 2 and W½ lot 2 and 11 block 2, Maple Hill addition Britt.

L. A. Andrew, Rec. vs. A. W. Noonan, et al Plff asks judgment for $1,783.25 on note.

L. A. Andrew, Rec. vs. B. A. Noonan Plff asks judgment on notes for $359.67.

L. A. Andrew, Rec vs L. C. Beaumont. Plff asks judgment on notes for $2,642.24 and foreclosure of pledged security.

R. C. Patrick vs. J. J. Lowe, plff asks judgment for $124.95 on account of services rendered.

L. A. Andrew, Rec vs Ole G. Peterson. Plff asks judgment on notes for $782.86.

Metropolitan Life Ins. Co. vs G. G. White et al. Plff asks judgment for $42,281.81 and foreclosure of mortgage.

In the matter of the application of Addie A. Cole for appointment of Guardian.

Champlin Refining Co. vs Louds Rierson. Plff asks judgment for $63 and attachment.

Frank H. Clark vs. Harvey Christenson. Plff asks judgment for $195 on acount of rent due.

Joseph Pletch vs. F. E. Chritie. Plff asks judgment for $120 and for attachment.

Arild Madsen vs Martin Erickson. Plff asks judgment for $340 and for landlords attachment.

Des Moines Indm Co. vs Alex Piat. Plff asks judgment for $127.34 on account.

J. A. Treganza vs. Tom Christianson et al. Plff asks judgment for $268.25 and for writ of attachment.

Fullerton Lbr. Co vs Caroline Hansom et al. Plff asks judgment for $328.76 and foreclosure of mechanics len on E½ NE¼ block 2 Stubbins add Britt.

Mrs. Flora S. Nassen vs Waldo Burgardt. Plff asks judgment for $768.97 and for writ of attachment.

L. A. Andrew, Rec vs Benzel Bros. Plff asks judgment for $593.51 and writ of attachment.

Farmers Nat. Bank, Crystal Lake vs Juhl Hansen. Plff asks judgment on notes for $633.01.

C. A. Schoenwetter vs. Della Engbert et al. Plff asks judgment for $728.38 and foreclosure of vendors lien on lot 5, and N½ lot 6 block 15 Garner.

L. A. Andrew, Rec vs J. F. Lorenz. Plff asks judgment for $7,130.-08 on note.

Frank Rayhons vs Chas. Nedved. Plff asks judgment for $3,887.80 on account of assault, medical attention, etc.

John Suurballe, County Treasurer vs Carl Swanson. Plff asks judgment for $201.17 and for writ of attachment.

Farmers Industrial Union, Britt, vs Peter Lewerske et al. Plff asks judgment for $453.57 and foreclosure of mechanics lien.

Augusta Freeman vs. Jno. G. Holck, et al. Plff asks judgment for $1,554.76 and foreclosure of mtg.

ORAL GIBSON WINS FIRST IN CONTEST

TOOK FIRST PLACE IN ORATORICAL AT GARNER FRIDAY

Friday Was Also Lucky Day For Basket Ball Quintet

Friday of last week was a red letter day for Klemme High School for at Britt our Basketball team was victorious over Livermore high school boys and Oral Gibson brought us victory in the Oratorical class of the Declamatory contest at Garner the same evening. School was called early Friday morning in order that some might be able to witness the game and that our team might lose ass of school work. Klemme, by defeating Lone Rock and Livremore, their first two opponents, got into the semi-finals Saturday morning but were defeated then by the Champions of the tournament in Class B. We refer to Renwick. Britt's team won the tourney in Class A.

A Post Scam Game Tuesday

We have a post season game yet to be played here next Tuesday evening, March 12th, against Crystal Lake. Both our High School team and grades have been defeated recently by the Crystal Lake teams and we are determined to redeem ourselves in this last game of the season on our own floor. At this writing winter does not seem to be over and basket ball games do not yet seem out of place. Let's whoop it up for the boys, both grades and high school next Tuesday evening. Our receipts have been less this year than usual and our expenses perhaps more than usual due to the longer drives and the added expenses for basket ball equipment. Admissions will be placed as usual at 35 and 20 cents for a double header. If teams and officials are here in time we propose starting the grade game at 7:30.

We have not yet been advised where our victorious orator will be expected to speak next but will soon. The date will probably be some time next week. Garner will compete in the next round in the Humorous and Kanawha in the Dramatic class.

Don't Come Until Bell Rings

Our school is such a popular place it seems, that children are disposed to arrive here before we can rightly expect our teachers to come. Our teachers are expected at the building by 8:30 in the morning and at 12:45 at the noon hour. We have found Mr. Patet willing to assume responsibility for the order of pupils during the noon hour, especially of those from a distance who must bring their unches. But it is too much to expect him to supervise both rural and town pupils and we forbid those going home for dunch to enter the building before the teachers have returned or are expected which is 12:45. We dislike to keep children outside the door in cold or unfavorable weather. We therefore urge parents to keep their children from leaving home before the 8:30 and the 12:45 bells have rung. This applies to homes in town. Farmers must be permitted to leave home with their children at their own convenience and the few who may come with their parents or drive in are permitted to enter when they arrive. We believe all of our parents will see the wisdom of these regulations and willingly comply with our request.

H. S. Report Cards Delayed

When we were ready to prepare the H. S. report cards this week for the six weeks period just terminated it was discovered that there were not enough for this semester. Consequently more must be procured and parents will now understand the reasons for the delay. Grade reports were sent out as usual.

Let's fill the gymnasium next Tuesday evening for the last basket ball games of this school year. A big enthusiastic crowd puts the spirit that wins in any team. The scores, we predict, will be close. We covet victory.

WEIGHT OF SNOW CRUSHES IN LARGE BARN ROOF

Barn On Wm. Haberkamp Farm Is Wrecked By Snow And Ice

A rather peculiar incident and something out of the ordinary in the way of a barn being wrecked by the elements is the example of the large barn on Wm. Haberkamp's farm.

Early Friday morning Mr. Haberkamp was awakened by a loud crash issuing from the vicinity of his farm buildings. Upon investigation he found that his large barn was minus a roof and in a badly wrecked condition.

Snow and ice had acumulated on the roof of the 88x30 foot barn, despite the efforts of Mr. Haberkamp to keep it clean, as on several occasions wha snow could be removed was taken off the large roof.

The last storm had piled the snow up high near the peak of the roof and with gradual melting had formed tons of weight which crushed the roof, wrecking the barn. The roof was crushed down and the sides of the barn above the hay mow floor pushed out. Some of the timbers fell to the horse barn below when the crash occured.

This will make another good story for the present generation to file away and beats even any that the old timers of today can relate about big storms of years ago.

MAIN ROADS ARE NOW CLEARED OF DEEP SNOW

At this writing most of the main traveled roads are open to traffic again and the drifts caused by the last heavy snow cleared away, so that highways and main roads now range from fair to good.

The big catterpillar powered plow came through Klemme Tuesday afternoon and augured it's way thru the deep snow into Klemme, opening up the road west of town which had been impassible for over a week The snow is so deep at that place that cars cannot be seen from the side as they pass through the long tunnel-like drift.

After burrowing through the drift west of Klemme the plow continued on east, opening the county road to the county line east of Klemme. On Wednesday afternoon the plow went west to open up the county road in Liberty township.

SCHOOL ELECTION WILL BE ON NEXT MONDAY

John Day And Fred Kluckhohn Are Candidates For 3 Year Term

The annual school election for the independent district of Klemme will be held Monday afternoon at the Town Hall for the purpose of electing one director for a three year term to succeed J. N. Day, and for the election of a treasurer to succeed F. A. Arnold.

John Day is a candidate for re-election and Fred Kluckhohn is also a candidate for the same office.

Mr. Arnold has no opposition.

METHODIST CHURCH NOTES

H. E. Whyte, Pastor

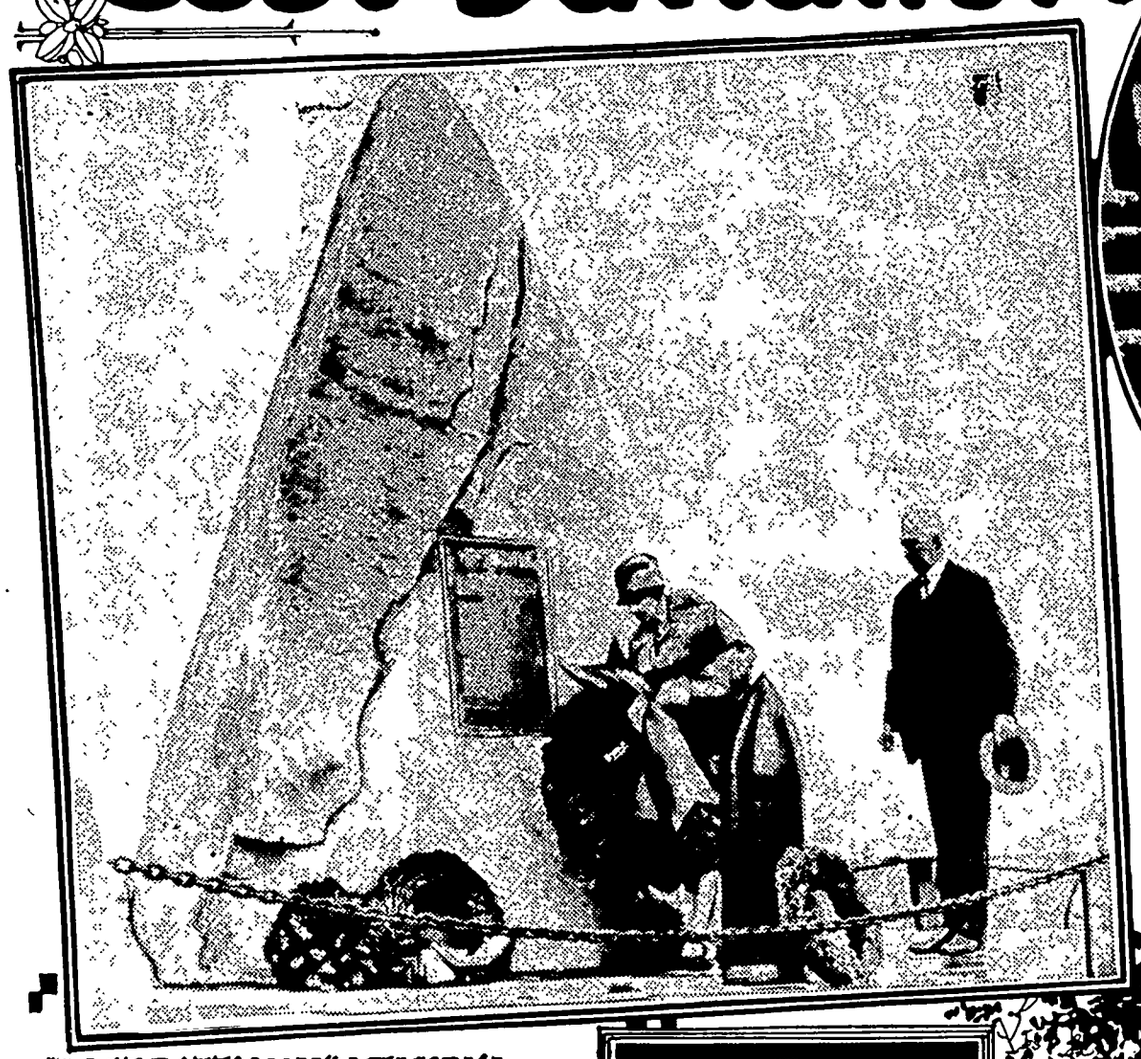
The week of Evangelistic Lenton services which are being held this week in the Methodist Church will end on Sunday evening. It is hoped that the church may be filled for these two big services Sunday as well as for the week night meeting.

The morning serivces on Sunday, March 17th will be given over to Foreign Missionary Society, both in Klemme and at Liberty for their annual "Thank Offering." Their speaker on that occasion will be Miss Letta Daubendick, a returned Missionary.

BASKET AND PIE SOCILA

There will be a basket and pie social at Liberty No. 6 on Friday evening, March 15. Everybody invited. Ladies please bring basket or pie. Hallie Greimann, Teacher; W. L. Haberkamp, Director. 1tc

The True Story of the "Lost Battalion"



"LOST BATTALION" MEMORIAL AT CAMP KEARNEY

MAJ. CHARLES W. WHITTLESEY

CAPT. GEORGE G. McMURTRY

BRIG. GEN. ROBERT ALEXANDER
Photo by Underwood & Underwood

By ELMO SCOTT WATSON

OUT at Camp Kearney, near San Diego, Calif., there was recently erected a monument to one of the most famous military organizations in the history of our country. Mention to the average American the Three hundred eighth infantry of the Seventy-seventh division and it may or may not have any special significance for him. But speak of the "Lost Battalion" and see how quickly he will understand what you are talking about. For the story of the "Lost Battalion" is one of the real hero tales of the World war. As such it is familiar to all of us, even though the facts about that incident in the great Meuse-Argonne offensive of the American forces in the autumn of 1918 have become so colored with a certain amount of fiction as to produce another example of "popular misinformation" in our national legend.

The Seventy-seventh division of the national army is known as "New York's Own" because its ranks were filled mainly with men who were called to the colors in New York city by that great human lottery, the Selective Service act. For that reason it may seem curious that a monument to the heroism of New Yorkers should be erected in California, clear across the continent from New York. But the reason for the Camp Kearney memorial is this: before taking over its sector for the Meuse-Argonne offensive, the Seventy-seventh was strengthened with replacements from the Fortieth division, composed of men from all parts of the West who had trained at Camp Kearney. And in the famous "Lost Battalion" episode, cowboys from the West fought alongside of men of every occupation, nationality, class, and creed from the East side or "Melting Pot" of New York.

In regard to the fiction which has crept into the story of the "Lost Battalion," it should be noted first that the name itself is a misnomer. For the "Lost Battalion" never was "lost." Led by Maj. Charles W. Whittlesey and Capt. George W. McMurtry, the battalion of something less than 700 men took part in an attack by the Seventy-seventh on the morning of October 2, 1918, with a certain road on the edge of a ravine in the Charlevaux valley as the objective. They were acting under orders of Gen. Robert Alexander, commander of the Seventy-seventh, who later assumed full responsibility for what took place. "My orders were positive and precise," said General Alexander. "The objective was to be gained without regard to losses and without regard to the exposed condition of the flanks."

Of the four battalions, from the Three hundred sixth, Three hundred seventh, Three hundred eighth, and Three hundred ninth infantry, which were sent into the attack, Whittlesey's from the Three hundred eighth, was the only one to reach its objective. As a result the enemy penetrated to the rear of their position and the battalion was cut off. So although they were cut off, they were not "lost," for they knew all the time where they were; the Seventy-seventh division knew where they were and made repeated attempts during the five days they were beleaguered to rescue them.

What took place during those five days is told in entertaining fashion in a book recently published by the Bobbs-Merrill company. It is "Without Censor," written by Thomas M. Johnson, correspondent for the New York Sun with the A. E. F., a "now-it-can-be-told" book which explodes many popular myths about the World war and sheds much new light on many disputed questions. In the chapter, "Finding the Lost Battalion," Mr. Johnson tells the true story of that famous incident in our history as follows:

The morning of October third General Alexander ordered the attack resumed, and directed General Johnson to give special attention to joining up with Whittlesey . . . Whittlesey and his men had heard the firing to the rear as the rest of the One hundred fifty-fourth brigade tried to reach them. But the firing receded, died down and they knew that the Germans had repulsed the attack, were free for a time to destroy the Amerikanernest, as they called it . . . They tried for five days and nights, by infantry attack, by trench mortar bombs, hand grenades, machine guns sweeping the valley, by sniping rifle fire from front, flank and rear, finally by flame throwers. The Americans clung to their small fox-holes along the slope. The trees saved them Safe holes could be dug under their roots. Trunks and branches deflected bullets.

They soon became hungry for they had started short of rations. The living ate those of the dead, but, before it ended, were eating leaves. In fact, even at the end of October third, the Lost Battalion was dwindling fast, its effective strength only two hundred forty-five. Water could not be got from the muddy stream in the valley, watched by snipers, slashed by machine-guns. Some who volunteered to fill canteens did not return. The men had started without blankets, and it was cold and rainy. There was no surgeon, only two medical corps men, binding wounds with bandages or wrap puttees taken from the dead.

Even their friends seemed to have turned against the Lost Battalion. The second day, October fourth, while the Germans were giving them a brief rest, an Allied artillery barrage came down upon them. Slowly the shell-bursts commenced on the southern slope of the valley; more rapidly, more quickly, they crept down the slope, crossed the valley, and settled straight on the line of fox-holes held by the cowering, bewildered Americans. Crashing shells threw about branches, leaves, stones and earth, smashed in fox-holes, burying some men. All wounded who could walk were moved to places of comparative safety, but thirty Americans were killed or wounded by that barrage. So easy to pass the buck to the French, but the weight of evidence seems to be that it was American. Whittlesey and McMurtry thought so. From its flaming smoking midst Whittlesey sent his last carrier pigeon with this message: "We are along the road, parallel 276.4. Our own artillery is dropping a barrage directly on us. For heaven's sake stop it." . . .

To Whittlesey and McMurtry, it seemed that the shells just missed them, passed on. Right at the end of it came a German attack, but that was beaten off, and the sound of the firing told the rest of the Seventy-seventh that the Lost Battalion was still there. It had made every effort to let the division know that. Whenever Whittlesey asked volunteers to take back messages, he found them. The Germans captured all but three of the messengers—captured some of them lying face downward amid the brown forest leaves.

So starving, chilled, drenched, sleepless, threatened with instant death from foe or friend, the men hung on through great heroism. Among them, calm and smiling, moved the scholarly, spectacled Whittlesey or the optimistic McMurtry, laughing and joking in a whisper with part of a German potato-masher grenade sticking from a wound in his back. One by one their nine precious machine guns were knocked out, their ammunition ran low. The Germans could not see why they did not surrender. "Kamerad, will you?" they shouted across, to which the doughboys replied: "Kamerad yourself, you ——!" Some German-Americans came in very handy there. . . .

A party of soldiers from Captain Cullen's company on the left flank slipped off to "look for kitchens," for food dropped from airplanes, trying vainly to succor the Lost Battalion, and all were killed, wounded or captured. Only one, named Hollingshead, returned bearing this letter, exactly transcribed:

To the Commanding Officers of the 2nd. Batl, J. R. 308:

Sir: The bearer of the present, Lowell R. Hollingshead, has been taken prisoner by us on October ——. He refused to the German Intelligence Officer every answer to his questions and is quite an honourable fellow, doing honor to his fatherland in the strictest sense of the word.

He has been charged against his will, believing it doing wrong to his country in carrying forward this present letter to the Officer in charge of the 2nd. Batl. J. R. 308 of the 77th. Div. with the purpose to recommend this Commander to surrender with his forces as it would be quite useless to resist any more in view of the present conditions.

The suffering of your wounded men can be heard over here in the German lines and we are appealing to your human sentiments. A withe Flag shown by one of your men will tell us that you agree with these conditions.

Please treat the Lowell R. Hollingshead as an honourable man. He is quite a soldier we envy you.

The writer of that letter was Lieut. Heinrich Prinz, who before the war lived in Seattle, Wash. . . . His ruse did not work—neither did Whittlesey reply. "Go to h—ll" That legend originated when correspondents first got the "story" from an enthusiastic division commander.

"What answer did he send 'em?" they asked.

"What answer would he send 'em?" General Alexander replied. "He told 'em to go to h—l."

Next day those few correspondents who saw the mild-mannered Whittlesey, asked him:

"Did you really tell 'em to go to h—l?"

"Well," he said slowly, "McMurtry and Holderman were squatting near by. I read the note. We smiled. I just folded up the note—it was typewritten—and put it in my pocket and said to the soldier, 'Go back to your post.'" Whittlesey said in his written report: "No reply seemed necessary."

But the next thing he did after putting the note in his pocket was to order taken in the white cloth panels with which he had attempted to signal American airplanes trying to drop food. He was afraid they might look like "withe Flags."

The rescue of the Lost Battalion was finally accomplished by Colonel Houghton of the Three hundred seventh, who discovered a gap in the German barbed wire south of Charlevaux valley through which men might wriggle one at a time unobserved, if they were very careful. Then, when enough had got through, they might start to work their way along the valley from the east, toward Whittlesey's position."

By the morning of October seventh, two men from Whittlesey's force had got in touch with these men creeping forward, and were brought to Colonel Houghton's hole in the ground. Some of his wounded were found bandaged by German surgeons who had said, "Soon it is we who will be surrounded." Houghten's men pushed on.

At seven o'clock that evening their first small party reached the right of the line of fox-holes that the Lost Battalion had held with such fortitude for five days and nights. Companies A, B and M of the Three hundred seventh soon appeared. The siege was ended.

Just in time. The Lost Battalion had held out on nerve for the last two or three days, saving every ounce of strength to repel German attacks. One of the worst of all had come the last morning, October seventh. For the first time the enemy used liquid fire. Belching smoke and flame did not demoralize the Americans on the right flanks, after their terrible ordeal—it made them mad. They jumped from their fox-holes and with their rifles shot the men carrying the flame throwers.

Yet when Houghton's men came among them, they could hardly have withstood another attack. Hand grenades were all gone, ammunition almost, only two of nine machine guns left and no machine gunners to handle them. To meet the next attack the men were sharpening defiantly on stones and earth their bayonets—about all they had left. . . .

The night of October seventh they got a little food, slept for the first time safely, guarded by the rescuing Three hundred seventh. Next morning occurred a thing that brought tears to the eyes that saw it.

Up from fox-holes at roots of trees, pits where dead lay with living, rose 194 men of the 679 who had attacked five days before, and of the 194 many bore wounds. They were all who could walk out of Charlevaux valley which they had taken and held, as ordered. The rest were dead, or had to be carried. The one hundred ninety-four walked heavily, numbed by utter exhaustion, clothes tattered and filthy, faces like drawn masks of putty, with the fixed stare of determination. Worn out, dirty, hungry, thirsty, they would not give in. The eyes told that. Those of us who were there and saw them, as the pioneers turned the first spadeful of earth for the others, know that here was indeed a holy place. . . .

Those who sought Whittlesey found a tall, slim, youngish man, wearing glasses, very tired, sitting on a stump in a little clearing at a forest crossroads, and near him the battalion—the handful that was left. About the first thing he said, and he really said it, was, "Don't write about me, just about these men."

A fine modest gentleman. How untrue and unjust, like most gossip, were the rumors about what he had done. He was of the conscientious type that worries. His friends thought afterward that his nerves were "shot" and those rumors, preying upon his mind, may have helped cause his tragic death by suicide. He had obeyed his orders with unswerving devotion. He had done a soldier's duty. He and those with him had left one of the World war's noblest traditions. That is the true glory of the Lost Battalion. It will never be lost.

ORCHARD GLEANINGS

SET STRAWBERRY EARLY IN SPRING

Varieties Succeeding Well in Community Favored.

"The man who sets vigorous plants of the best varieties of strawberries as early in the spring as the ground can be prepared properly, has gone a long way toward assuring a successful crop," says J. H. Clark, assistant pomologist at the New Jersey Agricultural experiment station.

"Very early planting is to be preferred," Professor Clark continues, "since at that period the plant is more nearly in a dormant state and weather conditions are more favorable. Later plantings are likely to run into periods of warm, dry weather, which will cause some of the plants to die and others to be permanently stunted.

"The correct depth of planting is more important with the strawberry than with most plants. If the plant is set too deep, so that the crown is covered, growth will be slow or death may result; if set too shallow, the upper parts of the roots dry out and growth is hindered. The ideal way is to set the plant as deeply as possible without covering up the growing point at the top of the crown.

"A vigorous one-year-old bed on a man's own farm or on that of a neighbor is the best source of plants, provided the varieties are right. If new varieties are wanted it is often advisable to buy just enough for a nursery row the first year so that later a commercial planting may be made from this row with plants which have not been subjected to the hardships of packing, shipping, and possibly delay en route. Even from a vigorous bed it is advisable to discard the weak plants, setting only those with large crowns and root systems.

"Varieties which succeed well in the community are the ones to plant in quantity, although others might be tried on a small scale. Howard 17 (Premier), an early sort, has given satisfaction in commercial plantings in most parts of the state, while Lupton has been very satisfactory in Cumberland county and vicinity. Varieties which may be recommended for home consumption are Chesapeake, Joe, and Aberdeen."

Control San Jose Scale by Dormant Treatment

(Prepared by the United States Department of Agriculture.)

The most effective control measure against the San Jose scale on peach trees is to apply a lubricating oil emulsion during the winter when the trees are dormant, according to the bureau of entomology of the United States Department of Agriculture. Liquid lime sulphur has also been used against this insect for many years and is reasonably effective. Lead arsenate or other stomach poisons are of no value. The spray must be one that will produce death by direct contact with the insect. A thorough job of spraying must therefore be done, so that it will hit every side of the trunk, lateral limbs, and branches. As the concentration of the spray necessary would defoliate the tree during the growing season, the work must be done during the dormant period, when there is no foliage on the trees and when bud wood is seasoned for winter weather.

Whenever a heavy scale infestation has caused the death of some limbs they should be removed and the tree pruned, if possible, before the dormant spray is applied. Peach trees that have been devitalized by the San Jose scale should receive a fertilizer high in nitrogen the following spring to force out bud wood.

The proportions and method of mixing lubricating oil emulsions and applying them will be furnished on request.

Two General Methods to Control Scale Attackers

There are two general methods for the controlling of the scale attackers. One is nature's methods, but is useful or effective only in the early stages of the disease, and is by birds that eat the scale. Investigation by the biological survey has undisputably proven that 58 species of birds eat scales, and for some the scales are a favorite food. These 58 species are all representatives of 12 families, namely: the woodpeckers, jays, orioles, sparrows, waxwings, viroes, kinglet, gnatcatchers, thrush and bluebirds. The above mentioned birds' stomachs have all been examined and found to contain the scale insect in varying degrees, some having the entire food capacity filled with the pest.

Pruning Trees

In pruning neglected trees, the same general practices should be followed. The first thing that the grower should realize is that this operation usually requires more than one year. As a rule the top of a neglected tree is a mass of growths, a large number of which should be removed or cut back. However, if this is done in a single season, the tree is forced into a heavy top growth and conditions are almost as bad at the end of the season as they were before.

THE WARREN WAY

(© by D. J. Walsh.)

FOLKS warned Jennie Maxwell of the Warren Way before she married Joe Warren. But she laughed at them. Joe was big, clean-bodied, clean-hearted, good-looking, and he loved her. She loved him. The Warren Way didn't bother her one bit.

For two or three years Jennie did just as Joe's mother had done; she got along with things as they were on the Warren homestead. Housekeeping tools were clumsy and old-fashioned. Jenny washed by hand, using a pair of leaky wooden tubs and a tin washboiler. It was hard work, particularly as she used her nice pieces of linen every day. Somehow, she just couldn't get the grime out of the towels.

When Joe had the place joined up with the electric light system in the near-by town Jennie saw help ahead. At the same time the barn was wired lights were installed in the house. But Joe felt he had spent enough money. improvements stopped right there.

One Saturday afternoon Jennie drove to town to do some marketing and happened upon a demonstration of electric washing machines. After looking through the window at the crowd of interested women inside the hardware store, she entered. Her father had been a machinist and she had inherited a knack for machinery. There was a joke in her family to the effect that if you gave Jennie a hairpin and a button hook she could mend almost anything. This brisk, capable labor-saver fascinated her. The grimiest towel came out snowy white.

Jennie's big dark eyes grew luminous with longing. Two or three women gave orders for a machine. One of these women was the wife of a man who worked, odd times, for Joe. Of course she had a big family.

"How about you, Mrs. Warren?" the salesman asked, smiling at her, pencil poised above order blank.

Jennie flushed and shook her head. She wanted to talk it over with her husband, she murmured. Behind her Lucy Frost laughed.

"That's all it will amount to—talking it over," Lucy said to the woman beside her. "My husband works for Joe Warren. He's tighter than the bark to a tree. And set in his way—the Warren Way."

Jennie could not get away quick enough. She raced the car home. Lucy Frost was a liar. Joe would, he must after that, let her have the washing machine.

But Joe wouldn't. When he learned the price he was astounded.

"But, Joe," pleaded Jennie, "you don't know what you're talking about. Just see how the thing works before you decide against it."

Nothing she said had any effect upon Joe. His lips shut in a straight line, his sandy brows drew down over his gray eyes. With a gesture he dismissed the washing machine forever.

Two days later a truck drove up to the barn. Two men got out and began to unload a huge box. Joe came running from the field. Jennie was puzzled. What was it going to be now? She went out to see.

It was a milking machine of the most improved type. Joe hadn't told her he was going to get it. They had only four cows, registered Holsteins, which Joe never allowed anybody else to touch. This expensive contraption was for them, to save Joe that hour's milking night and morning. Jennie turned around and went back into the house. She was washing, for Joe's things got dreadfully dirty. She scrubbed on the old washboard with all her might. Suddenly a cry burst from her lips. She had torn her hand on the zinc. It required bandaging. She couldn't finish her washing that day.

Next morning Joe had something else to do, so Jennie drew the milk to the condensery. She drove the light truck as well as Joe could and there was always somebody there to unload the cans for her. Her hand was still bandaged and very sore. And her disposition was sore, too. She felt she had as much right to a washing machine as Joe had to a milking machine.

She was delayed at the condensery and she went in to watch the machinery. She peeped into the great vat where the fresh milk bubbled to the proper point of condensation in three hours. Wonderful! She moved on to take a look at the way the cans were being filled and capped automatically. But most amazing of all was the tireless carrier which hurried along with the empty shells while two girls were feeding it with deft, swift motions. She knew the girls well. They were neighbors, young, alert, good looking.

"Say, Elsie," she said, "how much do you get a day for doing that?"

"Five dollars."

"Five—" Jennie was startled. "It looks easy," she added.

"Oh, it is! And I'd like to stay on here but—" she blushed.

"She's trying to tell you she's going to be married the first of the month and her place here will be vacant," said Mary Fancher.

"They are looking for somebody to take my place," Elsie said. During this conversation the girls didn't once pause in handling the empty shells.

Jennie turned around and went straight toward the office. As she went she made swift computation—$5 a day for thirty days would buy her that washing machine. Meanwhile, she could hire Melissa Sprague to help her with the housework.

When she went home she had Melissa with her.

"What's the idea?" Joe demanded.

"Melissa is going to do the work here for a few weeks, Joe," replied Jennie.

"On account of your hand?"

"No." Jennie tried to laugh but she was trembling all over. "On account of my taking Elsie Dumond's place at the condensery."

"What are you talking about?" Joe's face was crimson.

"I mean it, Joe. I've hired out for one month. I begin my work tomorrow," Jennie's tone sounded much steadier than she felt.

Joe jumped up, overturning his chair, and dashed out of the house. He was angry clear through, but he knew—all that Jennie hadn't told him.

Jennie went to work next morning. She drove over to the condensery. She drove home at night. Joe said not one word. Nor did she. They simply dropped the matter. But she knew when she looked at him that he wasn't going to give in about the washing machine. The Warren Way had hold of him. It was the first time that Jennie had ever seen the hateful Way in action, and she hated it. Her mode of procedure had become now a challenge. She was striving less for the coveted labor-saver than for victory over an inherited trait which threatened to mar their happiness.

After the first week Jennie's work became monotonous. Just an endless handling of shells. Once she awakened in the night to find herself sitting up in bed going through the motions on the counterpane. Night found her tired, her head aching from the pounding of the machinery all about her. Her washing machine was costing much, much more than money. Could she hold out, could she?

She held out to the last day and the last hour until her month's check was in her hand. Wearily she climbed into the car and started homeward. She had given up her job. She was glad to be through with that. But a harder job lay before her. If she got that washing machine it would add to the trouble. And the distance between her and Joe was wide and getting wider. Perhaps Joe's mother had done the better thing; she had bowed to the Warren Way. Of course she hadn't lived long. But what matter? Jennie was worn out. Her thoughts were thoughts of defeat as she drove homeward, the big check in her pocket.

Joe was nowhere in sight. She got out of the car and went slowly into the house. She heard Melissa slamming pans in the kitchen. There was a good smell of pot roast.

She went to the door, looked into the room, at the grinning and excited Melissa, and at something else—the washing machine of her dreams standing in the corner that seemed just to have been made for it.

"Melissa!" gasped Jennie. "Where did that come from?"

"From Allen's hardware. Just got here. Joe told 'em to be sure and have it here before you got home."

"Joe?" Jennie felt tears coming. She could hardly see Joe strolling in casually.

"Hello, Jen!" Joe said. He looked at her an instant, then went up to her, took her in his arms and kissed her. Melissa slipped from the room. Jennie put her arms around his neck, her head on his shoulder. "You're a brick, I'll say," whispered Joe. "But, Jen, say, if you won't go back to the condensery ever again I'll get you anything you ask for. I—I can't come into the house and find you gone Jennie. Why, it—it just about kills me."

Heart-Searching Voice of Violin Best Music

There is music on board, and to its merry tunes the great ship dances along on the silvery crest of the waves. The "white horses" leap and laugh, with the children sporting on deck. Gayly the music and the wind whips everything into movement and animation, and on goes the ship—a happy creature of freedom, carrying joyously its human freight.

Or, perhaps, it is a tree-fringed road, white in the moonlight. A musician, in the midst of a strolling group of hill walkers, wildly plays to the night. Fantastically the shadows of his companions dance with the flickering shadows of the leaves. They merge, then part, as in a grotesque procession. Now they pass, and the music, and the songs of the men, and the laughter of the trees, mingle into one.

But the best music of all is the heart-searching voice of a violin played by an open-air fire. To be carried here and there on the exquisite waves of sound, to watch the flames leaping, to inhale the smell of the burning wood, to lose oneself in the blackness of the encircling earth or in the vastnesses of the starry sky overhead—is to hear music.

Wanted—An Epidemic!

The doctor's little daughter took a lot of interest in her father's profession.

One day a lady friend called to see her mother, and in the course of conversation turned to the little girl and asked how she was and how her father was getting on.

"Oh, we aren't doing so badly," replied the young woman, with a new interest in the entertainment—"not so badly, all things considered. There's plenty of colds, some bronchitis, and a little fever here and there; but as daddie said yesterday morning, what we really want is a nice little epidemic."—Exchange.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

TRY IT

HAVE you ever tried a winter vacation? Some of you have probably "gone South," or taken a "cruise," or even "followed spring around the world" in the winter. In which case you have been extremely fortunate and doubtless have had a wonderful time. But the present discussion concerns a winter vacation, not a vacation in the winter season. The two things can be entirely different.

Each year winter resorts are becoming more and more fashionable. Tobogganning, skiing, skating and snow-shoeing in the northern woods are quite the things to do these days. But aside from the social gesture involved in such a pilgrimage, it is one of the most magnificent opportunities you can give to your body.

Fortunately one does not have to spend any more, and often not as much, on a vacation of this kind as he is compelled to spend on the more conventional journey to the shore or mountains in the hot season.

For the greater proportion of the population in the United States and for practically all of the people in Canada, winter is either at one's back door or at most only a few hundred miles distant. Therefore, instead of grumbling about it, step out into it and put it to use. The winter vacation is one of the best ways to do this.

Those who have not spent days in the winter woods plowing through glistening snow, or are ignorant of the thrills of winter sports have something to live for on the score of amusement alone.

It is not possible even to suggest the genuine delights that are connected with an outing of a week or ten days in the December or January woods. And, as a matter of fact, one does not need the background of a formal winter playground to experience the joys of wintertime. All one really requires is a good companion and the will to make the most out of the beauty and life-building qualities that winter offers.

To the many who are looking for a new thrill, try a real winter vacation. The physical benefits from an outing of this character will have to be experienced in order to be appreciated.

So, no matter how healthy you are, put the winter vacation on your schedule. And see what happens. "You'll be surprised!"

BEAUTY

THE desire for personal beauty is almost as deep-seated as for life itself. Women and men fortunately take the biblical statement that "God made man in his own image" as a literal fact. It follows, that to develop personal attractiveness or to keep that which nature bountifully bestowed is a most natural objective.

In these days of "service" beauty has not been overlooked. And this is as it should be. Beauty salons and barber shops abound. And millions of dollars annually, through them, are taken from our pockets and given to those whom we believe can make us more pleasing to our mirrors and to the rest of the world. Who would have it otherwise?

Nevertheless, when it comes to buying beauty, humanity is very prone to be gullible. One causes a phantom but with no more effort than to reach into the pocket and take out money. It is here that a fair objection may be raised.

A very misleading statement is this one: "Beauty is only skin deep." Don't believe it! Not even for a moment. Beauty is much deeper than that. In fact, beauty goes into the very heart of one.

Certainly, the set of your features, the cut or condition of your hair and the style of your clothes all play their part in your general appearance. But one can have the best of all these things and still lack that essential attractiveness that is only to be found in abounding good health. Dull eyes, sluggish blood and brain, an everlastingly tired body, are not the things that make for beauty. And this, no matter how beautiful you may happen to be.

Incidentally, no amount of rouge or hair-waving for the women, and no amount of shaving and massaging for the men can give you what you lack. As auxiliaries to beauty? Yes. But as a foundation for it? Positively no!

Red cheeks and lips, sparkling eyes, a sprightly step and a keen brain are not to be got from beauty specialists or the lotions they offer for sale.

The only things that count in this connection are fresh air, a proper amount of wholesome food, plenty of rest, sufficient exercise, regular alimentary habits and a cheerful state of mind.

Patronize beauty parlors and barber shops by all means. Indeed if you don't you will be half dead, for your conceit will be gone. But "patronize" the rules of health more. Therein lies beauty.

NICE WORDS WON'T DYE a dress or coat

Neither pretty pictures nor colorful adjectives will dye a dress or coat. It takes real dyes to do the work; dyes made from true anilines.

Next time you have dyeing to do, try Diamond Dyes. See how easy it is to use them. *Then compare the results.* Your dealer will refund your money if you don't agree they are better dyes.

You get none of that re-dyed look from Diamond Dyes; no streaking or spotting. Just fresh, crisp, bright new color. And watch the way they keep their brilliance through wear and washing. They are better dyes because they contain plenty of real anilines—from three to five times more than other dyes.

The *white package* of Diamond Dyes is the original "all-purpose" dye for any and every kind of material. It will dye or *tint* silk, wool, cotton, linen, rayon or any mixture of materials. The *blue package* is a special dye, for silk or wool only. With it you can dye your valuable articles of silk or wool with results equal to the finest professional work. When you buy—remember this. The *blue package* dyes silk or wool only. The *white package* will dye every kind of goods, including silk and wool. Your dealer has both packages.

Mrs. Frank Roths enjoyed a visit from her grandchildren for a few day last week while their parents were moving.

John Bachman, Hamo Beek and Rob Roths assisted Geo. Buseman with the moving last week Wednesday.

There has only been half days of school in Dist. 2 as there have been only a few present the last two weeks.

There has been quite a bit of moving in this neighborhood the past week. Walter Read moved to the old Bielefeldt farm and Adolph Schlichting moved to his farm where Walter Read lived. Geo. Buseman moved to town, and Verner and Tom Nelson exchanged forms.

NOTICE OF APPOINTMENT OF ADMINISTRATOR WITH WILL ANNEXED—

NOTICE IS HEREBY GIVEN, That the undersigned has been duly appointed and qualified as Administrator with will annexed of the Estate of Henry Medaus late of Hancock County, State of Iowa, deceased. All persons indebted to the estate are hereby requested to make immediate payment; and those having claims against the same will present them, duly authenticated, to the undersigned, for allowance, and filed in the office of the Clerk of the District Court in and for Hancock County, Iowa.

Dated March 1, 1929.

F. A. ARNOLD,
Adminstrator.

(Pub. March 7, 14, 21, 1929)

The wind blew so hard here Wednesday that it blew over two bob sleds. Otto Pringnitz and family were coming to town when the wind upset their sled. They had just gotten squared around when they looked back and saw the Martin Jensen family have a similar experience. In town the wind blew the glass out of Quandt's electric sign.

Standard Oil Service Station

—W. M. KIRKWOOD, Agent—

Let Us Drain Your Car And Fill With POLARINE Phone 96, Klemme, Iowa

POLARINE is made in different grades—there is one made specially for YOUR car. If you use Polarine and drain the crankcase every 500 miles you are assured your engine is thoroughly and adequately protected.

Trust Your Engine to Polarine!

It's the best lubrication money can buy. Polarine is made by the Standard Oil Company [Indiana]—is one of its major products in fact—has helped to build its reputation!

Polarine MOTOR OIL CONSULT CHART

In manufacturing Polarine the latest and most advanced refining practices are employed.

The result is a wonderful lubricant that cushions every moving surface with oil—keeps your car running smoothly—protects the motor from wear and tear and adds miles and miles to its life.

Only because of the *large volume* produced is it possible to put Polarine on the market at anything like the low price you pay for it.

And only because Polarine gives such satisfactory service is such a large volume *demanded*. Hundreds of thousands of motorists in the Middle West demand Polarine because it gives them the *best* lubrication for the least money.

Try this money-saving, car-saving motor oil today!

David Schwichtenberg was a Good ell caller one day recently.

Bennie Schaeper was quite ill a few days last week.

Albert Etchen called at the home of his brother, Fred, one day last week.

Several neighbors assisted Henry Buseman haul hogs last Saturday.

Dick Swalve was a Goodell caller one day recently.

Bennie Beek spent Sunday at the parental, Hamo Beek home.

Woodrow Schultz was a caller at the Edwin Josten home last Friday afternoon.

Mr and Mrs. Herman Priebe called at the Charles Priebe home in Klemme Sunday afternoon

The Misses Esther Buseman and Carnie Swalve were entertained at the George Buseman home Sunday.

Mrs. Carl Wille and daughter, Arlene visited at the Lew Griffen home from Saturday until Wednesday.

Esther and Franklyn Buseman returned to school after several weeks absence due to the mumps.

Lena Busemann returned to her home after spending two months visiting relatives.

Mr. and Mrs. Julius Priebe visited at the Charles Priebe home Sunday afternoon.

Mr. and Mrs. Fred Etchen visited at the home of Mrs. Etchen's brother, the Ben Greiman family.

Mrs Ed. Weisbrod came Thursday for a visit at the homes of her sister, brothers and mother. She was, before her marriage, Miss Della Schlei.

Dave Schwichtenberg drove to Klemme Wednesday morning where he met Mr. and Mrs. Dick Swalve who had just returned home from Ackley The roads were almost impassible, therefore taking them four hours to reach their home, a distance of two and one half miles.

Saturday morning at 2:00 a. m. a truck load of furniture and stock, coming from Northwood, Minn., on the way to Meservey, came as far as the Dick Swalve home and from that place it was impossible to go further with the truck so they unloaded at the Swalve farm. Friday morning about ten neighbors came and got the furniture and stock with sleds.

The Wilson Highway was closed until last week Friday when the big plow began work and worked continuously all thru the night until 2 o'clock Saturday morning they decided it was no use as the roads drifted shut almost as fast as they could open them The caterpillar tractor plow cleared the Wilson Highway of snow Tuesday of this week and now the roads are open to traffic

GOODELL AND VICINITY ITEMS OF INTEREST

(By Special Correspondent)

Many of this vicinity attended the Geo. Buseman sale held last Friday.

Ed. Hemenway shelled corn last Tuesday

Several tramps have been in town lately begging for food.

The movers all spent their first week ends at their new homes.

Mrs. Halfpop was called to Meservey by the serious illness of her father, Mr. Willar.

Margaret Veenstra and Kenneth Griggs are in school again after a siege with mumps.

Harry Ruka's have moved onto the O'Krueg farm which they bot last fall.

Francis Mason and Josephine Dominy are recovreing nicely from the pink eye.

Miss Iris Sherwood, who attends Drake University at Des Moines, spent the week end at home

Mrs. Tom Roths and little sons visited over Sunday with Mrs. F Roths.

Mr. and Mrs. Hess are now living at the place vacated by the Alec Groh family.

Mr. and Mrs Jay Buchaman and family were entertained at the Ed. Hemenway home for supper Sunday.

Mrs. Jake Bachman had the misfortune to fall and injure her side. Her friends hope for a speedy recovery

Mr and Mrs. E J. Nelson and sons, Edison and Boyd, were entertained at the Henry Busse home on Sunday.

Avery Center School has opened again from a one week vacation The teacher and some of the pupils had the mumps.

Mike Kearney, Ferron Griggs, M Smith, Clifford Chase and Jay Buchanan delivered hogs to Mr. Larson at Goodell Saturday.

The Johnny Meiudors family have moved onto the Mrs. Medaus farm. Mr. Spayde and family of Wesley are moving onto the Mrs. Eldred farm.

Mr. and Mrs. O'Krueg moved into their fine, modern home, which they built on what is known as the Harmon Section. They have retired from farming.

Clifford Chase moved onto the Anderson farm. The Chase farm was sold last fall to Herman Lauen and will be occupied by Mr. Lauen's son who recently married Miss Mable Prelipp, of Meservey.

ELL TOWNSHIP NEWS

(By Special Correspondent)

Mrs. George Thieman is on the sick list this week.

Miss Mabel Griffen visited at the Wm. Schlawin home a few days last week and this week.

Mr. and Mrs. George Thieman and family visited at the Herman Thiemann home Sunday.

Mr. and Mrs. Alfred Josten and family visited at the Henman Back home Sunday.

Mr. and Mrs. Verner Lewis are the proud parents of a baby boy. The little fellow arrived Tuesday.

Ewald Josten helped with work at the Geo. Thieman home a few days last week.

Amour Mullin visited his friends Lynford and Graydon Back, at the Herman Back home Sunday.

Mr. and Mrs. Albert Tanner and family visited at the John Newberger home Sunday.

Mr. and Mrs. Chris Back and family visited at the Henman Back home Sunday.

Mrs. Geo. Buseman is at the Verner Lewis home attending to the work and taking care of the new baby.

Mr. and Mrs. George Albers and Mr. and Mrs. Werner Schlawin moved to the Wm. Smith farm last Friday. Charles Fritzel lived there for the last number of years.

IDEA WAS JUST TO TRY OUT THE TEAM

Representative Virgil Chapman of Kentucky said at a dinner in Paris:

"We Kentuckians are daring horsemen. A friend of mine was invited to visit a famous stock farm and when he got off the train a groom was waiting for him with a pair of very restive horses. The horses reared and kicked, but the groom seemed to know his business and my friend climbed up into the high cart without anxiety.

"Whiz! Lickity-split! Off they went like the wind, and a hundred yards down the road the cart turned over in a ditch.

"'How long have these horses been in harness?' my friend asked the groom, as he climbed out of the ditch.

"'Half an hour, sah,' said the groom.

"'No, you misunderstand me,' said my friend. 'I mean how long since they were first put in harness?'

"'I jest done tole ye—half an hour, sah,' said the groom, 'and de boss he say if dey carries ye safe home he'll buy 'em.'"

Up-to-Date City Built on Old Refuse Dump

Part of Ottakring, the sixteenth district of Vienna, known under the name of "Sandleiten," writes a correspondent of the London Sunday Observer, was used for years as a refuse dump. But the municipality resolved to transform the place into a kind of garden city, and after four years' labor has now finished the construction of a new town which will house some 7,000 persons.

The place, which is to be opened for use in a short time, will have 1,600 flats, a large number of shops and storehouses, library, theater and cinema, kindergarten, public bath, post office, cafe, restaurant and park. Its architecture is modern town style, with a smack of the rustic. Round its center, the Matteotti square, the streets are grouped. Some streets and squares are called after Liebknecht, Rosa Luxemburg, Nietzsche, and others.

Spoiled

Bentley Mulford of New York, who is forming an artists' models' union, said the other day: "There are a number of models who won't join the union. These girls don't live up to their duty. Spoiled, you know. They wail and moan about their hard lot, but at the same time they 'lay down' on the artist. Halfway through a painting, his model disappears. All that work is a dead loss to him.

"These spoiled models, wailing and moaning in night clubs, are like the spoiled child.

"The spoiled child was crying, and his fond mother bent over him to wipe his eyes. But he dashed her handkerchief away and growled:

"'Aw, what are ye wipin' me eyes for? I ain't done yet.'"

Pirate Gold

The pirate captain was declaiming a spell-out square; it reads, "It is a glorious thing to be a pirate king." The enigma being shouted by the crew is the familiar couplet from "Treasure Island": "Fifteen men on a dead man's chest, yo-ho-ho and a bottle of rum." The rebus on the scroll spelled "Pirate treasure"—Pyre, Eight, Trays, Ewer. The pirate carrying the chest announced that it was filled with "ingots and pieces of eight"—in G. OTS and a broken eight.

Old, but Green

Chauncey M. Depew, at a reception in his New York home, criticized a June-December marriage after his usual crisp fashion.

"Old John Bullion is a healthy chap," a banker had observed. "He'll live to a green old age, old John will."

"Humph. He's reached it already," said Mr. Depew. "I met him downtown last week, and he told me he just married a chorus girl forty-two years his junior who loved him for himself alone."—Pittsburgh Sun.

Thoughtful Driver

Policeman on Point Duty—Why didn't you put out your hand when you turned this corner?

Pretty Little Motorist—Well, you see, it's this way. I've just been out with Jack, and he gave me the most thrilling diamond ring—isn't it a beauty?—and I knew only too well that if I put out my hand the head lights of the car behind would shine on the diamond and dazzle the driver, then anything might happen!

Pigeon Made Time

A pigeon beat a telegram from Hinsdale to Sanford, Maine, in a 100-mile race of the Sanford, Maine, Racing Pigeon club. A telegram from Hinsdale stating that the pigeons had started was delivered in Sanford twelve minutes after the first bird had arrived.

Isn't it queer how few of a philanthropist's benefactions ever reach your circle?

A green grocer is one who trusts the family that has just moved into the neighborhood.

A woman can tell what another woman has on as far as a man can smell fried onions.

A poet tells us that babies are new waves on life's ocean; but they are only fresh squalls.

A man who has no favorite restaurant doesn't know where his next meal is coming from.

Grandfather's pipe can well be a family souvenir. After fifty years it is comparatively inodorous.

Summerall with his guard of honor at Fort Myer carrying the flag of a full general, to which rank he had just been promoted. 3—Artist's conception of the Armstrong seadromes for transatlantic air service, the first of which will be half way between New York and Bermuda.

NEWS REVIEW OF CURRENT EVENTS

Hoover Is Inaugurated and Sets His Program Before the American People.

By EDWARD W. PICKARD

HERBERT HOOVER is now President of the United States of America and Calvin Coolidge is again a private citizen. Despite the wishes of Mr. Hoover that the inauguration be as simple as possible, the committee in charge made the event the gayest of its kind in more than a score of years, and the national capital was thronged with visitors who participated in the three days' entertainment. The feature included a reception for the governors of a large number of states with their staffs, an air circus that enlisted army, navy and civilian aircraft, the great inaugural parade and a charity ball.

Being notified about 11:30 Monday morning by a committee from the senate and house that the time for his inauguration was at hand, Mr. Hoover, with President Coolidge, escorted by cavalry, rode down Pennsylvania avenue to the capitol and, in the senate chamber, saw Vice President Dawes swear in Senator Charles Curtis as Vice President. Mr. Curtis made a short address and the Presidential party went to the inaugural stand. There Mr. Hoover took the oath of office, administered by Chief Justice Taft of the Supreme court, and made his inaugural address. Thereafter the Presidential party betook themselves to the White House, ate luncheon and, from the reviewing stand in front of the executive mansion, watched the long inaugural parade which took about four hours in passing and over which hovered a hundred airplanes.

Mr. and Mrs. Coolidge, following the precedent set by Theodore Roosevelt, left Washington in the afternoon for their home in Northampton, Mass.

President Hoover's address was listened to with enthusiasm not only by the vast crowd present but also by a radio audience that embraced a considerable part of the country's population. It set forth his view of the state of the nation and of its relations with other nations and his conception of the policies best designed to promote peace and improve living conditions. But, more important, it disclosed an eminent engineer's vision of a huge program of public works in the next four years, involving the expenditure of billions of dollars, and of a farm relief program that, while costly, will, he believes, return tremendously increased profits for capital and labor. Offsetting the great expenditures suggested, the new President pointed the way to governmental economies beyond even those of the Coolidge administration. He proposed the elimination of waste in the processes of government to an extent that would save the taxpayers more than would be expended on waterways, farm relief and other projects combined. This would be accomplished by a radical reorganization of the federal government on scientific lines of reclassification of functions, elimination of overlapping, and eventual reduction of personnel.

CONGRESS in its final days cleared up some legislation and left some unfinished, killed or postponed. Filibusters were frequent and in some cases effective. They caused the senate to abandon the congressional reapportionment bill passed by the house and to consent to the continuation by a committee of affairs of the Indian bureau. The second deficiency supply bill, minus the $24,000,000 prohibition enforcement item, was passed by the senate after Senator Dill had conducted a filibuster on behalf of his demand that the appropriation for a survey of the Nicaragua canal route be cut in half. The senate also adopted the conference report on the naval appropriation bill after the radical group had made a hard fight, so $12,370,000 will be made available for starting work at once on the cruiser building program.

Despite the stubborn opposition of the wets in the house, that body passed the senate measure, known as the Jones bill, which increases the maximum penalties for first offenders against the Volstead act. The proposed legislation for the deportation of alien gunmen failed because the senate conferees refused to accept certain provisions in the house bill, holding that they created unjustifiable inequities.

Efforts to postpone the national origins immigration restriction plan, which goes into effect July 1, also failed. The President transmitted to congress a revision of the national origins quotas which decreases the British quota from 65,894 to 65,721, and increases the German quota from 24,908 to 25,957, and the Irish from 17,427 to 17,853. Norway is reduced from 2,403 to 2,377, Sweden from 3,390 to 3,314, and Denmark from 1,234 to 1,181.

President Hoover may obtain the repeal of the revision plan at the extraordinary session of congress. He opposes it on technical grounds, holding the national origins figures cannot be accurate and that it is best to leave the quotas to the present census basis.

CONTRACTS for the sale and operation of the United States and American Merchant lines and the construction of two palatial liners by Paul W. Chapman & Co., Inc., of New York, were signed. The documents provide the necessary legal guarantees that the ships will remain under the American flag for a period of one year and maintain a regular schedule. Chapman takes over the operation of the eleven ships of the two lines, including the Leviathan, and will let contracts for the construction of two liners nearly as large as the Leviathan, but faster and more luxuriously appointed. They are to be speedier than any ships now built or building.

Chapman agreed to pay the shipping board $16,300,000 for the fleet and some shore property. Approximately half of this sum is to be paid at once. The shipping board agreed to loan the purchaser approximately $50,000,000 as three-fourths of the construction cost of the proposed new liners.

AIRMANSHIP of the highest order and cool nerve saved Colonel Lindbergh and his fiancee, Miss Anne Morrow, from serious injury or death down in Mexico City. The colonel and Anne had been on a little airplane ride in the course of which a landing wheel was lost. Lindy told the young lady they would upset on landing but not to be frightened, surrounded her with cushions, and flew about until the gasoline was exhausted, to avoid the possibility of explosion. He then came down to ground with the utmost care and skill. The plane upset, as he expected, and he sustained a dislocation of the shoulder, but Anne was unhurt. The colonel's injury was attended to at a hospital and he took Anne home in an automobile which he drove with his left hand. He declined to talk about the upset, insisting it was "not an accident, merely a mishap."

Showing that the "mishap" hadn't daunted them, Lindy and Anne made three short flights next day, the colonel handling the plane with one hand.

George Haldeman, who was Ruth Elder's pilot on her attempted transatlantic flight, made a fine nonstop flight from Windsor, Ont., to Havana, Cuba, in 12 hours and 56 minutes.

Joseph Lebrix, the French aviator, and two companions on an experimental mail plane flight from Paris to Saigon, Indo-China, crashed in the Gulf of Mataban, Lower Burma, when more than eight days out from Marseilles. The plane was destroyed but the aviators escaped serious injury.

Walter Scherz, who was helmsman of the dirigible Los Angeles when it was brought over from Germany, and of the Graf Zeppelin on its round trip between Germany and the United States, died in Berlin from balloon gas poisoning.

BANKER members of the reparations commission last week discussed the possible issue of German war debt bonds. The prevailing view seemed to be that the issue should be for not more than a billion dollars and the term for amortization should be thirty to thirty-five years. It was thought one-quarter of the amount should be allotted to the United States and three-quarters to Europe, since Europe has the deepest interest in the settlement. The settlement plan devised by Sir Josiah Stamp's subcommittee provides for the division of the annuities that Germany is to pay annually into two parts. The first and the larger portion Germany must pay unconditionally, but the balance she may delay discharging if the payment would endanger the exchange rate and threaten again to depreciate the mark.

This provision was necessary because when the plan to revise the Dawes plan was agreed on, the original transfer committee which safeguarded the German finances was automatically dissolved, and the Berlin representatives insisted that they need this protective organ if they are expected to pay anything like what the allies demand.

HOLLAND, and in lesser degree the rest of Europe, was interested in the publication in a Utrecht newspaper of documents disclosing an alleged secret military agreement between France and Belgium. Dr. J. Louden, Dutch minister to France, demanded an explanation, and the French foreign office asserted the treaty and its interpretation as printed in the paper were falsehoods. Belgium's foreign minister made a similar denial. The Belgian chamber of deputies decided that if any Belgian minister had signed the alleged treaty, he should be prosecuted in the courts. The editor of the Utrecht paper declared the source from which he secured the documents was "absolutely above suspicion"; that they are the minutes of a meeting of military experts, signed and officially sealed and include the text of the Franco-Belgian treaty.

LEON TROTSKY, the exiled Bolshevik, is said to be in an advanced stage of tuberculosis, and his friends have been trying to arrange for his removal from Turkey to some more beneficial clime. Those in Germany have prepared for him a cottage in the outskirts of Berlin where he and his wife can live in simple comfort if the German government consents.

HURRICANES swept across several sections of the Middle South last week, killing nearly two score persons, injuring many others and doing considerable property damage. The regions hardest hit were in Mississippi, Arkansas and northeast Texas. In Minnesota, Wisconsin and Iowa there were blizzards that interrupted transportation; in Ohio, Missouri and southern Illinois there were threatening floods; and the region about Los Angeles was hit by a destructive gale.

JACK SHARKEY of Boston outpointed young W. L. Stribling of Georgia in the much ballyhooed heavyweight fight in Miama Beach and was given the decision by Referee Magnolia after ten rounds of rather unexciting battling. The Southerner, younger, lighter and less experienced than his opponent, had rather the best of the earlier rounds, but Sharkey, generally avoiding Stribling's really formidable right, wore him down with body blows and fairly won the decision. Both fighters were brave enough and showed considerable skill, but the sports writers present agreed that neither gave promise of being championship material. Thirty-five thousand men and women paid $400,000 to see the fight. Sharkey's guaranteed share was $100,000, and Stribling received $60,000.

POLICE officials of Havana uncovered a plot to assassinate President Machado of Cuba, overthrow the government and force military intervention by the United States. Seventy-three persons were charged with complicity and some of them were arrested. Among those still at large was Gustavo Machado y Morales, a cousin of the President. American secret service operatives were said to have been in Havana helping investigate the plot.

REV. DR. NEWELL DWIGHT HILLIS, pastor of Plymouth church, Brooklyn, one of the most noted pulpit orators of the time, died in his home in Bronxville, N. Y. He was born in Iowa 70 years ago and first won fame as a preacher in Chicago and Evanston, Ill.

ASPHALT ROADS PROVED WORTHY

Government Finds Surfacing Material Is Durable.

Realizing that the cost of construction and maintenance of state highways, county roads and city streets affects the purse or bank roll of every citizen, whether or not he owns an automobile, motor cycle, pushmobile or horse-drawn vehicle, the United States bureau of public roads in 1911 and 1912 sponsored a test of various road surfacing materials, laid on Connecticut avenue in Montgomery county, Md., immediately adjacent to Washington, D. C., and found that the asphaltic pavements, according to the official report recently issued, had proved themselves to be remarkably durable in the face of 16 years of heavy traffic duty. These experiments included seven sections of bituminous macadam, two sections of asphaltic concrete, three sections of portland cement, one section of brick pavement.

In the bureau's official report of this experiment there appears the following statement concerning the bituminous macadam sections: "Approximately 16 years have elapsed since these experimental stretches were constructed, and during this period they have carried severe traffic, and in their broken edges and repaired local failures they show the effects of the stresses and strains to which they have been subjected. Nevertheless, all are still in serviceable condition, and with continued careful maintenance should not require reconstruction for some years to come."

Concerning the behavior of the bituminous, or asphaltic, concrete and the brick sections, the report declares: "The two bituminous concrete experiments, and the two brick experiments, have required the least maintenance up to this time and are still in excellent condition, and to all appearances should continue to give economical service for sometime to come."

Meanwhile, R. W. Coburn, construction engineer of the Massachusetts state highway department, presents another report showing the comparative cost of maintenance for the various types of pavement and road surfacing materials used in the construction of the "Bay State" highways. The cost of maintenance per mile last year was as follows: "Cement concrete, $625; reinforced portland cement concrete, $545; bituminous macadam (tar and asphalt) $480; bituminous concrete, $320." Mr. Coburn also declares that on bituminous, or asphalt, macadam roads, from one to ten years old, the surface maintenance cost, which includes patching, frost breaks and surface treatment, was $124 per mile over the gravel foundations and $147 per mile over stone fills. Incidentally, the New York state highway department reports that the average age of bituminous macadam roads in that state, of which there are more than 3,000 miles, is in excess of ten years.

Paris Policemen Must Learn to Drive Autos

Ability to drive an automobile is now a requirement for all new Paris policemen.

The rule is simply that candidates who can drive get the preference in appointment but the effect has been to make men get driving licenses before applying.

Since there are only a million cars in France there are few men in the ranks who can drive, but the number has been increased by the requirement that all traffic officers must learn to handle cars.

Overlubricating Spring Shackles Is Injurious

Now that some manufacturers recommend covering springs "dry"—that is, covering them without packing the covers with lubricant—it is important to avoid overlubricating the spring shackles.

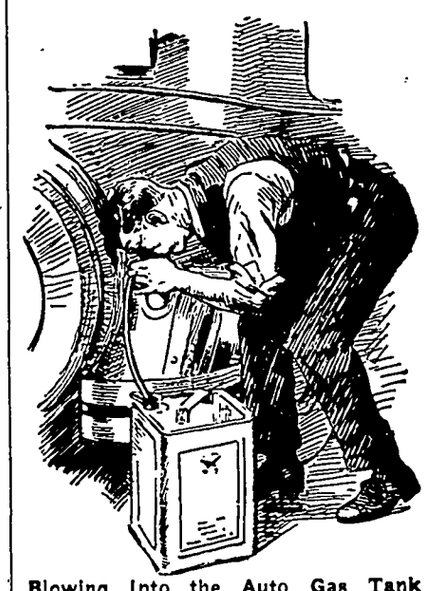
The owner of one car that is equipped with an automatic chassis lubricating system decided that he would be very generous with oil. Every day he pulled out the plunger and shot an excess of oil to the shackles, even though he did not travel far enough to warrant so much attention to these parts. And what was the result?

The excess of oil worked down over the spring ends and entered the covers. It wasn't long before the springs were as limber as though they had been carefully lubricated.

Overlubricating the shackles is a good way to keep the spring ends oiled, however, if your car requires this in order to get a comfortable ride.

Blowing Starts Siphon to Work on Gasoline

An ingenious way to siphon gas from the tank of your car is illustrated. Insert one end of a rubber tube deep into the gas tank; the other into a container. Then, wrapping your fingers around the tube where it enters the tank so as to make as air-tight a



Blowing Into the Auto Gas Tank Forces Gasoline Through a Siphon Tube Into a Container.

connection as possible, blow into the tank. The pressure will force the gasoline out.

You may find that a tighter connection can be made by wrapping your pocket handkerchief around your fingers.—Popular Science Monthly.

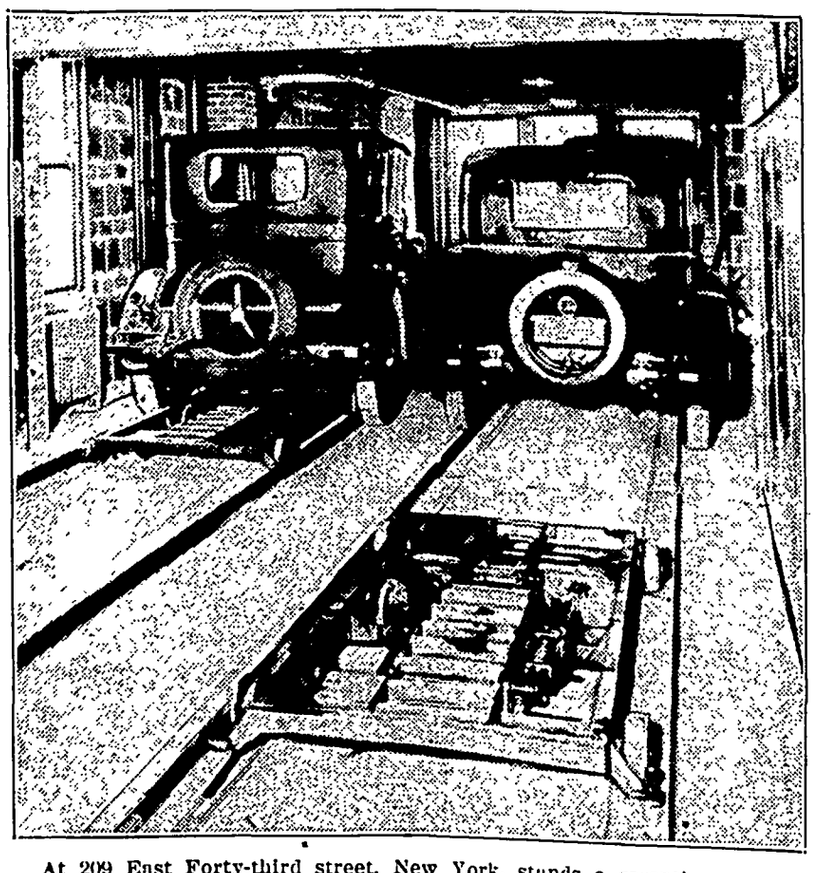
Throughout the world—not including the United States—there is a motor vehicle for every 277 persons.

* * *

The Ohio State Journal remarks that "whatever their rights, the cooperation of both pedestrian and motorist is essential to a maximum of safety in city traffic," and the statement is so true that it might almost serve as a slogan.

AUTOMOBILES PARKED IN LARGE BUILDING



At 209 East Forty-third street, New York, stands a recently completed twenty-four story building that is devoted entirely to the garaging of automobiles. It is the first New York example of the Kent Auto hotel system, developed in Kenosha, Wis. to eliminate traffic congestion because of parked cars. No human hand touches a car once it is run in on the ground floor into rail grooves. An electric parker under an automobile pulls it upon one of three of the largest elevators ever installed in a building. After a "room clerk" assigns a car its room and number it is shot up to its berth at the rate of a floor a second in a high speed elevator. At the proper floor the elevator doors automatically open for the self-leveling lifts and the parker shifts the machine either backward or forward to its place on the floor. The floors are capable of holding 1,000 cars.

DR. CALDWELL'S THREE RULES

Dr. Caldwell watched the results of constipation for 47 years, and believed that no matter how careful people are of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to treat it when it comes. Dr. Caldwell always was in favor of getting as close to nature as possible, hence his remedy for constipation is a mild vegetable compound. It can not harm the most delicate system and is not habit forming.

The Doctor never did approve of drastic physics and purges. He did not believe they were good for human beings to put into their system. Use Syrup Pepsin for yourself and members of the family in constipation, biliousness, sour and crampy stomach, bad breath, no appetite, headaches, and to break up fevers and colds. Get a bottle today, at any drugstore and observe these three rules of health Keep the head cool, the feet warm, the bowels open. For a free trial bottle, just write "Syrup Pepsin," Dept. BB, Monticello, Illinois.

STOP THAT COUGH

Use Pike's Toothache Drops.

An apple a day keeps the doctor away, but Adam and Eve found that an apple was just an invitation to Old Man Trouble.

It May Be Urgent

When your Children Cry for It

Castoria is a comfort when Baby is fretful. No sooner taken than the little one is at ease. If restless, a few drops soon bring contentment. No harm does for Castoria is a baby remedy, made for babies. Perfectly safe to give the youngest infant; you have the doctor's word for that! It is a vegetable product and you could use it every day. But it's in an emergency that Castoria means most. Some night when constipation must be relieved—or colic pain—or other suffering. Never be without it; some mothers keep an extra bottle unopened, to make sure there will always be Castoria in the house. It is effective for older children, too; read the book that comes with it.

Fletcher's CASTORIA

When You Catch Cold Rub On Musterole

Musterole is easy to apply and works right away. It may prevent a cold from turning into "flu" or pneumonia. It does all the good work of grandmother's mustard plaster.

Musterole is recommended by many doctors and nurses. Try Musterole for sore throat, cold on the chest, rheumatism, lumbago, pleurisy, stiff neck, bronchitis, asthma, neuralgia, congestion, pains and aches of the back and joints, sprains, sore muscles, bruises, chilblains, frosted feet and colds of all sorts.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

Jars & Tubes

MUSTEROLE WILL NOT BLISTER

Better than a mustard plaster

FARM STOCK

CLEAN GROUND IS BEST FOR SWINE

Most Profitable Practice for Farmers Anywhere.

The practice of raising hogs on clean ground and with clean equipment probably has done more to make hog raising profitable for farmers who used it than any other production method. One farmer found that he could produce 100 pounds of pork on 6 bushels of corn and 20 pounds of tankage by raising his pigs on clean ground. His neighbors who had unthrifty pigs found that it required 10 bushels of corn and 30 pounds of tankage in the production of the same weight of pork under the old fashioned system of management.

Thorough cleaning of pens and equipment in the farrowing house, the first step in the McLean county system, can best be done when the equipment is modern, preferably of steel. Scrubbing with plenty of lye water and an application of a good disinfectant afterward lessens the danger of the young pigs picking up round worm eggs and disease germs.

Remodeling and preparation of the hog house can best be done in the summer. Pens can be patched up or rebuilt, damp floors can be planked to make them warmer and dryer and ventilation systems can be installed in houses which are frosty and unhealthful in winter and in which hogs are subject to "flu" and other respiratory diseases. In some cases it may be necessary to line frame houses inside the studding and rafters with boards or insulating material so that the house can be kept warm and the temperature uniform.

Litter carriers and feed carts save many steps in large hog houses and can be installed with little trouble. Running water piped into the hog house also is a great convenience and a time and labor saver.

After the growing litters are transferred to pasture and housed in individual sheds much of the work of caring for them can be eliminated by the use of self-feeders and automatic waterers.

Thriftless Colts Often Infested With Parasites

Thriftless colts are often found infested with blood worms, and teething also aggravates the condition. Have the teeth put in order by a veterinarian; then feed whole oats, wheat bran, ear corn, carrots and good mixed clover and timothy hay. If you find a collection of scaly substances around the anus or see worms in the feces, mix in the dampened feed night and morning for a week two teaspoonfuls of a mixture of two parts of salt and one part each of dried sulphate of iron, tartar emetic and flowers of sulphur; then discontinue the treatment for ten days, and then give it for another week. Clip the hair from the legs above the knees and hocks and from the belly and sides to a line with the straps of a breast collar and breeching.

Watch Lambs Closely When Put in Feedlot

Western lambs which are to be fattened for market should be watched closely when put into the feedlot. It will take a few days to get them accustomed to new conditions and especially to get them started. Too much grain at the start may result in death of some of the lambs. Until all the lambs become accustomed to grain, only a small amount of concentrates should be supplied as there is the danger that some of the lambs will eat more grain than they can stand. Alfalfa hay is valuable for fattening lambs, but at the start it is safer to give them some prairie hay, straw, or fodder in addition to alfalfa.

Live Stock Hints

Farrowing rails will reduce losses of baby pigs.

* * *

It's hard to make good profits from scrub animals.

* * *

Diseases of live stock flourish in dirty places. Clean the premises frequently.

* * *

Clover and alfalfa hays are good healthful feeds for all classes of draft horses, but especially for growing foals. The mineral matter contained in legume hays is vital to the well-being of the colts.

* * *

Flockmasters should remember that in order to grow a fleece and to nourish a developing lamb, a ewe needs plenty of protein. If not obtained in legume hay, then bran and linseed oil meal must be fed.

* * *

With liberal feeding the brood sow will be able to recuperate from suckling her fall litter so that she will be thrifty and vigorous when mated for her next litter. Rations rich in protein and mineral content should prevail prior to mating as well as throughout the gestation period.

Quality Is First in Home Gardens

Good Seed Is Prime Requisite for Best Crop of Vegetables.

Quality comes first, says Paul Work of the New York state college of agriculture at Ithaca, N. Y., speaking of varieties of vegetables for home use and for the home garden. Good seed is a prime requisite, and to be sure of satisfaction, it usually is best to deal with a seed house that caters to commercial growers.

Corn Is Mainstay.

Sweet corn is the mainstay of many home gardens and often is the main reason for their existence, for it pays the highest dividends. Sweet corn loses 50 per cent of its sugar and hence its flavor and tenderness in 24 hours after it is picked. This is a mighty good reason for having it close at hand. Among the best varieties are Early White Cob Corey, Golden Bantam, Early Sunshine, Golden Giant, Country Gentleman, Evergreen and Whipple's Yellow.

For the same reasons, peas come next to corn in importance. Thomas Laxton and Gradus are the best varieties for quality, Alaska is the earliest. The dwarf kinds such as American Wonder, Knos Excelsior, Little Marvel, and Laxtonian give more peas to the pod, and are more tender. Telephone, Stratagem and Alderman are late, big-bodied peas.

Among the beans, Stringless Green Pod which is round, early and tender and Bountiful are to be recommended. Most good beans have curved pods.

Lima Beans Desirable.

Lima beans are very desirable for the home garden, but their long growing season and the unfavorable effects of cold wet ground and bad weather make them difficult in New York state to raise. The better ones for central New York are the Burpee bush, the Fordhook bush, and the Henderson bush. Of the pole beans, Scotia, Kentucky, Wonder, Leviathan, Challenger and Green Shell are good.

Canary Grass Valuable for Protein Content

The following is taken from a write-up of the work being done at the Waseca substation in Minnesota. It appeared in the Milking Shorthorn Journal:

"Another interesting experiment is with fellaris grass, or canary grass. This grows in sloughs and wet places, yielding 10 tons to the acre of grass that has as high protein content as alfalfa. It roots like quack grass, growing from the shoots as well as from seed. If the experiment shows that the grass has everything claimed for it by farmers in the county that have grown it, there seems a considerable future for canary grass. The prospect of a Minnesota farmer getting his wet land caught with grass yielding ten tons to the acre of grass as nourishing as alfalfa, is even worse than getting his good land seeded with alfalfa, this is always having to be cut when he has other farm work to do."

Ohio Farmers Walk Many Miles in Doing Chores

The Ohio farmers walk an average of 99 miles a month in doing their chores according to tests made by the rural economics department at Ohio State university. To make this test pedometers were worn by the farmers while doing chores. Of two farmers with exactly the same number of horses and cows and approximately the same number of pigs, one farmer walked 135 miles a month and the other farmer 49 miles. The difference was caused by the relative convenience of the farmstead and facilities for watering and feeding the stock. The water pail proved to be excellent equipment for inducing the farmers to walk great distances.

Around the Farm

Bad chimneys cause farm fires.

* * *

More and more farmers are using the multiple horse hitches.

* * *

Keeping the barn free from refuse and manure will help sanitation.

* * *

Hay averages lowest in price in September, October and November.

* * *

Garden tools are much more satisfactory if they never are permitted to rust.

* * *

Farmers whose buildings are behind good windbreaks seldom have to shovel snow.

* * *

An old alfalfa field makes the best place imaginable for a crop of corn. It is also good for potatoes.

* * *

Lift the hot bed sash and let in fresh air whenever weather permits. That's what makes stocky plants.

* * *

It's the last few pints of milk, bushels of grain, or other units of production, which are the most profitable.

* * *

Crows pull up your corn? Treat the seed and keep the crows away. You can buy a repellent from your seedsman for a small sum.

Control Sheep Tick by Proper Dippings

Blood-Sucking Parasite Is Readily Eradicated.

(Prepared by the United States Department of Agriculture.)

Though widely prevalent, especially among close-herded range flocks, the blood-sucking parasite known as the sheep tick can be readily eradicated by flock owners who study its nature and habits and who will treat their sheep according to government directions. Farmers' Bulletin 798-F, "The Sheep Tick and Its Eradication by Dipping," just revised, describes and illustrates this enemy of the sheep industry.

"The only practical way of destroying the pest," declares Dr. Marion Imes, the author of the bulletin, "is by dipping the sheep. Two dippings are necessary about 24 days apart, as the first dipping may not destroy all the eggs and these may subsequently hatch a new brood." Several kinds of dips are used successfully, the selection being largely a matter of availability, economy, and convenience.

Many farm flocks of the United States as well as those kept under range conditions harbor sheep ticks and in some cases the parasites are present in sufficient numbers to cause considerable damage. The bulletin describes and illustrates the parasites in different stages of growth, gives full directions for dipping, and includes plans of wooden and concrete vats suitable for both small and large flocks.

Utilization of Straw for Insulation Board

The utilization of wheat straw for insulation board is now a practical process and this year one factory at St. Joseph, Mo., has purchased 30,000 tons of straw which is being manufactured into insulation board at the rate of 125,000 square feet daily, according to Prof. O. R. Sweeney, Iowa State college.

It has been found that wheat straw, after steel fingers in a shredder have separated it, produces long tough fibers which can be fabricated into a board that has great structural strength and will provide insulation in building that saves 25 to 40 per cent in fuel used for heating.

The practical application of insulation is recognized by engineers everywhere and farmers, too, are learning that insulation of poultry houses, hog houses and other buildings brings direct returns in saving of feed and fuel.

Small Oat Hullers Now Available for Farm Use

Small oat hullers with capacities of 45 to 50 bushels per hour are now available for farm use. They are usually owned by individual farmers but are sometimes used by a group of neighbors or occasionally mounted on a farm truck for custom work. Machines of this kind, which can be driven by a 5-horse-power electric motor, will also hull and scarify clover seed, crack corn, wheat or rye, hull speltz or skin and crack barley. These added uses of the huller help to keep it busy, cutting down its cost per hour of operation and lessening the expense of making a more valuable feed out of the oats crop.

Tillable Areas Favored for Increasing Pasture

Various methods of obtaining a stand of sweet clover on permanent pasture land have been tried during the past few years. These include very liberal liming—four tons of limestone per acre—plus disking before seeding, sowing on late snows or frost cracked soil, spading small areas to serve as centers of seed distribution, and various fertilizer treatments. Only a few stunted plants have resulted from any of these methods, and it is concluded that only tillable areas are suitable for the purpose of increasing pasturage with sweet clover.—From 1928 Report of the Director of the Storrs Experiment Station.

Winter Proper Time to Clip Horses and Mules

Horses and mules may be clipped almost any time in winter, provided the owner uses blankets after clipping and properly houses the clipped animal. If the foregoing conditions are not complied with, better wait until the weather is warm and dry before clipping. Clipped horses and mules when exposed to cold winds or cold rain are very liable to contract pneumonia or pleurisy or both and quite often distemper, strangles or influenza. Early spring clipping followed by exposure to cold winds while being shipped in open stock cars brings out many cases of colds, shipping fever, influenza or pneumonia.

Raising Dairy Calf Is Quite Serious Problem

Those who know how to raise a human baby know exactly how to raise a dairy calf. By "exactly," I don't mean, of course, that the calf and the baby eat the same kind of stuff, says a writer in an exchange. But I do mean that the kind of care used in raising a baby is just the kind of care required to raise a calf. Babies require regular attention, so do calves. Babies require clean food. Exactly so with calves. Babies require the right kind of nourishment at the right time and in right amounts. And calves are not different.

POULTRY

RAISING POULTS DIFFICULT JOB

Sanitation Essential to Prevent Dread Blackhead.

That the new methods of raising turkeys are about to revolutionize the industry is indicated by the success adventurous turkey enthusiasts have experienced in many parts of the country during the last season.

Word has gradually spread around during the last two or three years that the dreaded disease of blackhead could best be controlled by raising the poults under conditions where the sanitation can be carefully controlled. This has given rise to experiments with incubator hatching and artificial brooding and to keeping the growing poults on restricted range, says a writer in the Oklahoma Farmer-Stockman.

As the result of considerable experimenting, the new method has gradually taken the form of a rather definite program. Hatch the eggs in incubators; brood under artificial hovers; range on fresh, clean ground, and feed an all-mash starting and growing feed. This is a summary of the modern method now being tried with considerable success in many different places.

The writer has had the pleasure of being enabled to visit three turkey raisers in three different states who have been remarkably successful in raising turkeys by the method outlined above. These places were located in three different states—Michigan, Kentucky and Kansas, yet the methods followed were surprisingly similar and the results were uniformly satisfactory. The Michigan man has been using the same methods for two or three years and is specializing in turkey farming. He has a fine flock of more than 1,000 birds, and claims that his losses have been very low.

The Kentucky grower lives in the famous blue grass region not far from Lexington, and is a general farmer. He raises tobacco and other field crops, and in addition to the turkeys has a flock of more than 500 White Leghorn hens. It is worthy of note, however, that the turkeys and chickens are kept entirely separate.

There was nothing at all elaborate about his equipment as he used cheap portable brooder houses with small coal-burning brooders, and had home-made troughs for feed. He has about 250 turkeys left out of about 340 hatched. He claims that the losses were heavier than normal because the poults were chilled when he had some trouble with his brooder stoves.

The Kansas flock was found at the Kansas experiment station at Manhattan. This was an experimental flock, and the birds had been kept in close confinement without outdoor range, until they were sixteen weeks old. At that age they were transferred to a two or three-acre alfalfa field, and at the time of my visit, after four weeks on range, they were as fine and sturdy birds as could be wished for.

During their period of confinement, these poults were fed plenty of lawn clippings for green feed, but otherwise they had the same rations as growing chicks. This flock contained approximately 100 birds out of 135 that were started.

Sufficient Range for Success With Turkeys

A range of one acre of sod is considered sufficient for 100 turkeys from the age of eight weeks to marketable age. This area should also be divided into four sections and then each section used for only one month. The secret of successful turkey raising rests largely in providing fresh ground and the hopper feeding of all feed. In the selection of range it should be one which has not been frequented by chickens and should not be situated where drainage from the poultry yards may result in infestation. It is, of course, desirable to have all the turkeys of the same age. There is no question but that turkeys can be successfully raised in confinement and that it does not pay to allow turkeys to range for their feed.

Separate Turkeys

Keep turkeys entirely away from chickens because the excrement from chickens may contain the worms which are believed to harbor the germ that causes blackhead, the most deadly enemy of the turkey family. There is always more or less trouble from lice and mites with hen-brooded poults. The best stock you can buy will pay the largest profits. Experiments over a long range have shown there is no money in scrub turkeys.

Material for Eggs

Feeding affects the texture of the egg shells. It usually is necessary to supply layers with materials from which they may make the shell for the eggs. Crushed oyster shell is kept in hoppers so the birds may eat it at will, as it contains a large percentage of lime. Grit also is kept in hoppers, as it helps in grinding up the feed in the gizzard. Some kinds of grit also contain a certain amount of lime that helps the birds in the manufacture of egg shells.

For Colds –

How many people you know end their colds with Bayer Aspirin! And how often you've heard of its prompt relief of sore throat or tonsilitis. No wonder millions take it for colds, neuralgia, rheumatism; and the aches and pains that go with them. The wonder is that anyone still worries through a winter without these tablets! They relieve quickly, yet have no effect whatever on the heart. Friends have told you Bayer Aspirin is marvelous; doctors have declared it harmless. Every druggist has it, with proven directions. Why not put it to the test?

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

BAYER ASPIRIN

There is nothing too good for the small boy with a pretty, grownup sister.

This Little Girl Got Well Quick

"Just after her third birthday, my little daughter, Connie, had a serious attack of intestinal flu," says Mrs. H. W. Turnage, 217 Cadwalder St., San Antonio, Texas. "It left her very weak and pale. Her bowels wouldn't act right, she had no appetite and nothing agreed with her.

"Our physician told us to give her some California Fig Syrup. It made her pick up right away, and now she is as robust and happy as any child in our neighborhood. I give California Fig Syrup full credit for her wonderful condition. It is a great thing for children."

Children like the rich, fruity taste of California Fig Syrup, and you can give it to them as often as they need it, because it is purely vegetable. For over 50 years leading physicians have recommended it, and its overwhelming sales record of over four million bottles a year shows it gives satisfaction. Nothing compares with it as a gentle but certain laxative, and it goes further than this. It regulates the stomach and bowels and gives tone and strength to these organs so they continue to act normally, of their own accord.

There are many imitations of California Fig Syrup, so look for the name "California" on the carton to be sure you get the genuine.

Even on a pinch some people are never up to snuff.

Trailing "Brer Rabbit"

The older the rabbit track the colder it gets and the dog usually smells a small length of it and decides in which direction the rabbit has gone. Dogs probably use the hunting instinct as well as the sense of smell in determining the direction the rabbit has taken.

Mother Tells How Milks Emulsion Saved Her Son's Life

"In November, 1918, I wrote you in reference to my son's condition at that time. He had just gotten over the flu and double pneumonia and it looked as if he would never be a well boy again. His lungs were very weak and he had an awful cough. We thought he was going into consumption. He had pneumonia four times. This had taken all of his vitality and left his lungs in a very bad shape.

"I saw Milks Emulsion advertised in the Birmingham News, got a large bottle and gave it to my son. It did him so much good that I kept on giving him Milks Emulsion until he had taken 125 bottles and now I am very proud to tell you that my boy is a well, strong young man, 18 years old, and in excellent health. I give Milks Emulsion the credit and praise for having saved his life.

"You can publish this letter if you like, as I am very grateful to you for what your Emulsion did for my son. MRS. J. A. BRADLEY, 1927½ Avenue D, Apt. A, Birmingham, Ala."

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Mrs. C. A. Arnold and Miss Minnie Lenz were entertained for dinner Sunday at the Aug. Ridder home

Mr. and Mrs. Frank Ward entertained Mr. and Mrs. Emil Beier and Billy for dinner Sunday.

We have a good supply of Neatsfoot Hanness Oil on hand. E. F. Jacobs, Hardware. 1tc

Mr. and Mrs. John Swalve and children visited at the Ben Swalve home Sunday.

Arthur Mueller of Garner visited with his brother Paul, and family here Sunday.

The W. F. M. S. of the Methodist Church are meeting today at the home of Mrs Henry Ludeke.

Miss Edith Haupt is visiting with her sister, Mrs. Elmer Schlei for a few days this week.

Mr. and Mrs. Adolph Lauritsen of Fayette spent the week end visiting at the Einar Salling home.

After being tied up in Klemme for over a week o nacount of snow, Emil Barz left Sunday to resume his duties as salesman.

Rev. Calvin Grosshuesch goes to Waukon this week end to install a new minister at the Ludlow Reformed church there.

Mrs. Gette Sherman, of Wyoming, was visiting at the home of her brother, Allie White and family for several days.

Mr. and Mrs. John Lauen of Hesservey, were shoppers in Klemme on Wednesday of this week. Mrs. Lauen was formerly Miss Mabel Prelipp.

Mrs. Elmer Howard spent from Sunday until Wednesday visiting at the home of her daughter, Mrs. Howard Spitler and family.

Mrs. C. E. Johnson and children visited at the parental, A. D. Gimer home, Thursday night and Friday of last week.

Mrs. E. F. Jacobs and son, Elwyn, spent last Thursday between trains at Garner visiting relatives and having dental work done.

Sheriff "Dutch" Wahlert of Garner was in Klemme Friday on business and was the first one into the town for several days.

Miss Eunice Braund returned to Klemme Monday after about a ten days visit with her parents at Williams, Iowa.

Mrs. Paul Grange and son Dorance returned Saturday evening after a few days visit at the F. J. White home at Estherville.

The Auxiliary ladies met at their Hall Tuesday evening. New committees were appointed and general business taken up.

Boxed Stationery, latest tints at 50c, 60c, 75c, $1.00 and $1.25. At The Times Print Shop. 1tc

Watch for the Legion Auxiliary Pie and Basket Social which will probably be March 20th. A program will also be given. 1tc

Mr. and Mrs. Victor Hueneman and daughters Miriam and Lois Lorraine were pleasantly entertained to dinner at the Henry Stromer home Sunday.

Mr. and Mrs. A. D. Gimer and family spent Sunday afternoon and evening in the country at the C. E. Johnson home. They report a very pleasant time.

Evangelistic meetings are being held at the M. E. Church this week with Rev. Snyder of Belmond preaching. The quartet from Garner on Tuesday was greatly enjoyed.

Mrs. Fred Haupt entertained the Reformed Ladies Aid Society Wednesday afternoon. Miss Adella Kuhlman assisted Miss Edtih Haupt serve.

Walter Ridder drove to Forest City Tuesday to meet Miss Florence Gates, of Minneapolis, who came to Klemme for a visit with her parents, Mr. and Mrs. Fred Gates.

Miss Norma Stromer, who is teaching near Britt, spent the week end visiting with her parents, and Mr. and Mrs. Victor Hueneman. This is Miss Stromer's second year of teaching in that community.

A nine pound baby boy was born to Mr. and Mrs. Verner Lewis Tuesday morning. They now have two boys and two girls. Mrs. Geo. Buseman is helping care for the new arrival.

Paul Grange went to Estherville Tuesday to take in the opening day of J. I. Case farm machinery put on there by the Northern Lumber Co. on Wednesday. He returned home this morning.

Karl Kraus installed a radio at the school house and the entire high school and grade schools listened in on te Hoover inaugural ceremonies Monday, wich prover very educational to all and was a feature which the superintendent wishes to thank Mr. Kraus for making possible.

The M. E. Ladies Aid will meet at the Parish House next Friday afternoon, March 15th. The meeting day has been changed to the third Friday of each month. Ladies are asked to bring finished article as there will be other work to be taken home. The meeting starts at 2:30 o'clock. Mrs. Whyte and Mrs. Waterman are hostesses.

A district rally of the Epworth League was held here Monday evening which was attended by about 70 young people fom Britt, Garner, Clear Lake and Klemme. Klemme was represented by about 40. Thornton and Swaledale were not represented on account of the bad roads. A 6:30 dinner was erved by Mesdames Whyte, Elder, Wellemeyer and F. Kluckhohn. Following the dinner a fine program was enjoyed.

The out of town relatives who arrived in Klemme to attend the funeral of Mr. Louis Sampson were his daughters: Mrs. W. F. Belstner, and Mrs. Florence Smith and daughter, of Fort Atkinson, Wis., and Mrs. Charles Lenz, of Spooner, Wis. who arrived Friday. Others here for the funeral were Mr. and Mrs. Wm. H Gast of Garner; Mrs. and Mrs. Geo. Fluhre of Charles City and Miss Anna Sampson of Colesburg; and Mr. and Mrs. Ed. Wetzel of Charles City.

GYCERINE MIXTURE STOPS CONSTIPATION

The simple mixture of glycerin, buckthorn bark, saline, etc. (Adlerika) acts on BOTH upper and lower bowell and relieves constipation in TWO hours! Brings out old waste matter you never thought was in your system. Don't waste time with pills or remedies which clean only PART of the bowels, but let Adlerika give stomach and bowels a real cleaning and see how good you feel. Wilson's Pharmacy. 1tc

KLEMME REFORMED CHURCH

Calvin Grosshuesch, Pastor

No services Sunday as the pastor will be in Waukon Sunday to take part in the installation service of Rev. De Buhr at the Ludlow Reformed Church.

The Confirmation class will meet Tuesday afternoon at 3:00 and the Choir at 4:00 o'clock.

Card Of Thanks

We wish to thank our neighbors and friends for their kind assistance during the illness of our father, and for the floral offerings and words of sympathy and help during our bereavement.

Mrs. Charles Lenz and family.
Mrs. Levi Klotzbach and family.
Mrs. Florence Smith & daughter
Mrs. W. F. Belstner and family

ORAL GIBSON ENTERS CONTEST AT ESTHERVILLE

Other Items Of News To Students And Parents Of Klemme

The next round of the state declamatory contests will be entered this week. Hancock County will be pretty well represented at Estherville on Thursday evening, March 14. Hayfield sends two speakers, Kanawha, Britt and Garner each sends one besides our own school sends Oral Gibson. The other three schools repreented will be Lake Mills, Estherville and Dolliver. The judges for the Estherville contest are to be Supt. F. H. Gilliland, Sibley; Supt. Antone Johnson, Emmetsburg; and Prin. Cornelia Maatert, Sibley.

Our contestant and his coach, Miss Trumbell, will be taken to the contest by Mr. Lewis on Thursday afternoon. The roads are at this writing rather uncertain and the party must leave in ample time to reach their destination. We understand one of the state musical contests has prevented holding the contest on Friday night which works a hardship on us and other schools going so far. It seems Hancock County should have had the contest but it seems none of our towns asked for it and Estherville did.

Wins Over Crystal Lake

Our basket ball team closed their season with another victory to their credit. They defeated Crystal Lake 24 to 20. They were beaten by but one point at Crystal Lake in our game there in February.

Inter Class Games Monday

On Monday night of next week there will be some inter-class games which some of our fans may want to witness. An admission of 10 and 15 cents will be charged. Games will begin at 7:30. Our Seniors think they can beat them all. Others doubt it.

Home Ecs Plan Exhibit

Miss McGinnis reports plans for an exhibit in the near future of work done by the girls of her domestic science department last semester. Those interested will do well to watch for it in some of our down town store windows. Mr. Heiden also plans an exhibit at a later date of manual arts projects done by our Freshmen boys. Splendid work has been done in both these departments this past year and we are glad to learn the public is to be permitted to view it.

P. T. A. Program Tuesday

Let no one forget that our next Tuesday night Rev. Whyte and Dr. Anderson have both consented to discuss topics at our P. T. A. program. We are depending on some special music and the girls of our Home Economics department will serve lunch at 15 cents per plate. The third and fourth grade room won the pennant for the best representation of parents last month. Parents represented in other rooms can delight their children by coming to this next program and thereby winning for them the pennant for the coming month. Let's have a big house to hear Rev. Whyte and Dr. Anderson. And those who are not on a diet will want to eat.

Local Spelling Contest

The county spelling contest will be held March 30th, as noted elsewhere in the Times. We have no outstanding spellers in our grammar room this year as we did last year in the person of Gladys Schlichting but there has been shown no little interest among several of our pupils eligible for prizes and we hope to see it grow and make possible a creditable showing at our county seat. The promise of monetary rewards to our best spellers in each of our grades by our local P. T. A. has no doubt been spurring several on. Our boys and girls who enjoy both money and recognition now have something to attract them and we hope many are working at home on word lists. Parents who care can assist them.

THE FIRST ROBINS ARE SEEN THIS SPRING

Robins, Bluejays And Meadowlarks Here n Large Numbers Now

To Loren Gast goes the feather-stuffed medal for turning in the official report on seeing the first robin in this spring in this community. Loren telephoned his observation to the Times Office early Monday morning.

A. D. Gimer gets the blue quill for spotting the first Bluejay which he reports he saw Monday.

Now comes Francis and Melvin Buseman who made as pecial trip to the Times Office this morning and said they saw a whole flock of robins in their orchard this morning and on their way to school saw lots of meadow larks. For reporting the meadowlarks they get the honor of holding the grass-bound certificate for 1929.

Ec Zeidler reports he saw eight robins yesterday.

Others who reported seeing robins, bluejays and meadowlarks this week are Buster Jorgenson, Mrs. C. M. Gram and Clarence Bredlow.

COUNTY SPELLING CONTEST MAR. 30

FINAL CONTEST WILL BE HELD AT COUNTY COURT HOUSE

Cash Prizes Are Offered By Garner Lions Club

A County Spelling Contest will be held in the Court House in Garner, Saturday, March 30th at 2:00 o'clock p. m.

In this contest a winner will be selected who will represent Hancock County in the Des Moines Register statewide spelling bee. The Lions Club of Garner, a service organization whose purpose is to encourage and assist in any good movement is offering ten cash prizes to the ten best spellers in the county.

Every school in the county is entitled to one representative in this contest. About fifty pupils entered the one held last year of which Gladys Schlichting, of Klemme was the winner and competed in the state contest at Des Moines.

Every one taking part in the county contest will be given a neat certificate. The winner will be awarded a two dollar first prize and a medal, and will be Hancock County's representative at the State Contest to be held in Des Moines, Friday, April 19th.

A royal good time such as has been furnished in previous years by the Des Moines Register awaits those who will be fortunate enough to have a place in the state meet. They will also have an opportunity to share in the $150.00 cash prizes which will be offered. The second prize will be $50; tird $25; fourth $15, fifth $10; sixth to fifteenth prizes inclusive, each $5.

The prize for the state championship will be a trip to Wasington, chaperoned by a representative of the Des Moines Register, with all expenses paid, and an opportunity to compete for the national championships and a part of the national $2,500 prize fund.

Township spelling bees or several schools uniting for a Friday afternoon spelldown offers an excellent opportunity for the boys and girls to become acustomed to spelling in public.

For those who have conquered all of the words in their spelling books and are looking for other words to conquer, here are a few words that have proven to be Waterloos for spellers in other contests.

anointing	occurrence
discernible	paraffin
dissension	Penitentiary
embarrassment	phosphorus
hippopotamus	picnicking
inflammable	rarefied
inoculated	rendezvous
jardiniere	rhinocoros
maneuvers	roommate
accommodations	villian

The Choir will meet at 4 o'clock Tuesday and Thursday.

Confirmation Class Tuesday and Saturday afternoon.

The Ladies are Delighted with the Calling Cards printed at the Times Print Shop. No extra charge for pannelled border. tc

GIMER STARTS 16th YEAR AS BUTTERMAKER HERE

Creamery Now One Of Laregst In Northern Iowa

At the meeting of the board of directors of the Klemme Creamery held last week at the office of Secretary Peter Josten, the board for the sixteenth consecutive time appointed A. D. Gimer as manager and buttermaker of the Klemme Co-Operative Creamery.

We doubt if there are many buttermakers in Iowa who have put in a longer regtime than Mr. Gimer working for a co-operative creamery.

The action of the board is more than a mere appointment. It is an honor bestowed on Mr. Gimer and shows the trust and confidence the board has in him as a man to further guide the destinies of the local creamery to further growth and success. For, during Mr. Gimer's service here the creamery has become one of the largest and best butter manufacturing plants in the state. It grew from a small plant with less than a hundred patrons to a manufacturing plant turning out a car load of golden butter a week and numbering over four hundred farmers on the list of patrons.

Even during the past yaer the creamery has shown a marked expansion in business over the previous year, and with more and newer machinery and devices installed has lowered the cost of butter making.

Mr. Gimer is ably assisted by Mr. Paul Mueller, who for severall years has been the assistant butter-maker. Paul ha also gained a reputation as a butter maker, and he can "sling butter" with the best of them in northern Iowa. For the past season the work at the creamery has become more than two good men could handle, so Harl Gimer joined the forces and is an all around good man at the creamery.

Peter Josten is the congeniall man elected as Secretary and has his office at the Northern Lumber Company. Pete says to tell 'em, 'I'll be at the office every morning, and most afternoons. After April 1st he says his office will be located at the old State Savings Bank building, at the rear of Dr. Missman's office. (It cost Pete two cigars to get this free advertising about the office change, and it will cost him two more when he moves.)

All of the officials of the Creamery are alert men. They predict a fine future and look for a bigger year than ever for 1929-30.

FARM BUREAU LEADERS AND AND DIRECTORS MET

Twelve Township Were Represented t This Meeting

The Farm Bureau Project Leaders and Board of Directors of the Hancock County Farm Bureau met at the Odd Fellows Hall at Britt on Saturday, March 9 at 10:30 a. m. The following townships were represented: Bingham, Crystal, Madison, Concord, Garfield, Britt, Orthel, Boone, Erin, Twin Lake, Amsterdam and Magor.

The women discused and made plans for a Rest Camp to be held again this year in connection with Cerro Gordo county and the men had their regular monthly business meeting.

In the afternoon, the two groups met together. Mrs. Van Bloom of Dayton, District Committeewoman, took up a discussion of the National State, County and Township Farm Bureau Organization. Mr. George Dillon, District Organization Man, discussed and made plans for the big membership meeting to be held on March 26.

Dinner was served at the A. Y. P. Cafe to all attending the meeting.

The new long type stationery at The Times Print Shop at 30 cents and up per box. tc

Farmers! as well as others use printed envelopes. Call at Times Print Shop. tc.

FOURTEEN CARS OF STOCK SHIPPED

SATURDAY SHIPMENT LARGEST THIS SEASON

Shipping Association Leads With A Shipment Of Seven Cars

The stock shipment Saturday of the week just past was the record breaker for the season when fourteen car loads of stock were shipped. As we remember it, the high mark last year was fifteen car loads. The outlook for next week, providing roads are pasable and the market holds, will be a record breaker as one shipper alone expects to ship in the neighborhood of thirteen cars of stock.

Saturday night the Shipping Association handled three car loads of hogs, three of cattle, and one car of mixed stock.

J. G. Linden shipped three car loads of cattle and Wood Bros. two car loads of cattle. These were all from the ranches east of Klemme.

C. A. Larsen shipped one car load each of cattle and hogs.

VOTERS GIVE DAY A SECOND TERM AS DIRECTOR

School Election Monday Brought Out A Medium Vote

At the annual school election held here Monday afternoon, J. N. Day was re-elected to serve a second term as director on the local school board for a three year term. He was opposed by Fred Kluckholm, who received a good vote.

F. A Arnold was re-elected as Treasurer without any opposition.

The school board remains the same as in the past, as follows: A. D. Gimer, president; Art Wellemeyer, John N. Day, Harry Gibbs and Conrad Quandt, directors; Fred A. Arnold, treasurer, and P Grange, secretary.

SNOW PICTURES SHOWN AT THE TIMES PRINT SHOP

Pictures Can Be Purchased By Any Who So Desire

During the last blizzard we procured some fine pictures of the big snow drift west of town at the time it was plowed out. We have other pictures of large drifts also.

A number have requested pictures which we have taken. We are not in this line of business but we have and will accommodate any who want these pictures which we have on display The price is but five cents each. All orders must be in our office not later than Saturday afternoon, at 3:00 p. m.

Many want to send these pictures to friends and relatives in sunnier climates than we experienced this past winter.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

The morning worship hour next Sunday, March 17, both in Klemme and at Liberty will be in charge of the Womans Foreign Missionary societies. It is the occasion of their annual "Thank Offering," and a large attendance is desired. They will have as their speaker Miss Letta Daubendick, a return missionary.

There will be the regular preaching service in charge of the pastor in the evening at the Klemme church. Let us keep up the renewed interest which has been aroused during our meetings.

THEY'RE MARRIED NOW!

The following marriage licenses were issued by Chris J. Johansen, Clerk, since our last report:

John Tjarks, of Titonka and Mabel Boekelman, also of Titonka. The license was issued March 5th and the couple were married at the Court House by Rev. Van Metre.

On March 12th a license to wed was issued to John Brown, Algona, and Myrtle Peterson, of Britt.

WOULD IMPROVE ALL COUNTY ROADS THROUGH TOWNS

Klemme Residents Circulate Paper Endorsing New Bill

A paper was circulated in Klemme a few days ago asking Rep. C. H. Nelson to support the bill passed by the Senate regarding a road bill.

As we understand it the bill as passed by the senate would improve all county roads adjacent too and through towns out of the road fund for that purpose. This would directly benefit Klemme as the county road now passes through the Main Street. Other towns in this county which would be benefited are Kanawha and we believe Crystal Lake and Hayfield.

The town of Klemme has already saved a lot of money by changing the road leading from the Main St. to the county road sytsem. As an example, it would have cost the taxpayers here a lot of money to have kept the road open this winter. And while the plow made special trips to open the road into Klemme, they at the same time cleared the county road east of Klemme and on the last trip cleared both the west and east roads.

Changing town roads over to the county road system has been found to be a sound business investment by several Hancock county towns.

SNOW IS MELTING RAPIDLY IN NORTHERN OWA

High Snow Banks Now Turning To Great Pools Of Water

As a welcome change came a few balmy days the past week which among other things has raised havoc with snow drifts in Northern Iowa but is also making roads, other than concrete, in a more or less passable and impassable condition. Gravel roads are beginning to tell under the strain and are cutting up badly in places where snow and ice was not removed soon enough.

However spring is surely close at hand and water and mud is somewhat of a welcome change from many months of sub zero weather together with high snow drifts and ice.

KLEMME SCOUTS GET AWARDS AT COURT OF HONOR

A court of honor was held at Garner Monday evening which was attended by Scouts Byrnes Missman, Alvin Keeper, Dorance Day and Wayne Pavey, and Troop Comittee men Dr. Misman and C. G. Waterman and Ast. S. M., R. A. Jorgenson Byrnes Missman received four First Class Merit Badges and Wayne Pavey received a Second Class Merit Badge.

There were other scouts from Garner, Crystal Lake, Forest City and Lake Mills present.

LIBERTY WILL BUILD ANOTHER BRICK SCHOOL HOUSE

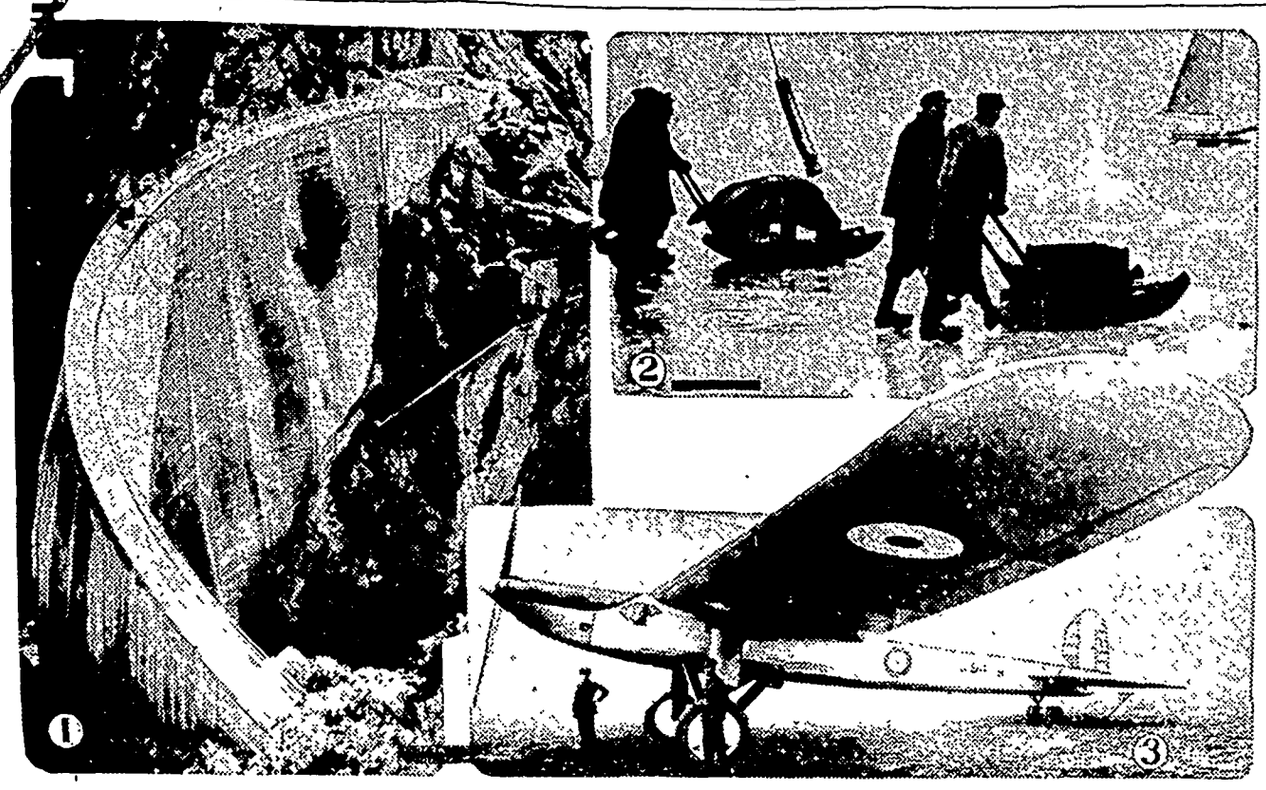
Liberty Township Seems To Be All For Permanent Structures

At the annual election held in the Liberty Township school district it was decided to build another new brick school the coming year, to replace the old building in Dist. No. 6, and also to locate the new building a little further west of the old site.

Liberty Townsihp will be known as the "Brick School Township" as the new buildings the past few years have been brick construction.

The Ell Township Trustees met yesterday and awarded a contract to the Fox Construction Co. of Forest City for grading five miles of road north from the Oscar Swanson corner, east of Klemme. Work will begin as soon as weather permits. This road will later be graveled.

C. G. Waterman and R. A. Jorgenson took in the Scout Leaders' banquet and meeting at Mason City last Friday evening. There were about seventy-five men of the Area present and a fine meeting was enjoyed.



1—Pacoima dam at San Fernando, Calif., highest in the world, that has just been completed at a cost of $2,500,000. 2—Dutch postal men taking the mail across the frozen Zuyder Zee during the extreme cold weather in Europe. 3—Hugé Falrey-Napier monoplane that will attempt a nonstop flight from Cape Town, Africa, to northern Scotland, more than 6,000 miles.

NEWS REVIEW OF CURRENT EVENTS

Senate, Still Dry, Votes to Put Sharper Teeth in the Prohibition Law.

By EDWARD W. PICKARD

THAT the senate is still overwhelmingly "dry" was fully demonstrated last week when the Jones bill to put more teeth in the prohibition act came to a vote. The measure was passed by a vote of 65 to 18 while, in the senators' private gallery, the result was closely observed by Rev. Clarence T. Williams, general secretary of the Methodist board of temperance, prohibition and public morals, and Rev. Edwin C. Dinwiddie, secretary of the national conference of 53 dry organizations. Every proposed amendment was voted down except one offered by Senator Jones of Washington, sponsor of the bill. This provides that: "It is the intent of congress that the court, in imposing sentence hereunder, should discriminate between casual and slight violations and habitual sales of intoxicating liquor or attempts to commercialize violations of the law."

As passed, the bill increases the maximum penalties for illegal manufacture, sale, transportation of intoxicating liquor to imprisonment for five years or a fine of $10,000 or both. An identical measure was pending in the house, having been favorably reported by the judiciary committee.

Passage of the Jones bill was preceded by a debate that drew crowds to the senate chamber, for the leading speakers were Senators Reed of Missouri and Borah of Idaho, respectively against and for the bill. Reed's effort, that spread over two days, was probably his last important speech in the senate, for he retires on March 4, and it was well worth hearing or reading. With all the powers of caustic denunciation at his command—and that means a lot—he attacked the Eighteenth amendment and the Volstead act and scored with bitter phrases the dry senators and the leaders of dry organizations. There was nothing new in his arguments, but his sarcasm delighted even those against whom it was directed.

Senator Borah admitted that prohibition might be a mistake, but insisted its object is an exalted one. He said he was not committed to opposition to the modification or even the repeal of the amendment to the Constitution or the Volstead act; that he was only committed against the change, the repeal either of the amendment or the law so long as nothing better and more effective has been or can be presented. While the amendment is a part of the Constitution, he declared, congress and the people must support it, maintain it and, if possible, enforce it.

Senator Caraway of Arkansas satirically recalled that Reed was singing a different tune when he was a candidate for the Democratic nomination for President at Houston last summer. He dwelt on the statement Reed issued on the eve of the convention in which he made a bid for the support of the prohibitionists.

"On that occasion," said Caraway, "he was offering to lead the drys to victory. But the drys were not deceived and the wets were only disgusted."

WITHOUT a record vote the house passed the Johnson general deportation bill which has provision for the deportation of alien bootleggers, gunmen and bomb throwers. A similar bill had been adopted by the senate. It was considered likely the conferees would modify the prohibition part of it, authorizing deportation of aliens receiving a one-year sentence, or two sentences aggregating one year, for violations of laws relating to the sale and manufacture of intoxicating liquor. This is more severe treatment than is provided for those convicted of most other offenses.

AT THE request of Senator Deneen of Illinois the senate foreign relations committee postponed until the next congress action on the treaty between the United States and Canada authorizing an additional diversion of water for power purposes at Niagara falls. Mr. Deneen argued that action on the treaty should be deferred pending consideration of other questions at issue between the United States and Canada involving other diversions of water from the Great Lakes, notably the diversion at Chicago for sanitary and navigation purposes. The committee decided to hold hearings on the treaty during the recess of congress.

PRESIDENT-ELECT HOOVER and Mrs. Hoover arrived in Washington Tuesday and went at once to their home on S street, where Mr. Hoover is to remain in virtual seclusion until the day of his inauguration. He has not receded in the least from his announced determination not to make public his cabinet selections before March 4. The latest gossip in this connection was that Mr. Hoover would like to have Senator Borah as attorney general so that prohibition might be properly enforced, but that the senator would not accept the post. There was talk, too, of James W. Good of Chicago for the postmaster generalship, and of Charles Francis Adams, treasurer of Harvard, for the Navy portfolio. On Wednesday Mr. Hoover had an hour's chat with President Coolidge in the White House. He also conferred with Representative Tilson and Senator Watson concerning the date and program for the special session of congress to be held this spring. Next morning Senator Edge of New Jersey, leading wet, breakfasted with the President-Elect, and there was reason to believe they discussed the matter of naming a fact-finding commission to look into the causes of the breakdown in prohibition enforcement. There was a rumor that Mr. Coolidge might be asked to take the chairmanship of such a commission

GOOD news comes up from South America. After 45 years of quarreling and fighting, Chile and Peru have settled their Tacna-Arica boundary dispute by peaceful means. Tacna goes to Peru and Arica to Chile, and the new boundary is so fixed that the railway, which is Bolivia's sole outlet to the coast, remains in Chilean territory until it crosses the Bolivian frontier. The railroad from Tacna to Arica will be in Peruvian control, and a spur at Arica to connect the two lines will be controlled by Chile. The agreement is the result of diplomatic negotiations undertaken four months ago, after resumption of diplomatic relations between Chile and Peru at the invitation of the United States Secretary of State Frank B. Kellogg last July.

COMMANDER BYRD has just made a huge addition to the territorial possessions of the United States. In flights over the Antarctic region he discovered a vast area of land and claimed it for his country, naming it Marie Byrd Land for his wife. The Rockefeller mountain range, in the British Ross dependency, was mapped by aero camera, and another and loftier range, in the newly discovered land, was found. Its peaks seemed to rise to eight or ten thousand feet.

RUMORS that the Spanish dictatorship was weakening and that Primo de Rivera was soon to hand in his resignation seem disproved by events of last week. By a government decree signed by King Alfonso the artillery corps of the Spanish army, in which originated much of the recent disorders, is dissolved. All the officers of the corps are dismissed without salary and become private citizens, and the classes of the Royal Artillery academy at Segovia are dismissed. Command of the artillery posts was taken over by officers of other branches of the service. Some of the artillery officers, who took part in the revolt of a week or two ago, were ordered deported, but probably the others will be reintegrated after taking a new oath to defend the present regime.

SIR ESME HOWARD'S statement to the press in Washington, in which the British ambassador predicted that another effort would now be made to bring about an agreement among the principal naval powers to restrict navy building, caused a lot of excitement in England and caused Sir Austen Chamberlain, secretary for foreign affairs, to be heckled in parliament. The Laborites and Liberals questioned him persistently, and at first his reply was to the effect that the British government had no intention of issuing an invitation for a conference on this subject; that all questions concerning relations with the United States were under consideration and the time had not come to make any statement of result. Later he admitted the government was considering a new line of approach to the United States on the question of naval disarmament.

TROUBLE for the Chinese Nationalists was developing rapidly last week in Shantung, where large numbers of bandits and former northern soldiers were reported to be concentrating. A revolt that started at Lungkow was spreading to other towns, and it was said that Chang Chung-chang, former war lord of the province, was on his way there, accompanied by some Russian generals. Gen. Feng Yu-hsiang some time ago concentrated 30,000 Nationalist troops in western Shantung in readiness for just such a situation as has arisen. The American cruiser Trenton was sent from Manila to Chefoo to look after American interests.

THE extreme cold that has brought so much distress to Europe has had one good effect in England. The coal mining business has been given such a boost that most of the collieries are working full time and many thousands of miners are at work after long months of unemployment.

Traffic and communications in the state of Sao Paulo, Brazil, were demoralized by floods following terrific rainstorms. The coffee crop was seriously damaged. The port of Santos was completely isolated except by sea.

FULFILLING predictions, President Coolidge last week took the first step toward reopening the question of America's entrance to the World court. By his direction Secretary of State Kellogg delivered to the Washington representatives of all the World court nations identical notes inviting the interested governments to reconsider their rejection of the senate's reservations to American adherence and to take steps making it possible for the United States to become a member of the court.

ONE of the interesting tragedies of the week was the murder in Los Angeles of E. L. Doheny, Jr., son of the oil magnate, by his secretary and companion, Hugh Plunkett, who then committed suicide. It was apparent that Plunkett had suddenly become insane after a year of nervous trouble for which he had been under treatment. The younger Doheny was thirty-six years old and was a partner in his father's oil corporation. The father was prostrated by his son's death.

PHILLIP C. HANNA, a retired veteran of the American diplomatic service, died in San Diego, Calif., at the age of seventy-two years. Mr. Hanna entered the consular service in 1891 and served in various Latin American countries as a consul general, being noted for his unswerving protection of American interests in times of revolution and disorder.

Edward J. King of Galesburg, Ill., who had represented the Fifteenth Illinois district in congress for seven consecutive terms and was re-elected for the eighth, died at his home in Washington after long suffering from heart disease.

Newspaper men mourned the death in New York of Melville E. Stone, one of the organizers of the Associated Press and until 1021 its general manager. Mr. Stone founded the Chicago Daily News in 1875.

THOMAS STERLING, special counsel for the senate's public lands committee, has virtually absolved the Midwest Refining company, a Standard Oil company (Indiana) subsidiary, of fraud in connection with its Salt Creek (Wyoming) leases. In a formal report of his six months' investigation of all the leases covering the Salt Creek field, Mr. Sterling, former Republican senator from South Dakota, declared he found no evidence of fraud on the part of the Midwest company or other operators in the field and no evidence that any of the leases are invalid. As a result of the report it is considered certain that the committee will abandon a proposed inquiry.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

COLD SHOULDER THE COLD

TEN to fifteen million people in North America are annually victims of colds during the fall and early winter. When the aggregate inconvenience and economic loss of this disability is considered, it is easy to realize that a problem of major importance confronts us. Add to this situation the reduction of body resistance to other infections such as bronchitis, influenza, pneumonia, and even tuberculosis, and colds assume a gravity usually not appreciated by the average individual.

"Only a cold" is the general expression of indifference attached to this condition. And it is exactly this attitude that has developed the unfortunate power the colds have on the American public today.

Colds are no light matter. One cold per year is bad enough. Many people can boast of three during this period. Assuming that you are going to be among the fifteen million unfortunates this year, what do you propose to do about it? For, after all, it is a very personal matter and one which cannot be controlled by public health measures.

The best medicine for a cold is bed. It is the last medicine usually administered. The time to retire to your couch is when you recognize the cold's presence. This means that you are not to wait until you are so ill that you cannot stay out of bed any longer. With business to attend to or household duties to perform, it will take will power to close up shop because of a few sniffles and coughs. But in the long run it will pay you to do so.

It may be exceedingly hard for an active person to get out of the race for a few days for such a little (?) thing as a cold. But many people who have neglected to do so have been disqualified for weeks through more serious illness and not a few have been finally eliminated. Give this suggestion some thought the next time you contract "only a cold." It may even save your life!

But why get a cold in the first instance? Here are some rules which if followed will make colds weaker adversaries for you than they now are:

1—Avoid direct drafts of any kind, this includes your sleeping room. 2—Keep away as far as possible from others having colds. 3—In the "cold season" avoid crowds and crowded places, even to the point of losing some fun. 4—Keep the feet dry. 5—Avoid sudden chilling. 6—Live up to the general rules of health every day and develop a strong resistance to all disease.

Ten or fifteen million people is a large crowd, but get out of it. And stay out.

* * *

WANTED! A CONTINUOUS PERFORMANCE

A GREAT number of people have a very mistaken idea about the annual vacation. Those who use it for rest and the replacement of vital forces lost during the year are decidedly in the minority. But even this class, (not to mention the others who return home more tired than when they left) are likely to argue that two weeks in the open air, with a healthy minimum of physical exercise and a maximum of life restoring sleep, are all they need until vacation time rolls around once more.

It cannot be denied that much good is to be derived from a safe and sane outing. However, it is equally a fact that fourteen days in the woods or shore are not to be considered as an effective antidote to three hundred and fifty days of luxurious inactivity. That is the basis upon which many work, nevertheless.

One must realize that with the conclusion of the formal vacation, the vacation possibilities still remain. Even if one is back on the job, there is still plenty of fresh air to be had, the breezes are still blowing and the night hours are available for sleep.

Those who come home in fine physical trim will do well to remain that way. A bit of daily discipline which will promptly turn into a pleasant habit, is all that is required. Really, the whole plan is so absurdly simple that many will disregard it for that reason. Use the fresh air by walking in it daily at least two miles. Permit the breezes to fan your cheeks by becoming regularly intimate with the outdoors. Do not over or under eat; and lastly, give your bed a fair and healthy chance at you.

Even for that great group who return home with nothing to show for it but black circles under their eyes and flat pocketbooks, "there is much hope"—as the quack medical advertisements say. And the medicine is exactly the same for the foolish excursionists as for the wise ones.

British Taxation

The income tax, which was introduced into the United Kingdom as a war levy by William Pitt in 1798-1799—a duty of 10 per cent on all incomes from whatever source derived, except incomes under £60 a year—was lifted in 1815 and not revived until 1842. A graduated tax on income from certain fixed sources had, however, been levied as early as 1435, and again in 1450.

YOU CAN'T DYE with Good Intentions

You can get results—after a fashion—with any old dye; but to do work you are proud of takes real anilines. That's why we put them in Diamond Dyes. They contain from three to five times more than other dyes on the market! Cost more to make? Surely. But you get them for the same price as other dyes.

Next time you want to dye, try them. See how easy it is to use them. *Then compare the results.* Note the absence of that re-dyed look; of streaking or spotting. See that they take none of the life out of the cloth. Observe how the colors keep their brilliance through wear and washing. Your dealer will refund your money if you don't agree Diamond Dyes are better dyes.

The *white package* of Diamond Dyes is the original "all-purpose" dye for any and every kind of material. It will dye or *tint* silk, wool, cotton, linen, rayon or any mixture of materials. The *blue package* is a special dye, for silk or wool only. With it you can dye your valuable articles of silk or wool with results equal to the finest professional work. When you buy—remember this. The *blue package* dyes silk or wool only. The *white package* will dye every kind of goods, including silk and wool. Your dealer has both packages.

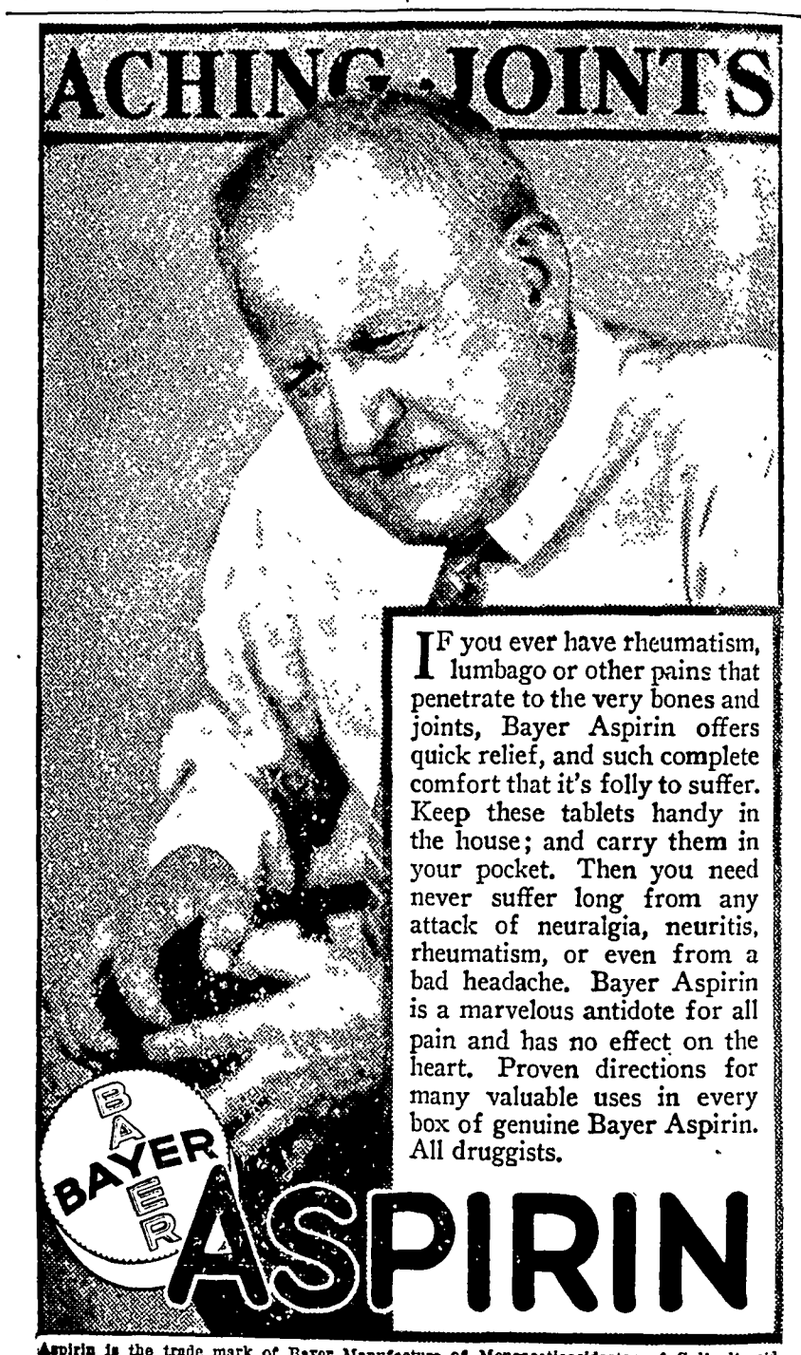
From Confucius

The quotation "One picture is worth a thousand words" is said to be from the writings of Confucius.

Mean What You Say

Everything you say, will be remembered by some one else after you have forgotten it.—Atchison Globe.

ACHING JOINTS



IF you ever have rheumatism, lumbago or other pains that penetrate to the very bones and joints, Bayer Aspirin offers quick relief, and such complete comfort that it's folly to suffer. Keep these tablets handy in the house; and carry them in your pocket. Then you need never suffer long from any attack of neuralgia, neuritis, rheumatism, or even from a bad headache. Bayer Aspirin is a marvelous antidote for all pain and has no effect on the heart. Proven directions for many valuable uses in every box of genuine Bayer Aspirin. All druggists.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

The practice of washing apples and pears before shipping them to market is becoming general in the Pacific Northwest.

A memorial to the Turkish soldiers who were killed in the fighting at Gallipoli is to be erected on the site of the bitterest fighting of the campaign.

That Million-Dollar Feeling

"Bill, I sure wish I had your appetite. How d'ya get like that?"
"Just take NR before you hit the hay. Makes you feel like a million!"

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

NR TO-NIGHT TOMORROW ALRIGHT

MAKE THE TEST TONIGHT

BE WELL HAPPY

Get Relief. *Drive Out the Poisons*

Auto-intoxication, Constipation, Biliousness, are caused by defective elimination. For over thirty years Nature's Remedy (NR Tablets) has proven the safe, dependable relief for these conditions.

GET A 25¢ BOX—SOLD BY YOUR DRUGGIST

Acidity

The common cause of digestive difficulties is excess acid. Soda cannot alter this condition, and it burns the stomach. Something that will neutralize the acidity is the sensible thing to take. That is why physicians tell the public to use Phillips Milk of Magnesia.

One spoonful of this delightful preparation can neutralize many times its volume in acid. It acts instantly; relief is quick, and very apparent. All gas is dispelled; all sourness is soon gone; the whole system is sweetened. Do try this perfect anti-acid, and remember it is just as good for children, too, and pleasant for them to take.

Any drug store has the genuine, prescriptional product.

PHILLIPS Milk of Magnesia

Kill Rats Without Poison

A New Exterminator that Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks

K-R-O can be used about the home, barn or poultry yard with absolute safety as it contains **no deadly poison.** K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, under the Connable process which insures maximum strength. Two cans killed 578 rats at Arkansas State Farm. Hundreds of other testimonials.

Sold on a Money-Back Guarantee. Insist upon K-R-O, the original Squill exterminator. All druggists, 75c. Largesize (four times as much) $2.00. Direct if dealer cannot supply you. K-R-O Co., Springfield, O.

K-R-O KILLS-RATS-ONLY

Cigars, Fresh Handmade Long Filler, direct to consumer, 50 10c size, $3.75, or 100 $7.30, postpaid. M. O. or check. Money back guarantee. Reektenwald, 1423 Clybourn, Chicago.

MANY SCHOOL CHILDREN ARE SICKLY

TRADE MARK DON'T ACCEPT ANY SUBSTITUTE

Mothers, for your own comfort and the welfare of your children, you should never be without a box of **Mother Gray's Sweet Powders** for children for use throughout the season. They Break up Colds, Regulate the Bowels, Relieve Feverishness, Constipation, Teething Disorders, Headache and Stomach Troubles.

Used by Mothers for over 30 years. Are pleasant to take—children like them. All Drug stores. Don't accept any substitute. Trial package Free. Address MOTHER GRAY CO., Le Roy, N. Y.

Some people would rather do a thing twice than to do it right in the first place.

Loss of Power

and vital force follow loss of flesh, or emaciation. Dr. Pierce's Golden Medical Discovery is a herbal tonic that enriches the blood, stops the waste of strength and tissue, and helps to build up healthy flesh.

Thin, pale, puny, pimply children are made plump, rosy and robust by the "Discovery." All druggists.

In recovering from "Grippe," or in convalescence from pneumonia, fevers or other wasting diseases, it speedily and surely invigorates and builds up the whole system. Read this:

Savannah, Mo.—"I was rundown in health and Dr. Pierce's Golden Medical Discovery built me up wonderfully.

"I also suffered from constipation and Dr. Pierce's Pleasant Pellets gave me perfect satisfaction. I notice such a great difference in Dr. Pierce's remedies from any of the others I have tried. Dr. Pierce's always turn out just as advertised."—Thomas Foley, 206 W. Pearl St.

Loosen Up That Cold With Musterole

Have Musterole handy when a cold starts. It has all of the advantages of grandmother's mustard plaster without the burn. You feel a warm tingle as the healing ointment penetrates the pores, then a soothing, cooling sensation and quick relief.

Made of pure oil of mustard and other simple ingredients, Musterole is recommended by many nurses and doctors. Try Musterole for bronchitis, sore throat, stiff neck, pleurisy, rheumatism, lumbago, croup, asthma, neuralgia, congestion, pains and aches of the back or joints, sore muscles, sprains, bruises, chilblains, frosted feet, colds of the chest. It may prevent pneumonia and "flu."

DIPPING SHEEP IS EASILY DONE

Vat Is as Essential as Shed for Proper Shelter.

It has been said by one authority that "a dipping vat is as essential on a sheep farm as a shed for shelter." The farm dipping vat should be built of galvanized iron, wood, or preferably concrete. It should be six inches wide at the bottom and twenty inches at the top, and four feet long at the bottom with a gradual slope at one end making it eight feet long at the top. Slats should be nailed to walk out. The vat should have a total depth of about four feet and should be set in the ground so that the top will be six inches above the surface. At the exit a small drain pan with a tight floor should be constructed so that the drippings will drain back into the tank.

There are several devices for getting the sheep into the tank, one of the best being a strip of smooth sheet iron slightly sloping to the vat, upon which the sheep are driven and whence they may be easily forced into the dip. A small pen at the entrance is necessary to hold the sheep that are to be dipped.

There are a number of dips on the market and most of them are destructive to external parasites. Perhaps the most common are the coal-tar dips, which should be used at the rate of 2½ gallons of dip to 100 gallons of water. The dip is most effective when used at a temperature of about 110 degrees Fahrenheit. It is not necessary to keep the sheep in the dip for any length of time, unless scab is present and then they should remain in the vat about two minutes. The head should be immersed twice, thus making sure that every part is thoroughly soaked. The cost of dipping will average about two cents per head besides the labor.

Unprofitable to Keep Ewes With Bad Udders

Although recent good prices for lambs and mutton are incentives for farmers to increase their flocks as rapidly as possible, there is no profit in keeping ewes with bad teeth or defective udders.

The ewe flock should be culled in the fall, according to a statement by animal husbandry specialists at Michigan State college, and the individuals whose usefulness is impaired for breeding should be sold for mutton. The culling should not be made on the basis of the appearance of the ewes, because animals which are good mothers frequently appear thin and sway-backed at this time of year.

Mutton sheep begin to lose their teeth at six or seven years of age and the fine wools at eight to nine. Any ewes whose udders show lumps, scars, or distortions should be discarded from the breeding flock.

The use of pure-bred rams in the flock is another means of improving flock quality, say the college specialists. To make it easy for farmers in the northern part of the state to secure good rams, 71 rams were carried by truck to a series of meetings in that section and were sold to farmers who attended the meetings. Last year, 21 rams were distributed by this method, and it is expected that another increase in the sale of rams will be made at meetings to be held next year.

Favor Early Operation on the Young Porkers

Castration should be done as early as possible in the pig's life in order to reduce the possibility of loss of growth and gains in weight following the operation. Also, young pigs are more conveniently handled than older pigs.

If the pigs are to be vaccinated after the operation, the vaccination should be delayed for a week or ten days, to let the wounds heal. On the other hand, if vaccination comes before the castrating, the operation should not follow until about a month after vaccination.

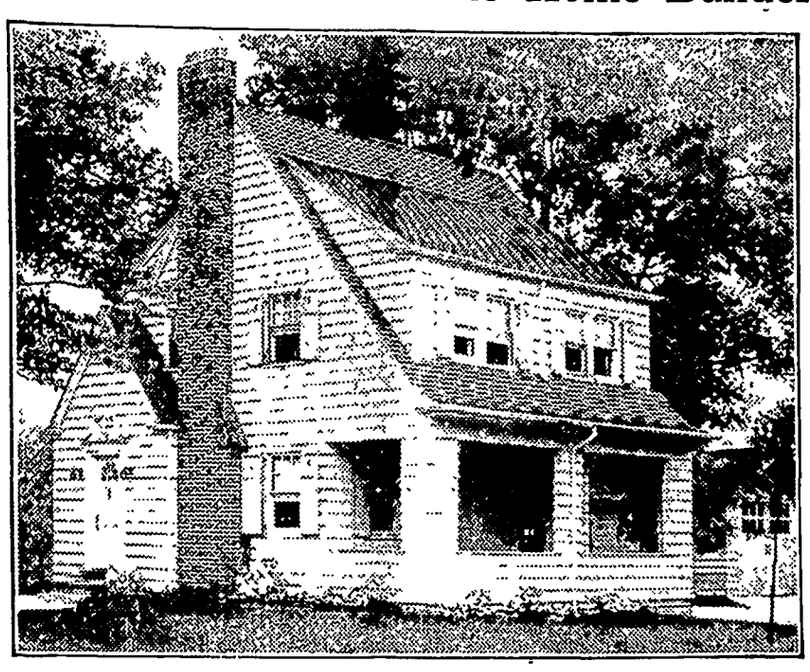
Important to Get Ewes Into Right Condition

The lambs should be weaned at least by the time they are five months old. The ewes should then be placed on good feed to give them a chance to start gaining and to get into a good thriving condition at breeding time. In years when there is poor pasture, it even pays to give the ewes some grain as this good feeding or flushing insures a larger lamb crop and also a more uniform date of birth of the lambs. It is important to tag ewes before they are turned with rams.

Treating Lambs

When the lambs are about ten days to two weeks old, they should be docked and all the ram lambs that are not intended for breeding purposes should be castrated. It is important to have the lambs docked and castrated if the best prices are to be obtained. Provide a lamb creep in one corner of the yard for the purpose of feeding grain to the young lambs. Better gains will be obtained than if dependent entirely on their mothers' milk.

English Type Frame House Has Many Attractions for the Home Builder



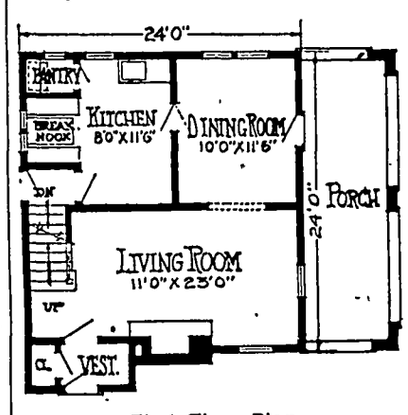
Essentially English in architectural style is this home which contains seven rooms and bath. The design of the home is such that each room is individual. Upstairs there are three bedrooms and a sewing room. The dimensions are 24 feet by 24 feet.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

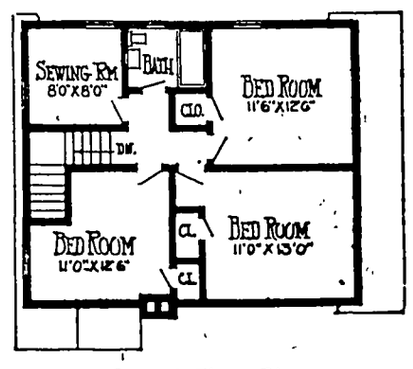
While most English homes are constructed of brick, American architects have taken the same graceful lines and have applied to them different materials so that the prospective home builder has a wide choice. The home shown in the illustration is of the English type but shows the American influence. The house is of frame construction but has an outside fire-place chimney which is very unusual. The ornament near the gable is typical of English fireplace construction.

The dimensions of the house are 24 by 24 feet which makes it ideal



First Floor Plan.

for the small lot. The entrance door at the side opens directly into the large living room 11 feet by 23 feet long. Connected with it by a cased opening is a dining room 10 by 11 feet 6 inches and back of that is the kitchen 8 by 11 feet 6 inches with a breakfast nook. The partially enclosed porch which extends across one side of the house is reached through the dining room. This arrangement makes



Second Floor Plan.

it private but if it is desired it is a simple matter to add steps to it at the end near the garage.

An open stairway runs out of one end of the living room to the second floor where there are four rooms and bath, each bedroom being a corner room which permits plenty of light and ventilation. One of the rooms is designated as a sewing room but it is 8 feet by 8 feet, a size sufficient to accommodate bedroom furniture.

There are many good features to this home it being unusually attractive from the exterior. The entrance door is unusual while the broken roof lines add to its attractiveness. It will be noted in the illustration that there is a single car garage of the same architectural design as the house itself which completes the modern home building group.

White Ants Endanger Timbers of Home

Complete insulation from the ground of all untreated woodwork of a building is the only effective preventive or remedy against attack by subterranean termites or "white ants," which are present in many areas of the United States and have been noted in Washington, according to Dr. T. E. Snyder of the Department of Agriculture, who has studied the pest.

Doctor Snyder, a specialist in forest entomology, points out that the small householder with a modest home of frame construction is the one most likely to suffer through termite attack and at the same time is the one who will be most oppressed if serious injury follows the termite attack. He suggests changes in the building codes of cities to prevent injury by the pest.

There is also a group of termites that fly and attack the wood directly. And for these thorough fumigation is required if damage is to be checked. In new buildings it is well to insure against termite damage by impregnating all foundation timber with a coal-tar creosote and other woodwork with zinc chloride, or some other equivalent preservatives.

Insulation and impregnation of timbers will cost a few hundred dollars additional in the construction of a building, but Doctor Snyder believes this should be considered in the light of insurance.

Freedom, Not Economy, Spur to Home Owning

What are the principal urges underlying Americans' wide-spread efforts to attain home ownership? Spiritual advantages take precedence over material gains, according to the results of a questionnaire sent out by one of the national building and loan associations and reported in the February American Home. It is the wish to be free from the dictations of a landlord, and the desire to provide greater safety and comfort for the children, that impel most people to save money for permanent homes.

In addition to personal privacy and freedom and bettered conditions for the children, the responses put a sense of achievement in gaining a definite and recognized standing, the pride of ownership, and the satisfaction of attaining it, high on the list. The material aspects of home ownership, the enforced saving, the building up of an investment, the getting of a tangible return for money spent, proved to be of secondary consideration

Painting Brick Needs Correct Color Scheme

Chief among the reasons why brick is often painted is that paint brings color variety to this material. Of course there are a number of technical and practical reasons why many people prefer to have their brick homes protected with paint, but it is safe to warrant that color advantages play a strong and prominent part in influencing their decision.

"Can brick be painted, though, and just what effects may be obtained?" many people ask.

To the first part of the question the answer is, of course, "Yes," while the second half requires elaboration.

The fundamental principle underlying successful painting is to adapt the type of finish to the material used. So, although brick may be painted nearly any color of the spectrum, it is wiser and in better taste to paint brick as brick and not try to make it look like something else. It is conceivable that under certain conditions a brick house might be painted white or cream with green trim, but since that color scheme is irrevocably associated with colonial houses with clapboard siding, it is not in the best of taste to advise this color scheme unreservedly.

Well-Chosen Wall Paper Corrects Room Faults

Wallpaper is valuable from a structural standpoint as well as from a decorative one, for its color and design, properly used, can do a great deal to remedy structual faults, says the February American Home Magazine. Rooms may be made to seem higher, more spacious and brighter than they actually are if the right paper is used on their walls.

When additional height is desired in low rooms wallpaper with stripes of rising lines in the pattern should be used. The paper should run directly to the ceiling line, and the ceiling should be papered with a plain color close to the shade of the background of the walls, if it is not too dark, so that the change from wall to ceiling will not be so marked.

In small rooms most people think it necessary to select tiny patterns, but this is not always wise. Small close patterns with almost no background, shut in a little room, making it seem even smaller than it is. A good-sized pattern in light clear colors, with plenty of light background showing will do much to make a tiny room seem larger. Small scenics with perspective in the drawing are an ideal selection.

POULTRY

RAISING CHICKS REQUIRES CARE

Success Depends Largely on Attention Given Them.

What success New Jerseymen have with raising chicks will depend largely upon the attention they give to maintaining cleanliness, plenty of room, and proper feeding equipment. In other words, these are the cardinal factors in successful brooding of chicks, says J. C. Taylor, assistant poultry extension specialist, New Jersey state college of agriculture, Rutgers university.

Keep the house clean at all times. After the fourth week, the brooder house should be cleaned every five days. Remove the litter, sweep the floor, and put in clean litter. Chick boxes, feed bags, pails, coal, and other equipment should not be in the brooder house.

Crowding is common to many poultry farms. It is safe to say that 90 per cent of the poultrymen crowd their chicks. Allow two chicks to one square foot of floor space until they are four to six weeks old. After this allow one chick for each square foot of floor space. Where chicks are raised in confinement allow one chick to each two square feet of floor space after the brood is six weeks old. Following these rules eliminates crowding and thus gives all chicks a chance to grow.

Adequate feeding equipment is essential. More chicks die of starvation than from a number of other causes. One inch of hopper space is recommended for each small chick. A hopper three feet long feeding from both sides will accommodate 75 chicks. Keep feed in the hoppers. Water fountains of the two-quart size are good for small chicks, followed by the gallon size when the chicks are older. The important point to keep in mind is to have enough fountains so there will always be water for the chicks to drink.

Treating Chickens for Severe Colds and Roup

When the eyes of chickens water and then swell, it is usually due to colds which are developing into a roupy condition. The nostrils are usually packed with mucous, making breathing difficult and matter due to inflammation gathers in the face and finally becomes packed in a hard, leathery lump.

When colds first appear, squeeze the nostrils with wads of tissue paper to remove the mucous and then inject commercial disinfectant or roup cure or potassium permanganate with a medicine dropper. The commercial roup cures often include a small syringe useful to inject the solution into the nostrils of the bird.

If the head is bulging with hard matter and has the strong odor of roup, it is best to kill the bird, especially if it is badly devitalized and becoming thin. If the hen is in good condition, the lump can be lanced and the hard matter picked out with the point of a small pen knife. Then inject roup cure or commercial disinfectant and place a small packing of cotton in the wound so that healing will take place from the inside. The cotton should be moistened with iodine. Whether treatment pays or not depends on the value of the bird, the time of the caretaker, and the condition of the bird when treatment begins.

Poultry Notes

A great many people seem to forget that a baby chick is a baby.

* * *

By hatching early the chick gets a good start and is less susceptible when exposed.

* * *

Every farm should include in its equipment a portable brooder house for raising young chicks.

* * *

A portable brooder house should not be over 8 by 12 feet if it is to be moved with a team.

* * *

Feed clean feed in clean containers. Don't use zinc containers for sour milk nor to feed mash in.

* * *

Avoid turning out young turkeys until dew is off the grass and weeds. A little care at first will repay you big. Don't change feed too quickly, but gradually work into another feed.

* * *

There are a number of gas burners available for brooding chicks. A satisfactory way to use gas is in a coal stove. Several manufacturers provide gas burners for their coal stoves.

* * *

The modern poultry house is well lighted, well ventilated, dry, free from drafts, and moderate in cost.

* * *

Sunlight is an essential in the poultry house; not only through glass, but more especially, direct sunlight is required.

* * *

Farm brooding is probably best done with the portable, colony brooder house as the first essential piece of equipment. This type of house possesses many desirable features with economy.

OLD FOLKS SAY DR. CALDWELL WAS RIGHT

The basis of treating sickness has not changed since Dr. Caldwell left Medical College in 1875, nor since he placed on the market the laxative prescription he had used in his practice.

He treated constipation, biliousness, headaches, mental depression, indigestion, sour stomach and other indispositions entirely by means of simple vegetable laxatives, herbs and roots. These are still the basis of Dr. Caldwell's Syrup Pepsin, a combination of senna and other mild herbs, with pepsin.

The simpler the remedy for constipation, the safer for the child and for you. And as you can get results in a mild and safe way by using Dr. Caldwell's Syrup Pepsin, why take chances with strong drugs?

A bottle will last several months, and all can use it. It is pleasant to the taste, gentle in action, and free from narcotics. Elderly people find it ideal. All drug stores have the generous bottles, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois, for free trial bottle.

For Cuts, Burns Bruises, Sores

Try HANFORD'S BALSAM OF MYRRH

All dealers are authorized to refund your money for the first bottle if not suited.

There are a few self-made men and a great many self-made blond women in the world.

ALWAYS KEEPS IT ON HAND

Lydia E. Pinkham's Vegetable Compound Helps Her So Much

Pittsburgh, Pa.—"I was just completely run-down. I had tired, heavy, sluggish feelings and I could not eat. I was losing in weight. I read so much about Lydia E. Pinkham's Vegetable Compound and what a good medicine it is, that I started taking it. I have taken eight bottles of Lydia E. Pinkham's Vegetable Compound and about the same in tablet form. This is one medicine a woman should have in the house all the time. I am improving every day and I sure am able to eat. I am willing to answer any letters I get asking about the Vegetable Compound."—Mrs. Ella Richards, 21 Chautauqua St. N. S., Pittsburgh, Pa.

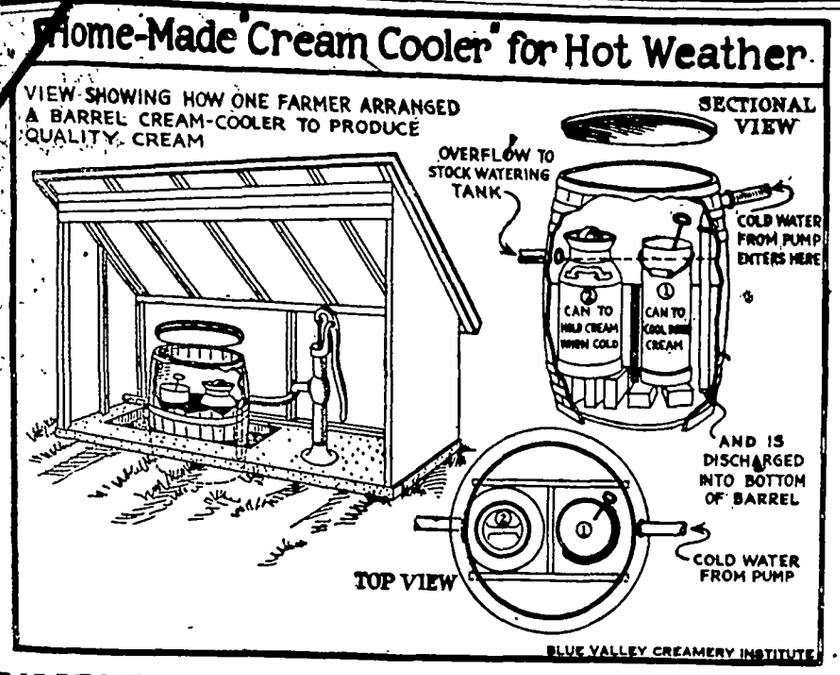
The average man gives advice by the gallon and accepts it by the spoonful.

Are *You* Ready

When *your* Children Cry for It

Baby has little upsets at times. All your care cannot prevent them. But you *can* be prepared. Then you can do what any experienced nurse would do—what most physicians would tell you to do—give a few drops of plain Castoria. No sooner done than Baby is soothed; relief is just a matter of moments. Yet you have eased your child without use of a single doubtful drug; Castoria is vegetable. So it's safe to use as often as an infant has any little pain you cannot pat away. And it's always ready for the cruelest pangs of colic, or constipation or diarrhea; effective, too, for older children. *Twenty-five million bottles were bought last year.*

Fletcher's CASTORIA



Home-Made Cream Cooler for Hot Weather
VIEW SHOWING HOW ONE FARMER ARRANGED A BARREL CREAM-COOLER TO PRODUCE QUALITY CREAM

BLUE VALLEY CREAMERY INSTITUTE

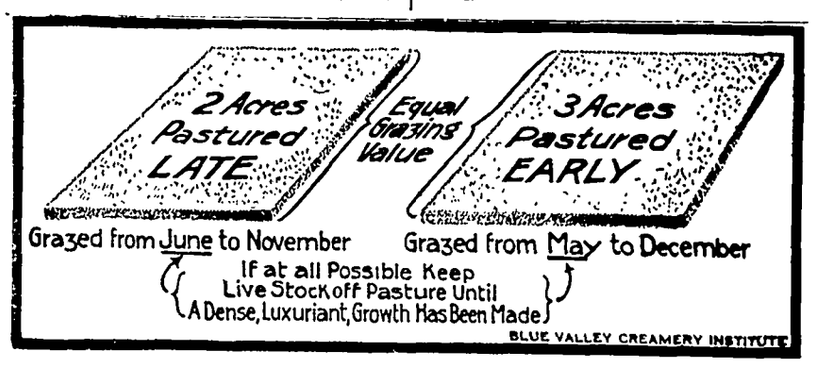
SIMPLE TO MAKE A GOOD CREAM COOLER

Small Outlay by Farmer Will Insure Quality of Product During Hot Months.

A low-cost cream cooling plant to insure the production of high quality cream during the hot weeks of July and August can be made right on the farm by the farmer himself, says the Blue Valley Creamery Institute, with the use of a water-tight barrel, two cans, and an open shed-like structure to protect the barrel from the rays of the sun.

In building such an arrangement, a water-tight barrel large enough to hold two cans is sunk into the ground, as shown in the accompanying illustration, near a well pump or at least near enough to a pump so that fresh, cold water can be frequently pumped into the barrel in order to keep the temperature of the water surrounding the cans of cream as low as possible. The overflow water can be piped to the stock watering tank. Such an arrangement can be hitched to a hand or power pump or to a kitchen pump or faucet. If more convenient the barrel can be located on the shady side of a building and thereby do away with the necessity of building a shed or covering. The detailed drawing shows how simple it is to build a "cream cooler" on the farm. The principal point to keep in mind is to pipe the in flow water so that it is discharged at the bottom of the barrel.

Two cans are necessary. Warm, fresh cream from each separation is kept in can No. 1 until it has cooled down to the temperature of the cream in can No. 2. Before the next separation and after it has been thoroughly cooled, it is added to the cream in can No. 2. Warm and cold cream should never be mixed, and can No. 1 must be thoroughly washed and cleaned after emptying its contents into can No 2 and before fresh cream is poured in it.



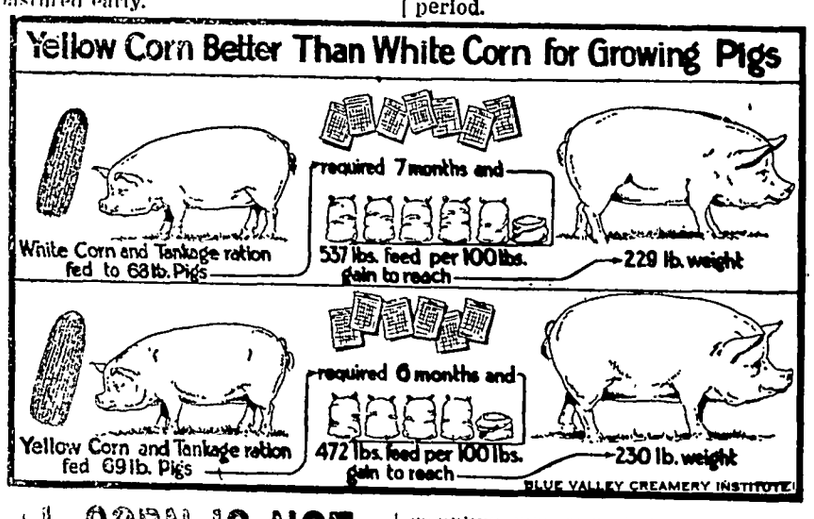
2 Acres Pastured LATE
Equal Grazing Value
3 Acres Pastured EARLY
Grazed from June to November
Grazed from May to December
If at all Possible Keep Live Stock off Pasture Until A Dense, Luxuriant, Growth Has Been Made
BLUE VALLEY CREAMERY INSTITUTE

INSTITUTE ADVISES CARE OF PASTURES

WHEN the farmer turns his stock to pasture just as soon as the grass shoots up and lets them forage as best they may until winter, he seriously reduces his profits by following this rude practice of our early European ancestors, according to the Blue Valley Creamery Institute. Fully one third of the value of pastures is lost by turning out cows to grass before the grass has had a chance to get a good start. Two acres pastured only after a dense, strong, luxuriant growth has been secured will generally produce more than will three acres pastured early.

Early grazing stunts the growth of grass for the entire season, because it manufactures food material in its leaves by the aid of sunlight, and when the pasture is kept eaten down close it has little chance to carry on its process. Keep stock off pasture if at all possible, and let the grass grow. It will not run away, and it will grow more luxuriant and stronger, last longer and resist summer drought better, declares the Institute experts.

Fresh green grass is deceptive. It is very stimulating in that it "peps up" cows. It makes a great "spring tonic," but it cannot do the work of grain and good high-protein hay. It pays to feed at least one pound of grain for each five pounds of milk even with the best pasture, in order to keep up a maximum flow of milk Once production shrinks, it is impossible to get cows back at as high a level of production in that lactation period.



Yellow Corn Better Than White Corn for Growing Pigs
required 7 months and
White Corn and Tankage ration fed to 68 lb. Pigs
537 lbs. feed per 100 lbs. gain to reach
229 lb. weight
required 6 months and
Yellow Corn and Tankage ration fed 69 lb. Pigs
472 lbs. feed per 100 lbs. gain to reach
230 lb. weight
BLUE VALLEY CREAMERY INSTITUTE

ALL CORN IS NOT ALIKE IN VALUE

Find Yellow Corn Is Cheapest for the Fattening of Pigs.

For growing and fattening pigs corn as the fattening part of the ration has no equal Yet all corn is not alike in feeding value, according to the Blue Valley Creamery Institute, which declares that for putting on cheapest and most rapid gains on pigs in ordinary dry lot or winter feeding yellow corn is far superior to white corn This is true especially when pigs are fed corn properly supplemented by liberal feeding of skimmilk or tankage as the only feeds in the ration Such a ration has been found to be high in a certain vitamine required for good growth.

Evidence of the superiority of yellow corn over white corn in winter feeding is given in the results obtained recently by the Illinois agricultural experiment station where weanling pigs were fed to an average weight of around 230 pounds. The group of pigs receiving the white corn ration required an average of 211 days to reach an average weight of 229 pounds and an average total of 487 pounds of corn and 50 pounds of tankage for each 100 pounds of gain. The pigs receiving yellow corn and tankage reached an average weight of 230 pounds in 183 days and ate 428 pounds of corn and 44 pounds of tankage per 100 pounds gain.

The difference in feeding value of yellow and white corn holds only when pigs are fed in dry lot and receive only corn and skimmilk or tankage. However, when bright clean ground alfalfa or other legume hay, which is rich in the necessary vitamine lacking in white corn, is fed with corn and skimmilk or tankage, yellow corn is no better than white corn for alfalfa hay takes care of all the pig's vitamine requirements. As green pasture is also rich in this vitamine, pigs on pasture make just as rapid and as economical gains on white corn as on yellow. But for pigs in dry lot receiving only corn and skimmilk or tankage and no alfalfa or other legume hay, yellow corn is better than white corn because the yellow contains the required vitamines which are lacking in the white.

BRIEF HUMOR

Um

"Don't you like home cooking?"
"Yes, but home has no cabaret features."

Cause?

"Why is beef so high?"
"All the cowboys have gone into the movies."

All Lot of 'Em Ever Get

"So your husband went hunting, eh? What did he get?"
"Shot."

Ignorantia Legis

"Why did you lose your case?"
"Because my lawyer, like necessity, knows no law."

Endurance

"The family upstairs plays the same piece day in and day out!"
"Some record!"

His Business

"He appears to be a man with pronounced convictions."
"Yes, he's a judge."

Something Gained

"What did you realize on your stock investment?"
"What a fool I was."

Inferior Workmanship

Brown—I'm a self-made man.
Jones—That's what comes of employing cheap labor.—Life.

Deep Sarcasm

She—You were right, dear, and I was wrong.
He—Forgive me, darling.

Getting a Rest

"That man doesn't seem to care for flowers."
"He's a florist on a holiday."

Reason Enough

Diner.—Waiter, take this coffee away. It's like mud.
Waiter—Well, it was ground this morning.

Screen Gives Effect of Three Dimensions

Cinemas in three dimensions, a problem on which several fortunes have been spent in recent years, are achieved in an entirely new way by an English inventor who has developed a motion picture screen which has for its surface 900,000 tiny glass lenses, each barely a quarter of an inch across. The screen is made by first coating the usual surface with a thick layer of white lead and then affixing the glass globules by hand to this coating.

The stereoscopic effect is then obtained with ordinary film and a standard projector, for the myriad tiny lenses split up the light into hundreds of thousands of minute beams which are individually magnified on the screen so that each lens gives depth in relief and produces the illusion that the spectator is looking around the object photographed.—Popular Mechanics Magazine.

"Phantom Ship" Uncanny

German scientists are taking great interest in the demonstration on Ammersee lake near Munich of an unmanned mystery boat. It is a motor launch, which, on receipt of a certain signal from the station, immediately returns to shore in a straight line. If the transmitter is mounted on another ship the boat can be towed by wireless and the distance between it and the towboat can be adjusted at will. A large doll of uncanny appearance fastened with its hands to the steering wheel caused the natives to nickname the craft the "Phantom Ship."

Braking Time

Pearl White, the former movie star, was about to sail for her Paris home after a visit to America, and in answer to a reporter's questions she said:

"It's safety first with the movie stars nowadays. Why, if they have to skip a rope they hire a double. It wasn't so in my time.

"Yes," Miss White ended, "our movie stars aren't what they were ten or fifteen years ago. Some of them, in fact, are quite two years older."

Overdid Yawn

At Novato, Calif., Herbert Graham indulged in a prolonged and luxurious yawn. It was a complete success until Graham sought to close his jaws. He discovered they had locked. The victim managed to attract attention of others to his plight and he was taken to a hospital, where physicians restored the jaw to normal.

Words Recorded on Steel

Recording the words on a fine steel wire, instead of a wax record, a new dictating machine has been introduced in Germany. Dr. Kurt Stille, the inventor, predicts that eventually the machine may be used in recording of two-way wireless conversation.

Expressing It in French

The Saleslady—That lot of lingerie waists we got from New York don't seem to go very well.

The Manager—Advertise 'em as our latest importations from Paris, the "pique-about" model.

That's Why

"That big car of Brown's sure kicks up a lot of dust."

"No wonder, it's dragging a mortgage on a quarter section of land."—Capper's Weekly.

Of interest to every car owner:

A statement of General Motors' Policy

by Alfred P. Sloan, Jr., President

THE public has been visiting the automobile shows in the larger cities of the country to see new models.

Suppose you could drop a curtain over the 1929 automobile shows and raise it immediately upon the shows of ten years ago. How vividly the changes would then appear!

Go back five years, or even three, and the contrasts are amazing. So fast have the improvements followed one another that every year has offered you *more* for your automobile dollar—in performance, in comfort, in safety, in beauty and in style. Never was this fact quite so impressive as in the cars now on display.

This is real progress, and inevitably General Motors has been a leader in it. You cannot have hundreds of engineers, in one organization, thinking and working day and night without knowing more about making automobiles than was known the year before. You cannot have great Research Laboratories, the Proving Ground and the unmatched resources and skill of Fisher body without developing constantly better processes and new ideas. The patronage of the public makes possible all this machinery of betterment; so the public is entitled to each improvement as promptly as it has been proved.

In this way came the self-starter, the closed body, durable Duco finish, four wheel brakes. By the same process one of the remarkable feats in industrial history has just been effected: Chevrolet has been transformed into a six-cylinder car within the price range of the four—almost overnight. Similarly, the new brakes and transmissions of Cadillac and LaSalle are a fundamental improvement; while the new models of Buick, Oldsmobile, Oakland and Pontiac all represent values that could not have been offered before.

Such progress, born of the inherent ambition of an organization of active minds to do better and to give more, is of benefit to all. It offers you more for your money with each succeeding year. It gives you more value for your present car when you trade it in.

This is our policy. This is real progress.

Alfred P. Sloan

ALFRED P. SLOAN, JR., *President*

Detroit, March 1, 1929

AN INVITATION

General Motors would like you to see the progress which it has made during the past year and which is represented by its new models. More than that, it invites you to peep behind the scenes at the methods employed to assure further progress. Simply check on the coupon below the products in which you are most interested. Full information will be sent without obligation *plus* a valuable little book which tells the inside story of the General Motors institution. This book—"*The Open Mind*"—has real value to every one owning or planning to buy a car.

COUPON

General Motors (Dept. A), Detroit, Mich.

Please send me, without obligation, information on the *new models* of the products I have checked—together with your new illustrated book "*The Open Mind.*"

BY ELMO SCOTT WATSON

ON JANUARY 13, press dispatches from Los Angeles carried the news that "Wyatt Earp, seventy-eight, gun-toting peace officer of Dodge City, Kan., and Tombstone, Ariz., in frontier days, whose colorful career led him through a dozen fatal conflicts with 'bad men' of the Old West, died here today." That brief announcement recalled for a moment a real "Wild West" period in American history, when there took place events in which the bare chronicles of fact reads like the fervent and exaggerated fiction of the dime novelist. And the story of those times seems all the more remarkable when one realizes that they were less than fifty years ago and that there are many men still living who had a part in the stirring events of what now seems like a far-off and dimly-remembered era.

Of course, the number of such men is being rapidly reduced and the galaxy of real "frontier notables" is now so small that they can almost be counted on the fingers of one hand. But in the counting there is one name which stands out prominently. That is the name of Col. William Breakenridge, a contemporary of Wyatt Earp in the Tombstone (Ariz.) episode of the real Wild West period, and the passing of Wyatt Earp only serves to emphasizes the importance of "Colonel Billy" as the sole remaining figure of outstanding prominence in that episode. Not only was he important as an actor in the drama of those stirring days in Arizona, but he is even more important as a chronicler of those days. Fortunately for the future historian the story of Tombstone has been set down by one who was there in the heyday of that lively place. If the old Nevada mining town was famous as "b-a-d, b-a-d Bodie" and the old Kansas cow town was known far and wide as "wicked Dodge," what would be the most appropriate nickname for this Arizona cow-and-mining town of Tombstone whose record was in some respects even more sensational than either of the others? Perhaps the name of "Colonel Billy's" book, which was recently published by the Houghton Mifflin company, is the best answer. It is "Helldorado" with the subtitle of "Bringing the Law to the Mesquite."

If "Helldorado" were the chronicle of Breakenridge's career as a deputy sheriff in Tombstone only, it would be interesting and exciting enough. But it is the record of his life for more than half a century in the West and to read "Helldorado" is to call the roll of a long list of famous frontier names. For the saga of "Colonel Billy" began during the second year of the Civil war when he ran away from his home in Wisconsin (he was then twelve years old) to work in the quartermaster's department of the Union army and soon afterwards found himself engaged in freighting supplies for the army in Missouri. After a few months of that we next find him crossing the plains to Denver with a freighter outfit and on this trip he made acquaintance with the first of the "frontier notables" he was to know.

"When we reached Jack Morrow's ranch at the mouth of the North Platte river," writes Breakenridge, "I saw Bill Cody, or 'Buffalo Bill' for the first time. I thought he was the handsomest man I had ever seen." After several trips across the plains Breckenridge enlisted in the Third Colorado cavalry which was called to service by Gov. John Evans of Colorado to take the field against the Indians who had been committing depredations on the isolated ranches and among the immigrants coming into the country. As a member of this outfit young Billy met some more "frontier notables," chief of whom were Old Jim Beckworth, the famous mulatto who became a chief among the Crow Indians, and Antoine Oenise, who served as guides for the regiment which was commanded by Colonel Chivington. "They taught me a lot about scouting and the ways and habits of Indians," says Breakenridge.

Considering the controversy which has raged for years over the battle of Sand Creek when Colonel Chivington surprised and destroyed the camp of Chief Black Kettle of the Cheyennes, it is rather remarkable that Breakenridge dismisses his part in this famous engagement with a few brief paragraphs. Perhaps the fact that he has other and more stirring events to write about accounts for that. For the next few years he was busy as a government freighter between army posts in Wyoming, Colorado and Nebraska and having many narrow escapes from death at the hands of the Indians. Next he became a builder of railroads, working for his brother who had the contract for building the roadbed of the Union Pacific which was then pushing west through Wyoming and he was present on the historic occasion when the Central Pacific and the Union Pacific lines met at Promontory, Utah, on May 10, 1869 and the golden spike was driven to signalize the completion of the first transcontinental railroad.

Next we find young Billy in Denver in the employ of Gen. William J. Palmer as a surveyor for the Denver and Rio Grande which was then being built from Denver to Colorado Springs. It is also interesting to note that at one time he was a "tourist driver" in Colorado Springs. And one of the passengers whom he drove from Colorado Springs to Manitou was a "good looking young stranger who began to tell me what a wonderful man his father was, how many railroads he owned, what fine horses he had. 'By the way,' I said, 'who is your father?' He spoke up with a good deal of emphasis, 'Cornelius Vanderbilt.' I told him I had never heard of him, and the more the young fellow tried to tell me who he was, the denser I got, till at last he realized that I was kidding him."

Eventually he got a job with a freighting outfit which took him down into Arizona and there in 1878 the career which was to make him famous began. After working for a time as a freighter and surveyor he finally landed in Phoenix, then a small village, and soon afterward was appointed a deputy sheriff. His first job was to arrest a murderer, which he did without any trouble, and locked him up in the town jail. But while the sheriff and his deputy were out of town "a number of citizens met at the mill and formed a vigilance committee. About ten o'clock that morning the committee went to the jail and took two murderers out and hanged them to the cottonwood tree in front of the town hall. They took two lumber wagons, placed a board across the wagon box at the rear end and had the murderers stand on the board with the nooses around their necks and the other end of the rope fastened to the limb of the cottonwood tree. The first man to be hanged either fainted or the noose was too tight. He sank down on the rope and as there was very little slack, his neck was not broken; he just strangled. The other man, just as the team started to drive from under him, jumped as high as he could and his neck was broken. Everything was very quiet when some one in the crowd spoke up, "Why the son-of-a-gun must of been hanged before; he knew just how to do it!"

In 1879 Breakenridge arrived in Tombstone and spent an unsuccessful season as a prospector. Of Tombstone at that time he writes:

The interesting period in Tombstone was during the fall of 1879 and the early eighties. In those few years Tombstone was born a mining town, lived a mining town and died a mining town. Like all mining towns in their beginning, money came easy and went easy, all kinds of men and women flocked there and it was soon a lively camp. . . .

It is claimed by many that Alfred Henry Lewis, who was in Tombstone in later days getting material for his story "Wolfville," placed Wolfville at Tombstone and Red Dog at Charleston. . . .

The rich Tombstone mines brought bad men from all parts of the West into the valleys of the San Simon, Sulphur Spring, and San Pedro rivers, where stage robbers, outlaws and cattle thieves found refuge, but for all of that, Tombstone was an orderly, lawabiding town. What little killing was done there was done among the lawless element themselves. This element was very much in the minority and during the five years I lived there I never heard of a house being robbed or anyone being held up in the city, and it was perfectly safe for any lady or gentleman to pass along the streets day or night without being molested.

Despite this picture of a peaceful village, as painted by Colonel Billy, which contrasts so favorably with the conditions in some of the larger cities of the present day, the fact still remains that when the lawless element did do a bit of killing among themselves Tombstone was far from a quiet place. For when "Colonel Billy" went to that town he could stroll down the only street in it and pass no less than forty men who had the right to cut one or more notches on their guns. Conspicuous among them were the following, all of whose names are famous in frontier history: Bat Masterson, Doc Holliday, the Earp brothers—Wyatt, Virgil, Morgan and Warren—, Luke Short (all of whom had won their spurs as "bad men to fool with" in the roaring days of Dodge City), John Ringo, Dave Nagle, Billy Claybourn, Charlie Storms, Frank Leslie and Dick Lloyd.

In addition to the gunmen, most of whom were gamblers, the country was full of rustlers and stage robbers, and when young Billy Breakenridge was appointed a deputy sheriff by Sheriff John Behan he found that the business of "bringing the law to the mesquite" was one which offered innumerable chances for sudden death for those who attempted the job. But if ever there was a man fitted for that job, it was young Billy Breakenridge, and the record which he made as a peace officer is one of the most remarkable in frontier history. He did not make it with a blazing six-shooter, for that was not his way. He "got his man" invariably, but he did it by peaceable means. Take the case of the man who stabbed and killed Johnny LeBar, after Johnny had refused to sell him another drink and ordered him out of his saloon. Deputy Breakenridge was sent to bring in the murderer. "Better take a posse," they told him. "Shucks, no!" replied Billy, for as he explains in his book, "I never liked to take a posse with me—most always I can handle things better myself." So he set out alone, found the murderer and told him he'd better come along. When the man failed to see it that way, Billy argued with him that it wasn't much good to wait and be chased all over the country and maybe die of starvation out on the desert. So the murderer walked peacefully to jail and Deputy Billy "got another man" with no gunplay.

Then there was the time when he was sent to collect the taxes on the personal property in the valleys and mountains east of Tombstone. This was in the very heart of the outlaws' country and it was easy to guess that the rustlers, stage-robbers and others "outside the law" would not care particularly for paying taxes to support the law which they consistently defied. But "Billy Breakenridge's way" was to go straightway to Curly Bill, the most notorious outlaw in that section of the country.

I told him I wanted to hire him to go with me as a deputy assessor and help me collect the taxes, as I was afraid I might be held up and my tax money taken from me if I went alone. The idea of my asking the chief of all the cattle rustlers in that part of the country to help me collect taxes from them struck him as a good joke. He thought it over for a few moments and then, laughing, said:

"Yes, and we will make every one of those blank blank cow thieves pay his taxes."

Next day we started and he led me into a lot of blind canyons and hiding places where the rustlers had a lot of stolen Mexican cattle, and introduced me something like this:

"Boys, this is the county assessor, and I am his deputy. We are all good, law-abiding citizens here and we cannot run the country without we pay taxes."

He knew about how many cattle they each had, and if they demurred, or claimed they had no money, he made them give me an order on their banker Turner. Curly had many a hearty laugh about it. He told them that if any of them should get arrested, it would be a good thing for them to show that they were taxpayers in the county.

The result was that Breakenridge and his "deputy" collected nearly a thousand dollars in tax money with which Breakenridge arrived safely in Tombstone and he confesses that he was "much relieved when I did so."

Several historians have told in detail of other similar feats of Breakenridge as a deputy sheriff which for sheer cool-headed nerve are not excelled in western history. But you will find no intimation of that in his book unless you read between the lines of his straightforward, modest narrative. His attitude is that "it was all in the day's work." Like all true heroes, he was not given to heroics. He did his job simply and he tells of it in the same manner.

PROOF OF DYES is in the dyeing!

Words won't dye a dress, or coat, or sweater. It takes real anilines to do that. That's why Diamond Dyes contain from three to five times more anilines than any other dye—by actual test.

It's the anilines in Diamond Dyes that do the work; that give the colors such brilliance; such depth and permanence. It's real aniline that keeps them from giving things that re-dyed look; from spotting or streaking.

Next time you have dyeing to do—try Diamond Dyes. *Then compare results.* See how soft, bright new-looking the colors are. Observe how they keep their brilliance through wear and washing. Your dealer will refund your money if you don't agree Diamond Dyes are better dyes.

The *white package* of Diamond Dyes is the original "all-purpose" dye for any and every kind of material. It will dye or *tint* silk, wool, cotton, linen, rayon or any mixture of materials. The *blue package* is a special dye for silk or wool only. With it you can dye your valuable articles of silk or wool with results equal to the finest professional work. When you buy—remember this. The *blue package* dyes silk or wool only. The *white package* will dye every kind of goods, including silk and wool. Your dealer has both packages.

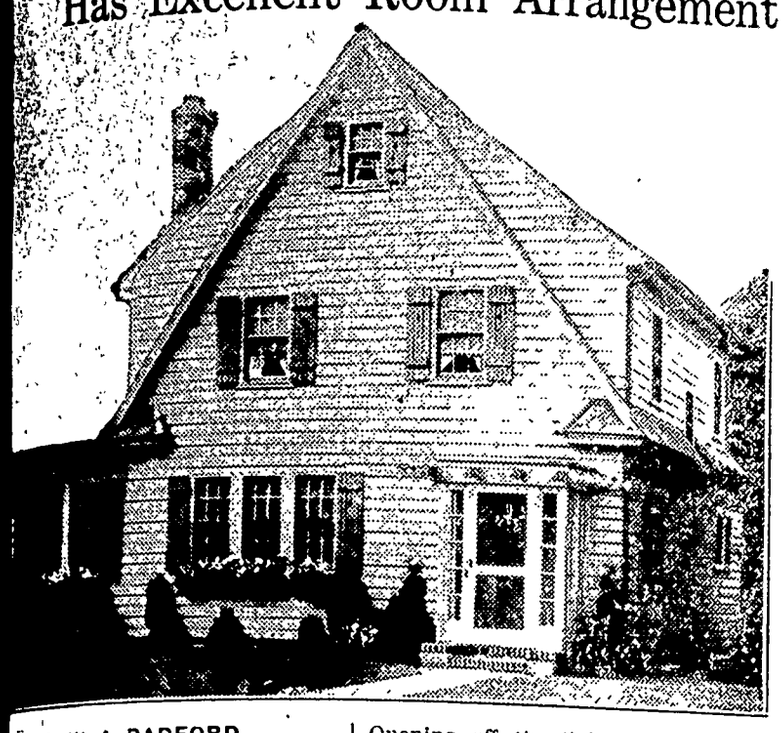
Get Rid of, Drive Out the Poisons

Auto-Intoxication, Constipation, Biliousness caused by defective elimination. Try your thirty cents Nature's Remedy NR Tablets and prove the quick, thorough relief they bring to these conditions.

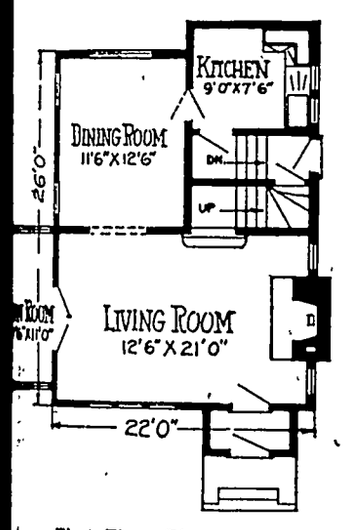
This Attractive Seven-Room Home Has Excellent Room Arrangement



By W. A. RADFORD

William A. Radford will answer questions and give advice FREE OF CHARGE on all subjects pertaining to practical home building, for the readers of this paper. On account of his long experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

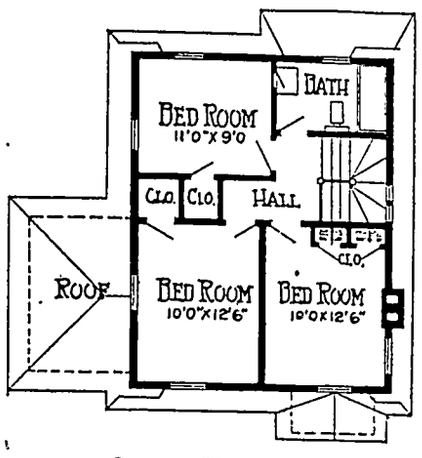
The picture of the home building shown herewith should arrest the eye of everyone who intends to build a home. One can look at many home building designs before finding one which is more attractive from the exterior and which has a better room arrangement than this shingled house. There are a great many features in this home which recommend it. The glassed in vestibule, the triple window in the living room and the sunny light room adjoining on the first floor are all excellent features. The house is 22 feet wide exclusive of the sun room and 26 feet deep, but the space pressed into this small area are the living room 12 feet 6 inches by



First Floor Plan.

feet and an open fireplace at one end of the living room, a dining room 11 feet 6 inches by 12 feet 6 inches, which is connected with the living room with a double cased opening thereby adding spaciousness; the kitchen 9 feet by 7 feet 6 inches. Opening off the living room the sun parlor is connected with it by double french doors. The sun room is 7 feet 6 inches by 11 feet, which in reality makes the living room 28½ feet long.

The stair leading to the second floor opens out of one end of the living room and into a central hall on the second floor. Off this hall are three bedrooms and a bathroom. Each of



Second Floor Plan.

the bedroooms is a corner room which is an advantage and all are of good size. It will be noted by the floor plan that each bedroom has a large closet and the entrance doors to the bedrooms are so located that the bathroom is handy.

The house is set on a concrete foundation. The only other type of masonry being used is for the two steps to the enclosed vestibule which has a brick floor, and the outside fireplace chimney which is also brick. The walls of the house are shingled. There is a basement of the same dimensions as the house itself which provides plenty of space for the heating plant, fuel storage, vegetable storage and other storage.

Because of its rather simple design outside of the broken roof line, this home could be built at a very reasonable price. It will provide room for a good sized family but does not require a large investment in a lot to accommodate it. In the illustration there is shown a garage of the same architectural design at the rear.

Control Insects and Disorders

Annual Loss From Pests and Diseases Amounts to Immense Sum.

The annual loss of crops caused by insect pests and fungus diseases in New York state exceeds the amount appropriated each year to conduct the state's business, according to a bulletin on the control of insects and plant diseases, reprinted at the New York state college of agriculture at Ithaca, N. Y.

By careful spraying experiments conducted by growers themselves, it is shown that the average annual preventable loss to potato growers in this state from blights and insects is nearly fifty bushels to the acre. This represents a yearly loss of more than ten million dollars which might be prevented by spending less than ten dollars an acre for spraying.

Estimate of Losses.

A careful estimate of losses from the loose smut of oats in New York shows that five per cent of the crop is destroyed annually by this fungus disease, a net loss of more than a million dollars in 1919 when the government survey was made. The losses from apple scab, codling moth, and San Jose scale, from peach yellows and fire blight, and from all the other common insect pests and destructive plant diseases, if they could be accurately calculated, would show a grand total of appalling magnitude. This tremendous annual tax on the plant production of the state might be greatly reduced by the proper application of known methods of control.

The method of control to be employed for a given insect pest of fungus disease must be determined by the nature and habits of the enemy and by the character of the crop attacked. Plants can seldom be cured of disease as are men and animals; they must be protected from the attack. If sucking insects are to be controlled, something must be applied that will kill when it hits them; if biting insects are to be combated, the fruit and foliage of the plants must be sprayed or dusted with a poison that when eaten will destroy the pest.

Prevent Diseases.

Many fungus diseases are prevented by spraying the plants before the disease appears, with a mixture destructive to the fungus but harmless to the plant. The poisons that destroy fungi are seldom effective against insects, and hence we have fungicides and insecticides. Often these can be combined in one mixture for insect and fungus pests of certain crops as, for example, arsenate of lead and lime sulphur for controlling codling moth and apple scab.

Best Planting Distance for Many Fruit Plants

Many times fruit plants are planted too close and growth is unsatisfactory, states C. Woolsey, University of Arkansas college of agriculture extension service. The common distances recommended are as follows: Apples, 35 feet apart each way; peaches, 21 feet apart each way; cherries, 21 feet apart each way; plums, 21 feet apart each way; grapes, 8 feet apart in a row that is 15 feet from the last row of tree fruits; blackberries, 3 feet apart in rows 8 feet apart; raspberries, 3 feet apart in rows 8 feet apart; strawberries, 2½ to 3½ feet apart in rows 4 feet apart.

Frequency of Milking Cows Is Hard Problem

It is very difficult to establish a hard and fast rule as to when a cow should be milked out completely after calving and how often she should be milked. Like many other things in the care of an animal, a great deal depends upon the existing circumstances. Care is not merely a matter of frequency of milking but also avoiding those conditions that would cause undue inflammation at this particular period. The understanding of the caretaker as to the condition of his animal is a very material factor.

Farm Notes

Each rat costs a dollar a year.

* * *

Forget those other acres you have your eyes on and farm to live.

* * *

When you cheat a customer you lose that customer to all farmers.

* * *

A farm of 160 acres well planned can be made a little kingdom all its own.

* * *

The lower the grade of fertilizer the higher the cost per unit of plant food.

* * *

Those farmers who fertilize best are the same farmers who make the greatest profits.

* * *

A successful sailor studies his compass and a successful farmer studies market conditions.

* * *

Corn in the crib and meat in the smokehouse almost always indicate well-to-do farming.

* * *

For soil building and for hay the soy bean has no equal. Laredo and O-too-tan are the best varieties.

Ellen Terry's Forgiveness

Ellen Terry had said that she "never had to forgive anyone," adding that harsh things said to her were either richly merited or were due to stupidity. And when asked if she had "never gone to bed with a feeling of resentment to anyone," she replied most emphatically: "Never! If that were the case, one could not say the Lord's Prayer, and that would be unthinkable."—London Express.

Young Lady's Elbows No Longer A Hat Rack

"I just couldn't resist any longer telling you of your wonderful medicine, Milks Emulsion. I have been constipated as long as I can remember. Had typhoid fever when I was eight years old and since then my bowels haven't moved freely. Doctors have given me bowel medicine and I have taken pills, salts, castor oil, and everything a person could think of. They didn't do me any good whatever.

"Now, whenever I hear anyone say they are constipated, I immediately tell them of Milks Emulsion. I have taken about 12 large bottles, not all of them regular. Now I keep Milks Emulsion in the house and take it regular. I have taken so much medicine that I thought it was all alike.

"I had a sallow complexion, no color, and felt miserable all the time; but now I have the color of health, and health is something I wouldn't exchange with anyone for a fortune. I wouldn't take ten times the price I paid for Milks Emulsion for the results I have obtained.

"I am 19 years old and weigh 105 pounds. Have gained 5 pounds since taking your medicine and am still gaining. My face is round and my arms are getting round. Before, people used to hang their hats on my elbows, thinking they were hatracks. Now I am going to keep on with Milks Emulsion until I weigh 125 pounds.

"I mentioned your Emulsion to two doctors. They both admitted it was good, and no one knows better than I that it is not only good, but wonderful.

"You may publish this letter if you wish and anyone that wants to ask me about your medicine may do so. I promise to answer every letter. In fact, I couldn't do enough for Milks Emulsion to repay them for what their medicine has done for me. I remain, very respectfully yours, ROSEMOND BOWER, Frontenac, Kan."

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Sure of It

"Here is a letter for you with a black border."

"Alas! My poor brother is dead!"

"How do you know? You haven't read it yet!"

"No—but I recognize his handwriting."

Small Home Not Built by Rule of Thumb Plan

Most persons suppose that the plan of a small home is simply the result of following a few "rules of thumb," such that by a few trials and shuffles of mere spaces for rooms, with walls on four sides and some kind of cheap roof, a house can be com-

The sorry truth is that many so-called houses emerge from this method but certainly no correct solution of the home builder's problem is thus achieved.

Each room must have its appropriate size, shape, aspect and relation to other parts of the house. Proper relation of rooms means no waste time of the occupants when going from one part of the house to another. A saving in steps is a real comfort to the busy housewife.

All parts of the house must be properly lighted with sufficient window space and doors must be properly placed so as to leave suitable spaces for the furniture.

The architect never studies plans for a home without placing properly the necessary pieces of furniture, and be sure that there is room enough for them.

Now, all this may seem simple enough, and it is, were not the inevitable factor of cost ever present to determine the limit of what can be afforded most properly by the architect who makes complete preliminary drawings for his client and obtains preliminary bids before final construction is begun. The plans made by an architect, complete in detail, show the contractor exactly what is expected of him.

The architect eliminates "the extra so often incurred by the unenlightened using poor plans or possibly no plans at all except "their builder's sketches."

Construction Earmarks

If a house you contemplate buying is equipped with brass pipe for hot and cold water lines—a condition you can determine while you inspect the basement—gutters, flashings, rain spouts of copper, window and door screens of bronze wire, there is every reason to feel that construction is sound. These are earmarks of quality which are generally recognized.

Heat Waste Prevented by Felt Asbestos Cover

When your cellar is hot and upstairs rooms feel like a piece of ice, you are losing heat through lack of furnace and boiler insulation, states an announcement by a New York corporation specializing in insulation and roofing. This condition is caused by faulty or inefficient boiler, heating pipes and furnace.

This great heat "loop hole" may be readily and cheaply stopped, declare engineers who have experience along this line, by the employment of a patented felt and asbestos insulation. This material, composed partly of the fireproof asbestos mineral, is one of the best known heat insulators, due to the fact that it has under its outer surface a number of corrugations which act as obstructions to the passage of air, either hot or cold.

Figures computed by the engineers show that it furnishes a high efficiency primarily because of the type of corrugation used. This material may be applied with ease to "bare" pipes or boiler in from one to four or more layers, each layer appreciably lowering fuel waste and increasing comfort.

Wide Planking Winning Favor in Modern Home.

Wide planks or boards for flooring, so popular at the present time, are a throwback to the old days. This was a type of flooring immensely popular in early English and French architecture and also in other countries as well. One of the best forms of construction for this flooring is of veneers on frame backing to prevent twisting and cupping. These planks are often laid with open joints to give an appearance of age. Wide planking is adaptable to almost every foreign or domestic wood, and ranks among the highest types of floor construction today.

Rusty Pipes

Rusty pipes never get any better. They gradually fill up until water can barely trickle through. Meanwhile, lingerie and linens are ruined from the rust in the wash water. And the family's disposition is wrecked from "seeing red" every time the water is turned on!

Your Best Fuel Investment

Genuine

KOPPERS CHICAGO COKE

A young ice berg was 'growing" on the roof of Wellemeyer's store and was gradually slipping away from the roof, causing it to overhang a couple of feet out on the side walk. Art decided this was a dangerous propodition and so had Aaron Greiman do a high aerial act in chopping the ice from its precarious perch.

It is reported in Klemme that C. W. Wiles, former garageman here, and for several years in busniess at Ames conducting a filling station and later a garage, has purchased a restaurant at Ames and is doing a good business.

Mrs. George Buseman returned to Klemme yesterday, after assisting with work at the Verner Lewis home the past week.

The Rebeccah Lodge of Klemme has completed arangements and are now affiliated with the lodge at Garner. Representatives of the Klemme lodge signed the by-laws and other required papers for the merger. Some time ago the Odd Fellows here joined up with the Garner organization.

Clerk of the District Court, Chris J. Johansen and wife are the happy parents of a fine baby boy born to them at Mercy hospital, Mason City, Tuesday afternoon. The young man tips the scales at half past eight and has annexed the name of Dean Allan. Congratulations!

A number of Klemme Eastern Star members will be at Garner Friday afternoon and evening as the district instructress will be present to conduct work. A banquet will be served at 6:00 o'clock and degree work will be put on for the evening session.

Mr. and Mrs. Glenn Seney, of Sheffield, came Saturday evening for a few days visit with Dr. and Mrs. D. P. Anderson and other Klemme friends. Mr. and Mrs. Seney have quit farming and have stored their household goods for the present. They will probably buy a drug store again as soon as they can find a suitable loaction. Mr. Seney took charge of the Wilson drug store at Garner for a few days this week while Mr. Wilson was absent.

VOLUME 33.—No. 42 KLEMME, IOWA, THURSDAY, MARCH 21, 1929 $2.00 Per Year In Advance—Outside of Iowa $2.50

ATURDAY WILL BE BARGAIN DAY HERE

TERY STORE IN TOWN LISTS A NUMBER OF SPECIALS

Northern Lumber Company Showing New Line Of Machinery

A new enterprise will be launched in Klemme Saturday when the J. I. Case line of Farm Machinery will be on exhibition and the Northern Lumber Company will have open house and entertain the people of this comunity who come to visit the new farm machinery department to be opened that day. Mr. Dwight Osborne is the manager of the new department for the Northern people. Factory men will be in Klemme on Saturday to assist Mr. Osborne for the big opening. A free lunch will be servde at noon by the Ladies Auxiliary. It's going to be a big day and all farmers within a radius of many miles will no doubt come to town to see this great array of modern machinery, including everything practically from a monkey-wrench to a complete threshing outfit in operation.

Klemme business men are helping out with this great event by featuring special bargains for Saturday. The bargains offered in Klemme for that day are well worth coming miles to get. There will be many bargains besides those offered in the ad vertisements in The Times this week and it will pay you to make a special trip to Klemme.

This big mchinery day opening by the Northern Lumber Co. and the bargain events offered by the other businessmen of Klemme is going to make Klemme look like a celebration day is being put on. Klemme business men are going to forget profits on this day and you will be the loser if you miss out by not coming to Klemme.

Tell your friends, tell all your neighbors about Klemme's Big Machinery Opening and Bargain Day. And don't forget to read the ads! Check over the bargains, clip out the ads, bring them with you and after visiting the Machinery Display make the rounds and visit all of the stores. It's going to mean a big saving for you to be in Klemme this week Saturday.

Rain or shine, nothing will stop the crowds!

Ralph Stokesbary, who was taken to the Hampton hospital early Wednesday morning for an appendicitis operation, is reported as doing well.

EARL JOSTEN MAKES RECORD AS MUSIC DIRECTOR

His School Captured Number Of Places In Contests

Another Klemme boy who is making good in the profession of teaching is Earl Josten, son of Mr and Mrs. John Josten.

Earl's musical organizations and soloists of Harris High school captured highest honors at the sub-district music contest at Paulina last Friday and Saturday, winning six first places, a second and a third. (The Paulina Contest correspodms to the contest held at Mason City recently, in which Klemme participated.) First places were given to Earl's mixed chorus (32 members), girls' glee club (22 members), boys' quartet, girls' sextet, mixed small vocal group, and soprano soloist. In the last four events Mr. Josten's contestants competed against the larger schools of Le Mars, Cherokee, Hawarden and others, as there was no classification according to ize of schools in these events.

The next contest (the district) will be at Ida Grove next week end. At that place Josten's school will meet the winners of other sub-district contests. Survivors of this contest are eligible to participate in the state music contest at Iowa City May 5 and 6.

Here's wishing you lots of luck Earl!

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Next Sunday, Mar. 24th is one of the red letter days in the church. It commemorates the Triumphant Entry of Jesus into Jerusalem. It has been designated as Palm Sunday due to the fact that the followers of Jesus strew His path with Palm leaves and branches on that memorable ocassion as a symbol of their love and loyalty. We may show our loyalty and devotion to Him next Sunday by finding time for the hour of worship. The subject for the morning sermon will be "The Triumphant mind."

For the evening service we have several special treats in store that will be of interest to all. By way of music we will have the Junior choir as usual, and in addition the male quartet has consented to sing. For the remaining half of the service we will have first of all the reading "The Man Nobody Knows," by Oral Gibson. Oral has made a very credible record in the contests this fall, and we count it a privilege to have him give his oration in our church Last of all and not least we are to have a set of lantern slides portraying important events in the passion week of our Lord. These slides will be accompanied by a short lecture. Let us make next Sunday a triumphant day in our lives and in our church.

TOWN ELECTION WILL BE HELD HERE MONDAY

Everybody Urged To Go To Polls And Vote Monday

Monday will be a big day in the old home town and no doubt will be more or less exciting as is usually the case in town elections.

As to how and whom to vote for—that's your business, but see to it that every eligle voter in town goes to the polls Monday.

The candidates for Mayor are Paul Grange present official serving his first term, and Frank Gruetzmacher, a former mayor. There are eight men running for the council, of which five are to be chosen. The men are: W. F. Missman, A. Wellemeyer, H. L. Suckow, C A. Larsen, and Wes Schuldt, serving at the present time, and H F. Jost, Conrad Quandt and J. E. Stille, who are new men on the ticket.

C. G. Waterman has no opposition on the ballot for treasurer.

G A Goll and Jos. E. Johnson are the candidates for Assessor. Mr. Johnson is the present official.

These men listed above are all well known in Klemme and the voters will support the man whom they think will be the best for the office.

VOTE MONDAY!

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

Schedule Of Services During Festival Days

Palm Sunday, March 24th

10:00 a. m. Examination of

10:00 a. m. Examination of the Confirmation Class. This examination will take the place of the regular service.

Good Friday, March 29th

10.00 a. m. German and English Sermon.

Preparatory for Lord's Supper.

Confirmation of Class.

Easter Sunday, March 31st

10:00 a. m. German and English sermon.

Celebration of Lord's Supper.

11:00 a. m. Sunday School.

7:30 p. m. English service in charge of this years Confirmation Class.

Offerings for benevolences will be lifted at all of the above services.

We cordially invite all our members and friends to attend these services.

We extend a special invitation to the new-comers of our community We hope that many of you will attend our services and enroll your children in our Sunday School.

The following have now completed the Catechism and Bible Course and will be received into Church membership by confirmation:

John Beek	Henry Smid
Lydia Pearson	Mildred Lemke
Gladys Kothenbeutal	Ethel Barz
Viola Thieman	Jennie Albers
Della Rosendahl	Norma Wille

DYNAMITED TO SAVE BRIDGE SOUTH OF KLEMME

Ice Jam At Railroad Bridge Broken After Hours Of Work

Last Thursday afternoon the big floating cakes of ice in the Iowa river formed a jam at the railroad bridge south of town and for a time there was danger of the bridge being broken away. The rapid melting of snow had raised the river until the stream was as wide as a small lake, loosening the ice and sending huge cakes down the river causing serious jams at bridges.

Lynn Drake, section foreman and his crew of men worked at the railroad bridge all through the night, setting off heavy charges of dynamite every few minutes to loosen the serious ice jam. It was not until nearly morning before they succeeded in their work and getting the bridge out of danger.

Ice jams also formed at bridges near Belmond where dynamite was also used.

For several days the road going west into Liberty township was under several feet of water at the river. That bridge over the road was in danger for a time of going out, but the water going over the grade gave an outlet for the rising river.

TOM, DICK AND HARRY AND HIGH TAXES

At this time of the year when most people have parted with more or less money to pay taxes, they are inclined at times to wonder about taxes being high, or higher.

Ye Editor also noticed that taxes do not seem to become any lower. In fact they are some higher. This fact got us to thinking it over and it brings to mind the delinquent tax list published last fall by the County Treasurer in which report are listed quite a number of Klemme properties (as well as other towns) in which taxes have not been paid, an in some instances have not been paid for several years. The whole thing in a nut shell then seems to be that when Tom does not pay his taxes, Dick and Harry must sometime be taxed higher to meet the funds required.

Klemme, as well as hundreds of other Iowa towns have each lost thousands of dollars on unpaid taxes, rather than thru extravagance.

About so much money must be raised by so many people in each community, and when some fail to keep up their own taxes the burden shifts to the rest. It does not seem right, but never-the-less it is the case. How to remedy this is another problem.

When Tom, Dick and Harry and the rest of us pull a load up hill the load is distributed along the entire line. But when Tom, Dick and Harry quit pulling and lay off, the rest of us have to pull just that much harder to get the same load over the same hill.

A CORRECTION

We wish to correct an item which appeared in The Times last week in which we listed the members on our school board. The name of R. C. Ludeke did not appear, and in his place we had inserted the name of Arthur Wellemeyer. This was not as it should be. Mr. Wellemeyer is not a board member, but Mr. Ludeke is a member of our school board and is a very good director and much interested in school affairs.

Mr. Wellemeyer is a member of the town council and a former director on the school board.

MR. AND MRS. F. A. GEE HAVE BEEN MARRIED 50 YEARS

Observed Their Golden Wedding Last Weew Thursday

Last Thursday, March 14th, Mr. and Mrs. F. A. Gee of Goodell were married fifty years. However a big celebration had not been planned but a family reunoin in honor of the event will be held next summer.

Their daughter, Mrs. Chris Gram and husband drove to Goodell and had dinner with them Thursday evening. Another daughter lives in Michigan and a son at Corwith, but they were unable to attend at this time.

The Times extends congratulations.

GLADYS WILSON WILL APPEAR IN DRAKE MUSICAL PLAY

Des Moines, a., Mar. 21—(Special) Miss Gladys Wilson of Klemme, Ia., a student at Drake university this year, will be seen on the stage in one of the choruses in the annual Drake women's musical comedy to be given on pril 5. Miss Wilson will appear as a member of the Mystery Dream Chorus in the production which is called "Ann's Touchdown" and is adopted from the operetta "Pennants."

The comedy, which is sponsored by the Women's Athletic Association at Drake, includes a total of 125 girls in the cast. Thirteen lead parts, seven specialties, and ten choruses make up the bill.

BIRTHDAY SURPRISE PARTY ON MRS. JOHN LARSON

Mrs. John Larson celebrated her fiftieth birthday Sunday but did not expect any elaborate observations of the day. However, in this she was mistaken and agreeably surprised when friends arrived later with well filled baskets for a big feed. Those present were Walter Lauden and family of Forest City, C. A. Larsen and family, Alvin Stokesbary and family and Mr. and Mrs. Otto Lemke. All expressed a good time was enjoyed.

TEN CAR LOADS OF LIVE STOCK SHIPPED SATURDAY

Shipping Association Handled Four Car Loads Saturday

Stock shipments Saturday fell off a few cars as to what had been expected, due to the bad country road. However, there were ten cars of stock shipped, as follows:

The Klemme Shipping Association had four cars. Two cattle, one hog and one mixed.

The Lindon Ranch shipped three car loads of cattle.

Victor Schoenwetter shipped one car load of cattle.

C. A. Larsen shipped one car load of hogs and one car mixed stock.

Elmer Howard, Harry A. Knutsen and Dean Zebol went to Chicago Saturday night with the stock shipment.

As soon as roads are favorable a record breaking shipment is expected here, according to M. O. Barr, Rock Island agent.

MARRIAGE LICENSES ISSUED DURING THE PAST FEW DAYS

The Clerk of the District Court reports that the following have secured permits to wed:

George Lindas, Eagle Grove ,and Helen Jenkens, Fort Dodge. License issued March 18, 1929.

Albert Hoefs, Wisconsin, and Minnie Buehshe, Garner, owa. Mar. 19, 1929.

Mr. and Mrs. R. A. Jorgenson, Mr. and Mrs. C. G. Watermon, Mrs. Paul Grange and Mrs. Ed. Jacobs attended Eastern Star lodge at Garner Friday evening. A banquet at 6:30 was served. Mrs. Banton, of Charles City, District Instructor was present.

Mrs. F. Gruetzmacher has a fine flowering plant at the store which is a beauty. One plant has eleven large blossoms and seven buds. Mr. Gruetzmacher has been watching the temperature all winter to keep the room just right, and we believe he has succeeded, as the flowers are sure beauties.

NOTICE OF APPOINTMENT OF ADMINISTRATOR WITH WILL ANNEXED—

NOTICE IS HEREBY GIVEN, That the undersigned has been duly appointed and qualified as Administrator with will annexed of the Estate of Henry Medaus late of Hancock County, State of Iowa, deceased. All persons indebted to the estate are hereby requested to make immediate payment; and those having claims against the same will present them, duly authenticated, to the undersigned, for allowance, and filed in the office of the Clerk of the District Court in and for Hancock County, Iowa.

Dated March 1, 1929.

F. A. ARNOLD,
Adminstrator.

DOINGS AT SCHOOL THE PAST WEEK

JUNIORS SHOW SENIORS HOW IN BASKETBALL GAME

Other Items Of Interest During Tho Past Week At School

The Senior bays displayed good form in their game against the boys of Junior and Sophomore classes on Monday night, but lost by a scroe of 29 to 25 in an over time period. It was a bitterly contested affair and had it not been for Lemke, the scoring ace of the regular team, the Seniors would no doubt have won.

Oral Gibson Was At Contest

In the Sub-District Declamatory contest last week contestants from Lake Mills won two firsts and one from Estherville won the other. Oral Gibson, our contestant, has the satisfaction of being placed first in his class by one of the three judges.

Short Vacation This Week

Our schools will be closed on Thursday and Friday of this week while the faculty will attend the District Teachers meeting at Mason City. There will be heard the leaders in our profession from our own state institutions, as our State University, State Teachers Colleges and also from prominent high schools of Iowa. Besides these there will come to address us men and women of prominence from Maine, Ohio, Washington, D. C., and Minnesota University. Many phases of school work and many types of school problems will be presented and we believe the Board decided wisely to permit our teachers to hear the programs which will last until noon Saturday. The meeting is financed by our own teachers and others who are eager to learn how to do their work better and to render a higher type of service in their community that profits from a successful meeting or gathering of public school teachers such as this one at Mason City. This is the only excuse for such meetings.

Grade Spelling Bee Tuesday

Our grade spelling bee will be held on Tuesday afternoon of this week. Parents of children in grades from 2 to 8 inclusive will be welcomed to the contest which will begin at 1:10 p. m. Prizes will be awarded to the first, second and third best spellers in each grade determined by the judges appointed and a larger prize will be awarded to the champion speller of our whol school. There will be keen competition for these prizes which should make an interesting contest. Besides the prizes offered by our local P. T. A. our champion will have the opportunity to earn more money at Garner on Saturday afternoon, Mar 30, in the County Spelling Bee.

P. T. A. Program Well Attended

Our P. T. A. program was quite well attended on Tuesday evening of this week. To begin with, Mr Lewis leading and Miss Lenore Wheatman at the piano the audience joined in several commun songs. After listening to a very worthwhile discussion of Moral and Religious Home Training by Rev Whyte, we enjoyed a play hour directed by the play committee, consisting of R. A. Jorgenson, Mr. Holden and Miss Root. Then we were invited to the home economics room where was waiting for us a lunch prepared by our Freshman girls under the direction of their instructor, Miss McGinnis.

We hope many more parents can come next month and play with us. Besides the games there will be other features contributing to the program.

Girls Basket Ball Game

On Monday night of next week our high school girls will attempt to humble the Alumni Girls in a game of basket ball. An admission will be charged for this game of 15 and 25 cents. Game will begin at 8:00 p. m.

1—A view of Orizaba, in the state of Vera Cruz, Mexico, a hotbed of the revolutionary movement in Mexico. 2—General Gonzalo Escobar, one of the leaders of the rebel forces.

NEWS REVIEW OF CURRENT EVENTS

Mexican Revolution Complete Failure, According to President Portes Gil.

THE Mexican revolution is a complete failure, according to a statement issued by President Portes Gil suspending further enlistments. Mutiny, desertions and capture have greatly weakened the rebel forces and, although sporadic fighting will probably continue for some time, the present outlook is that the government will be completely successful in suppressing the opposition.

The optimistic outlook of the government is based largely on the improved morale of the federal army. It is claimed that the military power has been solidified by general education within the army. The soldiers no longer are ignorant and refuse to be misled by the rebel generals.

General Calles, former president and now secretary of war, is in the field with the greatest army ever assembled in Mexico. In a series of rapid forward movements they have invaded the strongholds of the rebel forces and have been victorious wherever they came in contact with the enemy.

Provisional President Emilo Portes Gil in an interview said the relations of the United States and Mexico were excellent. He said the position taken by the United States on the arms embargo, allowing the Mexican government to import arms and preventing the rebels from importing them, was a most eloquent testimony of the good will of the United States government toward the Mexican government.

Secretary Frank B. Kellogg's position is that the United States will not recognize governments emanating from a revolution, he said. This is an assurance to the stable governments of Latin-American countries and recognition and respect for the sovereignty of Mexico and its institutions.

Referring to the stand taken by President Herbert Hoover and Secretary Kellogg, President Portes Gil, after a conference with Genaro Estrada, foreign minister, gave the following statement over his signature:

"Both declarations constitute a new and solemn testimony of the respect for the Mexican institutions representing law and order and the national sovereignty."

EARLY in the week President Hoover made the important announcement that it would be the policy of the administration to do everything possible to conserve the petroleum resources of the nation. His formal statement reads as follows:

"There will be no leases or disposal of government oil lands, no matter what category they may lie in, of government holdings or government controls, except those which may be mandatory by congress. In other words, there will be complete conservation of government oil in this administration."

The first step toward making this policy effective came in the form of an order by Secretary of the Interior Wilbur to all government land offices directing them "not to receive further applications for permits to prospect for oil and gas on the public domain, and to reject all applications now pending."

Far-reaching effects of this new policy are predicted.

Preceding the issuance of the order Senator Thomas J. Walsh of Montana held a conference with the President and protested against the new policy. Senator Walsh contended that it was the intent of congress that oil development should be permitted on the public domain and that any arbitrary restriction would be discrimination against his state, where there are 20,000,000 acres of public land.

This new policy accords with that recommended by the oil conservation board of which Mr. Hoover was a member while secretary of commerce.

COMPLETE agreement on a formula for the adhesion of the United States to the World Court of International Justice was reached at the fourth meeting of the international committee of jurists at Geneva.

The formula, in its final form, is the work of Sir Cecil Hurst, British delegate, aided by M. Politis of Greece and Elihu Root of America. Mr. Root is entirely in accord with the Hurst redraft.

The Root-Hurst formula, as the revised scheme is known, represents a tightened-up version of the original Root formula and contains but few basic changes.

One change of highest importance, however, deals with the question of summary procedure in negotiations with the United States in case an advisory opinion is asked for in an urgent dispute. In order to speed up the machinery and eliminate the maximum of red tape, the new formula provides for direct dealings between Geneva and Washington, if an advisory opinion is requested urgently.

The original desire of Washington was to handle all negotiations through The Hague, which would mean if the council decided to ask an advisory opinion Geneva would have to notify The Hague. The Hague would have to relay word to Washington, Washington would reply to The Hague, whereupon The Hague would turn over the response to Geneva. Sir Cecil objected to this roundabout method and he has been backed up by most of the members of the committee.

With the completion of the modernized draft of the protocol the committee will have cleared the ground for the adhesion of the United States to the World court. The ultimate decision will depend on ratification by Washington and the 52 signatories of the protocol of December 16, 1920.

MATERIAL progress toward the settlement of the reparations situation has been made by the commission in Paris. The suggestion for the creation of an international bank for receiving and disbursing reparations and to act as an umpire in war debt payment questions, has met with almost unanimous approval.

It was said unanimity had been reached in the banker's committee regarding the question of the capitalization, which would be small compared with the colossal capital of some of the giant banks of America and England. The bank scheme provides against any political interference, the governments having no direction or control of the superbank. Secondly, the co-operation of the central banks of emission must be assured, if the bank is established.

Powerful private financial institutions and banking groups will be asked to collaborate with the superbank, as without their aid the projected organization is helpless. Despite pessimistic reports the assurance was also given that the difference between what Germany is ready to offer and what France, as the chief creditor, is willing to accept does not exceed $115,000,000.

The Germans already have given indications that they are ready to pay $391,000,000 per annum, while the French are holding out for $506,000,000. It is understood that their colleagues are confident of reducing this to $460,000,000.

THE tragic death of Lee Bible at Daytona Beach, Fla., has put an end to speed racing for the present. The A. A. U. A. contest board announced after the tragedy that the third annual international auto speed trials were over for the year. Maj. H. O. D. Segrave, English record holder, declared that he was through with racing, and a similar statement was made by J. M. White, owner of the car driven by Lee Bible.

Bible was traveling at a rate of 202 miles an hour when he lost control. The car plunged into the dunes and was completely wrecked. Bible's body was hurled from the car near the end of its crash. His neck, legs and arms were broken. Bible was making a test preliminary to an attempt to bring back to America the automobile speed record, lost two days before when Major Segrave, English racing driver, established a new record of 231 miles an hour.

THE federal prison spy system inaugurated by assistant attorney General Mabel Willebrandt is likely to be made the subject of senatorial investigation as a result of the controversy in which Warden John Snook of the Atlanta penitentiary submitted his resignation to Attorney General Mitchell rather than continue under the espionage of Justice department agents "planted" as prisoners.

Senator W. E. Borah entered a vigorous protest with the attorney general against the acceptance of Snook's resignation, and added that, whether the resignation is accepted or not, demands will be made in the senate early in the coming extra session for a sweeping investigation of the spy system.

WHEN Henry L. Stimson, newly appointed secretary of state, arrives from the Philippines and assumes his duties, it is expected that sweeping changes in the diplomatic service and a slight shakeup of State department officials will follow.

President Hoover now holds the resignations of all of the American diplomatic representatives and the high officers of the department, but he is withholding action upon them until after he can hold a series of conferences with his secretary of state.

Mr. Hoover carried to the White House some very definite ideas about a reallignment of the diplomatic corps, based not alone upon his observations during his good-will tour of Latin America, but also upon a thoroughgoing study of the whole foreign service situation. As a result changes affecting the American diplomatic representatives around the globe are expected.

A new ambassador is to be sent to the most important of all the posts, that at the court of St. James. Alanson B. Houghton of New York soon is to retire as ambassador to Great Britain and, while his successor has not yet been selected, it is known that President Hoover is hopeful that he can obtain the services of Former Vice President Charles G. Dawes of Chicago.

AN EXECUTIVE order issued Friday by President Hoover decrees publicity of decisions in all tax refund cases, marking a departure from the policy of secrecy heretofore maintained.

While a step in this direction was required under a compromise provision in the first deficiency appropriation bill enacted by congress in the closing days of the recent session, the order went somewhat further than necessary under the congressional mandate. The provision adopted by congress required publicity only in cases of refunds of $20,000 or more. The President's order provides for publicity in all cases of refunds.

The action of the President was based on a recommendation by Secretary of the Treasury Mellon, who heretofore has opposed all moves made in congress in the direction of tax refund publicity.

Secretary Mellon in a statement made it clear that there is no intention to embarrass taxpayers by disclosing in the decisions information relative to their business affairs as contained in their tax returns which, under the law, are not open to public inspection.

UNCLE SAM'S venture in the shipping business during and after the war will show a loss of $3,000,000,000, according to figures just made available. Only a fraction of the billions expended for government construction and operation of ships will ever find its way back into the United State treasury. Up to date the government has salvaged less than half a billion of the three and a half billions expended since 1917.

THE creation of an eleventh department of the government, headed by a cabinet officer, is contemplated by President Hoover. This new branch of the government is to be formed by combining the public health service, the bureau of education and the various welfare agencies.

The National Education association has been advocating for two decades or more the creation of a department of education. A bill favored by that association was introduced in the last congress. Its declared purpose is "to aid and encourage the public schools and promote the public educational facilities of the nation, so that all the people of the several states and territories, without regard to race, creed or color, shall have larger educational opportunities, and thereby abolish illiteracy, make more general the diffusion of knowledge and provide for the general welfare."

MONEY FOR ROAD BUILDING NEEDS

Greater Part of Income Derived From Motor Vehicle Tax and Gasoline.

(Prepared by the United States Department of Agriculture.)

While the greater portion of the annual state road income is derived from motor vehicle fees and gasoline taxation, receipts from sales of state highway road and bridge bonds and from notes for 1926 and 1927 ranked third, and federal-aid appropriations fourth as sources of revenue. In 1923, 1924 and 1925, motor vehicles fees headed the list, state bond revenues were second, federal-aid funds ranked third, transferred funds from counties ranked fourth, and gasoline taxation fifth.

From Sale of Bonds.

The latest available figures of 1927 show that 12 per cent of the total state road income $739,765,258, or $90,979,230 was derived from the sale of highway road and bridge bonds and from notes; 35 per cent or $259,854,786 was derived from motor vehicle fees, and slightly less than 23 per cent or $169,818,473 was derived from gasoline taxation. Federal-aid amounting to $80,459,671 formed 10 per cent of the total.

Of the total county and township road income for 1927 of $840,613,923, about 21½ per cent, or $181,080,953 was derived from the sale of bonds, which is more than double the sum received by these subdivisions from motor vehicle fees and gas taxation, amounting respectively to $40,239,856 and $48,860,508. Bond revenues ranked second in the counties' total income, exceeded only by the $405,219,774 local road tax levy. Bond revenues have ranked second in the counties' annual income for several years.

According to latest available figures, 31 states have an outstanding state road and bridge bond indebtedness of $860,000,000. The county and township bonded indebtedness for roads in 45 states is $386,338,600.

In the recent election, Iowa, by voting an issue of $100,000,000, brought the total number of states with issues of state bonds outstanding to 32. In the fall elections, Missouri, West Virginia and Louisiana also voted additional credits of $155,000,000 to those already authorized for road and bridge improvement. All of the recent bond issues were made possible by amendment of state constitutions.

Pays Interest on Bonds.

Interest on state road bonds, as well as retirement of principal, in 25 states is paid wholly or in part from either the motor vehicle fees or from gasoline taxation, and in some states from both. The interest and principal on the Iowa state bonds will be paid by motor vehicle fees and gasoline taxation.

For 1927 the states having bond issues reported a sale of $76,825,000 of state road and bridge bonds bearing an interest rate of from 3 to 5 per cent, and a sale of $194,301,000 of county bonds with an interest rate of from 4½ to 6 per cent. The average interest rate on all state road and bridge bonds sold in the past 33 years is 4.35 per cent.

State road bonds were issued as early as 1894 by Massachusetts. In 1906, Rhode Island and New York adopted the plan. In 1908, Maryland joined the ranks; in 1909, California and New Hampshire floated issues; in 1911, Utah and Idaho; in 1912, New Mexico; in 1913, Maine; in 1917, Delaware and Oregon; in 1918, Louisiana; in 1919, Illinois, Michigan, Nevada, Pensylvania, South Dakota and Wyoming; in 1920, Colorado, Missouri, New Jersey and West Virginia.

Parking on Down Grade Requires Real Caution

Parking with safety on a downgrade involves much more than turning the wheels in toward the curb. It never is a waste of time to take the additional precautions of pulling on the parking brake and leaving the car in gear. In being content with placing the wheels so the car cannot slip, the driver frequently makes the mistake of putting merely the side of the tire against the curb. Of its own weight the car frequently works itself free. Downgrade parking is responsible for much serious damage to the car that one does not hear or read about. It pays to take no chances.

Motorists and Signals

An assiduous motorist reports that the most painstaking observation has convinced him that the significance of a driver protruding his hand straight out from the larboard window of his car is as follows, possibilities being given in order of their inherent likehood:

(a) Driver is shaking ash from actual cigarette.

(b) Is pointing out airplane, woodchuck or humming-bird to friend wife.

(c) Stretching himself.

(d) Gesturing in support of oration he is making to inmates of car.

(e) Shaking ash from imaginary cigarette.

(f) Rubbing mosquito-bitten elbow on sill of window.

(g) Resting his arm, cramped from long driving.

(h) Trying to attract attention of acquaintance on roadside.

(i) Relieving tickling of wrist by overlong shirt sleeve.

(j) Flirting with young lady in car behind or ahead.

(k) Signaling for right turn.

(l) Signaling for a stop.

(m) Signaling that he is about to turn around in the street.

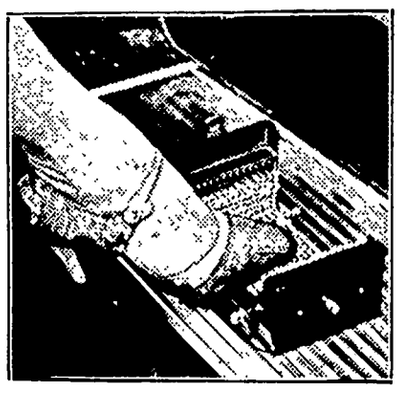
(n) Signaling that he is out of gas.

(o) Signaling for left turn. (The correct signal.)

If the driver is of the female persuasion, our observer says, this list must be completely revamped and rearranged. Well, anyhow, we don't believe in signs.—Detroit Saturday Night.

Auto Brush Practical and Efficient Unit

This auto brush, a compact and efficient unit which fits on the running board is accessible for those entering



Useful on Any Car.

to brush the soles of their shoes. After using it can be closed with the foot.

Large Cost of Building Federal-Aid Highways

The cost of building the federal-aid highway system of the United States has been approximately 50 cents per year for every man, woman and child in the country. The amount is based on the government's expenditures of $613,993,977 for completed highways since the program was started in 1918. There have been a total of 73,119 miles of federal-aid roads completed, as of September 30, 1928, and 10,915 miles are under construction, with 2,139 miles approved for construction.

AUTOMOBILE HINTS

Wabbling wheels are a common ailment in motordom.

* * *

All things come to him who waits, beginning with a traffic violation ticket.

* * *

The best way to be assured of receiving the courtesies of the road is to be a driver of a ten-ton truck.

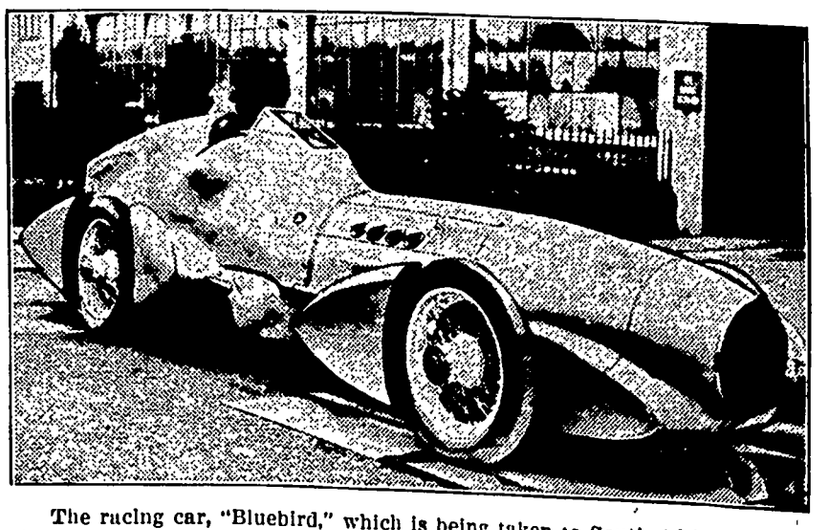
* * *

The construction of the proposed elevated express highway along the Hudson in New York, has had the final approval of the board of estimates. Its cost may run close to $13,500,000.

* * *

It is essential to have water, oil and gas inspected before starting out on a long journey, says the National Automobile club. Also it is well to have the air pressure in all of the tires looked after.

SEEKS SPEED RECORD IN SOUTH AFRICA



The racing car, "Bluebird," which is being taken to South Africa by Capt. Malcolm Campbell, British racing driver, in his effort to set a new speed record for automobiles, the record now being held by America. A new chassis has been specially designed for Campbell which effects a more complete stream line on all projections.

Husband—I thought it came from our grocer.—Life.

This Mother Had Proble

As a rule, nothing is about the best for children, but there are times when they are much better off without it. should always be off when child show by fever fretful or cross spells, by bad breath, coated tongue, sallow skin, indigestion, biliousness, etc., that their stomach and bowels are out of order.

In cases like this, California Syrup never fails to work wonders. It's the quick and gentle way it removes all the souring waste which is causing the trouble, regulates the stomach and bowels and gives these organs tone and strength so they continue to act normally of their own accord. Children love its rich, fruity flavor and it's purely vegetable and harmless, even for babies.

Millions of mothers have proved its merit and reliability in over 50 years of steadily increasing use. A Western mother, Mrs. May Snavely, Montrose, California, says: "My little girl, Nina's, tendency to constipation was a problem to me until I began giving her California Fig Syrup. It helped her right away and soon her stomach and bowels were acting perfectly. Since then I've never had to have any advice about her bowels. I have also used California Fig Syrup with my little boy, with equal success."

To be sure of getting the genuine which physicians endorse, always ask for California Fig Syrup by the full name.

Paris Bars Policewomen

The Paris police authorities, who recently sent a commission to London to study the potentialities of women police, strongly recommended against their introduction in Paris on the ground that there is "no analogy between English and French mundane and morals."

Guard Against "Flu" With Musterole

Influenza, Grippe and Pneumonia usually start with a cold. The moment you get those warning aches rub on good old Musterole.

Musterole relieves the congestion and stimulates circulation. It has all the good qualities of the old-fashioned mustard plaster without the blister.

First you feel a warm tingle as the healing ointment penetrates the pores, then a soothing, cooling sensation and quick relief. Have Musterole handy for emergency use. It may prevent serious illness.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

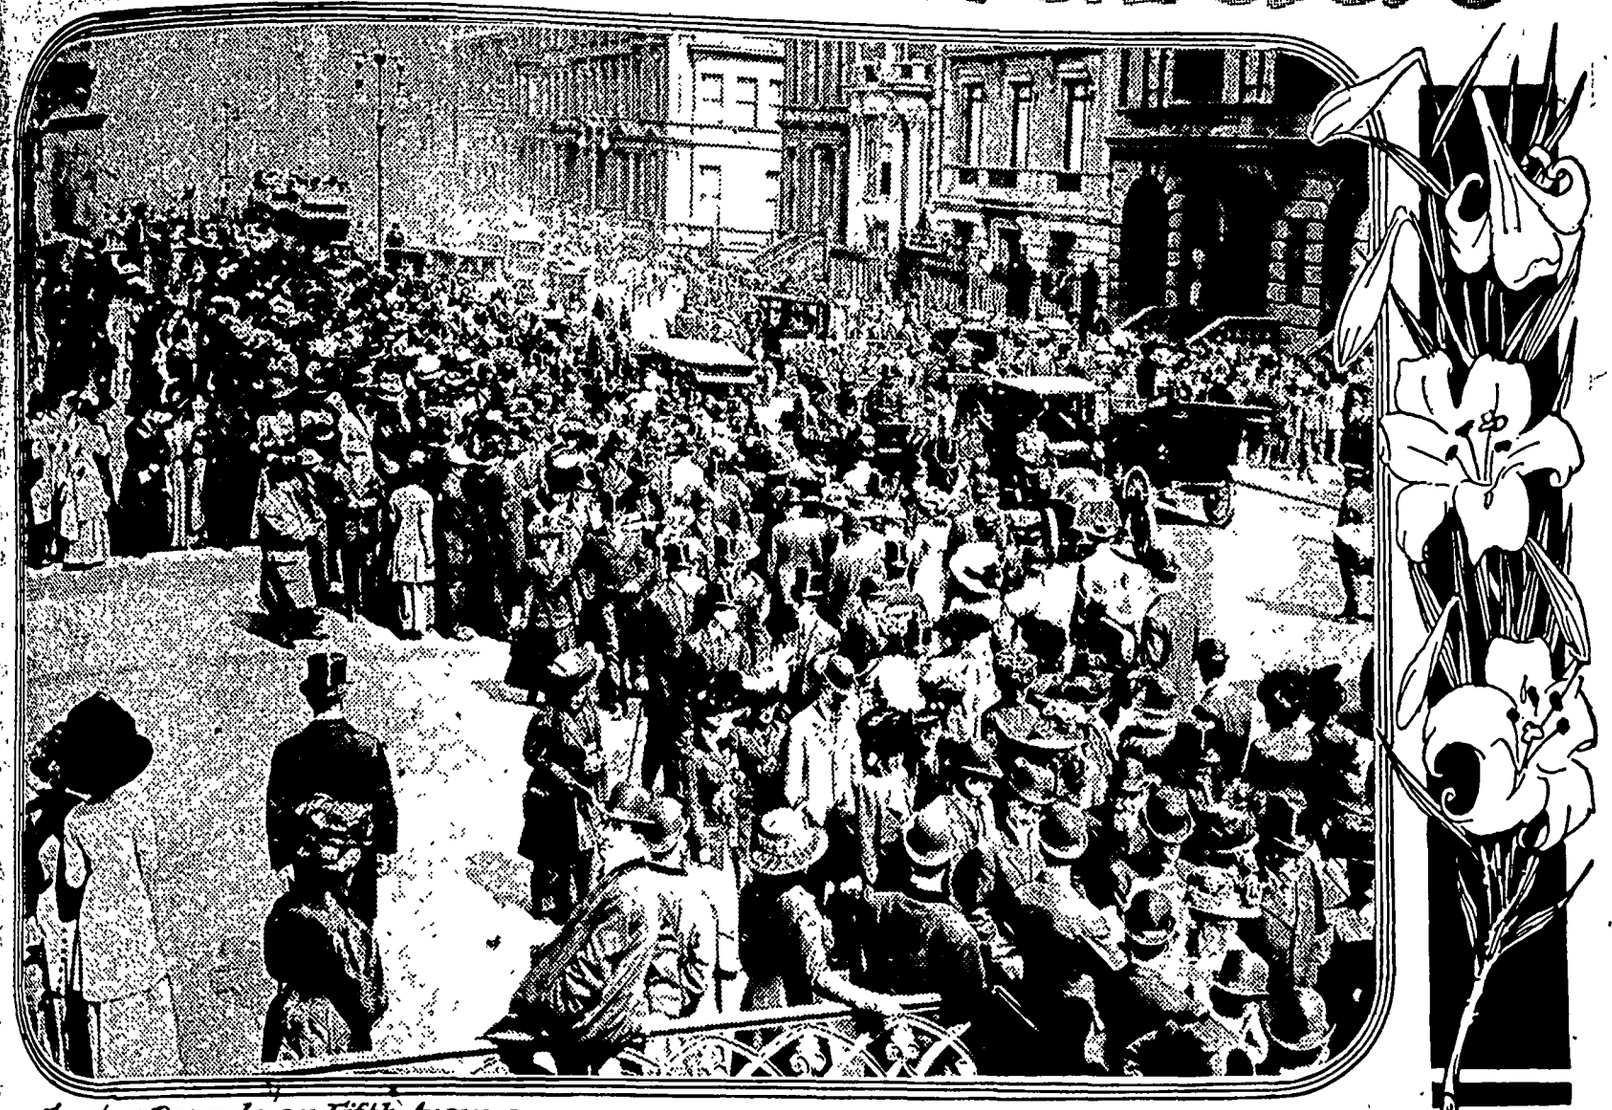
The Easter Parade



Easter Parade on Fifth Avenue
Photo by International

By ELMO SCOTT WATSON

AS THE annual "Easter dress parade" is staged in every city and town in the United States on March 31 (which is the date of Easter this year), it is estimated by experts in the United States Department of Commerce that an investment of somewhere between $1,500,000,000 and $2,000,000,000 in fine raiment will have been displayed by the "richest nation on earth" on the two "dress-up" days of Palm Sunday and and Easter Sunday. What is the meaning of all this lavish showing of clothing and millinery?

The simplest answer is to point to the fundamental facts about Easter and see how those facts can be related to a development which often seems inconsistent with the real spirit of Easter. The essential idea of Easter is shared by Christian and pagan alike. It is the idea of "resurrection," of revived life after apparent death. It marks the climax of the year when all nature awakes from sleep, throws off the death-like chill of winter and begins to live anew. With all nature pointing the way by bedecking herself in new raiment, it is only natural that mankind should also celebrate the surge of renewed life by putting on new apparel.

So when milady appears at church on Easter Sunday in a new frock and a new hat, it is not mere human vanity expressing itself. She puts them on because she must! She has responded to the fundamental instinct by responding thus to the call of spring, to the message of renewed life. There is an old British tradition that it is "good luck to wear something new on Easter day," but that is a mere outgrowth of the essential idea of the Eastertide.

All of which is a simple and entirely logical reason for the feminine display of new clothes on Easter day. But it is by no means a complete explanation for it does not tell why there has developed in this country such an expensive method of satisfying the primal spring urge nor why such a colossal sum is spent on women's clothing at this season, despite the fact that their clothing is as scanty if not scantier than ever before. If the Easter dress parade was entirely in keeping with the traditional idea of "wearing something new on Easter day," it would be a parade of new clothes which might be inexpensive as well as new. But the fact is that it has become an exhibition of national opulence and as such apparently more emphasis is being laid upon the word "expensive" than upon the word "new."

In these days when the psychologists have an explanation for everything we do, think and feel, it may be well to go to those learned gentlemen for an explanation of the Easter dress parade. If you do that they will tell you that in order to arrive at an understanding of the psychological problem of clothing you must go back to the "origins" and take into account four important theories as to those origins. They are as follows:

First. The modesty theory. This theory, familiar from the legend of the Garden of Eden, holds that clothing was originally donned to conceal, from a sense of shame, modesty or embarrassment.

Second. The immodesty theory. This maintains that the purpose of clothing in the beginning was to make the wearer a greater object of interest to the opposite sex. This is the doctrine that familiarity breeds indifference and that concealment increases interest.

Third. The theory that clothing begins in the desire to attract attention or secure pre-eminence. The primitive clothing, on this theory, is conspicuous for ornamentation.

Fourth. The utility or protection theory. The supposition that clothing had its origin in attempts to protect the body from injurious or unpleasant features of the environment would seem to be the most obvious one, but for various reasons has had little standing among the anthropological theorists.

It is easy to see that neither the first, second nor fourth theories in regard to clothing is an adequate explanation for the Easter parade. If anyone of the four can be logically applied it must be the third—the theory that the Easter parade is to "attract attention or secure preeminence, especially since "the primitive clothing, on this theory, is conspicuous for ornamentation."

However, before assuming that this theory is the final explanation of milady's desire for new raiment at Easter time, it may be well to hear a discussion of these theories by one of the eminent psychologists of the country—Dr. Knight Dunlap of Johns Hopkins university. He says:

The modesty theory has probably had the greatest vogue in modern civilization, through its having crept into popular religion and so having been connected with moral prejudices. Eve and her fig leaves still trouble popular moralists and bob up in police regulations.

It may sound merely facetious, but it is both metaphorically and literally true to say that every time woman shortens her skirts the moralists shiver. Yet this is not the only way in which she has frightened them with her clothes. Some years ago, shoulder puffs and baggy sleeves were denounced as indecent and ungodly.

The shudders over the one-piece bathing suit have not yet subsided, in spite of the valiant missionary work of Mack Sennett. That bobbing the hair flaunted indecency, threatened the foundations of morality and endangered the sanctity of the home even the college freshman can remember. He probably does not know, however, that not many years ago putting up the hair on top of the head was also looked upon with fear and indignation.

The obvious failures of regulatory measures in the past, and the equally obvious certainty that if women decide to discard clothing entirely they will do so, in spite of selectmen's ordinances and the protests of clergy and press, seem to convey no lesson to the weaker brethren.

As a matter of observable fact, the connection between clothing and modesty is a simple one. Any degree of clothing, including complete nudity, is perfectly modest as soon as we become thoroughly accustomed to it. Conversely, any change in clothing, suddenly effected, may be immodest if it is of such a nature as to be conspicuous. It is merely the breaking of the established convention which makes it immodest.

The first and second theories go down together. There is today no reasonable doubt that clothing has nothing intrinsically to do with modesty or immodesty.

The third theory, the theory of adornment, is perplexing. It involves the curious assumption that adornment is self explanatory. The theorists offer more or less vague amplifications of the conception of adornment, in terms of "extension of personality," "aggrandizement" and so on, but when their phraseology is sifted down to matter-of-fact statements, they have really nothing to offer except the assumption that clothing is worn to make the wearer conspicuous.

We may grant the human tendency to seek the limelight, the desire for pre-eminence; and we may grant the influence of this in the development of clothing and adornment. But that conspicuousness is attained by adornment when every member of the group wears the same attire or ornaments cannot be granted.

If the simple desire for conspicuousness were operating, the individual who should omit the ornament would be the most successful. She would, in fact, be the most conspicuous; but she doesn't do it.

It is reasonable to conclude that there is a reason back of the adorning; that ornament is not a simple "instinctive" product, requiring no explanation, but that it requires to be explained along with clothing.

The fourth theory, which maintains that clothing was introduced primarily for purposes of protection, has been in disfavor, because it has not been easy to see how the most typical primitive clothing really affords any protection. The costume of the Eskimo protects from cold. Heavy skin cloaks or karosses of other peoples are worn to protect from rain and cold. Sandals, leggings, arm bandages and similar paraphernalia are undoubtedly developed as protection from stones, thorns and brambles. But these are really minor details in the development of dress.

For most savages, and probably for primitive man, protection against cold is only an occasional matter, and many races make no effort to protect themselves by clothing, even though inhabiting climates where cold is encountered; and yet these races develop clothing of a characteristic sort. Sandals, leggings and arm protectors, too, are incidental, put on and discarded in conformity with the occupations of the savages. Costume exists quite aside from these forms of protection and apparently was developed before these.

The most characteristic types of costume of savage races, types which are believed to be truly primitive, are really represented by the fig leaves of the Babylonian legend. Skirts and aprons of grass and leaves, bunches of leaves, give no protection from cold, neither do they protect from thorns and brambles or to any great extent from the sun. Why, then, have these types of clothing been so widely and primitively developed, if not for concealment from the eyes of other people?

The fact that the peoples who wear these garments put no emphasis on concealment, but at times discard the garments completely, and the fact that where there is a costume which cannot be discarded in public it is apt to be some nonconcealing article such as a string of beads around the waist, dispose of these explanations, and apparently leave nothing but the unsatisfactory adornment theory in the field.

Man has a group of adversaries from whom protection is an acute need, especially in the warmer climates in which man undoubtedly originated and in which large groups of savages live today.

The origin of clothing, properly so called, can then be ascribed to the human need for protection from unpleasant agencies, although other factors have entered into its further development.

So there you are! Judging from this psychologist's remarks on the third theory of the origin of clothing, not even this one may be applied to the Easter fashion parade. At least, it can't be done so "logically." Then how account for it?

Perhaps, after all the easiest way to account for it is to say that milady has made the Easter parade a national institution "because she wants to." As for the logic of it—well, she doesn't have to be logical unless she "wants to," does she?

An Easter Parade in Holland

Above—The photograph was made on Easter Sunday, 1915. Fourteen years ago the world was steeped in the blood of war, but when Eastertide came around, thoughts turned to dress and fashion, to the glory, not of the battlefield, but of the Easter parade. Fifth avenue, the mart of fashion, witnessed a queer procession that Easter Sunday. Motor cars were then first attaining real notice. True, the streamline body had not yet made its appearance, but horses no longer snorted and stamped when a car chugged past in the parade. Those on the sidewalks no longer stared at the peculiar horseless contraptions. Dresses were long, very long, and petticoats were bulky. Hats were big, gaily decorated with feathers. Women wore high shoes, then, and gaiters or spats were the fashion. Fur neckpieces were all sizes and women carried large and roomy muffs, a relic scarcely seen these days. . . .

A brief span in the time of the world—fourteen years, but see the difference in the trend of fashion when society parades on Fifth avenue or in any other city this coming Easter Sunday. Then look at this picture. It was made only fourteen years ago, but one might well believe it was taken thirty years ago. The world does move fast. . . .

Below—On this day the children carry little statues of birds made out of pastry. They go from house to house and collect coins.

LIVE STOCK

WORMY PIG WILL PAY NO PROFIT

Lack of Sanitation Is Expensive to Growers.

The common round worm which infests many swine herds is costing the growers more money than the combined losses from cholera, thumps, pneumonia and other common swine diseases.

"The reason why this is true is that most of us think any place is good enough to raise pigs in," says W. V. Hays, assistant swine specialist at the North Carolina State college. "Most growers overlook the need for sanitary measures in the hog lot, yet an infestation of worms may be prevented by a little care. When the sow is ready to farrow, put her in a place where hogs have not been kept. Give the under part of her body a good scrubbing, using soapy water and a fiber brush. Some mild disinfectant in the water would not hurt. This will remove the worm eggs attached to the mother's body. Now place her in the new quarters and the result will be a pleasant surprise to the one who has not tried this plan."

The next best thing to do, says Mr. Hays, is to worm the young pigs. There are specially prepared worm capsules that may be used. For best results in using these, the stomach and intestines of the pigs should be empty of feed. Give all the water the pigs want. In some cases it is wise to give a laxative dose of epsom salts in a thin slop before putting the animals on the fast. This fasting period should last 24 hours, after which the medicine is administered. One capsule for a weanling pig and two for the larger shoats will do. After eight or ten hours, give another dose of salts in a thin slop to wash out the worms.

Mr. Hays says this form of treatment is being followed by progressive hog growers in a number of North Carolina counties, and these men would not attempt to fatten pigs now before treating them, especially if there is any evidence of worms.

Confinement Not Good for the Sheep Flock

Sheep do not thrive in confinement. They need range and exercise. They do not require warm barns for shelter, as do dairy cows, except during the lambing season. A dry, open shed, or a barn with the doors wide open, is the most satisfactory shelter. Wet snows and rains are detrimental to the ewes in the fall and winter season, for their fleeces will sometimes remain wet for days, causing coughs and colds. However, light, dry snows that are easily shaken off do no harm.

Select for the ewes a lot or yard that is well drained. During muddy times, the sheep will stay in the shed most of the time, particularly so if the shed is kept well bedded, for sheep do not like the mud, particularly so a short time before lambing, sometimes lose their lambs prematurely, due to the strain caused by wading through the mud.

Excellent Bulletins for Raisers of Hogs

Some excellent bulletins for hog raisers are Bulletin 243—Equipment for Swine and Production, Kansas State Agricultural college, Manhattan, Kan., and Circular 69—Handy Equipment for Swine Raising, Iowa State college, Ames, Iowa.

These bulletins take up the proper construction of hog houses both of the permanent and the individual types, their proper lighting and ventilation, feeding floors, self-feeders, hot waterers, feed troughs, movable fences and creeps, breeding and castrating crates, loading chutes, shipping crates, and so on. In most cases, bills of materials as well as brief construction plans are given. Copies of these bulletins may be obtained by writing to the colleges.

Live Stock Notes

All animals need direct sunlight.

* * *

Long wool types of mutton sheep make good mothers.

* * *

Within the next few years there probably will be a shortage of young horses.

* * *

Better growth and development of young stock will result if they are given a ration which supplies more protein and mineral matter than is needed by the older animals.

* * *

Do not neglect the foal during the winter months, live stock specialists urge. For proper growth and development a ration of oats and bran or a mixture of corn, oats and bran, with a legume hay or a good mixed hay, is recommended.

* * *

Good clean corn silage is one of the best roughages that the flockmaster can use. The best shepherds use this grain mixture with corn silage and clover hay 300 pounds of oats, 100 pounds of shelled corn, 50 pounds of bran, and 25 pounds of oil meal.

You Get Strong, If

are a ... out or ... down" man, by taking Doctor Pierce's Favorite Prescription.

Women by the thousands write letters like this:

"I was suffering with aches and pains and could not get any relief until I took Dr. Pierce's Favorite Prescription. I am glad to advise any woman who needs a tonic to give the 'Favorite Prescription' a trial. Judging from my own experience and from what others say I pronounce the 'Prescription' a grand medicine."—Mrs. Sallie Cottrill, 902 N. 2nd St., St. Joseph, Mo.

The use of "Favorite Prescription" has made many women happy by making them healthy. Get it from your druggist, liquid or tablets. Write Dr. Pierce's Invalids Hotel in Buffalo, N. Y., for free advice. Send 10c if you want a trial package of tablets.

GREAT DISCOVERY KILLS RATS AND MICE, BUT NOTHING ELSE
Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks
K-R-O (Kills Rats Only) is a new exterminator that can be used about the home, barn or poultry yard with safety as it contains **no deadly poison.** K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, under the Connable process which insures maximum strength. Two cans killed 578 rats at Arkansas State Farm. Hundreds of other testimonials.
Sold on a Money-Back Guarantee.
Insist upon K-R-O (Kills Rats Only), the original Squill exterminator. All druggists 75c, or direct if not yet stocked. Large size (four times as much) $2.00. K-R-O Co., Springfield, O.

Nursery for Dogs

The thirty-first floor of a hotel just built in New York is reserved for the guests' dogs and cats. Most New York hotels refuse to admit dogs, but this one has a "vet," kennel maids, and a cook for the pets, as well as bathrooms, a "beauty parlor," and wired exercise runs on the roof garden.

Mrs. Margaret Washington Tells

How to Get Rid of a Severe Cold

"Last August I took a very severe cold and it seemed that I couldn't break it up. I got so bad that I was confined to my bed for five weeks, doctoring all the time without getting any relief. I had no appetite, naturally lost flesh. In fact, I had given up all hopes of ever getting any better.

"A friend recommended Milks Emulsion and I commenced its use. When able to leave my bed I weighed 111 pounds. Now, after taking Milks Emulsion five weeks, I weigh 125 pounds, feel better than I have felt in two years, can eat anything, have no effects of the cold and work every day. I thank God and Milks Emulsion for restoring my health." MRS. MARGARET WASHINGTON, 1699 E. 14th St., Winston-Salem, N. C.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

On the Hop

New Landlord—And, may I ask, have you any running accounts?

New Tenant (brazenly)—Oh, yes, several, and they sure keep me running from collectors.

Red Cross Ball Blue should be used in every home. It makes clothes white as snow and never injures the fabric. All good grocers.—Adv.

The Longer the Higher

She looks as young as ever."

"Yes, but she says it costs no more money every year."

LIBERTY TOWNSHIP NEWS NOTES

(By Special Correspondent)

Will Lemke was a Mason City caller Monday.

Buzz Carlson visited at the Ed. Schoenwetter home Sunday.

J. J. Stille shipped a car load of cattle to Chicago, Saturday.

Mr. Carolus, who has been ill, is reported better at this time.

Mr. and Mrs. Geo. Schoenwetter and children visited at the Will Lemke home last Sunday.

Kermit Stille and Agatha Steeman were dinner guests at the Smock home in Klemme Sunday.

Miss Ethel Schoenwetter visited at the Elmer Ludeke home in Garner over the week end.

Mr. and Mrs. Emil Beier and Billie were supper guests at the Franklin home Sunday.

Editor's Note: We are sory that Liberty Notes were delayed in the mails last week and did not arrive in our office until Friday a. m.

Mr. and Mrs. Jones and Mr. and Mrs Quinten Stille were entertained at the J. J. Stille home one evening last week.

A baby girl arrived at the home of Mr. and Mrs. Walter Bredlow last Thursday. This makes them a family of two boys and two girls.

A baby boy was born to Mr. and Mrs. Elmer Schaefer March 17th. Mrs. Schaefer from Klemme is caring for mother and son.

Fred Primgnitz has been helping with the cream hauling the last few times as the roads have been so bad that it was next to impossible to make the full route with one team.

There were no church services in Liberty Church Sunday as the roads were impassible for anyone to get there. The Ladies will hold their thank offering program sometime in the future when roads will be a little more dependable.

Liberty Township voted on putting up another brick school in Dist. No. 2 last Monday at their annual election. This will make three brick buildings and leaving but one building in the township which hasn't either been replaced with a new one or being remodeled. No. 4 and No. 8 were built over to requirements a few years ago. The township put up a fine brick building at No. 6 last year.

NOTICE To Parents and Children. No roller skating will be permitted on the sidewalks of Klemme after 9:30 p. m. Paul Grange, Mayor. 1tc

J. N. DAY'S

"The Busy Store"

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

MODERATION

"ALL work and no play makes Jack a dull boy." Of course it does. But a fair amount of work and the wrong type of play can give the same results. Don't lost sight of this fact, either.

Recreation is essential to human happiness, health and welfare. But in these days of highly commercialized attractions one should give some thought to the manner in which the leisure hours are spent. This is perhaps too infrequently done.

While the radio, for example, is one of the most fascinating of modern amusements, it scarcely pays night after night to sit up until the wee small hours trying to "get" hither, thither and yon. It would be more sensible to shut off the current at a more reasonable hour and "get" sleep.

Movies, too, while having their place in one's diversion schedule, should not become one's sole idea of a good time after working hours. Even the best of picture palaces are crowded; and while ventilation systems are efficient in some of them, vitiated atmosphere is more likely to be the case than otherwise. Consequently to walk in the evening occasionally for two hours is a decidedly more beneficial type of distraction.

A word of caution needs to be directed at the older boys whose pride in the imaginary possession of lost youth leads them into all sorts of physical extravagances. The exceptional man over fifty can play hard games of tennis, basket ball or hand ball—and live to tell the tale. But one is foolish to try to prove himself to be in that class by vigorously indulging in "kid" games.

Diversion, therefore, that leads one of mature years to the gymnasium for hand ball or to the club for squash is a conceited sort of affair. It may even cause a strike on the part of your heart which spells finis to the game and possibly to you also.

Remember that the physical exactions of our driving civilization have most of us going at high speed during our work period. And that a healthy let-down is not only good for the soul but for the body also.

There is no implication in this advice that a man over forty-five should arbitrarily forsake all the athletic activities to which he has been accustomed and join a sewing circle. Just the same, always keep in mind that "the old gray horse ain't what he used to be"—and govern yourself accordingly.

* * *

A FRIEND

THE most outstanding friendly enemy of man is pain, only he doesn't know it. Moreover, when he is informed of the fact, he is decidedly loath to believe it.

As a general rule, the first thing a person does when he gets a pain is to grumble about it. It frequently is also the last thing he does about it.

True, if pain hurts badly enough, one is likely to try a pill or so to deaden it; and if it hurts worse than that, a physician will be consulted. But one's attitude toward pain is always the same—dislike and disrespect.

Well, if pain merely hurt, there might be some reason for such an attitude toward it. But that is the least that it does. As a matter of fact, pain is the language of the body talking to direct and forceful terms to the brain. It is indicating that something is wrong, and that scientific attention is immediately required.

That so many turn a deaf ear to pain is positively pathetic; that so many who know absolutely nothing about the particular pain's cause are so egotistical and silly as to indulge in self diagnosis and self medication is much more so.

How many times, for instance, have you throttled a headache by some favorite pill or potation? And this, without a real knowledge of the condition back of the thing. Headaches are merely symptoms. And it is a blind physician indeed who goes about his business on that flimsy basis.

What is true in a minor way about headaches is equally and more true concerning other bodily pains. Long and healthy life demands that you lend a receptive and affectionate ear to pain. This can only be done in one way. Take your pain, great or small, to your physician. Let his practiced eye and specialized intelligence go behind it and find the cause. For the cause is the only thing after all that matters.

People who get angry at pain and treat it themselves or attempt to ignore it, sometimes wake up to find themselves dead!

The hospitals always have an appreciable number of guests who are such simply because they lack the right attitude toward pain.

Pain is your servant. Use it as such. Life lengthening and even life saving is in this advice. Three cheers for pain!

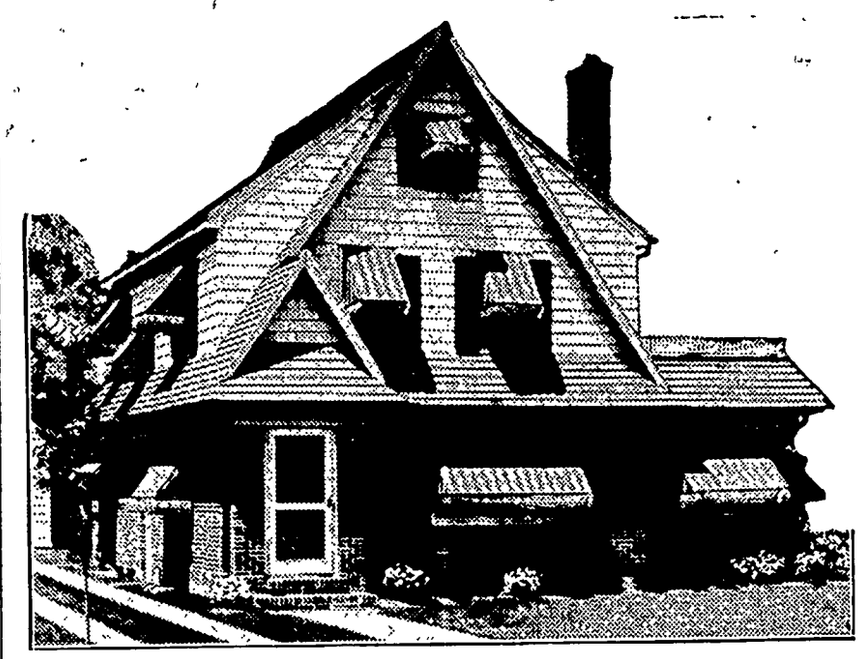
Family Tree a Gallows

The British college of arms says that fewer persons these days are tracing their ancestry. They have probably learned from the experience of others that when it gets back to a certain distance it isn't so hot.—Philadelphia Inquirer.

Delightful Home of Frame and Brick Unusually Good Design



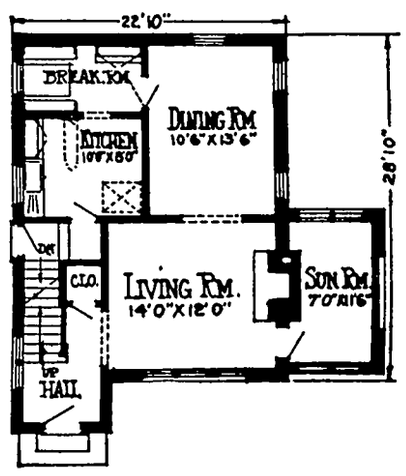
This brick and frame home will just suit those who want to build this type of house and want to do it economically. It has straight walls, which mean low construction cost. At the same time the entrance door and the windows, together with the roof, make it very attractive. As will be seen by the floor plan, the home contains six rooms, there being three bedrooms and bath on the second floor.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Harmonious combinations of color and materials are the aim of many home builders. Brick in itself is excellent building material as also is wood. Combinations of these two, however, provide a contrast that is pleasant.

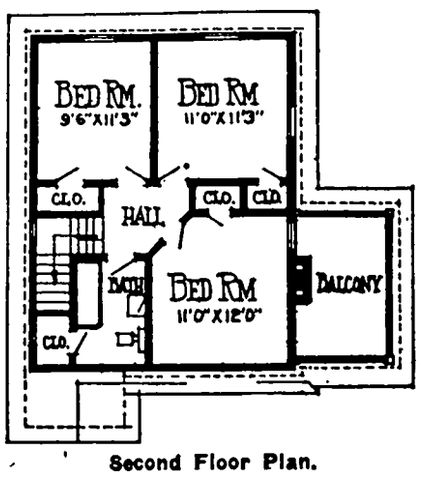
Shown in the illustration is a design of a home which utilizes a combination of brick and wood to an unusual good advantage. The lower half of the house is of brick while the upper half is of frame. The brick gives a substantial appearance to the lower part while the frame above the brick permits broken hip lines and dormers which make this an unusual good design for prospective home builders.



First Floor Plan.

The house is 22 feet 10 inches wide by 22 feet 10 inches deep exclusive of a sun room which adds 8 feet to the width. The sun room is 11 feet 6 inches deep.

The entrance at the corner leads into a small hall at the right of which is the living room, 14 feet by 12 feet, with the sun room adjoining it. The entrance hall is connected with the living room by a cased double opening which adds to the length of the room while at the back the dining room is also connected with the cased opening which makes for spaciousness. The dining room is 10 feet 6 inches by 13 feet 6 inches and at one side is a breakfast room 3 feet wide by 8 feet. The kitchen is reached through the breakfast room.



Second Floor Plan.

The stairs running out of the entrance hall end in a square center hall on the second floor. Opposite the stairs is the bathroom while on the other three corners are bedrooms of good size. It will be noted by an examination of the floor plans that each bedroom has a large closet off it as also has the bathroom.

The house is set on a concrete foundation and has a basement of the same dimensions as the house itself. The addition of plantings around the base of the outside walls and the awnings at the windows give this home a very attractive appearance and one of which any owner may be proud.

Floor Colors Should Blend With the Finish

Floors should be as mellow and inconspicuous in color as possible, but always in a color that harmonizes with the general finish of the room.

The finish of permanent flooring is highly important to the general appearance of the room, and the possible combination of soft and hard woods, linoleum and composition floorings is of interest to anyone who is planning a home.

In general, hardwood floors are better and more durable, particularly if the floor is not to be entirely covered. If the floor is to be covered with carpet, soft wood is desirable; it is also used in country houses and successfully finished with paint or stain. The hard woods include oak, maple, birch and beach, while pine, fir and red spruce come under the head of soft woods.

If a linoleum floor covering is desired, it should be laid at the time the house is built. Many housekeepers prefer tile and composition floors for the bathroom, kitchen and service quarters, as they are waterproof and can be cleaned with soap and water as often as necessary.

If hardwood floors are used, they can be finished with wax, or varnished and then waxed, and polished at regular intervals with a dry mop. Floors of soft woods should be oiled at intervals. Linoleum floors should be waxed.

Rugs should be in keeping with the type of room, and should in nearly all cases be darker than the walls. Large rug designs are not desirable, though small all-over patterns are attractive in rooms with plain walls. If the walls are figured, plain rugs are in better taste. Plain rugs and carpets show dust more readily than those with all-over figures.

Tiled Interiors

Tiled interiors—entrance halls, living rooms, sun porches, bathrooms and kitchens—have a very practical basis as well as an esthetic one. No other material is as easy to keep in spotless order as tiles, which are impervious not only to dirt, but also to wear, so that there need never be any question of redecoration or repair.

Stucco Needs Clean Surface for Adhesion

Monolithic concrete walls should preferably be rough and of coarse texture, rather than smooth and dense, for the application of stucco. Walls of this type should be cleaned and roughened, if necessary, by hacking, wire brushing or other means.

The surface of the concrete should be brushed free from all dust, dirt and loose particles, and should be wetted to such a degree that water will not be rapidly absorbed from the plaster, but not to such a degree that water will remain standing on the surface when the plaster is applied.

Concrete block for stucco walls should be rough and of coarse texture, but not weak or friable. Block should be set with cement mortar joints, which should be raked out or cut back even with surface.

Before applying the stucco the surface should be brushed free from all dust, dirt and loose particles, and should be wetted to such a degree that water will not be rapidly absorbed from the plaster, but not to such a degree that water will remain standing on the surface when the plaster is applied.

Where a Window Is There Should Sink Be

Kitchen experts agree that the best place for a kitchen sink is under a window. Under some circumstances, where the plan of the kitchen is unusual, the sink may be placed elsewhere, but there should be an assurance of good light. If the sink is placed on the outside wall the pipes will not freeze up, as the drainage line does not go into the wall and the supply pipes do not have to be placed there. If they are put in the wall they may be insulated so they will not freeze.

Small House Idea

On account of the high cost of construction and maintenance, it is no longer practicable to erect the huge frame residences which have lined our city streets in the past. The old order of eight and nine-room houses for the man of moderate means has had to give way.

FARM POULTRY

DRIED MILK WILL HELP CURE CHICK

Part of Treatment for Flocks With Coccidiosis.

For chicks affected with coccidiosis, a diet rich in milk is one of the measures advocated for the cure and control of the disease, by the poultry husbandry department of the Ohio State university. Not that simply feeding lots of milk is a sure or complete control measure. It must be employed as one of the features of a general treatment of which sanitation and prevention are the outstanding practices.

In combating coccidiosis in a flock the poultry husbandry department recommends four steps, giving epsom salts at the rate of one pound to four gallons of water; confining the chicks to the brooder house or moving the house to clean sod so that there is no reinfestation from the soil; cleaning the brooder house thoroughly and disinfecting it every three days, and placing the chicks on a diet which is rich in milk.

Quick relief from a diet of liquid milk is not likely because the birds will not consume enough of it. In using dry milk, best results are obtained when the mash is composed of 40 parts of dry milk. No other source of animal protein should be used in the mash.

The following mixture has been found to give satisfactory results when fed as soon as the disease appears and kept before the chicks as long as it is in evidence: dry skim milk, 40 pounds; wheat bran, 10 pounds; yellow corn meal, 30 pounds; ground rolled oats or barley, 20 pounds.

Selection of Breeding Stock Helps Turkeys

One of the most important steps towards successful turkey production depends upon the proper selection of the breeding stock. Weak poults, small, scrubby turkeys and unhatchable eggs are often traced to carelessness in the selection of the breeding stock. Turkeys that are used as breeders must possess those physical characteristics, showing strength and vigor. These characteristics are manifested as a general rule by a deep and wide body, the back broad and the breast round and full. The head shows certain physical characteristics of strength, namely: the eyes should be active and alert, the head should be fairly short, broad and deep and of good size, showing a clean, healthy appearance. The legs of the birds should be well apart, showing a strong, sturdy shank and straight toes. Considerable emphasis should be given in the selection of the male bird. This in itself should improve the stock from year to year. Early hatched toms, as a general rule, are sufficiently matured to make good breeders the first season. One should avoid using the late hatched male birds for breeding purposes.

Oyster Shells Provide Right Source of Lime

Usually oyster shells provide a good source of lime for poultry. Quite often they are not broken up in sufficiently small parts. But they are cheap and when clean and not scattered in filth are safe. As a rule, they should be kept in clean self-feeders or places where they will not become contaminated. This will do most good when the birds are fed feeds containing vitamines, because lime is assimilated best in the presence of or when birds have the necessary vitamines to aid in digesting and assimilating it. If bone meal or healthy clean bones are crushed or ground and kept clean and wholesome, the good bone along with the vitamines will furnish lime and phosphate. But there are some things in the processes of digesting and assimilating lime that are not known. Yet we know poultry must have some form of lime in their feed. Lime and phosphate may be obtained from other animal tissues and from vegetables and grains.

Hatch Chicks Early

Much has been said for or against early hatching of chicks. It is a question that every breeder and producer will need to answer according to his own circumstances. In making the decision he should take into consideration not only the immediate convenience, but also the future usefulness of the birds. It is a fact that early hatched chicks are more profitable winter layers, the same as fall freshening dairy cows are the most profitable milkers.

Skim Milk for Hens

On many farms skim milk is used with stock that will not pay as great a return for its use as when fed to poultry. Most records indicate that it is worth more when fed to poultry than to any other class of live stock. In fact, more poultrymen are feeding different types of condensed milk, than all other classes of live stock. This indicates that poultry responds particularly well to milk feeding. The minerals in milk are also beneficial to the fowls.

RADIOLA 60

You Can't Dye a Dress with Promises!

You can't dye a dress—no matter how careful you may be—without real color. That's the idea behind Diamond Dyes. They are made to give you real service. They contain from three to five times more aniline than other dyes on the market.

Next time you want to dye, try Diamond Dyes. See how easy it is to use them. Then compare results. Note the absence of that re-dye look; of streaking, or spotting. See how soft, bright, new looking the colors are. Then observe how they keep their brilliance through wear and washing. If you don't agree Diamond Dyes are better dyes, your dealer will refund your money.

The *white package* of Diamond Dyes is the original "all-purpose" dye for any and every kind of material. It will dye or *tint* silk, wool, cotton, linen, rayon or any mixture of materials. The *blue package* is a special dye, for silk or wool only. With it you can dye your valuable articles of silk or wool with results equal to the finest professional work. When you buy—remember this. The *blue package* dyes silk or wool only. The *white package* will dye every kind of goods, including silk and wool. Your dealer has both packages.

Diamond Dyes Easy to use Perfect results

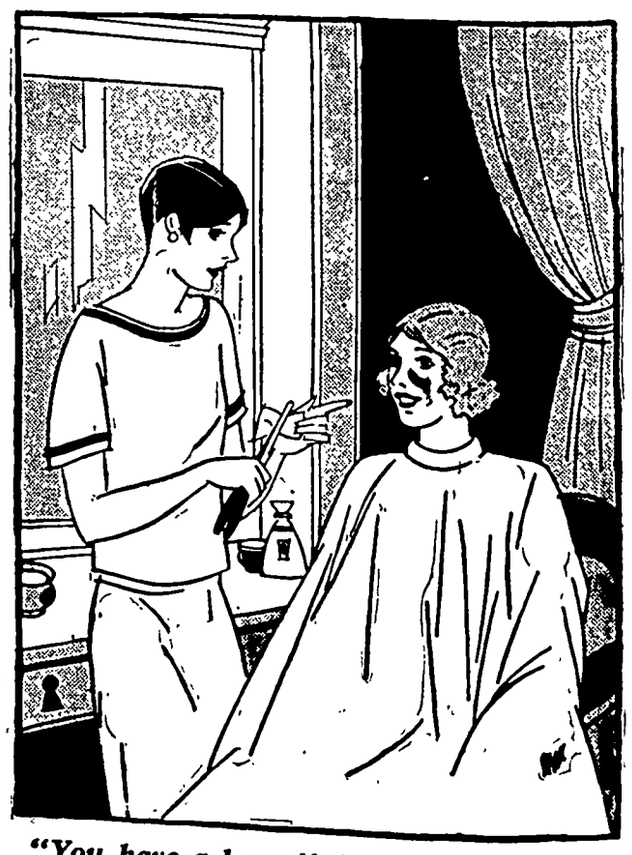
That Million-Dollar Feeling



"You have a beautiful complexion, Mrs. Smith. No wonder you look happy."

"Take NR, dear; it improves the complexion and makes you feel like a million."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

NR TO-NIGHT

MAKE THE TEST TONIGHT

BE WELL HAPPY

Get Relief. Drive Out the Poisons

Auto-Intoxication, Constipation, Biliousness, sick headache caused by defective elimination, all yield when you take Nature's Remedy, NR Tablets. Thousands have proven this mild, dependable relief for these conditions.

GET A 25¢ BOX

Makes Life Sweeter

Children's stomachs sour, and need anti-acid. Keep their systems sweet with Phillips Milk of Magnesia! When tongue or breath tells of acid condition—correct it with a spoonful of Phillips. Most men and women have been comforted by this universal sweetener—more mothers should include its aid for their children. It is a pleasant thing to take, yet neutralizes more acid than the harsher things too often employed for the purpose. No household should be without it.

Phillips is the genuine, prescriptional product physicians endorse for general use; the name is important. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875.

Engraved Laws of Athens

Fifteen acres of old Athens are to be uncovered and one of the interesting developments anticipated is the uncovering of the Royal Stoa, believed to contain the stone tablets on which were engraved the laws of Athens. It is also expected to uncover the Agora, which was the market place and which is said to have been surrounded with beautiful buildings of stone all richly carved. It is necessary to acquire a great deal of the property on the surface before this work can be started, but the machinery has already been set in motion and it will not be long before the work of excavation will be commenced.

It is a woman that needs to be redressed, not her wrongs.

What Will *you* do

When *your* Children Cry for It

There is hardly a household that hasn't heard of Castoria! At least five million homes are never without it. If there are children in your family, there's almost daily need of its comfort. And any night may find you very thankful there's a bottle in the house. Just a few drops, and that colic or constipation is relieved; or diarrhea checked. A vegetable product; a baby remedy meant for young folks. Castoria is about the only thing you have ever heard doctors advise giving to infants. Stronger medicines are dangerous to a tiny baby, however harmless they may be to grown-ups. Good old Castoria! Remember the name, and remember to buy it. It may spare you a sleepless, anxious night. It is always ready, always safe to use; in emergencies, or for everyday ailments. Any hour of the day or night that Baby becomes fretful, or restless. Castoria was never more popular with mothers than it is today. Every druggist has it.

Fletcher's CASTORIA

Garfield Tea
Was Your Grandmother's Remedy

For every stomach and intestinal ill. This good old-fashioned herb home remedy for constipation, stomach ills and other derangements of the system. The prevalent thee days is in even more favor as a family medicine than in your grandmother's day.

BEAT WORMS TO YOUR CHERRIES

Before Trees Blossom Spray With Arsenate of Lead.

"Spraying cherry trees guards against two things," says W. R. Martin, extension horticulturist at the Kansas State Agricultural college. "Four sprays are practicable for the control of plum curculio, the insect that causes worms in cherries, and for cherry leaf spot, a fungous disease that causes yellow spots on the foliage and the ultimate falling of the leaves in midsummer."

Only trees that have previously been badly infested with plum curculio need to be sprayed when the buds are large and green, but before they blossom, with a spray made up of one and half to two pounds of arsenate of lead in 50 gallons of water. No fungicide is necessary with this application.

As soon as the flower petals fall, the extension hoticulturist recommends spraying with a mixture made of one and quarter gallons of liquid lime-sulphur and one and half pounds arsenate of lead in 50 gallons of water. If dry lime-sulphur is used, apply three and half to four pounds to 50 gallons. These treatments will control both the cherry leaf spot and the plum curculio.

Because the cherries will be discolored if a spray is applied within two weeks of their ripening, no spray should be applied after a second application of the lime-sulphur and arsenate of lead spray put on two weeks after the use of this spray, the first time when the flower petals fall.

To control cherry leaf spot, which greatly weakens the vitality of the trees, after the fruit is harvested, thoroughly spray with a 3-6-50 bordeaux mixture. Trees affected with the leaf spot will produce a light crop of under-sized fruit the following year. They are also susceptible to attacks from the shot-hole borer. In most instances the control of the leaf spot also controls the shot-hole borers, which many people believe have killed their trees.

Grapes Will Grow From Seed by Careful Work

Yes, grapes will grow from the seed. Crush the fruit, and place in a vessel with some water added; let stand for a week or more, till fermenting, then wash the seeds out clean. Plant the seeds directly, in drill rows, about the same way as onion seeds should be planted, but spacing the rows some 2 feet apart. Most of the seed should start growth the spring following, but should remain in the same spot two summers before transplanting. Grapes, like most other fruits, will not come true to type from the seeds. The only way to increase plants that you wish to be exactly the same as something you now have, is to either plant cuttings or cover parts of the vines till they root. Grape wood cuttings do not usually give over half a stand. Select canes that have made a good growth this past summer, lay these alongside of row, and place a few shovelfuls of dirt on at intervals along the vines. Dirt may be placed on vines at any time of the year, and they will take root. It takes from one to two seasons' growth before the vines have had time to get enough roots started, so that they may be cut off from the parent plant and transplanted. However, a person can soon make quite an increase by this method, as a long vine may be covered in several places, and each part taking root will make a plant, when divided up properly.

Find Wide Differences in Hardiness of Alfalfa

Wide differences in the winter hardiness of alfalfa varieties have been discovered by Burlison and Hackleman of the Illinois experiment station. The three highest yielding types for the two cuttings made during the season of 1927 were Grimm, Canadian Variegated, and South Dakota 12, with an average yield of 3.5 tons per acre. The three poorest yields were made by imported lots, Provence, Peruvian and Spanish, with an average of 1.24 tons per acre.

The estimated stands of the three best yielding varieties after the second winter or in the spring of 1928 were: Grimm, 78 per cent; Canada Variegated, 65 per cent, and South Dakota 12, 72 per cent. At this time the stand for Provence was 6 per cent, Peruvian 1 per cent, and Spanish 10 per cent.

Control of Scale

The oyster-shell scale can be controlled without difficulty with dormant strength lime-sulphur or with an oil spray. Do not depend on cleaning it up for good with a single season's application but keep after it for several seasons in succession, says the Rural New Yorker. The old dead "shells" will remain on the trees for a long time, so do not be alarmed by their presence. We would advise you to do this spraying in the spring, not in the fall.

Composition of Fruit Is Shown

Data on Several Varieties Grown and Marketed in This Country.

(Prepared by the United States Department of Agriculture.)

New summary tables on the chemical composition of fresh fruits have been issued by the United States Department of Agriculture. Data on 67 kinds and varieties of fruits and 31 fruit juices are included in this compilation by Charlotte Chatfield and Laura I. McLaughlin of the department's bureau of home economics. Reliable analyses printed in this and other countries and unpublished data from co-operating federal and state laboratories were used as the basis of these figures, and specialists in fruit production and handling were consulted regarding them. It is believed that these figures more nearly represented the composition of fruits now grown and marketed in this country than any other extensive list of analyses heretofore published.

Fuel Value.

Protein, carbohydrates, and all the other chemical constituents are given in percentage of the edible portion of each fruit. Fuel value appears as calories per pound and per 100 grams. In making the tables particular care was taken to determine what part of the fruit was considered refuse in making the analyses, and to designate the refuse percentage as skin, seeds, or other inedible portion.

As a further aid to accuracy, the botanical as well as the common name is given for each fruit. For varieties that differ markedly in composition or for types grown in different localities, separate averages are given. Under apples, for instance, are figures for early, medium, and late varieties, as well as an average for all varieties. The averages for peaches grown in Georgia, North Carolina, Maryland, and New Jersey bring out interesting differences in sugar content.

New Figure.

With these new figures on fruit analyses, diets in both health and disease may be calculated more accurately. Economists can use them in making closer estimates of nutritive value in food consumption studies. They will give producer and consumer more exact knowledge of the chemical content of fruits grown and eaten.

Copies of these tables may be obtained free as long as the supply lasts by writing to the United States Department of Agriculture for Circular No. 50-C, "Proximate Composition of Fresh Fruits."

Muscovy Ducks Favored by Arkansas Breeder

I was the first to raise Muscovy ducks in this part of the country. My neighbors were astonished to see them sitting on the top of fences or in the loft of my barn.

Feeding and laying habits of Muscovy ducks are much like that of chickens. It is not necessary to confine them each morning to get their eggs, as is often the case with other ducks, writes B. G. Roberts of Arkansas in Capper's Farmer. They begin laying in February and often will lay until cold weather if not allowed to become broody.

Like the goose they feed mostly on grass and other green matter and do not require much concentrated feed.

Those who object to the noise made by other varieties of ducks prefer Muscovys for they quack only when badly frightened. The drakes can made no noise at all except a hissing sound. The young ducks are easy to raise. After they are 36 hours old I feed stale bread soaked in sweet milk. This is soon changed to a ration consisting of two parts wheat bran, two parts shorts, one part yellow cornmeal and a small amount of beef scraps. I feed this three to five times a day. Sand is sprinkled over it occasionally for grit.

Agricultural Notes

Salt is cheap. It's a necessary food. Be sure that all animals have their share.

* * *

The remedy for diseased animals which promises to cure all ills usually ends by curing none of them.

* * *

Corn silage, fed in moderate amounts along with other roughage, is excellent for the breeding ewes.

* * *

Timothy hay is not a suitable roughage for sheep, unless supplemented with bran and pea-sized linseed meal.

* * *

The wise farmer carries on his own "farm relief" by starting in now to do some of the things the farm has long needed.

* * *

Sows with second or third litters can be counted on to farrow and save nearly two pigs more per litter than gilts with their first litter.

* * *

Put straw in the loft of your poultry house and it will keep your flock warmer in winter and cooler in summer. Straw has insulating properties.

* * *

The usual deficiencies in the winter rations of fall pigs are a lack of suitable proteins, a lack of mineral matter, and a lack of essential vitamines to promote growth and the assimilation of bone building material.

Diplomacy Not Small Girl's Strong Point

The time was an autumn afternoon, the place was at an East side drug store and the characters were two women and a little girl.

The conversation which was being carried on over their soda glasses had drifted to the fact that Rev. Mr. Blank had been at the home of Mrs. Jones the day before for lunch. The conversation ran thus:

"I would sure hate to be the wife of a minister," exclaimed Mrs. Smith.

"Don't s'pose I'd like it, either," said Mrs. Jones.

"Do you think a minister would have me for a wife?" asked Mrs. Smith, turning to the child, who was Mrs. Jones' little daughter.

"I expect he would," replied the little girl. "The ministers aren't supposed to pick the pretty ones."—Indianapolis News.

Vain Efforts

Senator King of Utah, at a dinner in Washington, said of a political scandal:

"It gets worse and worse, and the efforts of these men to clear themselves only soil them more.

"It reminds me of the Munich butcher. An American lady said to him:

"'And you can assure me, then, that there is no horse meat in these sausages?'

"'Lady,' said the butcher earnestly, 'I can assure you that there's no meat of any kind in them.'"

Large, Generous Sample Old Time Remedy Sent Free to Every Reader of This Article

More than forty years ago, good old Pastor Koenig began the manufacture of Pastor Koenig's Nervine, a remedy recommended for the relief of nervousness, epilepsy, sleeplessness and kindred ailments. The remedy was made after the formula of old German doctors. The sales soon increased, and another factory was added. Today there are Koenig factories in the old world and Pastor Koenig's Nervine is sold in every land and clime.

Try it and be convinced. It will only cost you a postal to write for the large, generous sample.

Address: Koenig Medicine Co., 1045 No. Wells St., Chicago, Illinois. Kindly mention your local paper.

No Rest

Mrs. Knagg—You promised to love me for the rest of my life.

Mr. Knagg—Yes, but I didn't realize what little rest there'd be.

After a girl has refused him 12 times a superstitious youth will quit proposing.

ASPIRIN

To break a cold harmlessly *and in a hurry* try a Bayer Aspirin tablet. And for headache. The action of Aspirin is very efficient, too, in cases of neuralgia, neuritis, even rheumatism and lumbago! And there's no after effect; doctors give Aspirin to children—often infants. Whenever there's pain, think of Aspirin. The genuine Bayer Aspirin has Bayer on the box and on every tablet. All druggists, with proven directions.

Physicians prescribe Bayer Aspirin; it does NOT affect the heart

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Cuticura Soap

VOTE MONDAY!

20 White Rock Cockerels and one drake for sale. Mrs. E. J. Arnold. 1c

Don't forget, Town Election next Monday. Vote!

Don't forget to phone us your news items, or mail them!

Saturday is bargain day in Klemme. Read the ads.

George Gruetzmacher, of Garner, was a Klemme caller Monday.

Mildred Gast fell at school Monday and sprained her wrist quite bad.

Miss Minnie Beek is assisting with work at the Verner Lewis home.

Quite a few people walked out to the railroad bridge Sunday to see the high water.

Mr. Carl Kloock, of Garner, was a week end visitor at the Mrs. Chas. Medaus home.

Mr. and Mrs. Fred Musfelt of Clarion have been Klemme visitors the past few days.

Irene Johnson has been confined to her home the past week with flu, but is getting better at this time.

Mr. and Mrs. C. F. Keraus were at Clear Lake Thursday fixing up their cottages for the summer.

Mrs. George Ulrich has been helping care for her new grand-daughter at the Walter Bredlow home.

Mrs. Joe Johnson has been very ill the past week, but at this writing we are happy to state that she is making a good recovery.

Mrs. J. N. Day is still under the care of a nurse but is rapidly recovering from her serious attack of pneumonia.

Mrs. Henry Medaus, Mr. and Mrs. George Johnson and Geo. Gruetzmacher were at Forest City on business Tuesday.

Mr. and Mrs. Conrad Quandt and daughter, Gracka, and Miss Thelma Kluckhohn were Mason City visitors Sunday afternoon.

Mr. Walter Lauden and family, of Forest City, and C. A. Larsen and family were Sunday visitors at the John Larson home.

Mr. and Mrs. Saathoff and family and John Jumker, of Woden came Sunday for a visit at the Mrs. Chas. Medaus home.

Mrs. Carrie Kindon returned to her home at Thompson Monday, after a few days visit with her daughter, Mrs. Frank Kluckhohn and family.

Mr. and Mrs. C. G. Waterman and family drove to Mason City Sunday where they met Mr. and Mrs. T. F. Mitchell of Swea City and enjoyed the day with them.

Vernon Turgasen came home Monday from Ames. Vernon had been in the college hospital for the past three weeks recuperating from the mumps.

Fred Arnold and Maurice Greiman came home from Ames Wednesday to spend the week end with home folks, as they are enjoying a short vacation before Easter.

FOR SALE—GLADIOLA BULBS small and large of each color, 20 for $1.00. An extra bulb free if you come early. Mrs. Art Schoenwetter. 2tc

Mr. and Mrs. Glenn Seney left for Minneapolis Friday, after visiting a week at the Dr. D. P. Anderson home, and with other Klemme friends.

Now that the "first bird" question has been settled, who will find the first wild flower? The Times will give a box of correspondence cards to the young lady who brings to our oiffce the first wild flower picked this spring.

Mrs. Harvey Stille and children, accompanied by her father, Mr. Lilljenberg, of Valley City, N. Dak., came Saturday for a visit at the home of their sister and daughter, Mrs. Frank Kluckhohn and family.

Mr. and Mrs. R. A. Jorgenson and Buster and Byrnes Missman drove to Hampton Sunday to see Mrs. W. F. Missman. She is getting along fine and will leave the hospital in a few days.

The office room at the Northern Lbr. Co., which for the past year has been used by the Creamery as the secretary's office, has been rented by John Suckow, locall contractor. It will make a handy office for Mr. Suckow.

Frank Ward left for Algona Wednesday evening where he was called to take his father to St Mary's hospital at Rochester, Minn., wehre they visited with Frank's mother, who recently underwent an operation and will again submit to another.

Jay Griggs was a caller at the Times office Monday morning, the first time Jay had been to Klemme for several weeks. He reports that the fish at East Lake wintered quite well, although quite a number died because of the severe winter which made air pumping a difficult job.

The M. E. Ladies Aid Society met Friday at the Parish House and was in charge of Mrs. A. D. Gimer. The president, Mrs. Jorgenson had to be present at lodge work at Garner, and the vice-president, Mrs. Day was ill. The ladies wish to thank Mrs. Gimer for taking charge. She is a former president of the society. The ladies plan to hold a bake sale April 6th.

Send in your news items or call us on the phone. We want the news and are glad to have your co-operation. - Times Office.

GRANGE IS AGAIN ELECTED MAYOR

MISSMAN, WELLEMEYER, JOST, LARSEN, QUANDT COUNCIL

Joe Johnson, For Assessor, C. G. Waterman, Treasurer Re-elected

The voters of Klemme were out in nearly full force for the town election Monday and 257 ballots were cast at the polls.

Frank Gruetzmacher was defeated by Paul Grange for Mayor. Mr. Gruetzmacher received 92 votes and Grange received 158 votes.

Two new men will take their position on the town council as a result of Monday's election. Wes Schuldt and H. L. Suckow are the retiring councilmen and their places will be filled by Conrad Quandt and H. F. Jost. The other councilmen are old members who were re-elected: W. F. Missman, Art Wellemeyer, C. A. Larsen.

For Councilmen the votes were divided as follows:

H. F. Jost	219
C. A. Larsen	216
W F. Missman	164
Art Wellemeyer	143
Conrad Quandt	139
H. L. Suckow	112
J E. Stille	104
Wes Schuldt	96

For Assessor Jos. E. Johnson was re-elected with 165 votes, and G. A. Goll received 71.

C. G. Waterman was re-elected Treasurer without any opposition.

All of these men will serve for two years in their respective offices.

Thanks To The Voters

In the past Town Election, and we also wish at this time to make it known that we, as Council and Mayor, go into office with a free and clean record; no promises made before election that will be a detrement to a good, clean administration of the law for the coming year.

(Signed)
P. GRANGE, Mayor,
C A. LARSEN,
W. F. MISSMAN,
C. QUANDT,
H. F. JOST,
ARTHUR WELLEMEYER.

You are heartily invited to attend these services.

THIEVES STEAL CHICKEN FEED FROM WM. LAU'S BARN

Wm. Lau reported to us this morning that there had been thievery going on in town. Last week someone broke the lock on his barn door and proceeded to help himself to some choice chicken feed in the barn at Wm. Lau's place. Mr. Lau informed us that others in town had previously been robbed of feed.

Bill wants to warn the thief against any further attempts at robbing his feed. Bill is not much of a hand at fast ruuning, but he says he has a little friend in the form of a few lead pellets that might have a effect on the thief and at the same time give the doctor a job of extricating the afore mentioned pellets from the northwest corner of the thief going south east, or vice versa as the case may be.

Mrs. Ed. Schaefer was on the sick list the past week and was unable to attend church Sunday.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Sunday is Easter, the culmination of the Lenten Season, and a day of great significance in the church throughout all of Christendom. The day is characterized by the spirit of hope and victory, made possible to the world through the resurrection of Jesus Christ. Your presence at the services Sunday will help to make Easter a day of victory in our local churches. The theme for the morning service both at Klemme and Liberty will be "Victorious Lives."

Our evening service was well attended last Sunday and we are to have a similar program for this coming Sunday evening, with music by the Junior Choir, and the male quartet. We will also have a short pantomine accompanied by song, and lantern slides relatives to the resurrection of Jesus.

In addition to these Sunday services we are holding a Good Friday service in the Klemme church at 7:30 p. m. at which time a short sermon will be delivered and the Holy Communion observed. All members and friends of the church through out the comunity are invited to this service.

At the Sunday morning service the rite of baptism will be administered to all desiring it whether child or adult. The church will also welcome into its fellowship at that time new members either by letter or confession of Faitn.

FARM BUREAU TO STAGE BIG MEMBERSHIP DRIVE

Hancock County Bureau One Of The Best In The State

The Board of Directors of the Hancock County Farm Bureau are developing plans for the huge membership campaign that will reach every farmer in Hancock County. Committees of twelve are appointed in each township and these committees will make a personal visit to their friends and neighbors and solicit them for membership in the Farm Bureau.

The county meeting was held at Britt on Tuesday at which time the plans were developed for the coming campaign. The meeting was in the form of an organization school. Among the speakers were O. W. Beeler, State Organization Director of the Iowa Farm Bureau Federation, Geo. Dillon, District Organization Specialist and Murl McDonald, Assistant Director of the Extension Service.

Ranks High In The State

The Hancock County Farm Bureau has been one of the high membership counties in the state. Last year it ranked seventh in number of members regardless of size of counties. The total paid members for 1928 was 926. The Farm Bureau has had an average membership the last ten years of over 1,000

COUNCIL PROCEEDINGS

Klemme, Iowa,
Feb. 11, 1929.

Regular meeting of the Town Council held at the Mayor's Office with all members of the Council present.

Motion made and seconded that the following bills be allowed:

Central States Electric Co. Jan. Str. Lights	54.92
Central States Electric Co. January Power	10.30
E. F. Jacobs, Supplies	9.20
Fred Gates, Jan. Salary	60.00

Bills allowed.

Motion made and seconded that the Clerk order legal supplies for the coming municipal election..

Motion made to adjourn.

A. J. Kudje,
Clerk.

I wish to thank the voters for their splendid support given me at Monday's election and assure you I shall do the best I can as Assessor for Klemme.—Joe E. Johnson. 1tc

DOINGS AT SCHOOL THE PAST WEEK

ALUMNI GIRLS WIN B. B. GAME FROM HIGH SCHOOL

Other Items Of Interst Regarding Our Grades And High School

The High School-Alumni Girls basket ball game on Monday night of this week was won by the Alumni Girls by a score of 29 to 18. Elvira Stille, who chanced to be here during her vacation, proved to be the scoring ace of the game, making 17 of the 29 points for her team. Glenna Gruetzmacher made 8 and Miss Larson the other 4 for the Alumni girls. Blanche Gimer for the High School was high point girl with 7 to her credit, followed by Valeria Koerner, with 6 and next by Nova Koerner with 5. The height and weight of the Alumni Girls gave them a decided advantage and their superior knowledge aided them also. They were surprisingly fast on their feet and often beat their opponents to the ball. We were fortunate in having an official so competent to direct the contest as did Mr. Knutson.

The girls will spend their door receipts at Mr. Qaundt's cafe some evening soon and forget any animosity that may have been aroused during the heat of the game.

High School Boys Enjoy Feed

The High School boys of the basket ball fray last week enjoyed a lunch together at the Crystal Cafe on Tuesday evening. The male members of the faculty sat with them and did not leave the place hungry. Claire West, one of our Seniors, seemed to be the guiding figure of the occasion. Two of our Freshman girls, Thelma Kluckhohn and Gracka Quandt, proved to be capable waitresses.

Sewing Class Has Exhibit

The sewing class exhibit of our Home Economics department, in charge of Miss McGinnis may be seen this week in down town store window's at Day's, Kluckohn's and Wellemeyer's. Everyone should pause and observe it. We belive our Freshman girls are getting something really worthwhile from this course, during these days of the d. c. of l.

Teachers Attend Meetings

Our faculty appreciated the opportunity granted them by our Board last week to attend the North Central District Teachers Meeting at Mason City. We heard some fine things there and believe the program has made us worth more to communities we are now serving and may later serve as public school instructors. Our Students no doubt enjoyed the release from their regular school routine.

Local Spelling Contest Held

Our local spelling contest was held on Tuesday afternoon of this week and the usual amount of interest was shown. Mrs. R. A. Jorgenson, Mrs. Ralph Ludeke, Mrs. P. W. Johnson and Miss Elvira Stille very generously consented to act as judges for the occasion We wish to commend the pupils of our grades who gave of their time and efforts toward this spelling program. Not all could win money or honors but none has spent his time in vain for having tried. It is not an easy task to stand up and have words fired at one when so many eyes are focused his way. Not all can be expected to do equally well but the courage to try provokes our admiration. As our Editor will give elsewhere more of the details of our contest it is unnecessary to elaborate here. We merely add that altho Margaret Gates won the first place in her grade (8th) and won first place over all in all of the grades, she has not been promised the privilege of representing our school at Garner next Saturday. Two or three others have been disputing with her the right to this privilege and they will fight it out this week in several spelling periods. Margaret would seem to have the advantage but must continue to prove her superiority throughout the week. She is to be commended for the showing she has already made. Irene Harms, Doris Carson and LaVohn Larsen will continue to threaten her supremacy.

Contest Will Be Held At Garner

We hope a number can go to Garner Saturday and boost for Klemme. The program will begin at 1:30 p. m. Every town in Hancock County will, no doubt, be represented and there will be many rural schools who will send their best spellers. Klemme has always shown favorably in these county contests, last year winning first place or the County Championship and we hope for a favorable showing this year.

Vacation Begins Friday

Our school will be closed on Friday evening of this week until Monday morning, April 8th. Our faculty will disperse and school children will work at home or play and get the needed rest or change of employment. There will then be left of the school year but two months, or eight weeks. Our year of school will end on the last day of May.

BROADCAST PIPE ORGAN MUSIC FROM OKLAHOMA

Mr. Wellemeyer's Sister Is Expert Pipe Organ Musician

Mr. and Mrs. Arthur Wellemeyer drove to Charles City Sunday to hear an organ concert at the First Methodist Church.

This church building has just recently been remodeled and a fine new Estey Pipe Organ installed.

Mrs Robert Merten (sister of Mr. Wellemeyer), of Guthrie, Oklahoma played this opening concert and explained to the audience the possibilities of their great organ. Mrs. Merten played a total of fifteen numbers on the new instrument and brought out the many effects that can be produced on a pipe organ.

Mrs. Robert Merten was formerly Miss Hulda Wellemeyer, and for a few wyears taught music in the Charles City College, and for the past fifteen years has been teaching pipe organ and giving organ concerts in Oklahoma. Her playing is broadcast from Oklahoma City, the "Pipes of Pan Girl."
where they usually announce her as the "Pipes of Pan Girl."

Report of Garner-Klemme Cow Test Association

The report of the Garner-Klemme Cow Test Association for February shows that a total of 329 cows were on test. There were 41 cows producing over 40 pounds of butterfat and 7 producing 50 pounds or more. The high cow for the month was a grade Holstein belonging to Christian Rasmussem of Garner. Her production was 65.6 lbs. butterfat. The second high cow was a grade Guernsey belonging to M. W. Sprole of Garner. Her production was 58.6 lbs. butterfat. The high herd belonged to Carl Woiwood. This herd consisted of 14 grade Holsteins producing an average of 37.1 pounds butterfat per cow per month. The second high herd belonged to Chas. Haes, Garner. This herd consisted of 11 grade Holsteins producing an average of 32.7 pounds of butterfat. —Howard Horne, Tester.

GOOD FIGHT ON FRIDAY NIGHT AT MASON CITY

Mason City (Special)— Johnny Fulton, welterweight champion of Iowa, has been signed by the local post of the American Legion Drum Corps to defend his title against Battling Nelson, Waterloo boxer, in a ten round main bout of an all-star boxing show here Friday night, March 29th. There will be five other bouts totaling 34 rounds of what is expected to be the best show of the year.

MARRIAGE LICENSES

Marriage licenses were issued the past week in Hancock County to George Lindas, Eagle Grove, and Helen Jenkins, Fort Dodge.

Albert Haefs, Garner, and Minnie Buechele, also of Garner.

MARGARET GATES IS BEST SPELLER

LOCAL SPELLING BEE HELD IN GRADE SCHOOL TUESDAY

Jean au And Milvern Barz, 4th And 5 Graders Spell Up To Finals

The local spelling contest was held at the Klemme Grade Schools Tuesday afternoon to determine the champion and honor spellers in each grade from the 2nd to the 8th, inclusive, and if possible to choose a representative for the County Spelling Contest to be held at Garner on Saturday afternoon of this week.

As a result of the several rounds of spelling in the various grades the best speller and the two next highest are as follows:

Second Grade
1s. Doris Johnson
2. Chester Ward
3. Irene Suckow.

Third Grade
1. Paul Schuldt
2. Enid Harvey
3. Buster Jorgenson.

Fourth Grade
1. Jean Lau
2. Doris Ludeke
3. Nora Wellemeyer.

Fifth Grade
1. Milvern Barz
2. Leo Brinkman
3. Franklin Kluckhohn.

Sixth Grade
1. Bessie Larson
2. George Stokesbary
3. Mabel Schlichting.

Seventh Grade
1. Novella Bredbenner
2. Hilda Keeper
3. Marie Stille.

Eighth Grade
1. Margaret Gates
2. LaVohn Larsen
3. Doris Carson.

Following the first rounds to determine the best spellers an intergrade contest was started by picking the five best spellers in the second grade, Doris Johnson, Chester Ward, Irene Suckow, Marvin Lemke and Roland Gibbs to spell against all of the third grade.

The survivors of this contest, Paul Schuldt, Enid Harvey, Thelma Gimer, Avis Barz and Jaunita Pavey in turn spelled against the 4th grade.

This round resulted in the following five as the next team: Jean Lau, Carmen Kluckhohn, Max Barz, Doris Ludeke and Nora Wellemeyer, all fourth grade pupils.

This team then took on all of the pupils in the fifth grade and resulted as follows: Milvern Barz 5, Max Barz 4, Jean Lau 4, Doris Ludeke 4, and Nora Wellemeyer 4.

These five, four fourth graders and one fifth grader then spelled the sixth grade with the following resulting winners: Jean Lau 4, Eloise Lau 6, Ruth Wellemeyer 6, George Stokesbary 6 and Milvern Barz 5. You will note that Jean Lau 4th grade and Milvern Barz 5th grader, are still in the running and going strong.

This team then took on the pupils of the seventh grade and the five survivors of this contest were Marie Stille 7, Jean Lau 4, Milvern Barz 5, Hilda Keeper 7 and John Kaduce 7.

By this time Jean Lau and Milvern were getting into big company but they stayed by the ship.

This team composed of one fourth grader, one fifth grader and three seventh graders then entered the final bout against all of the eighth grade. Several of the eighth grade pupils went down before Milvern and Jean gave up when the words became unfamiliar and their spelling capacity had been taxed to the limit. If our memory serves us correctly Jean Lau was the sixth to remain standing in the final contest. Milvern lost out earlier, as did the others of the lower grade. The result of the last contest resulted in the following five best spellers remaining: Irene Harms, Clarence Kluckohn, Hilda Keeper, LaVohn Larsen and Margaret Gates.

The spelling contest showed that the Klemme schools have some very remarkable spellers who should be able to furnish winning material in the next few years to come for the county and state contests.

The P. T. A. provided the prizes and in each grade $1 was awarded for first place, 50 cents for second and 25 cents for third. The winner over all received a prize of $1.50.

The competition this year was unusually keen.

Real Estate Transfers

Joe T. Anderson to Mary Louise Haupt. W. D. date 3-1-29. $6 000. Lot 20 and E½ lot 19 block 6 Kanawha.

Charles Bredlow reports that high water in the river has washed a large hole in the approach to the bridge just south of this place and that road has been closed until repairs are made. He says the road was used Saturday, but evidently only a shell of earth kept cars from tumbling into the river. He first noticed the washout Sunday when the earth had given away entirely.

A number of Klemme Methodist men went to Thornton Friday evening to attend a district brotherhood banquet. Over 100 men from Garner, Klemme, Thornton, Swaledale and Clear Lake were present. J. C. Underwood, of Mason City stressed the real job of a brotherhood was to champion a scout troop. Rev. J. D. Clinton, Fayette gave the men a fine address along religious lines. The men say they had a fine time.

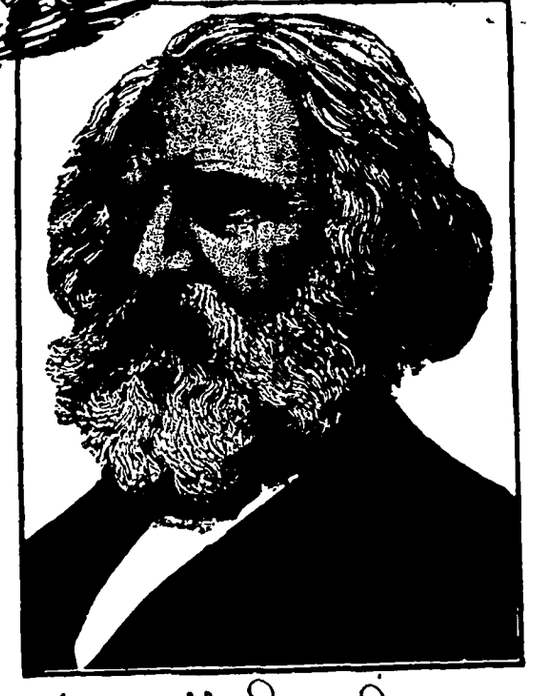
Mr. and Mrs. Sumner Trumbell visited at Mason City Sunday evening.

A New "Mine Host" at the Wayside Inn

Henry Ford

The Wayside Inn near Sudbury, Mass.

Restored Mill near the Inn



Sidney W. Longfellow.

By ELMO SCOTT WATSON

THERE'S a new "mine host" at the Wayside inn, immortalized by Henry Wadsworth Longfellow in a group of poems familiar to most Americans, and he is none other than Henry Ford, millionaire maker of automobiles. The Wayside inn has stood near South Sudbury, Mass., for more than two hundred years. Curiously enough the Wayside inn was not it's original name at all. That title originated in 1826 when the poet, bound from his home in Cambridge to Albany, N. Y., stopped by the wayside during a change of coach horses at the Red Horse tavern and it so pleased his fancy that he later commemorated it in his "Tale of a Wayside Inn."

The Red Horse tavern was built in 1686 by David Howe. Three other Howes were successive keepers of the tavern, their combined service as "mine host" totalling 174 years. Lyman Howe was the host at the time of Longfellow's visit and it was into his mouth that Longfellow put the words of the poem which begins, "Listen, my children, and you shall hear of the midnight ride of Paul Revere."

In 1860 the last of the Howes died and the tavern furnishings were sold at auction. Ownership of the place passed through various hands, but it continued as an inn down to the present century. How it came into the possession of Henry Ford was told recently by Mrs. Ford herself. Speaking before the Woman's National Farm and Garden association, of which she is president, at South Sudbury, Mrs. Ford gave the "inside story" as follows:

Many funny stories have gone around about our intentions, so I am going to tell you so that at least this group will hear the real truth.

Well, I think we have owned it about five years, perhaps six. Mr. and Mrs. Lemon owned it and ran it as an inn until Mr. Lemon died. Mrs. Lemon carried it on about five years. Then she thought she would sell it and take a little ease.

New Englanders had a great interest in coming to the place and they disliked the idea of its being sold, fearful it might get into the hands of some one who would cheat them out of the privilege of visiting it. When an association, formed by many Boston people with the intention of raising money to buy it, was unsuccessful and a man offered to give Mrs. Lemon her price, Mr. Ford was approached. He was told about the man who intended to add on 60 bedrooms and turn it into a common, ordinary roadhouse and take in everybody and all kinds.

Well, some one, I don't know who it was, said that was going to happen. Mr. Ford said, "We'll buy it and save it." That seemed an easy thing to do, buy it and save it. After we realized we owned it we said, "What will we do with it?" We didn't know one thing about running an inn or hotel of any kind. We thought, "We won't renovate it. We'll keep it in perfect order and keep it as a museum."

Then we began getting letters from these nice New England people who came to it so often, writing, "O, Mr. Ford, I've always been able to ride out to Wayside inn and have luncheon or dinner."

Mr. Ford is rather easygoing, so he said, "We'll continue that." That meant cooks and managers, all sorts of people to be here and run it. We were away in Michigan and when people are many miles away it is hard to tell whether the people are carrying it on as we should like to have them. But as long as people wanted it, we did it.

We did think we wouldn't have anybody stay over night, and we should keep all the rooms as show rooms, but we got the same story when New England people heard that.

"O, we want to stay over night," and so we did that. Of course we do have these restrictions. We don't take everybody. Everybody has to be known by some one or have an invitation because there are only four bedrooms on the second floor and two on the third floor; not very desirable because in the summer it is hot up there. We just had to limit to people we know are reliable, people we know will not bring a hip flask or anything like that.

To begin with we found the inn in very bad repair. The basement was full of broken down furniture, the lower floor had to be changed so there would be more room from floor to ceiling and we made it nice and clean. The next job was rewiring it. We were afraid of fire, the wires had been stuck in every which way. We went into the walls and fished those little wires through and put them through, what do you call it, a conduit? It was an awful big piece to do and not many who have seen the house before would know that we did it. We wanted to keep it as old as possible.

People began to come in crowds. We found we couldn't take care of them. One Thanksgiving 500 came to dinner, they began telephoning for reservations early in the morning. We had to do something. He had to have another dining room and just as soon as we started doing that we had to have another kitchen. An old-fashioned sink and stove and oven that would do years ago for a few people won't do for many people. We have to have things up to date and of the best, but people don't see the modern kitchen.

Just as soon as we started enlarging the dining room people said, "The old inn must be making so much money they don't know what to do with it.

It was closed Sundays because we decided the type of people who streamed in were not interested in antiques at all. They merely wanted a place to spend the day. We stopped busses coming out at night because we thought it was inconsiderate to have the persons who had been showing people over the house all day, taxed further by tourists who would come to the Wayside inn in the daytime.

Interesting as is this "inside story" it does not tell all that the motor manufacturer has done to preserve this shrine for future generations of Americans, for he has spent more than a hundred thousand dollars to build a new link of public highway so that heavy traffic may be diverted from the neighborhood of the inn. He has bought more than 2,500 acres of land surrounding the inn, and across the way from it he has restored the old stone mill over whose wheel the water still pours as it did in the old days when the farmers brought their grain there to be ground. Around a bend of the Boston Post road, which goes past the inn, stands the school house where Mary went, followed by her little lamb. This school house originally stood near Sterling, Mass., but, finding it in a dilapidated condition, Mr. Ford bought it and moved it to a site near the Wayside inn so that it, too, may be preserved for posterity.

Not the least of the interesting facts about the Wayside inn of today and its new host has been his unrelenting search for the original furnishings or duplicates in the same period. Over the entrance of the inn swings the sign which tells the passing traveler that this is the Red Horse inn and which bears the name of its builder, David Howe and the three Howes who succeeded him. After the tavern furnishings were sold at auction, the sign hung in its place for several years. Then some students, out on a lark, carried it away and a farmer who had rented them a sleigh found it in the sleigh after they had returned the vehicle. He put the sign in his hayloft and there it remained until Mr. Ford started the restoration of the inn and sought it out.

When Mr. Ford decided to reconstruct the inn he used as the basis for his work these lines from Longfellow's poem:

The fire-light, shedding over all
The splendor of its ruddy glow,
Filled the whole parlor, large and low;
It gleamed on wainscot and on wall,
It touched with more than wonted grace
Fair Princess Mary's painted face;
It bronzed the rafters overhead,
On the old spinet's ivory keys
It played inaudible melodies,
It crowned the somber clock with flame,
The hands, the hours, the maker's name,
And painted with a livelier red
The landlord's coat-of-arms again;
And, flashing on the window pane
Emblazoned with its light and shade
The jovial rhymes that still remain,
Writ here a century ago,
By the great Major Molineaux,
Whom Hawthorne has immortal made.

So far as it was possible, first buyers and later buyers of objects in the inn were traced and one by one as many of these objects as could be found were purchased and brought back to the inn. "The bronzed rafters overhead," of course, remained fixed in their place. "The somber clock crowned with flame" stands today reaching almost from the floor to the ceiling and the present day visitor may see for himself "the hands, the hours, the maker's name"—Edward Faulkner, a London clock-maker of the middle Eighteenth century. "Fair Princess Mary's painted face" hangs on the wall near the fireplace, still "touched with more than wonted grace." Near by the "landlord's coat of arms" hangs over the mantel. The "old spinet" has not yet been recovered, although the owner of the original is known and Mr. Ford still hopes to obtain it. However, another of the same period stands in its corner.

All of these are in the front parlor, which is to the left of the doorway and is called the "Longfellow room." On a table more than two hundred years old lies a book opened at the lines spoken above. The window on which the "great Major Molineaux, whom Hawthorne has immortal made," cut his verse with a diamond ring was lost many years ago. But two of the panes of glass have been preserved and are carefully framed. The "jovial rhymes" which the major "writ near a century ago" were as follows:

What do you think
Here is good drink
Perhaps you may not know it.
If not in haste
Do stop and taste
You merry folks will show it.

The tap room where could be obtained the major's "good drink" is opposite the Longfellow room. The ancient bar, conveniently high for the elbow, but without the foot rail of a later period, still stands as it did in Longfellow's day. On the shelves behind the spot where "mine host" stood are bottles and jugs of various kinds. Of course there are no bottles to be opened, nowadays, so that these empty relics are all that remain to tell of this adjunct to the joviality of the group which gathered around the fireplace in the tap room to sip and smoke and talk. Nearby still hangs the "pipe tongs," a long implement like a pair of scissors with which the guest, without bending his back, might reach into the fire, pick out a glowing coal and light his pipe.

On the walls of the Longfellow room hang the portraits of some of these guests made famous by Longfellow, in assigning them parts in the "Tales of a Wayside Inn." Among them are Ole Bull, the violinist; Professor Treadwell, the theologian; Isaac Elrehl, "the Spanish Jew"; Luigi, "the Sicilian," then a Harvard professor, and Thomas W. Parsons, the poet.

Another of the rooms is called the "Washington Room" because of the tradition that George Washington spent a night there on his way to take command of the Continental army at Cambridge.

On the third floor which was the old garret there are rooms for about twenty guests. Here the motorists of today, sleeping beneath the eaves as travelers of an earlier day before slept, may "take mine ease in mine inn" and be grateful to the "ninth landlord" of the Red Horse tavern for this opportunity to enjoy the practical use of an American shrine because "mine host" of today is Henry Ford.

Family Garden Needs Good Plan

To Be Successful It Must Be Thought Out Before Work Begins.

"A garden should grow piece by piece," said Carl Stanton, landscape architect, speaking at Cornell's farm and home week at Ithaca, N. Y., "but the garden which is to be successful when completed is the one which has the whole plan of it thought out before the work starts. Such a plan makes each installment an integral part of the whole; each part dovetails with the rest and there is no chance of duplication or work to be done over."

Many small gardens are lovely at first, he said, but they are enlarged until all semblance of design and balance is lost. Frequently they are not orderly and are greatly overcrowded.

Rules for Planning.

Mr. Stanton gave certain rules for planning the small garden. "No garden or flower bed should be placed in an open lawn area, unless it be tied by plantings or architecture to some permanent feature. Avoid competition between the garden and any other feature such as a vista or a view. The size of the garden, which should be decided from the first, is governed by three important principles: the first is taste—the preference of the owner; the second deals with ability and willingness of the owner to pay for the maintenance, both in time and money; and the third governing element is the chosen site."

Mr. Stanton said that he preferred the rectangular or oval garden to the square or circle. "The garden is only as good as its background," he continued. "In the country the background question is easily solved—in the city more often than not the satisfactory solution is unattainable.

"Do not give an air of depression to the picture by surrounding your garden with too high fences and walls. Whenever possible, use evergreen trees as a background. For bed edgings use such material as will tend to avoid hard lines. Do not cut your garden up into a jig saw pattern of beds."

Planting Important.

"The planting is as much of the design as is the layout. The planting should be counted upon to furnish masses, variations in light and shade, much of the repetition and continuity required, as well as the anticipated beauty of line and color. Particularly avoid any flatness in the planting. Where flower beds are above the average width resort to the use of shrubs to give added height and bulk. Do not grade the height of the flowers in the beds evenly, with the lowest in the foreground. More fascinating will be the picture when the top line is broken up by placing some slightly taller varieties in the front with the lower growing sorts."

Soy Bean as Fertility Crop Is Disappointing

Another recent development in the legume phase of soil improvement is that the soy bean, which it was hoped would be the leguminous savior of poor land, has, in a number of experiments proved disappointing. It is variously charged with increasing erosion, being a heavy feeder of mineral elements at the expense of succeeding crops, adding only small amounts of organic matter through its root systems, and even robbing the soil of its nitrogen. As a hay and seed crop, the soy bean is rapidly gaining favor, but as a fertility crop, there appears to be serious doubt in many cases. Perhaps the next five years will reveal how soy beans should be grown to make them a first-class fertility crop.

Agricultural Notes

A sharp plow means more work accomplished.

* * *

Piles of trash about the yard are fire menaces and breeding places for flies.

* * *

It is easier to kill a thousand weeds in the spring than a hundred in midsummer.

* * *

The first most important thing is a fine deep seed-bed, so you must be careful not to work your land too wet.

* * *

Rape and oats are sometimes sown together and some feeding results give this combination as preferable to rape alone.

* * *

The object in growing a green manure crop, is to produce especially on poor soil as much material as possible to turn under.

* * *

Efficiency in farming, as in other industries, is profitable for the individual, profitable for the industry as a whole, and as its own protection.

* * *

It is up to each individual farmer to consider first of all his own interests and those of his family and take every fair advantage he can get to go ahead.

* * *

Rape may be sown any time after the danger of hard freezing is past and, if sown early, it should provide pasturage by the middle of May or a little later. It is advisable to sow rape several times during the season so that continuous forage will be provided.

It May Be Urgent

When your Children Cry for It

Castoria is a comfort when Baby fretful. No sooner taken than the lit one is at ease. If restless, a few dro soon bring contentment. No harm do for Castoria is a baby remedy, mea for babies. Perfectly safe to give t youngest infant; you have the docto word for that! It is a vegetable p duct and you could use it every d But it's in an emergency that Casto means most. ORCHARD CLEANINGS

NTROLLING SAN JOSE SCALE PEST

y Should Be Used While Trees Are Dormant.

y peach and apple trees have sprayed in the past few years in sons with lubricating oil emulfor the control of San Jose scale. those that are now in the fruit ess it might be well to keep for this small inconspicuous which appears as a small gray about the size of a pin head on branches of the tree, advises C. sley, University of Arkansas, col- of agricultural extension service. the young wood the scale is often reled with a small reddish ring. San Jose scale multiplies very idly and will often kill a tree in a e season.

Lubricating oil emulsion should be d while the trees are dormant to rol these insects, and care should ken to see that the spray mixture ers all parts of the tree inside and . The following conclusions are n from Arkansas Extension Cir- No. 164, which may be secured the county agent or by writing gricultural Extension Service, 310 eral Bank and Trust building, Lit- Rock, Ark.

Lubricating oil emulsion is now nized as the most satisfactory material to use in the control San Jose scale. A 2 per cent solu- or three gallons of the stock sion to 100 gallons of water, is dosage recommended.

This material offers all that can be ed in efficiency, for in experi- tal work, practically 100 per cent the scale hit were killed. In con- to lime sulphur, which is most ive only in early spring, it may ed at almost any time during the ant season when the weather is n enough to permit spraying with- reduced efficiency. The fact that emulsion is not caustic, as is lime hur, takes away much of the dis- ableness which accompanies dor- t spraying. At present the cost of emulsion is about one-half as great that of lime sulphur, which is the pest of the other insecticides used the control of scale," the circular es.

oper Implements Are Important in Orchards

here the orchardist can have the t implement for the particular of work for which it is best pted, he is, indeed, fortunate. He also be able to do more and bet- work if the implements have kept in the best condition and available for work when needed. any growers who handle a rath- extensive acreage have found that tractor may replace horsepower advantage. This will be particu- true on land and soils where tors may be operated efficiently wher. the acreage is enough to fy additional expense. The trac- will be able to cover the land h more quickly and at the same supply additional power for bet- work.

oreover, it may often happen dur- the winter, spring or summer that e are only a few days during h the soil works well. If suffi- team power is not available, cultivation may be neglected on nt of the inability of the grower the tillage work rapidly. This, course, results in an increase of rious pests, more expense for ying materials and labor, and too lower grade and less fruit is ered through decreased tree vigor.

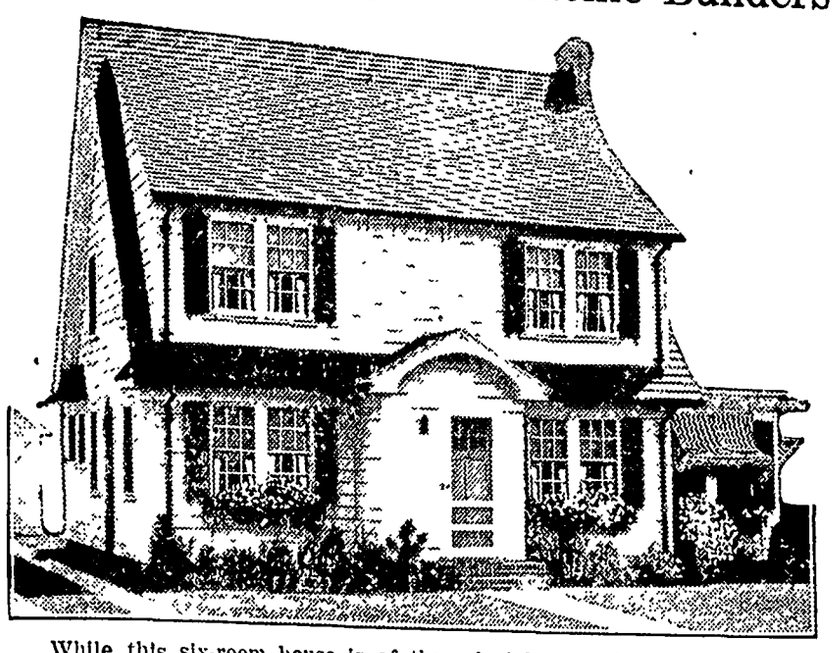
tect Newly Planted Tree From Sunburn

addition to forming low heads, trunks of newly planted trees uld be protected from sunburn. ordinary, perforated tree protector for citrus trees may be used, or trunks be wrapped with a few s of newspaper tied at the top near the bottom and made loose gh to allow the air to circulate y around the trunk. The wrap- should be done soon after the is planted but should not extend e the point where it is intended orm the first scaffold limb. The r part of the trunk should be ewashed, and for this the follow- formula has proved satisfactory: pounds unslaked lime, two ds sulphur, two pounds salt, mixed water to make a thin paste. The ping should be allowed to remain the trees develop ample top to ace shade for the trunk, which is ally after the second growing on.

Prevent Washing

rchards set on sloping land and ides must be protected against hing. This may become one of most important parts of the proc- of establishing the young orchard. rds in such locations may, nec- rily, be maintained in sod to pre- undue washing, but still the area diately around the young trees be handled under clean cultiva- and proper measures taken to nt washing of the soil around rees.

Colonial Type That Will Appeal to Many Prospective Home Builders

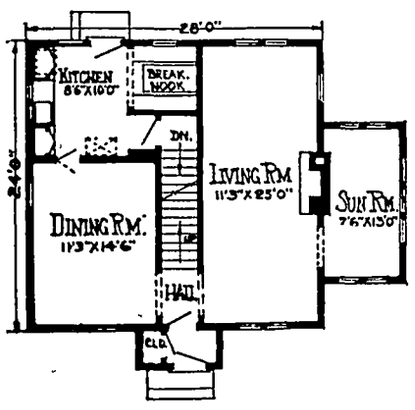


While this six-room house is of the colonial type, the wide dormers in the roof give three good-sized bedrooms on the second floor. The sun porch gives the home a colonial appearance. The size of the building is 28 feet deep and 24 feet wide. How the rooms are arranged and their sizes are shown on the floor plan.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

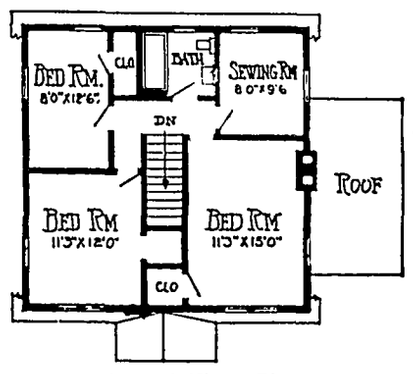
Ever since the Pilgrims built their simple style of home in the first New England villages the colonial type of architecture has been recognized as one distinctly American. Undoubtedly the plain two-gable houses of the early days were designed because of economy. However, their simple lines have an appeal which has made them popular all through the centuries. Present-day architects have used the colonial style as the basis for many of the homes they now design, but have made some changes in exterior appearances which have added to the attractiveness of the exterior. One of



First Floor Plan.

such a design is shown in the accompanying illustration. This home while not quite a true colonial is of that style and the room arrangement inside is the same as will be found in the early American homes.

The entrance door leads to a central hall out of which run the stairs to the second floor. At the right extending the depth of the house is the living room and at the left is the dining room with the kitchen back of it. The living room is 11 feet 3 inches wide by 25 feet long, a room that is spacious and, being open on three sides, is light and airy. At the center of the outside wall is a fireplace. At one side of the fireplace is a double cased open leading into the sun room, 7 feet 6 inches by 13 feet. The sun room is a substantial addition to



Second Floor Plan.

the house having solid walls and seven windows. By running heating pipes to this room it may be left as shown on the plan through the winter. However, it is a simple matter to hang doors in the cased opening so that the sun room may be shut off during the colder weather if desired. The dining room is 11 feet 3 inches by 14 feet 6 inches and the kitchen is 8 feet 6 inches by 10 feet. Adjoining the kitchen is a built-in breakfast nook where the less formal meals may be served. Upstairs there are four rooms and bath. While on the plan one of the rooms is designated as a sewing room, it is large enough for a bedroom. The stairs run to a center hall off of which opens four rooms at the head of which is the bathroom.

The dimensions of the house are 28 feet by 24 feet exclusive of the sun room and entrance porch.

It is of frame construction and its outside walls are covered with shingles which may be treated in such a manner as to give them the silvered appearance that the action of the sea air puts on new homes and which is so much desired.

Shellac Excellent to Preserve Floors

More often than not the floor goes shabby for want of time to refinish it. The same is true of woodwork and furniture that would look infinitely better for a fresh finish. Why not use shellac then? It makes a durable finish for all interior purposes and dries so rapidly that frequent recoating is possible.

In fact, shellac competes with lacquer for fast-drying records, but it does not dry too fast. It is easy to work with and two coats can be put on an hour or two apart if necessary. As in the case with all paint and varnish materials, however, a better job results if more time between coats is allowed.

Since semi-luster finishes are so much more in favor than new, shiny surfaces, shellac has been very much in demand. It is one of the oldest finishes and one of the best materials to use for an unusually durable and velvety finish. In addition, where pure shellac is used the finish is sufficiently elastic so that it will not easily scratch or mar—a highly desirable feature for a furniture and woodwork finish.

There is both an orange and a white shellac—alike in characteristics and wearing body, but used for slightly different purposes. White shellac is made from bleached orange shellac gum, through an intricate process, and is used over light woods that are to retain their natural color, or over dark woods like ebony and mahogany to bring out the tone and richness of the wood. Orange shellac is transparent, too, but has staining properties besides. It is often used over white wood to give a dark wood finish, and after a parquet floor has become stained or darker with age, orange shellac can be used to cover the spots by giving the floor a clear, natural stain as well as the durable finish desired.

Shellac makes an excellent liquid filler for furniture and interior trim. For this purpose it may be used in a thin coat which penetrates deeply into the wood and dries quickly enough to permit further finishing within a couple of hours. Where varnish, enamel or lacquer is to be used as a finish, shellac is an especially good undercoat. It seals up any stain coats or filler coats which might be lifted by a subsequent finish or which might bleed through. And on new wood that is not sufficiently open-pored to require a paste-wood filler, and where an unusually fine finish is desired, a shellac may be used advantageously.

Brushes to be used for the application of shellac should be the largest possible for the size of the surface being coated. This is in order that as few strokes as possible may be taken to cover the surface. For large areas a four-inch flat brush is about as large as can be handled, while for smaller surfaces the one and two-inch varnish brushes are about right.

Shellac should be brushed on rapidly and in one direction. It is best to do little brushing, as shellac sets rapidly and cannot be stretched out like paint and varnish.

Shellac has many other interesting uses, but none more serviceable than for interior finishing. There is no easier way to keep a house looking clean and attractive than by the durable, quiet luster of this material—and no better way to protect good furniture from the inevitable hard knocks that come its way than by the protection of several coats.

As with all paint and varnish materials, only good products of reputable manufacturers are recommended. Shellac of an inferior grade, while momentarily serving the purpose, cannot give either the wear or the beauty of recognized pure material.

Sun Parlor Ideal for the Child's Playroom

A sleeping porch or a little sun parlor attached to the child's room is a welcome novelty. There is reed furniture for it to choose from—chairs, rockers, tables, tea carts, sofas and chaise longues. A fern stand is indicated, or boxes for window gardening, for there is a secret bond between children and flowers. A canary in its cage makes a colorful spot, and surely the sunroom is the very place for a sand table. But do you know what the children would adore? A swing, a real porch swing, complete with bright striped awning and cushions, and no bigger than dad's chair.

POULTRY

GREEN FEED FOR GOSLINGS HELPS

Tender Grass Should Fill Principal Part of Ration.

An important item in the care of young goslings is to keep them warm and quiet for the first few days and an equally important item in their feeding is to start them out on green feed, preferably tender grass.

For about two days after hatching goslings show little inclination to do anything but keep warm and quiet. They may come from under the hen and nibble at whatever they may see that is edible. They are most partial to grass and tender plants, but will take a little mash if it is offered and will dabble their bills in the water.

After that the gosling begins to take more interest in affairs and will feed industriously for short periods, always prefering short, tender grass and weeds for its diet, with mash and other substantial feed that may be offered in small amounts. A common mistake is to feed green food as an accessory to grain feed when it should form the principal part of the ration with mash and grain as an accessory to the green stuff.

Goslings may be brooded with hens or in small colony brooders or with geese. In the latter case they will get along very well if left to the old birds, the keeper supplying a soft feed of grain once or twice a day as the appetites of the goslings may dictate. This is true only when the range is ample and furnishes good grazing. The geese which are mated with one gander will usually raise their broods in one group, the gander being watchful over his whole family.

When the goslings are brooded by hens or brooders they require close attention while small. They should be confined for the first few days in pens which will keep them near the hen or brooder. These pens can be made of narrow wire netting or boards and placed on sod. When the goslings clean off the grass they should be moved.

Egg-Eating Habit Among Hens Hard to Control

The egg-eating habit is usually caused by the hens getting hold of a soft-shelled egg that happens to be dropped on the ground somewhere in plain sight. They get to rolling it about, finally breaking it, and the trouble has started. The next thing is to get it stopped. Sometimes it may be stopped by making a slight break in the side of an egg, running a part of the white and then inserting a good dose of cayenne pepper, closing the hole with adhesive tape or court-plaster. Drop this out among the guilty ones and see what they do with it and how it affects them. Another way is to heat an egg to the boiling point, crack slightly and place out for them.

In case neither of these work, a plan that will be effective is to put a false bottom of burlap in your nest box just a few inches from the real bottom, tacking it around the sides, then cut a cross in the center of the burlap large enough for the eggs to drop through. They will go down out of sight and trouble. It may be that at the start of this dirty work you may be able to locate one leader, and taking her out to herself the trouble in the flock will be ended.

Poultry Facts

Keep hens ridded of worms.

* * *

The air in a chicken house should be continually moving at a fairly slow rate.

* * *

The first three weeks of the life of a chick is recognized as one of essential importance.

* * *

Baby chicks will digest a crop full of mash in from two to two and a half hours and are then ready for another feed.

* * *

The breeding turkey should receive a good laying mash along with scratch grain.

* * *

The turkeys should not be fed straight alfalfa meal or alfalfa steam meal because it is too bulky to be handled by their digestive systems.

* * *

It is generally recognized by poultry disease specialists that chickens have remarkable resistance against most diseases, and the class of troubles commonly spoken of as colds and roup is no exception to this statement.

* * *

The first symptoms of colds among a flock are sneezing and loss of appetite and activity by those infected.

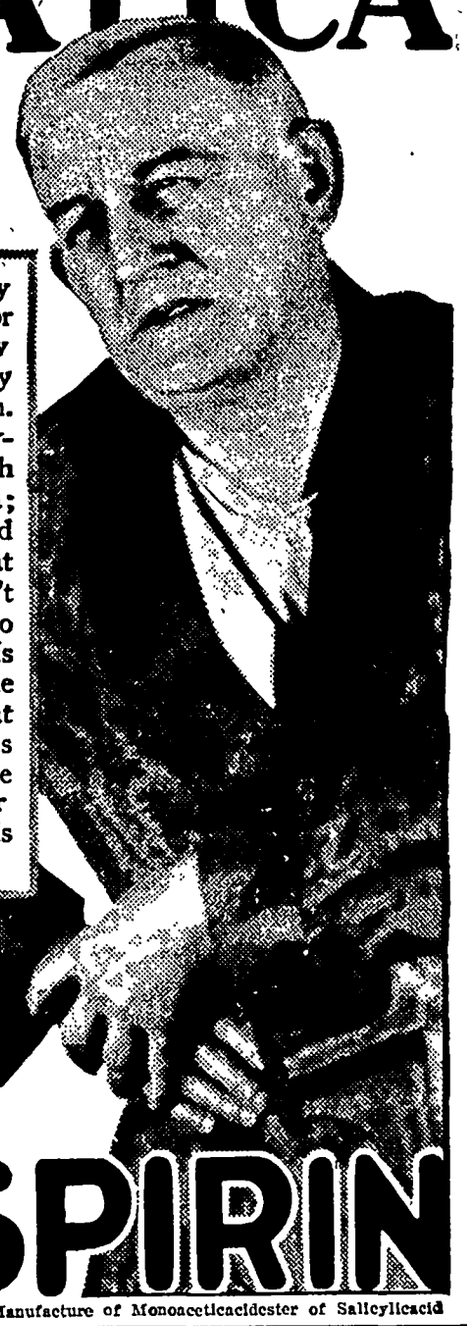
* * *

Liver troubles in hens are difficult to treat, as they are seldom discovered until the bird becomes sick and dies suddenly.

* * *

Hens don't need and can't eat such feeds as corncobs and shucks. Save the corn-and-cob meal for the cows. Give the hens whole corn, or preferably cracked corn. They'll lay more eggs.

SCIATICA



YOU have undoubtedly used Bayer Aspirin for headaches and know how promptly and completely these tablets relieve the pain. They are even more wonderful in the relief of such serious suffering as sciatica; lumbago; rheumatism and those aches and pains that are bone deep. They don't affect the heart, and they do dispel the pain. There is nothing quite like genuine Bayer Aspirin, but see that you get the genuine. It has Bayer on the box and inside are proven directions for many important uses it is well to know.

BAYER ASPIRIN

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

YOU CAN'T DYE with Good Intentions

You can get results—after a fashion—with any old dye; but to do work you are proud of takes real anilines. That's why we put them in Diamond Dyes. They contain from three to five times more than other dyes on the market! Cost more to make? Surely. But you get them for the same price as other dyes.

Next time you want to dye, try them. See how easy it is to use them. *Then compare the results.* Note the absence of that re-dyed look; of streaking or spotting. See that they take none of the life out of the cloth. Observe how the colors keep their brilliance through wear and washing. Your dealer will refund your money if you don't agree Diamond Dyes are better dyes.

The *white package* of Diamond Dyes is the original "all-purpose" dye for any and every kind of material. It will dye or *tint* silk, wool, cotton, linen, rayon or any mixture of materials. The *blue package* is a special dye, for silk or wool only. With it you can dye your valuable articles of silk or wool with results equal to the finest professional work. When you buy—remember this. The *blue package* dyes silk or wool only. The *white package* will dye every kind of goods, including silk and wool. Your dealer has both packages.

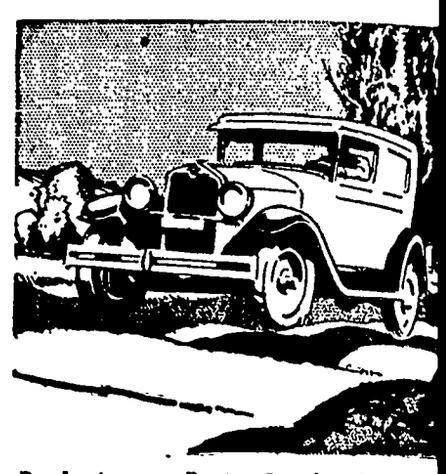
Mental pictures every car buyer should have

SOME DAY you will consider buying a new car.

Keep in mind these pictures made from photographs of scenes at General Motors' 1268-acre Proving Ground. A car wallowing in a sunken road with water over the hubs . . . a car bucking a long stretch of cruel bumps and potholes . . . a car straining to reach the top of a heart-breaking hill . . . a car doing twists and turns and other acrobatics that few cars are ever called upon to do.

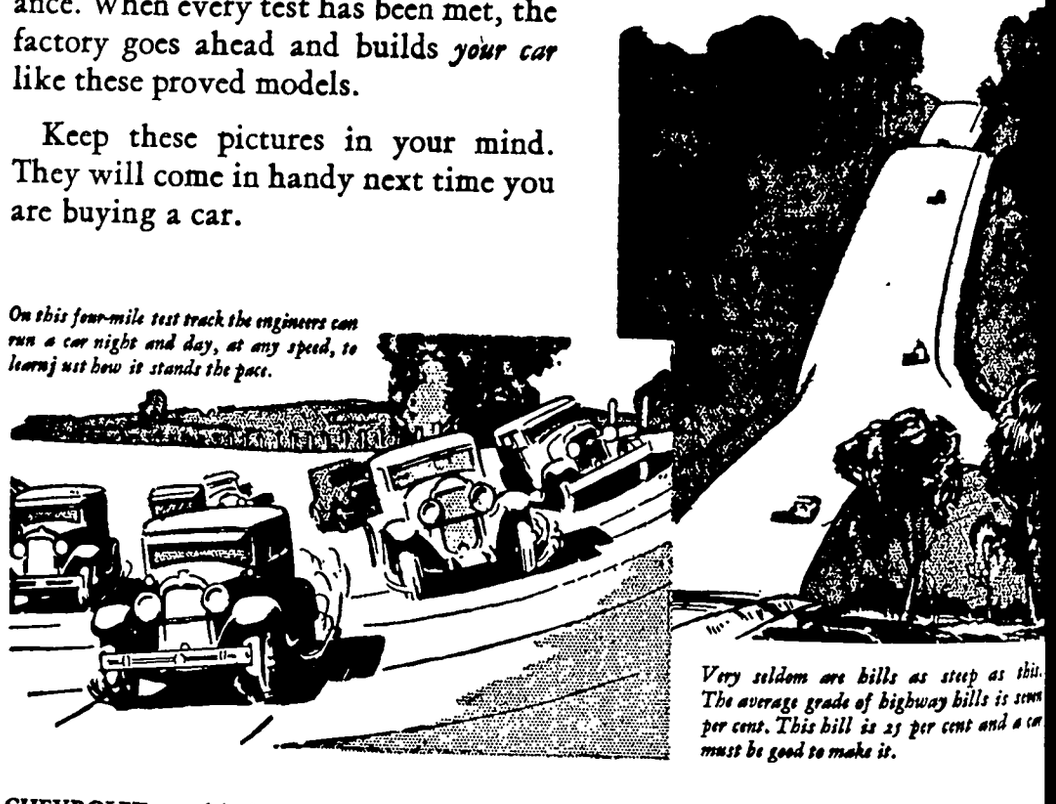
Such are the tests given *advance models* of a General Motors car at the Proving Ground. The tests involve speed, power, endurance, braking, riding comfort, handling ease; fuel, oil and tire economy; body strength—every phase of car construction and performance. When every test has been met, the factory goes ahead and builds *your car* like these proved models.

Keep these pictures in your mind. They will come in handy next time you are buying a car.



Rough going on a Proving Ground road, made bu to test various parts of General Motors cars unde hardest possible conditions.

A scientific "bath tub"—not to wash cars, but to show the Proving Ground engineers exactly what happens when a car is driven through water.



On this four-mile test track the engineers can run a car night and day, at any speed, to learn just how it stands the pace.

Very seldom are hills as steep as this. The average grade of highway hills is seven per cent. This hill is 25 per cent and a car must be good to make it.

CHEVROLET. 7 models. $525—$725. A six in the price range of the four. Smooth, powerful 6-cylinder valve-in-head engine. Beautiful new Fisher Bodies. *Also* Light delivery chassis. Sedan delivery model. 1½ ton chassis and 1½ ton chassis with cab, both with four speeds forward.

PONTIAC. 7 models. $745—$895. Now offers "big six" motoring luxury at low cost. Larger L-head engine; larger Bodies by Fisher. New attractive colors and stylish line.

OLDSMOBILE. 7 models. $875—$1035. The Fine Car at Low Price. New models offer further refinements, mechanically and in the Fisher Bodies—yet at reduced prices. Also new Special and De Luxe models.

OAKLAND. 8 models. $1145—$1375. New Oakland All American Six. Distinctively original appearance. Splendid performance. Luxurious appointments. Attractive colors. Bodies by Fisher.

BUICK. 19 models $1195—$2145. The Silver Anniversary Buick. Three wheel-bases from 115 to 128 inches. Masterpiece bodies by Fisher. More powerful, vibrationless motor. Comfort and luxury in every mile.

LaSALLE 14 models. $2295—$2875. Companion car to Cadillac. Continental lines. Distinctive appearance. 90-degree V-type 8-cylinder engine. Striking color combinations in beautiful bodies by Fisher.

CADILLAC. 25 models. $3295—$7000. The Standard of the world. Famous efficient 8-cylinder 90-degree V-type engine. Luxurious bodies by Fisher and Fleetwood. Extensive range of color and upholstery combinations.

(All Prices f. o. b. Factories. Time payments may be made on the low-cost GMAC Plan.)

ALSO

FRIGIDAIRE Automatic Refrigerator. New silent models with cold-control device. Tu-tone cabinets. Price and model range to suit every family.

We know A D. Gimer is a very good buttermaker, but we did not know that he is also a weather prophet, as he said he saw a bluejay the other day and that is a sure sign of spring. If spring is here we must congratulate Mr. Lau on the perfect score in which the forecast the past winter. He said we would have a mild, open winter with but little snow. Now we do not know what method Mr. Lau uses in predicting weather, but it seems he has it down pat. Let us suggest for the benefit of the younger generation that he explain and tell them what an old fashioned winter is like, for instance, some of those "real old timers," and then they will know what to expect when he predicts a severe winter.

Friends of Mr. Allabem have received word they expect to be home from California about April 10th.

The Rural Carriers have been having a hard time delivering mail on account of bad roads.

Phil Lowenberg was taken ill again Saturday and is confined to his home.

Forrest Boren went to Waverly to work for his uncle in a restaurant.

Floyd Anderson of Belmond is working for Verdie Anderson.

Miss Margaret Vienstra is back to school again after a siege of the mumps.

Leon Sherwood was a Klemme caller one day last week.

Frank Pringnitz returned from California where he visited with his sister, Mary.

Jay and Ferrion Griggs were to town last Friday in the car. It is a rare thing to go to town in a car this winter.

Mr. and Mrs. Ditch of Belmond were Goodell callers Saturday.

Fred Shultz and Bob Roths spent Sunday afternoon at the Tom Roths home.

Mr. and Mrs Mint Cline are now on their way home from Florida.

Bill Nelson of Belmond was a caller here one day last week.

Jule Cook and his hired man, Peter Willis had Sunday dinner at the Sherwood home

Mrs. Jule Cook entered the Hampton hospital Monday where she will be under the doctor's special care. Her friends hope for a speedy recovery.

The was no school in Center on Monday afternoon on account of the board meeting

Victor Bratt was a Belmond caller Monday

Have you heard the frogs croak? We have in this vicinity.

Mr. and Mrs. Tom Nelson, Jr. were callers at the Verner Nelson home Monday.

Mr. Will Bachman and daughter, Lela were busines callers at Mason City Saturday.

Mrs. Leon Sherwood and daughter La Vonne were callers at the Jule Cook home Saturday morning.

Mr. and Mrs. Adolph Schlichting and sons Glenn, Walter, George and Arthur Conners were visiting at the Peter Trampel home Friday evening.

Mr. and Mrs. Will Bachman and daughter, Lela, were visiting at the Jake Bachman home at Goodell on Sunday afternoon.

Mrs. Jule Cook was taken to Goodell Saturday morning where she stayed at the home of her sister Mrs. Carpenter, from where she was taken over to Hampton to the hospital Monday for treatment.

Mr. and Mrs. Herb Marshall and daughter, Irene and Mrs. D. A. Marshall were visitors at the Peter Trampel home Sunday afternoon.

Rob Roths and Fred Schultz were business callers at the Tom Roths home Sunday.

KLEMME LOCAL NEWS

Conrad Quandt has a fine new electric sign hanging in front of his Crystal Cafe. The strong wind a couple of weeks ago blew the old one down.

For dinner Sunday evening Mr. and Mrs. Harold Leitzinger entertained Mr. and Mrs. Frank Kluckhorn and children, Mr. Lilljenberg and Mrs. Blanche Stille.

Dr. W. F. Missman and son Byrnes drove to Hampton Sunday for a visit with Mrs. Missman. She is getting along fine and feeling quite well again.

Mr. F. J. White and son of Estherville came Saturday to attend the big implement opening day at the Northern Lumber Co. They visited at the Grange home until Sunday.

Mrs. R. W. Elder, Mrs. Alvin Stokesbary, Mrs. C. A. Larsen and Mrs. Buford Meyers went to Iowa Falls Wednesday to visit Grandma Fuller who is very ill

Mr. and Mrs. Wm. Anderson are the parents of a baby boy born to them Friday morning. We can now address Mr. and Mrs. Levi Klotzbach as Grandpa and Grandma.

LOST—steel buttermilk barrel, painted red. The men who took it from near my lane will please return it at once and no questions will be asked. Charles J. Kraus. 1tc

NOTICE To Parents and Children. No roller skating will be permitted on the sidewalks of Klemme after 9:30 p. m. Paul Grange, Mayor. 1tc

Tom Blank reports that someone shot his pet dog last week. This was certainly a mean trick as the dog was harmless and disturbed noone. Tom would like to bring the law to bear on the scoundrel who committed the act. As we are about to go to press we learn that Byrnes Missman's dog was also wounded by gun shot. The party gilty of these offenses is so low down and dirty that a skunk would smell sweet along side of him.

Frank W... gona Thurs... of that pla... to see Fra... pital. Fra... er's conditi...

Rev. Grosshuesch and G. A. Goll drove to Mason City Monday to see Dr. Zinn at the hospital. Rev. Grosshuesch drove over again Wednesday and reports Doc as feeling a great deal better.

The Auxiliary ladies wish to express their thanks to all those who brought baskets, pie and candy to their social, and to J. N. Day who furnished coffee, and the auctioneer who sold baskets.

The Farm Machinery Department of the Northern Lumber Company wishes to take this means of thanking the Auxiliary Ladies for the fine way in which they served lunch at the opening day.

The teachers of both the grades and high school attended the meetings of teachers held at Mason City last week Tursday and Friday. Over a thousand teachers took in the special meetings.

Mrs. J. J. Cook, who was taken to the hospital at Hampton last week, underwent a serious operation Saturday morning. At this time reports are that she is doing as well as can be expected.

The school board met last week for the purpose of re-organizing. A. D. Gimer was elected president and Paul Grange appointed secretary. The board members are A D. Gimer, R. C. Ludeke, J. N. Day Conrad Quandt and H. R. Gibbs.

Ye Editor had a birthday surprise dinner Saturday evening to which C. G. Waterman and family and Dr. Missman and son, Byrnes, were invited. The only thing about these surprises, a fellow should be warned in advance!

There were a lot of people in this town Saturday to attend the Opening Day of the farm machinery department of the Northern Lumber Co., and to take advantage of the many special bargains offered by the Klemme merchants.

Mrs. Ruth Melcher and children, and Mrs. Robt. Merten drove down from Charles City Tuesday for a visit at the Arthur Wellemeyer home. Mrs. Merten left for her home in Oklahoma on the evening train. The ladies are sisters of Mr. Wellemeyer.

FOR SALE—THREE EXCEPTIONAL Land Bargains: 80, 120 and 162 acres of Iowa Improved Farms, Hancock and Wright County; also block of City Property. Value from $80 per acre up, with easy terms Send or ask for inquiries to Box 56. Belmond, Iowa. 1tc

Mr. and Mrs. R. A. Jorgenson and Buster drove to Mason City Sa... where the former attended a ... ing of the Scout Training Scho... ficers. A Council-wide train... course starts this week Thursday ... Mason City and runs for twelve ... secutive weeks.

Miss Elvira Stille is spending this week in Klemme visiting with her parents, Mr. and Mrs. Wm. Stille Miss Stille is a student of the State Teachers' College at Cedar Falls. She is taking her practice teaching in the Mason City schools, but as the Mason City schools are having a vacation, she likewise has one.

Dr. Zinn was taken suddenly ill last Thursday night and until Sunday night was under the care of G. A. Goll and Rev. Grosshuesch, who he says, were very capable nurses. Dr. Zinn's condition became more serious again Sunday evening when he was taken to the Mercy hospital at Mason City.

Mrs. R. W. Elder and Mrs. Ben Katter were at Dows the past week visiting with their aunt, Mrs. Leach The Ben Katter family are moving to Alberta, Minnesota where they will farm this coming year. They have been visiting at the Elder home for some time, and from there have made visits to other relatives and friends in this community.

Miss Knight, the nurse who has been caring for Mrs. J. N. Day the past week or more, left for Mason City Sunday evening where she had another case. Mrs. Day is making a fine recovery from her recent attack of pneumonia. We think its quite a coincidence in names—Day and Knight (night). Therefore a our neighbor's house they had day and night all the time.

NEWS REVIEW OF CURRENT EVENTS

France Pays Sorrowful Homage at Bier of Its Great Marshal.

MOST of the world shares with France its great sorrow in the loss of its distinguished soldier, Marshal Ferdinand Foch, generalissimo of all the allied armies during the World war, who died Wednesday in Paris. Marshal Foch was seventy-eight years of age and had been ill for nearly three months. He suffered an attack of influenza which developed into a pulmonary trouble and was followed by complications of the kidneys. A resultant heart weakness claimed him.

Not since Napoleon's body was brought back from St. Helena in 1840 has France witnessed a funeral of such surpassing pomp as that arranged under direction of the French chamber of deputies to honor the dead marshal. For twenty-four hours previous to the funeral, which was held on the 26th, the body lay in state under the Arc de Triomphe, near the tomb of the Unknown Soldier. The high and low, the rich and poor, in continuous procession passed by the bier to pay homage to France's greatest hero of modern times.

Gen. John J. Pershing, who was one of the marshal's most intimate associates and supporters during the war and who is recovering in Paris from influenza, expected to go to the Riviera for recuperation, but canceled his departure to attend the funeral and act as one of the honorary pallbearers.

Honors seldom paid to any one but the most distinguished American soldiers was the tribute of the United States army to the memory of Marshal Foch. General Pershing was designated to represent the army at the funeral in Paris. On the day of the funeral, by orders of the War department, the flag at every military post and station was displayed at half mast and salute of twenty-one guns was fired at regular intervals during the day.

President Hoover, immediately on learning of the great marshal's death, dispatched a message to the French government expressing the sorrow of the American people for the people of France over the loss of a great national hero. Warm tribute to the military genius and fine human qualities of Marshal Foch were paid by other high officials of the government.

When Marshal Foch, with sure grasp, remarkable strategy, and rare power of co-ordination, was directing the allied effort which finally broke the German hosts, he was in command of more men than anyone had led in the history of the world. Marshal Foch first attracted world attention at the first battle of the Marne, when he sent the laconic message to his chief, Marshal Joffre, "My left and right wings are shattered. I shall attack with my center." He did and broke up the German offensive and forced a retreat.

It was this success, with its manifestations of bulldog determination to win even in defeat, that singled him out as the man for supreme leadership when unified command of all the allied armies was decided upon in the spring of 1918.

So it comes that almost on the eleventh anniversary of the greatest moment of his career, when to him passed command of a military machine more vast than any the world had ever dreamed of, Foch, hero of the first Marne, has breathed his last.

In 1921 Marshal Foch came to this country as a guest of the American Legion. He covered 20,000 miles and his journey led him through the Eastern states, the wheat fields of the Middle West, the vast plains of Texas, and the plantations in the South. His trip was climaxed in the national convention of the Legion at Kansas City.

Hundreds of thousands of Legionnaires and citizens turned out in all principal cities to see and hear Marshal Foch. His personal aide was Francis Drake, an officer of the A. E. F. and a Legionnaire. A flotilla of destroyers met the French liner Paris, and as she steamed in the Narrows on October 28. The marshal was greeted by a 19 gun salute. New York gave him one of its typically famous receptions.

THE Mexican revolution is rapidly petering out. The expected great battle at Torreon failed to materialize when the rebels evacuated the place and started their retreat northward. At last accounts they were still going.

Gen. Jesus M. Aguirre, rebel leader in Vera Cruz, was captured at Agua Catelli, following a battle in which many were killed on both sides. He was promptly court-martialed and executed. President Portes Gil ordered photographs taken of General Aguirre before and after execution. These will be used to prove to the public that Aguirre has really been executed.

The government continues to meet its pay rolls despite the mounting costs of war expenses.

Future revolutions in Mexico must count with the radio and the broadcasting stations, officials say. The desertions, the discontent, and the quarrels of the rival rebel leaders were made known to the Mexican people almost as soon as they were known in the rebel camps, and this has had a powerful effect on the popular mind.

BIDS for the construction of ten of the fifteen cruisers authorized by the naval building bill passed by the last congress are to be asked by Secretary of the Navy Adams. Designs of the new cruisers have been completed and all that now remains is for the Navy department to set forth the terms under which the bids will be asked. The new vessels are to be the fastest and most powerful cruisers of their class ever constructed in the United States. Three of the vessels will be built in government yards and the balance in private establishments. Five ships are to be started this year and five the latter part of 1930.

PRESIDENT HOOVER has already found two places convenient to Washington where he can indulge in his favorite sport of fishing whenever opportunity affords. Two places within short distances of the capital have been placed at his disposal. One of these is the historic Catoctin Manor estate at Catoctin, Md. The second fishing place selected is in Shenandoah National park, Virginia. A new game lodge to be erected near the head waters of the Rapidan river in the Blue Ridge mountains will be occupied by the President during his fishing trips in that section.

SENATOR BORAH has announced his determination to oppose American entrance into the World court when the revised protocol is sent to the senate in December.

In a statement issued in Washington, Senator Borah attacked the World court as representing merely the legal department of the League of Nations and denounced its authority to issue advisory opinions in international disputes of the league. He predicted that the World court would never function as a really great international tribunal unless it discards the practice of issuing advisory opinions. The new Root formula, the senator contended, does not afford the United States protection against advisory opinions.

OFFICIAL inquiry has failed to fix the blame for the accident in which 14 passengers were killed when a giant tri-motored Ford passenger plane crashed at Newark, N. J. The accident, the worst in heavier-than-air aviation in this country, occurred when the plane, loaded with sight-seeing passengers, fighting a gale with disabled engines, crashed into an iron freight car and was cut in two.

GOV. HENRY S. JOHNSTON has been removed from the office of governor of Oklahoma by the state senate court of impeachment and that body found him guilty of a charge of general incompetency, preferred by the house of representatives. He was exonerated on nine other charges brought by the house. The senate vote came as a dramatic climax to more than two years of political turbulence, which reached the impeachment pitch in 1927. At that time, however, Johnston succeeded in dispersing hostile legislators by court action after they had sought to convene on their own call.

LEGISLATION necessary to transfer responsibility for prohibition enforcement from the Treasury department to the Department of Justice, as recommended by President Hoover in his inaugural address, is in course of preparation, according to Attorney General Mitchell. However, it is unlikely, in view of the difficulty of the problem and as well as the President's desire to confine the forthcoming special session of congress to farm relief and tariff revision, that the dry reorganization will be submitted to congress until the next regular session convenes in December.

STRENGTHENING of the enforcement of all laws, with special emphasis on none, is the announced policy of the Hoover administration. No special law, such as the Volstead act, is to be singled out for special attention. The President's expressed hope is to obtain better law enforcement and a lessening of crime through judicial reforms, reorganization of enforcement machinery where necessary, and the building up of public respect for all laws.

The President's purpose in arranging for the appointment of a law enforcement investigating commission is to determine the facts and then work out an enforcement system which will result in a substantial permanent advance toward the enforcement of all laws.

FLOODS again are taking their heavy spring toll in lives and property in various sections of the country. The Mississippi at Quincy, Ill., has reached the highest mark in 25 years. Levees along a 50-mile front were battered by the angry waters and patrols were kept on duty night and day strengthening the danger points with sand bags. Several towns and smaller communities in Illinois are under water and thousands are homeless. The property loss cannot yet be estimated.

Two breaks in the levee near Quincy flooded 20,000 acres of farming land.

In Alabama and Georgia incalculable damage has been done to property by swollen rivers and there has been considerable loss of life. Many towns and rich farming sections have been inundated and highways have beeen made impassable. Sections of Florida have also suffered heavily. Food and other supplies are being delivered by aviators on a regular schedule.

In sections where the waters have abated the work of rehabilitation has already commenced. Residents of the flooded towns were returning to their homes inoculated against disease, prepared to restore their ruined buildings.

DRASTIC reductions in penalties for violations of the Ontario liquor control act were announced at Toronto when the government introduced surprise amendments to its liquor legislation. Fines and terms of imprisonment mandatory upon conviction are cut in half. To United States visitors the most important change is prohibition of taking liquor purchased in Ontario outside the province. Visitors who legally purchase liquor there must consume it before they leave Ontario if they wish to remain within the law of the province. A man caught on a train bound for the United States with liquor in his possession will be liable to a fine of $200 and two months in jail for having liquor in an illegal place. It was explained that this was not a blow aimed at rum-running, but at hip-running.

THE problem aroused by the seizure of a truck load of liquor consigned to the Siamese legation in Washington is being solved by plans under course of formulation by the administration and police officials. Under the new system foreign officials enjoying diplomatic immunity from arrest will be permitted to transport liquor from Baltimore to Washington without disturbance from prohibition officers or the police if a duly accredited embassy or legation official rides the truck with the wet cargo.

Diplomats desiring to transport a consignment of wines and whiskies from Baltimore to Washington will be furnished credentials informing all who may inquire that the cargo is diplomatic liquor and, as such, enjoys immunity from seizure.

Easter Bonnets

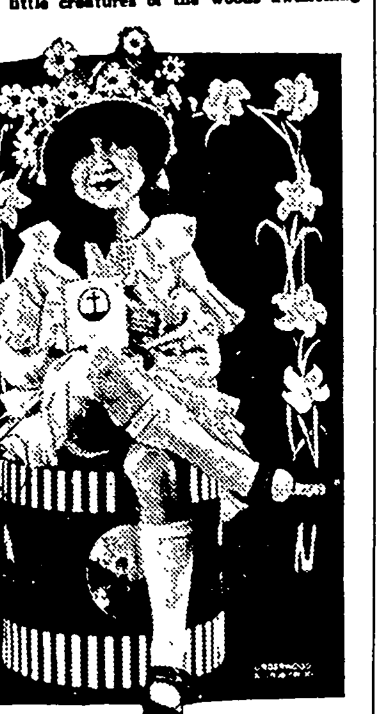
By MARY GRAHAM BONNER

The little chickens bursting out of their shells. Easter bonnets for them.

The flowers bursting into bloom. Easter bonnets for them.

The leaves of the trees peeping forth in buds. Easter bonnets for them.

The little creatures of the woods awakening



from their winter sleep. Easter bonnets for them.

The birds decking themselves in fresh plumage. Easter bonnets for them.

Little ladies, grown-up ladies wondering what they will get that is new and becoming. Easter bonnets for them.

Freshly decked, newly garbed, springtime glory for every one and every thing.

Easter bonnets for the whole world!

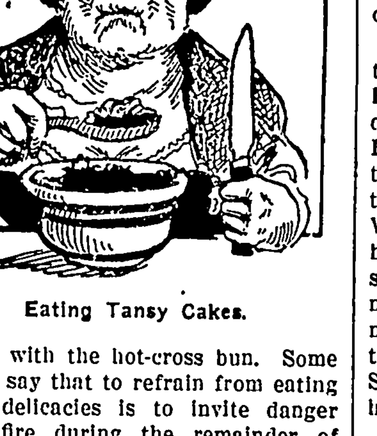
(©, 1929 Western Newspaper Union.)

Tansy Cakes Passing From Popular Favor

Tansy cakes are still made and eaten in many parts of Britain, but they are rapidly going out of fashion. Two or three hundred years ago even the poorest table was piled high at Easter with "tansies." These are merely ordinary cakes flavored with tansy, which gives them a rather bitter flavor.

In the old days Easter was a great cake-eating festival, and the custom still survives in the form of the hot-cross buns which we eat on Good Friday.

There are many superstitions connected with the hot-cross bun. Some people say that to refrain from eating these delicacies is to invite danger from fire during the remainder of the year!



Eating Tansy Cakes.

The hot-cross bun can be traced back to the time of the pharaohs. The word "bun" is said to be a corruption of "bous," which in the tongue spoken by the ancient Egyptians signified a cake.

Easter Is Here

Over the landscape dull and drear
The sunshine falls and then a thrill
Quickens the crust on the hillside sere,
Wakens the seed and loosens the rill;
Out of the south the soft winds blow,
Up from the south the white clouds veer;
Nature, the wakened, murmurs low:
"Easter is here!"

Story of old—yet ever new—
Told us again in quickened dust,
Told us in seed, in changing hue,
In flower, in breeze, in waking crust;
Chiming afar from joyous bells,
Carolled by children, sweet and clear,
Higher and higher the message swells:
"Easter is here!"

—W. R. Rose.

Palestine Always Holy Land

Whatever form each different creed may adopt in celebrating its Holy week the dominant note is the same—it is the spring of the year, the time for freedom, the true resurrection, the dawn of life and hope. To Christian, Moslem and Jew alike Palestine will ever remain the Holy land, the cradle of so many faiths, for which so many have faith for the future.—Toledo Blade.

Christmas brings home to us a sense of Christianity's fund of cheer and good will, the stored-up capital we may draw upon. But Easter blows the silver trumpet of hope in our hearts, and renews for us the will to live.

The gladdest blessings
Spring may hold,
And peace, life's
greatest treasure,
Kind Providence
this Day unfold
For you
in loving measure

Idea of Immortality Impressed on Soldier

One writer, the father of a soldier, who has been studying the phenomenon of faith in soldiers hardly more than boys who have had no previous spiritual experience, says that when a soldier sees his comrade shot down at his side he does not feel that he is dead. "He is no philosopher, but some inward voice assures him this handful of battered clay is not his comrade. He feels assured that his friend has passed on and taken with him all that composed his personality, his gayety and courage, his unselfishness and heroism and all the endearing blend of his faults and virtues. The tragic ease with which the body vanishes from sight conveys the sense of something unreal in his disappearance. So, in his simple way, not arguing the matter or being capable of argument, the soldier assumes human immortality as a necessity of thought. He could not go on with the work of war without it."

It is hard that this central tenet of the Christian creed should ever need to be taught in this tragic way, but "the roads are many that lead to God." and if out of the bitterness and horror of war this truth shall be made a part of the soldiers' belief and of the belief of those who lose them from earth, then up from the bewildering experience of grief will arise one great cause for thanksgiving. For never was higher saying to man than the promise of eternal life.—Exchange.

Homage to Spirit of Christ Man's Tribute

On Easter Sunday the Christian world pays homage to the living spirit of Christ—the spirit of dauntless courage, unwavering kindness, unfailing love. When He was nailed on the Cross it looked as if the forces in opposition to that spirit were definitely triumphant; as if the great adventure of love incarnate had ended in failure.

But love could not be imprisoned in the tomb. We celebrate at Easter His resurrecton. "Thou hast conquered, O Galilean!" exclaimed the Roman emperor. So down through the ages we have come to feel with the great physician to Labrador, Dr. Wilfred Grenfell, that, "the only real heathen and heretics are the purely selfish." So we accept the final judgment: "Verily I say unto you, inasmuch as ye did it not unto one of these least, ye did it not unto Me." So, under His leadership, we take heart.

Fill up the gaps in our files,
Strengthen the wavering line,
Stablish, continue our march
On, to the bound of the waste,
On, to the City of God.

Easter Custom

Children of the Near East Relief orphanage at Syra, Greece, planting the Easter cross above their school home. The custom of the planting of the cross at Easter has been observed in Greece for many centuries.

Victory Over Death

At Easter we are accustomed to put emphasis upon its promise of personal immortality—"Death is swallowed up in victory!" That note has brought rejoicing to many a heart, and the implications involved in the belief that man is immortal, that the individual survives the grave, are of great importance. They are inseparable from the belief that man is essentially a spiritual being, whose complete satisfaction can be found only in God.

Early Advertising

In the Seventeenth century small advertisements appeared in newspapers for books, tea, coffee or medicine. A heavy stamp tax hampered the growth of newspapers and advertising in England until 1855. In America, advertisements appeared in the early colonial papers. Brief notices told of new goods just imported from England, coffee, slave sales, runaway slaves and servants, or lost cattle. Newspaper advertising on a large scale dates from the establishment of the New York Sun, in 1833, followed shortly by the New York Herald, the Philadelphia Public Ledger and the New York Tribune.

First to Protect Oysters

Rhode Island was the first state to set aside water territory for the propagation of oysters. As early as June, 1799, this state set aside a small tract for the cultivation and propagation of oysters by private parties.

Something Reminded Her of Her Duty

"Today I am reminded of a duty that I have neglected, and that is to let you know how wonderful have been the results I obtained from the use of Milks Emulsion. Nothing could have been more beneficial to me than your Emulsion.

"In the winter of 1917 and 1918 I had a severe case of pneumonia, and in the spring of 1919 I took a cough. I was doing some summer work to prepare myself for a college, but by the time school opened I was too ill to attend. I finally went to bed for the rest cure. I gained a little in strength and got up by Christmas, but my cough never left me, and I caught cold very easily and it would take a month to get over it.

"Finally, in September, 1920, I got a bottle of Milks Emulsion and wrote you for instructions, to which you replied promptly and for which I thank you. I followed the instructions carefully and soon my cough began to disappear. I was able to sleep better than ever before and my appetite was fierce. I could not eat enough. I gained in weight slowly but surely, but continued the use of Milks Emulsion, until I am a well girl today.

"I went through the entire season without a cold or a cough, and I came back into the society circle and played all the big affairs without any ill effects. About a month ago I neglected myself and took a dreadful summer cold and, being at a house party, I could not care for myself properly. But as soon as I reached home I flew in on my old standby, Milks Emulsion and within a week I was well.

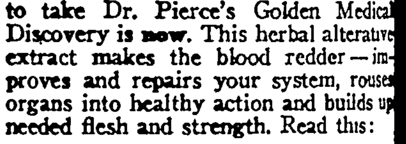
"I have recommended it to many and if at any time I can be of any help to your company by telling what it did for me, let me know. Sincerely, MISS KATY WALLER, 40[illegible] Argyle Ave., San Antonio, Tex."

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Life is short, but men never outlive their good resolutions.

Fresh, sweet, white, dainty clothes for baby, if you use Red Cross Ball Blue. Never streaks or injures them. All good grocers sell it.—Adv.

Integrity gains strength by use.—Tillotson.



The Very Best Time

to take Dr. Pierce's Golden Medical Discovery is now. This herbal alterative extract makes the blood redder—improves and repairs your system, rouses organs into healthy action and builds up needed flesh and strength. Read this:

Mrs. T. Wise of 4509 Beothe Ave., Rosedale, Kans., writes:—"I had dizzy spells, and was so deathly sick at my stomach I couldn't ride on a street car, nor be where it was warm. We had a Medical Adviser about 10 years old, or more. After trying about ten doctors, I read that book and found I had catarrh of the stomach. I got two bottles of Dr. Pierce's Golden Medical Discovery but with only half a bottle the sickness at my stomach was all gone."

Ask your nearest druggist for Dr. Pierce's Discovery, in tablets or liquid or send 10c for trial package of tablets to Dr. Pierce's Clinic, Buffalo, N. Y.

Don't Let That Cold Turn Into "Flu"

That cold may turn into "Flu," Grippe or, even worse, Pneumonia, unless you take care of it at once.

Rub Musterole on the congested parts and see how quickly it brings relief as effectively as the messy old mustard plaster.

Musterole, made from pure oil of mustard, camphor, menthol and other simple ingredients, is a counter-irritant which stimulates circulation and helps break up the cold.

You will feel a warm tingle as it enters the pores, then a cooling sensation that brings welcome relief.

HER BOY AND HIS GIRL

(© by D. J. Walsh.)

SOME people when their finances dwindle go abroad. The American dollar is very elastic in foreign countries. With a handful of traveler's checks you can make a respectable showing in France or Italy. But you must be adaptable. Myrtle Hardy wasn't adaptable. So she went back to Westmore.

Twenty years before Myrtle had run away from Westmore in a dark blue traveling suit, a hat with a willowy plume and three trunks full of trousseau. As she shook the rice of her wedding send-off from the folds of her skirt and said to herself: "There! I'm through with that forever!" golden promises, rosy vistas, and symbols of joy lured her to the future. Upon closer view the promises proved to be tarnished, the rosy vistas turned shabby, the symbols cracked. For Myrtle Hardy hadn't made good. Before three years passed Myrtle was keeping boarders, doing all the work herself with a baby on her arm. But nobody in Westmore ever knew this. Her friends who had helped her get married, the man she had jilted for Will Hardy, never dreamed that she wasn't as happy as she had started out to be.

When Dick Hardy was eighteen his father died after a long sickness that took Myrtle's last nickel in spite of the fact that she nursed him herself. She got through everything she managed to pay the premiums on Lewis' life insurance. So she had a few thousand to help her through the bad time that came afterward.

She couldn't live where she was. So she negotiated for a house in Westmore. Certain heart tuggings made her decide on Westmore. Besides, she knew she could live cheaply there. Besides, also, she knew that Dick would be safer in a small town. One day she slipped in, saw the house, bargained for it and slipped away again without anybody but the realtor and himself being the wiser. Two months later she returned with her son and such household gear as she hadn't sent to the auction rooms.

It was a patchy little old house, somewhat remote from other habitation, but it cost so little that when it was paid for Myrtle still had a tidy little sum to her credit. And when she had placed the clock on the mantel shelf, hung her curtains at the windows and lit the fire she felt more at home than she had perhaps ever felt in the last twenty uphilly years of her life.

While she was settling the house, Dick, hands in pockets, strolled round the town picking up acquaintances. A pretty girl in a red coat brought him home in a putty-colored sport model. Dick was wild about that girl at sight. Genevieve he called her. He straightway declared his intention of getting a job. Myrtle looked at him sadly. Was he going to be like his father? She'd hoped he was going to be like her grandfather, Winn. All her life she had been trying to be like Grandfather Winn—honest, brave. She wanted Dick to have an education. She told him so. He sneered.

He got the job. It didn't pay much but it gave him pocket money. Of course he didn't pay his mother a cent board. With his nonchalant ways and good looks he soon had plenty of friends. Almost every day Genevieve called him up to go some place. He rode with her, danced with her, dreamed of her. Myrtle saw him only at mealtime and not always then. She was busy crocheting wool goods for a children's shop in the city. By making her crochet hook fly she earned fair wages. It wasn't what she wanted to do, however; she had other plans just as soon as she could afford them.

One afternoon as she sat crocheting on the sagging little porch the putty-colored car drove up and stopped. Not Genevieve this time. It was apparently her father. And he looked mad clear through.

"Mrs. Hardy, I believe?" he began curtly.

Myrtle arose, a half-finished baby sack of pink wool trailing from her slender hand. She wore a black-and-white voile. Her frosted black hair was simply knotted. She used no make-up for her skin was fresh and clear. A pair of shell-rimmed "nighbys" covered her beautiful dark eyes. She whipped them off for a closer view of her visitor. In the same instant that she recognized him he recognized her.

"Myrtle!" he exclaimed as if there was just one woman of that name in all the world.

"How do you do, Will?" She held out her hand. "Won't you sit down?"

He sat down, embarrassed. He had come full of fury to comb this woman over the coals because of her recalcitrant son. He found in her the girl who had jilted him for another fellow.

"What's the matter?" Myrtle asked kindly. "What have you come to me about? I see there's something disturbing you."

"That boy of yours!" he exploded. "He's running round with my girl. They must be stopped. I've given Genevieve every advantage. I've humored her in everything since her mother died. She's a talented girl. If she'd get boy out of her head she'd amount to something. But she picks up a strange youngster who earns only $15 a week. It spells trouble. You understand what it means."

Yes, Myrtle understood. Her dark eyes were fixed upon a paper cone attached to the porch round which some insects were buzzing, she couldn't destroy that old yellowjacket's nest somehow.

"What do you want me to do?" she asked.

"I suppose you have talked to your boy. I want you to talk to my girl. Use your—" he looked at her closely—"your personality. You've got plenty of it. You'll know what to say to Genevieve. I'd only blunder. But the thing's got to stop. I can't have her getting married at her age. I—"

He went away leaving Myrtle with a hard problem. She had planned to talk to his girl.

She walked a mile next day to meet Genevieve by appointment. A maid admitted her into the luxurious Robinson home. Will had been poor when she last knew him. But she didn't stop to think of that or look around. She was intent upon Genevieve, lovely in her soft beige sports dress. She thought: "Oh, if Dick could only have her maybe it would be the saving of him." But she had promised. And she owed Will Robinson something for jilting him, not but what he'd done better marrying old Gus Warren's heiress.

Into that talk Myrtle flung all the force of her nature, all the fruits of her experience, all the courage and determination that was hers. Afterward in thinking it over she wondered if she had been just fair to Dick in her effort to make Genevieve see? But at least she won. She knew she had won when Genevieve kissed her.

A week later Genevieve went abroad to study. Dick was crushed. "Lots o' other janes," he said. "Very few like Genevieve," Myrtle said. "If you want her, play the man and win her. You can. Don't be a bobby or an ass. Prove that you can amount to something. Her father wouldn't object to you then."

Into Dick's face came the look that Myrtle had so longed to see there, the look that had been minted by Grandfather Winn. Her heart leaped with hope.

She didn't see Will Robinson for a long time. He had gone to Paris with his daughter. Meanwhile, she finished the business course she was taking with a private tutor and got a good job. Dick, too, was working industriously days and studying evenings.

On her way home from work one wet afternoon Myrtle was hailed from an enclosed car. She looked with a start into Will Robinson's fine, friendly face. He took her home. There was a sign "For Sale" on the sagging porch. "We're moving into an apartment, which will be nearer Dick's work and mine," Myrtle explained. It was unaccountable the way her heart was acting at sight of this man.

"Haven't thanked you yet for what you did for Genevieve and me," Will said. "You made a great hit with my girl. She'll be a better woman for that interview. Your boy can't help making good with you for a mother, Myrtle. Some day maybe—" He paused, looking deep into her eyes. "Your boy and my girl," he said huskily. "Why not our children, my dear?"

Adaptation to Change Big Business Factor

Adaptation is the life of business. Change is the eternal law in the world of affairs. The popular product of today is thrown into the discard tomorrow. Fashion performs a somersault, and, lo, a plant operating night and day has to close its doors. Or, a new invention upsets a whole industry. Fortunes, for example, were made in the piano business; came the phonograph and other competition, and the demand for pianos was cut in half. Next the leading phonograph company found its product left in the lurch by the sudden vogue of the radio. But this company utilized its own brains, the best brains available in America, readjusted its product, effected new affiliations in line with the trend of the times, and its shares have doubled and trebled in market value. All living things which have survived have had to adapt themselves to change; those that failed perished.

Many an individual and firm and company is today confronted with the urgent necessity of doing something out of the ordinary to avoid disaster. A change in conditions demands a change in activities. Happily, many executives have abundantly demonstrated that it is possible to switch from one line of business into another and make a success. The new head of the Stevens Institute of Technology declares that the best results have frequently been obtained when graduates who specialized in a particular direction were given employment in an entirely different line. The able business man need not conclude that his ability can function only along one channel and that he would be a failure were he to launch into another channel. Even humble rural storekeepers have proved able to adapt themselves to changed conditions by becoming garage operators and sellers of gasoline. The larger the enterprise, presumably the better the brains directing it. Therefore, these brains should not meekly surrender to what appears to be an unkind fate, but should manfully accept the challenge thrown out to them by circumstances.

Adaptability is the essential quality of the fittest to survive.—B. C. Forbes in Forbes Magazine.

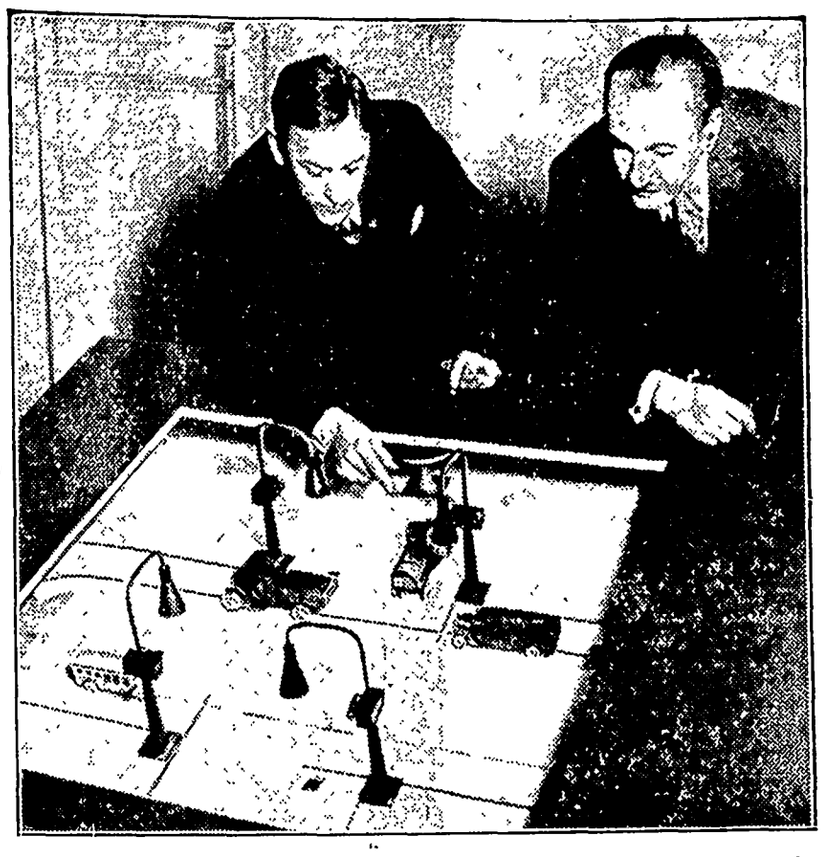
Friend in Need

Teller—Yes, Summers is a good friend of mine. He showed confidence in me when the clouds were dark and threatening.

Askit—In what way?

Teller—He lent me his umbrella.

ELIMINATE DELAYS BY "ELECTRIC EYE"



Left to right, Prof. H. H. Sheldon of New York university's physics department and Dr. Phillips Thomas of the Westinghouse Electric company, watching a demonstration of a new light sensitive device, before the members of the Electrical society at the Engineering Societies' building. It is expected that unnecessary traffic delays, caused by the flashing of a red light or "stop" signal on a main thoroughfare at times when no vehicles are waiting to cross the intersection may be done away with forever. The new system gives motorists a green signal continuously until a car on the cross street comes within a short distance of the intersection, at which time the lights automatically revert to a prearranged "set" program operation. The automatic feature of the system is made possible by a new application of the photo-electric cell, or "electric eye" which literally "sees" automobiles or other vehicles and regulates the signals accordingly.

HIGHWAY MARKERS NEED OF CITIES

Nothing to Indicate When Motorist Is on Right Road or Off of It.

(Prepared by the United States Department of Agriculture.)

"Why aren't the standard route markers of the United States highway system more generally erected in cities through which the route is pass?" a cross-continent motorist recently asked the bureau of public roads of the United States Department of Agriculture. "I started from the western coast last summer over one of the U. S. routes and had no trouble in following the road across the country," he explained, "except when it crossed the larger cities. There were no markers to indicate when I was on the route or when I was off it. It is through the cities that we motorists are most likely to get off the route, especially at five-point intersections," he asserted.

Not Under State Control.

Officials of the bureau explained that the route markers in the various states were erected by the state highway departments only upon the highways under their jurisdiction; that city streets, which are connecting links, are under the jurisdiction of municipal authorities, and that the erection of the markers within city limits is up to the city officials.

Some Cities Erect Markers.

A few cities have recognized this need of the motorist, the bureau says, and have erected the standard markers on their streets.

Since the standard route markers and danger and caution signs were adopted in 1925 for use on the United States highway system, 28 states have completed the marking of the system within their borders and under their jurisdictions, eight states have marked from 75 to 99 per cent of their roads, and four states have marked from 50 to 75 per cent.

Water Isn't Especially Good for Spare Tires

With tires carried on the side, the vogue of the day, it may be appropriate to make a suggestion for an improvement in fender wells.

Most owners note the way the wells catch dirt on the under side, and not a few of them appreciate that constant scraping and cleaning of these parts will result in the metal getting rather thin at these points. But how many realize that fender wells tend to wear out from the upper side because of water remaining in the wells?

This water isn't especially good for the spare tires, either. Accordingly, some means should be provided whereby it could be drained off.

Why not drill a small hole in the bottom of each well?

Missouri Making Study of Automobile Crashes

A study of the automobile accidents in Missouri in a recent month revealed 1,219 accidents. Ten were caused by cars with no drivers; 33 were cars driven by intoxicated drivers; 47 were caused through losing control of the car; defective brakes caused 10; tire blowouts, 11; skidding, 29; 15 were caused by "the other fellow," who forced them into ditches; 19 were caused by trying to pass another car; 15 resulted from drivers falling asleep at the wheel. One car was struck by an airplane and one driver was stung by a bee.

Big Motor Business

The following key-points are taken from the forecast made by Roy D. Chapin, president of the National Automobile Chamber of Commerce:

1. Automotive employment in America will total 4,000,000.
2. Production will be on new high levels, buying raw materials in larger quantities than ever before.
3. Pent up demand for transport, held back in 1928, will keep sales active throughout 1929.
4. Highway building on all continents creates new transport needs.

Foreign Matter Sticks at "Neck of the Bottle"

The "neck of the bottle" in an automobile radiator is at the top of the cooling fins or tubes. Any foreign matter that floats around with the water always gets stuck at this point and the result is retarded circulation and a tendency for the motor to overheat.

Ordinary flushing will not remove serious obstructions. But you can get them out by the simple method shown.

Incision in Radiator, After the Shell Is Removed, Gives Access to Obstructing Particles.

Remove the radiator shell and with a sharp, strong knife make a curved incision. Then fold out the flap thus formed. Pick out the obstructions with a pointed instrument, push the flap back in place and solder it. Radiators are made of thin sheet brass so this is easier than it looks.—Popular Science Monthly.

AUTOMOBILE NOTES

Test the oil level every time the tank is filled with gasoline.

* * *

Now if some genius will devise a way to refuel automobiles while in motion the life of the speeder will be complete.

* * *

A driver in California sustained an eye injury as a result of an automobile accident. Police arrested the expugilist in the other car.

* * *

When your car fails to complete a turn in a space that seems wide enough for it, maybe you failed to start the turn with the wheels cut as sharply as possible.

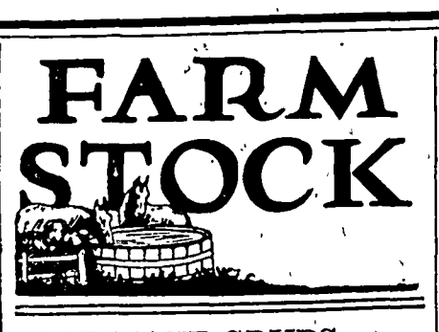
* * *

If the water in the radiator needs changing it is best to drain and flush it immediately after a long run. The sediment will still be circulating and it will clean out much more thoroughly.

* * *

Scientists are trying to establish what was man's first conquest of space, but his greatest conquest of space was probably the distance he jumped when he saw a car about to hit him.

FARM STOCK



ERADICATE GRUBS EARLY IN SPRING

Dockage Estimated by Packer at $750,000 Yearly.

"Gad flies" or "heel flies," which pester cattle in the springtime, may be killed while still in the grub stage, imbedded in the backs of cattle, by placing an ointment consisting of one part iodoform and three parts crude petroleum on each warble hole.

This ointment should be placed on the hole of each warble, or large swelling on the animal's hide, with the finger, according to Dr. George H. Glover, head of the veterinary division of the Colorado Agricultural college.

The grubs can be removed from the backs of animals by pressure with the fingers, but this seems like a hopeless undertaking. Then too, crushing or destroying the grubs in the backs of cattle is liable to bring on dangerous anaphylactic symptoms, Doctor Glover says.

The problem of efficiently eradicating the "gad fly" is one of the most important and most difficult problems relating to the cattle industry which is now facing the government.

The ointment treatment will never completely stamp out the pest, but is useful as a temporary measure of relief.

The problem of the ox warble is a difficult one to solve, but it is believed that the combined scientific efforts of the leading cattle-producing countries will find a solution.

When the "gad fly" begins to pester cattle, the animals throw their tails high in the air and run for the nearest water hole. Contrary to the prevailing opinion these flies do not sting or bite cattle, but instinctively cattle are thrown into a panic by their mere presence.

These flies look like large bees. They hatch from the grub, which takes a heavy toll of the live stock industry, resulting in reduced milk supply, severely damaged hides along the back where the thickest and most valuable leather is obtained, and wasted "jellied beef" along the backs.

One packing company estimates the dockage on account of "grubby" hides at $750,000 a year. The total loss from the cattle grub to the live stock industry in the United States has been estimated at $50,000,000 a year.

Canadian Field Peas Alone Not Recommended

In parts of the Pacific Northwest, Canadian field peas are grown extensively and grades of low merchantable value are available as feed for live stock. These low priced peas have become popular as hog feed in the Palouse country of eastern Washington and northern Idaho. These peas have been made the main feed for brood sows during the winter, which is also the period of gestation.

As time went on, the question arose as to the effect of this practice upon the physical condition of the brood sow and the resulting effect upon the weight and vitality of the pigs.

Since the value of pigs is to a great degree established by their vigor at birth, the Idaho experiment station made an investigation of the effect of the pea ration. The investigation disclosed that frequently brood sows fed too large a proportion of peas went off feed. Throughout the investigation pigs farrowed in the herds which were fed on peas were small. From the check pens the greater number of pigs weighed from 2 to 3½ pounds at birth, while in the others the greater number of young weighed 1½ to 2½ pounds. The smaller pigs were also less vigorous. The investigators at the Idaho station have recommended that brood sows be fed a supplementary ration where peas are utilized.

Heaviest Infestations of Worms Among Lambs

Sheep of any age are liable to infestation with stomach worms, but the heaviest infestations are usually among lambs. Infestation may occur at any season of the year. The trouble is usually first noticed in young lambs about the middle of the summer, though it may become evident much earlier, depending upon the temperature and moisture conditions that have prevailed. Often the first notice that infestation is present is the death of one or more sheep or lambs. However, if the flock is closely attended the symptoms of stomach worms are usually noticed before death claims its victim.

Give Ewes Variety

Advice about feed of ewes before lambing is stereotyped to one kind of hay and two of grain. Think of the body needs of the mother, and what is needed for the growth of the lamb. Sheep cannot have too many kinds of hay, and if there are weeds in it when forked in the hay rack, notice the heads on both sides reach for them. A sheepman has no horror of weeds either in his pasture or hay. The sturdy little animals thrive on any kind of weed.

When Food Sours

Lots of folks who think they have "indigestion" have only an acid condition which could be corrected in five or ten minutes. An effective anti-acid like Phillips Milk of Magnesia soon restores digestion to normal.

Phillips does away with all that sourness and gas right after meals. It prevents the distress so apt to occur two hours after eating. What a pleasant preparation to take! And how good it is for the system! Unlike a burning dose of soda—which is but temporary relief at best—Phillips Milk of Magnesia neutralizes many times its volume in acid.

Next time a hearty meal, or too rich a diet has brought on the least discomfort, try—

GREAT DISCOVERY KILLS RATS AND MICE, BUT NOTHING ELSE

Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks

K-R-O (Kills Rats Only) is a new exterminator that can be used about the home, barn or poultry yard with safety as it contains no deadly poison. K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, under the Connable process which insures maximum strength. Two cans killed 578 rats at Arkansas State Farm. Hundreds of other testimonials.

Sold on a Money-Back Guarantee.
Insist upon K-R-O (Kills Rats Only), the original Squill exterminator. All druggists 75c, or direct if not yet stocked. Large size (four times as much) $2.00. K-R-O Co., Springfield, O.

While most English critics scorn America's talking motion pictures, the masses pour into the theaters to hear them.

"O Happy Day" sang the laundress as she hung the snowy wash on the line. It was a "happy day" because she used Red Cross Ball Blue.—Adv.

Queer things are always happening to some people, who hardly seem to be aware of it.

Denver Mother Tells Story

Nature controls all the functions of our digestive organs except one. We have control over that, and it's the function that causes the most trouble.

See that your children form regular bowel habits, and at the first sign of bad breath, coated tongue, biliousness or constipation, give them a little California Fig Syrup. It regulates the bowels and stomach and gives these organs tone and strength so they continue to act as Nature intends them to. It helps build up and strengthen pale, listless, underweight children. Children love its rich, fruity taste and it's purely vegetable, so you can give it as often as your child's appetite lags or he seems feverish, cross or fretful.

Leading physicians have endorsed it for 50 years, and its overwhelming sales record of over four million bottles a year shows how mothers depend on it. A Western mother, Mrs. R. W. Stewart, 4112 Raritan St., Denver, Colorado, says: "Raymond was terribly pulled down by constipation. He got weak, fretful and cross, had no appetite or energy and food seemed to sour in his stomach. California Fig Syrup had him romping and playing again in just a few days, and soon he was back to normal weight, looking better than he had looked in months."

Protect your child from imitations of California Fig Syrup. The mark of the genuine is the word "California" on the carton.

FOR INFLAMED JOINTS

Absorbine will reduce inflamed, swollen joints, sprains, bruises, soft bunches. Quickly heals boils, poll evil, quittor, fistula and infected sores. Will not blister or remove hair. You can work horse while using. $2.50 at druggists, or postpaid. Send for book 7-S free.

From our files: "Fistula ready to burst. Never saw anything yield to treatment so quickly. Will not be without Absorbine."

RESOLUTIONS OF RESPECT

Be It Resolved, by the Bar Association of Hancock County, Iowa, that

WHEREAS, the Supreme Judge of all mankind has removed from us our highly respected and beloved brother, John E. Wichman; and

WHEREAS, we feel that his passing is a distinct loss to us and to his community, county and state which he has so well represented with devotion, honesty, and courage in his daily life, the legislative offcies he has filled, and in the courts where he has served his clients with unswerving loyalty and fidelity; and

WHEREAS, his life and his devotion to the profession of the law was an inspiration to his fellow members of the Bar who deeply mourn his loss,

NOW, THEREFORE, we, the members of the Bar of Hancock County, Iowa, hereby extend to Mrs Wichman and family our sincere condolence.

Be it further resolved that a copy of this resolution be published in the papers of Hancock County, Iowa, and a copy spread upon the permanent records of the Court at the Courthouse in Garner as a mark of the great respect and affection in the hearts of his fellow members who mourn his loss.

4TH YEAR SEWING COURSE TAUGHT

TRAINING COURSE LEADERS IN AVERY HOLD MEETING

Three Districts To Meet April 10th In Goodell

The Womens Training School of Avery Township met at the home of Mrs. E. P. Hubbard for an all day meeting, Monday, April 1st.

Do you know the difference between shears and scissors? Do you know what kind to buy for your sewing work?

The Leader of your District will be glad to explain these things to any woman interested. She will have much valuable information, which she is learning in the Fourth Year Course in Sewing, to pass along to her neighbors.

Miss Myrtle E. Johnston is our new demonstration agent; Mrs. C. A. Arnold the township chairman. The Leaders are:

District 1. Mrs. Will Waddingham.
Mrs. John Bachman.
District 2. Mrs. Will Johnson.
District 3. Mrs. Allie White.
District 5 Mrs. Leon Sherwood.
Mrs. J. J. Griggs.
District 6. Mrs. H. C. Barger.
District 7. Mrs. Len Wilson.
District 8 Mrs. Wm. Gealow.
District 9. Mrs. E. P. Hubbard.

The follow up meeting for Districts seven, eight and nine will be held at Goodell, Wednesday April 10th. Anyone who is interested will be welcome.

HOLSTEIN BAND WINS DISTRICT BAND CONTEST

Wm. And Carlyle Gauger Members Of The Organization

It is of interest to our reads to know that the high school band at Holstein recently won first place in a district contest at Battle Creek.

William and Carlyle Gauger are members of the band.

Praises Former Klemme Minister

Holstein Advance: "Rev. Gauger constantly endeavors to bring at this church the things that are beneficial and interesting to the people of this community. It pleases us to state that he fits well into our community life."

DOINGS AT SCHOOL THE PAST WEEK

EVERYTHING IS QUIET AT OUR FOUNT OF KNOWLEDGE

Children And Teachers Enjoying A Week's Needed Vacation

As the roads have not been good for driving, the superintendent has remained in town two of his vacation days sort of cleaning house. He left Wednesday for Britt to visit schools and will attend the Junior College play Wednesday evening. The Seniors of K. H. S. have been promised free admission to this play as they were last year. High school teachers are treated as well. This is a courtesy extended us by Britt that we all very much appreciate.

Fifty Schools In Contest

There were an even fifty grade youngsters competing at Garner on Saturday for spelling honors and a chance to represent Hancock County. The ten standing longest received monetary awards ranging from $1.50 to 50 cents and it seems most of them were rural school pupils. The champion of them all was Richard Schubert from Britt township, District No. 5. The second best was also from the farm. She was Julia Zwald, from Garfield, No. 2.

Margaret Gates Made Good Showing

Margaret Gates represented the Klemme school and remained spelling until 27 others had been retired. She apparently did not understand the word pronounced to her which she missed for she has to our own knowledge spelled it correctly before in practice. We had hoped to be able to take another county champion to Des Moines as last year, especially since Lillian Birchmier, the superintendent's niece, comes there as a champion from Davis County.

Prospects Look Good For 1030

We hope our seventh graders who showed to such good advantage this year will keep up their practice and be able to furnish us with an excuse for going to Des Moines next year. Hilda Keeper, Marie Stille, Stille, and Nova Bredbenner took the keenest interest in the work this year and by consistant effort begun now and continued should be hard to down this time next year.

Teachers All At Home

We guess our faculty has all gone home except Miss McGinnis and the superintendent. But we hope the weather and roads permit their return for next Monday. We hope every one returns well rested up for the next eight weeks.

How One Supt. Felt!

A very progressive and successful superintendent in a letter to a friend not long ago expressed himself thus: "I have the usual tinhorn rattling about my re-election. I don't believe that I care enough for the work to put up with the inconveniences. I am a little disgusted this morning, anyway, because some of the cheap-skate kids are trying to make some commotion over a few book fines. Nothing in this town will so disturb a bunch of old cacklers as a bunch of lies from a gutter rat of a kid. They come to see the teachers, superintendent, and all in the light of demons, evil doers, and tyrants." But this same man has had support sufficient to maintain him in office for the past eight or ten years and should not lose heart. He should remember what the most perfect man, the world has known, suerffed. It would seem he should be getting somewhat used to criticism.

BASKET & PIE SOCIAL

A Basket and Pie Social will be held in Dist. No. 2, Twin Lake twp. on Friday, April 12. Everybody invited.

Bernice Tanner, Teacher.
Herman Nuehring. Director. 1tc

FARM BOY WINS COUNTY HONORS

RICHARD SCHUBERT WINS THE SPELLING CONTEST

Julia Zwald, Rural Pupil Is Second In County Spelling Bee

The third annual spelling contest for Hancock County was held at the Court House at Garner, Saturday afternoon under the direction of J. R. Baggs, county superintendent of schools and was open to all eighth grade pupils of the county who had won in their own school. Fifty boys and girls took part, representing fifty rural and town schools of Hancock County.

The Garner Lions Club this year provided the cash prizes, ranging from $2 to the winner, $1 to the second and eight prizes of 50 cents each.

Richard Schubert of Britt township, District No. 5 won first place. His teacher is Miss Lucy O'Brien.

Second place was won by Julia Zwald, of Garfield township. Miss Evelyn Waller is her teacher. The other prize winners in their order are: Mary Trulson, Paul Higdon, Enolia Olson, Oscarine Cox, Beulah Prelix, Minnetta Molander, Ruth Berhow, Madelia Abele.

Miss Smeby, of the Garner school pronounced the list of words. The contest judges were Superintendents M. F. Penrod, Klemme; A. A. Wolf, Kanawha; and C. W. Thompson, of Corwith.

The contest drew a very large crowd and the court room was taxed beyond its capacity, many people being forced to stand in the halls and on the stairway.

Last year Gladys Schlichting of the Klemme schools carried away the county championship. This year Margaret Gates represented Klemme and held her position until well beyond the middle of the contest, when she went down.

REFORMED CHURCH NOTES Calvin Grosshuesch, Pastor

10:00 a. m. English Service.
11:00 a. m. Sunday school.
8:00 p. m. Tuesday. The Young Peoples Bible Class will meet.

HAVE GOOD TIME AT AVERY MEETING

A REAL PROGRAM A FEATURE OF THIS MEETING

Contests Add Fun To The Meetings Of Avery Farm Bureau Meets

The regular monthly meeting of the Avery Township Farm Bureau was held at the home of Mr. and Mrs. John Sims, on Friday evening, March 29th.

After the community singing, led by Mrs. Elmer Hillman, of Grinnel, the "Farm Bureau Creed" was read by Mrs. Virgil Cook. A paper, "What the Farm Bureau is Doing for Our Schools," by Miss Anna Homeck showed us that we must take the responsibility for agricultural instruction in our rural schools. "The Goals of the Farm Bureau Organization," was discussed by Mrs. H. C. Barger.

An interesting report of the Organization School at Britt was led by Mr. Virgil Cook, our township Director. He was assisted by Mr. Fred Gealow, Mr. John Sims, Mr. Wm Prelipp, Mr. Herman Lauen and Mr. Howard Barger. They agreed that the County meeting, preparatory for the membership drive, was a decided success. By co-operating, three of them were able to perform the stunt of putting a large hard boiled egg into a milk bottle, without crushing the egg. Can you do it? If you are interested ask a Farm Bureau member about it!

This part of the program was followed by:

A recitation, 'The Little Hen," by Adella Lauen.

A demonstration, "Our Common Birds," Avis Andreason.

A reading, "The Chickens' Mistake," Margie Andreason.

A discussion of the Women's Training School Work of the past year was led by Mrs. Wm. Gealow and Mrs. Len Wilson.

The Round Table Discussion for the men was led by Mr. Howard C. Barger, the township president.

A cracker eating and whistling relay race got everyone in a good humor for the dougnuts and coffee which was donated by the Hulsebus Grocery Company.

Everyone went home feeling that "The More We Get Together, the Happier We'll Be!"

CLAIM KLEMME IS MOST MODERN IN ELECTRIC USAGE

Has More Appliances Per Meter Than Any Other Town On Line

The Central States Electric Company has just completed the installation of a multiple Frigidaire unit at the Wellemeyer Company. The new electric refrigerating machine will replace ice at the store. Coils have been installed in a large display counter, and another coil has been installed in a large ice box. With this new equipment the store will be able to keep meat, food and fruit at the right temperature to prevent its spoiling in any way. The new units which have been installed are of the very latest types.

In telling of this new installation Mr. Klingman, manager of the Garner division of the Company stated that the town of Klemme has more electric appliances per meter than any other town on the entire system. This includes electric ranges, electric refrigerators and many other home conveniences.

This fact points out that Klemme is the most modern town on the Central States Electric Co. lines and that the people of Klemme are for modern homes and conveniences.

Much of this is due to the excellent service rendered by the Central States Company. A call for help brings quick results, and their men are courteous, friendly and ever ready to rended service.

There are now many homes in Klemme equipped with electric ranges and electric refrigerators.

MARCH CLOSED WITH A SNOW STORM EASTER SUNDAY

Put Roads In Bad Shape Again And Delayed Field Work

Well, we hope old man Winter is now perfectly satisfied with the way he has treated North Iowa and that the snow storm Sunday was his final fling. Six to eight inches of snow fell again Saturday night and Sunday, which didn't help roads or field work any. In fact many roads which had begun to dry nicely the past week were worse than ever after the snow had filled old ruts and melted down, adding more soup to the muck. Field work which began last week was likewise given a back.

The bright sunshine has dried the snow and with a few warm, windy days we will again "be sitting pretty."

The highway leading into town was at times impassible the fore part of the week, and at times resembled a junk yard full of old cars which were stuck fast. However bridge planks are being laid over the worst holes and traffic will not be tied up.

NOTICE

Proposals For Erection Of School House In Liberty Township

Notice is hereby given that the proposals for the erection of a brick school house in Liberty Township District No. 2, in the county of Hancock, state of Iowa, will be received by the undersigned, at the Center School House, District No. 5, Liberty Township at 8:00 o'clock p. m. on Monday, April 29, 1929, at which time the contract will be awarded to the lowest responsible bidder. The Board reserves the right to reject any or all bids.

Plans and specifications may be seen at my place in Liberty township.

JOSEPH SCHULDT, Secretary.
Klemme, Iowa, April 2, 1929.

NOTICE TO CHICKEN OWNERS

You are hereby notified to lock up your chickens at once, in accordance with town ordinance which prohibits chickens running at large with penalty for violation of same.
Paul Grange, Mayor. 2tc

LAW SAYS ALL EGGS MUST BE CANDLED IN IOWA

Des Moines.—There will be no "open season" this spring when it is not necessary for buyers of eggs to candle all receipts of eggs, according to information furnished to egg buyers by the Iowa Department of Agriculture.

The candling of all eggs insures that farmers who produce good eggs will not be penalized in price for a buyer's purchase of inferior quality egg from other sources. Candling also helps to improve the average quality of Iowa eggs, thereby ing to increase the average price received for the product.

Eggs will average better in quality during the spring than at any other season of the year, but the only method of stopping the sale of eggs that are unfit for food is by continuation of the candling regulations throughout the year. Dealers who buy eggs by the case from other dealers are required to buy them "loss off."

The new council organized and met Monday as an equalization board. Although it always causes a lot of howling when property are adjusted, raised or lowered in value, never-the-less it's good business to get things somewhere on an equal basis and we think the men did a pretty fair job of it. No one realize everybody won't agree with us, but could YOU do any better.

The Morningside College outfit started for Sioux City Monday. Dale Bailey piloted her Ford coupe with Harvey Nelson and little Billie Croston as passengers. "Poodles" and Donald Gibbs resurrected the old "Spirit of Sioux City" and Lewis Croston as chief navigator. As we have heard no news to the contrary the westward trek might have been successful.

1. Mexican federals in charge to drive rebels out of Torreon. 2. President Hoover's three secretaries, George Akerson, Lawrence Richey and Walter Newton. 3. Henry L. Stimson, new secretary of state, and his wife arriving in Washington.

NEWS REVIEW OF CURRENT EVENTS

Hoover Will Give Jobs Only to Those Who Prove Their Fitness.

A RIGID scrutiny of all applicants for federal appointments is to be the policy of the present administration. President Hoover has announced in no uncertain terms that in the future every applicant for office in the government service must demonstrate his fitness for the job. His first move in this direction is the repudiation of the present Republican organizations in Mississippi, South Carolina and Georgia, on the grounds of irresponsibility and corruption, and the demand that they be replaced by Republican leaders possessing integrity and the confidence of their communities. In Texas, Alabama, Florida and some other states, where the existing leadership has fallen into disrepute, the President announced that these leaders would be compelled to divide authority with advisory committees acceptable to the administration.

The President's action is based on the report of the Brookhart committee of the senate which made an investigation into the sale of federal appointments and other political corruption in that region.

This important announcement by the President was brought out by questions at the press conference at the White House. He said:

"Recent exposure of abuse in recommendations for federal office, particularly in some parts of the states of South Carolina, Georgia and Mississippi, under which some of the federal departments, mainly the post office, were misled in appointments, obviously render it impossible for the old organizations in those states to command the confidence of the administration, although many members of these organizations are not subject to criticism. But such conditions are intolerable to public service, are repugnant to the ideals and purposes of the Republican party, are unjust to the people of the South and must be ended.

"The duty of reorganization, so as to correct these conditions, rests with the people of those states, and all efforts to that end will receive the hearty co-operation of the administration. If these three states are unable to initiate such organization through the leadership of men who will command confidence and protect the public service, the different federal departments will be compelled to adopt other methods to secure advice as to the selection of federal employees.

"In other states, including Alabama, Arkansas, Louisiana, Texas and Florida, the Republican leadership has in recent times shown increasing strength and is now rendering able and conscientious service in maintaining wholesome organization, under whose advice the appointments to public office have steadily improved and commended themselves to the citizens of those states with increased confidence in the party."

A VERITABLE earthquake hit the stock market early in the week when call money went skyward. The first jump to 14 per cent caused a first-class money scare in Wall street. Stocks came roaring down with a crash. Frightened traders sold for any price they could get, almost demoralizing the market. There was no sustained support, the rich men's stocks giving the most ground and the standard issues crumbling along with the good and the bad.

When call money later reached 20 per cent, the highest since 1920, records, prices and bank accounts went smash. Odd lot dabblers and the heavy plungers dumped their holdings overboard when they could no longer wait for the rally which came, but came too late. The market never was so violent. Later, when bargain hunters, investment trusts and institutions began buying, prices began the upward swing and recovered some of the ground lost.

Toward the end of the week the bulls recovered control of the market when assurances came that the money panic was not to be continued. Money eased to 15 per cent and was in adequate supply. New York banks kept the market unhampered as to any stringency in funds. The National City bank sent $25,000,000 over to the exchange to be loaned at rates from 16 to 20 per cent. J. P. Morgan sent over $10,000,000. This brought some cheer to the situation. Short covering got under way and prices reacted buoyantly.

Under the urging of the federal reserve board the strings about the credit supply have for some time been drawing tighter and tighter. It is the plan of the board to bring about a diversion of the country's money from speculative markets to normal channels of business. Should the week's mammoth liquidation serve its purpose, bankers anticipate a gradual relaxation of the purse strings.

One result of the market upset was that several houses sent out notices to their customers that hereafter all margins would be 50 per cent. Brokerage firms admitted that if the federal reserve policy was continued and if the banks persisted in refusing to accept all kinds of securities and continued marking down the loaning rates, all margins in the street would have to be 50 per cent to ease the strain on the brokers.

THE arrival in Washington of Henry L. Stimson, former governor general of the Philippines, to take up his new duties as secretary of state, completes President Hoover's cabinet. Secretary Stimson immediately plunged into the work of familiarizing himself with pending problems and the duties of the office. Former Secretary Kellogg remained with him for a few days to give what assistance was necessary.

The new secretary of state finds himself confronted with several matters of high importance such as American participation in the arms parley at Geneva, the Mexican revolution, American adherence to the World court on the basis of the Root substitute for the senate's reservations, the German reparations question, and necessary changes in the diplomatic corps.

PRESIDENT HOOVER has appointed Col. Henry L. Gilchrist, medical corps, to succeed Maj. Gen. Amos E. Fries as chief of the chemical warfare service, and Col. Stephen O. Fuqua to succeed Maj. Gen. Robert H. Allen as chief of infantry. Both General Fries and General Allen, whose terms of office have expired, will revert to their regular rank of colonel, but both will be eligible to retirement as major general on application or because of age limit.

The appointments of Colonels Gilchrist and Fuqua, who will rank as major generals during their four-year terms, was in accordance with the rotation policy adopted, but not always followed, during the last administration, and which was indorsed as "sound and in the interests of good administration" by Secretary of War Good.

ANOTHER airplane disaster has taken its toll of those who venture in the air. A pilot and three passengers were killed when the Ryan monoplane in which they were flying from Columbus to New York crashed into a tree in a dense fog on South mountain between Colebrook and Mount Gretna, Pa. Witnesses said that when the plane hit the tree it wavered, then rose slightly, turned over on its side, and crashed into the dense thicket. All of the men were dead when workmen from the Pennsylvania National Guard encampment grounds nearby reached the scene. It is believed the pilot lost his way in the fog and was trying to get his bearings over the military reservation when the accident happened.

THE preliminary work of the reparations commission in Paris has been completed and the conference has settled down to a discussion of the actual problem of figures. Chairman Owen D. Young said: "The work of the committee had reached a point where we must consider figures before proceeding further in order to fit them into the scheme already written down. The only problem facing us is the number of annuities and the amount each year."

It is generally admitted that the total indemnity will be in the neighborhood of ten billions of dollars, but it remains to be figured out at the present value through the discount rate over the number of years it runs. The Germans stand pat for 37 years and the French insist on 58 years.

REPUBLICAN members of the house committee on agriculture, which is conducting hearings on the farm relief problem, are said to be almost unanimous in their approval of President Hoover's farm relief program. All the Republican members of the house committee as well as the members of the senate committee, which is also conducting hearings, have conferred with the President and have been acquainted privately with his general views on the form which legislation should take.

THE Europa, pride of the German merchant marine, worth about $12,000,000, was completely gutted by fire. The building of the ship had taken about 18 months of patient night and day labor and was practically finished. Owing to the large quantities of paint, tar, oil and other inflammable materials aboard, the firemen found themselves up against a hopeless task in fighting the flames. An overheated plumber's stove was believed to have caused the conflagration.

THE Mexican revolution is slowly disintegrating. The army of Gen. P. Elias Calles continues its relentless plodding northward. Jiminez, former headquarters of the rebel commander-in-chief, Gen. Jose Gonzalo Escobar, has been occupied by the federal forces. The rebels abandoned the place on the approach of the federal troops.

The town of Douglas, Ariz., has got in bad because of the revolution. Charges that two city-owned machine guns and 37,000 rounds of ammunition had been sold to the Mexican rebels for $2,000 and that the city received only $500 of the money precipitated an investigation of the whole city administration by the United States Department of Justice. Several city officials were arrested and later released under bonds pending trial on charges of conspiring to smuggle arms across the border.

THE Radio Corporation of America has sold its communication interests to the International Telegraph and Telephone company, receiving stock equivalent to $100,000,000.

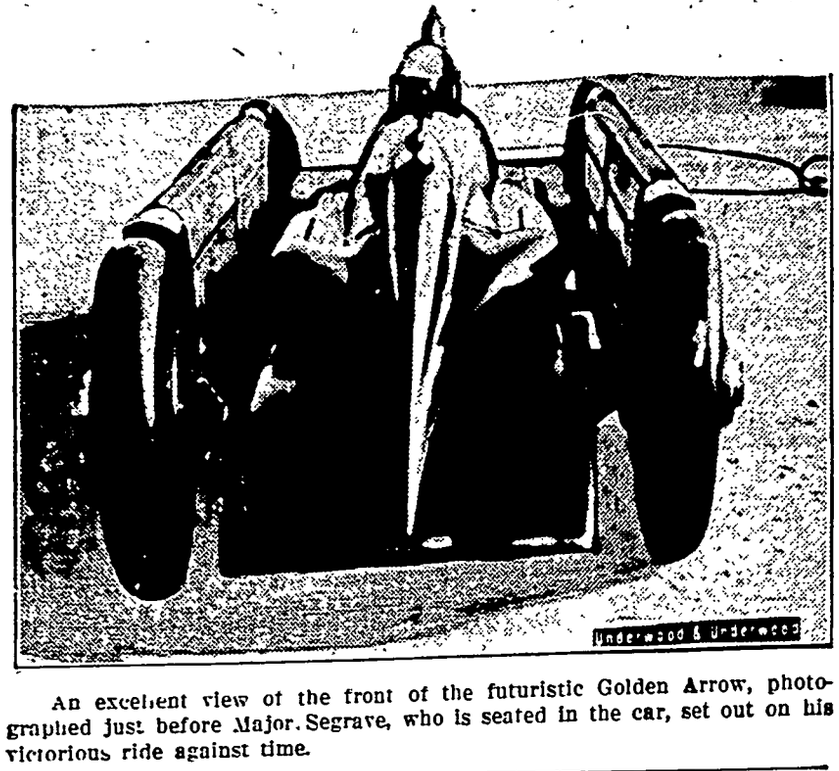
The deal makes L T. & T. the largest international communications system in the world and apparently leaves Radio Corporation as a manufacturing and distributing company for radio apparatus, phonographs and talking films, divorcing it completely from communication enterprises.

TORNADOES and rains have added to the horrors the South has had to endure lately. Taking stock of the damage while floods still raged in some sections it was found that 46 lives was the toll taken by the two elements in six states. The greatest loss of life was in Tennessee, where 20 lives were lost at Harriman, seven at Rockwood and three at Webster. Four of the deaths were in Kentucky. With the exception of Tennessee and Kentucky, where major streams were rising, conditions were improving over the South.

Along the upper Mississippi the river continues to rise slowly. Police and militia are on guard at the danger spots to protect the property of those who have been forced from their homes by the flood.

A COMIC opera revolt which broke out in the principality of Monaco lasted all of 25 minutes and left the country completely paralyzed for the most of a day. A band of 600 determined citizens marched to the castle of Prince Louis and forced him under pain of abdication to rescind the decrees which have recently turned the tiny principality into a hotbed of unrest. The most important decree that Louis was forced to repeal was that for the cancellation of the municipal elections. The citizens celebrated their victory by spending the rest of the day in a cafe.

GOLDEN ARROW GIVEN ITS FIRST TRIAL



An excellent view of the front of the futuristic Golden Arrow, photographed just before Major Segrave, who is seated in the car, set out on his victorious ride against time.

MOTORING TRIPS IN EARLY DAYS

To Make Sure the Thing Would Work Engineers Accompanied Royalty.

How royalty and members of highest nobility, in the early days of motoring, were often accompanied on their trips by an engineer "to make sure the thing would work," is related by Hector Rabezzana who more than 25 years ago frequently enacted the role of "road engineer."

Mr. Rabezzana, who was awarded the medal of merit some years ago for outstanding contributions to the automotive industry and who is a spark ping development engineer, goes on to say:

Appeal of High Speed.

"Twenty-five years ago the fastest automobile, equipped with a 12-horsepower engine, capable of a speed of slightly over thirty miles an hour, was considered a regular 'speed demon.' The high speed made great appeal to the sportsman and especially the royal families. To them speed meant freedom and the privilege of traveling incognito with all the carefree enjoyment of an adventure.

"Before the crowned heads took to the wheel themselves, they would have either an engineer of the factory or one of the best mechanical men that the factory could produce, drive the car and take care of the necessary repairs on the road, which invariably were in order about every twenty miles of driving. These days were full of excitement and happy memories for the driver, who was entrusted with the lives of such personalities. He was treated in a truly royal fashion, as some one belonging to another aristocracy; and at the termination of these trips was presented with some gracious token of friendship from the higher-ups—very valuable gifts, and sometimes titles were conferred that put the lucky driver in the peerage line without much effort.

Start of Race Drivers.

"Many of the old-time racing drivers, whose names have made history in the automobile field, started their colorful career as personal drivers for some majesty or other who later turned the car over to them for sport racing, thus putting them in the limelight.

"Those racing drivers were certainly engine experts—tuning-up of their racing machines was always their personal job and many of them were so jealous of the machine that they would make sleeping quarters near it on the eve of the race, so no one but themselves could touch the delicate machinery."

Great Deal of Trouble With Motor Car Horns

A great deal of trouble with motor car horns can be traced to a combination of conditions. If carbon brushes are used, the commutator is likely to become so smudged that a greater amount of current is required to operate the horn motor. At the same time, if the battery is low, it is obvious that the born will not operate properly.

Another common condition is for the driver to fail to give the horn proper attention, with the result that brushes get out of adjustment or the bearings of the horn motor are not given sufficient lubrication to keep them moving properly when the battery is weak.

How to Judge Used Cars Not Hardship for Expert

Selection of a good used car is handicapped by a tendency to put success down to luck or a knack possessed by relatively few. Judging a used car should be no hardship for the experienced motorist.

One factor that hampers success is a temptation to look at the car as the product of a certain period. This is wrong. The used car should be judged purely on its merits and not in relation to the merits or lack of merit of others produced about the same time. If the particular car one is inspecting is a good car, it's a good car regardless of the condition of the one that followed it from the production line.

Outline of Simple Plan to Clean Spark Points

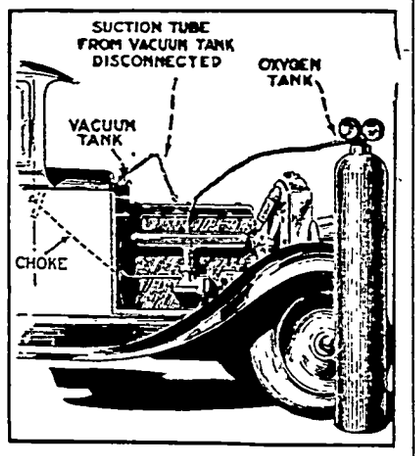
To clean spark plugs simply fill the lower part of the plug with alcohol, or any liquid metal polish, and allow to stand for a few seconds; take a piece of wire covered with one thickness of cloth and rub the carbon from the insulator, then wipe clean and dry thoroughly before replacing in the engine. Cleaning a plug in this way is far better than taking it apart to clean. When a plug is once taken apart there is great danger that it will not be put together securely again, which would cause leakage due to it not being gas tight. This in turn causes loss of power.

In cleaning the sparking points use emery cloth or a knife.

In cases where the electrode is badly worn away and when the insulator is coated heavily, cleaning is of no avail. It is then better to install new plugs.

Burn Out Carbon While Engine Still Running

Carbon is usually burned out by blowing oxygen into the spark-plug openings. A quicker way is to draw the oxygen into the cylinders while the motor is running. Attach the hose from the oxygen tank to the intake manifold by unfastening the tube to the vacuum tank and connecting the oxygen hose to the fitting of the vacuum tank lead. Ordinarily the tank will hold sufficient gasoline to run the motor during the oxidation. Be sure that the radiator is full of



Burning Out Carbon.

water. Start the motor and run it slightly faster than idling speed. Turn on the oxygen gradually and at the same time close the choke slowly. Adjust the oxygen valve until the motor receives so rich a mixture that it will miss. Then let the motor run for ten minutes. The surplus oxygen combines with the carbon in the combustion chamber. Not only is the combustion chamber thoroughly cleaned in this way, but also the exhaust ports and valve stems, and the spark plugs. —R. P. Cole, Paterson, N. J., in Popular Mechanics Magazine.

Cause of Poor Starting and Big Battery Drain

An automobile properly serviced, engineers agree, should give as good performance after 25,000 miles of driving as it did when new.

Among the important minor servicing items that should be looked after regularly are spark plugs. Old or worn out spark plugs cause poor starting and excessive drain on the battery, poor running, and loss of power, especially on hills.

AUTOMOBILE HINTS

To paint the exhaust pipe requires a compound capable of resisting a high degree of heat.

* * *

The next endurance marathon will be riding in a rumble seat from New York to Los Angeles.

* * *

The purchase of the Lancaster and Fruitville turnpike in Lancaster county, Pennsylvania, leaves but one toll road in operation in that state.

* * *

Indianapolis is endeavoring to regulate pedestrian traffic. As usual, however, the pedestrian prefers to assume the risks rather than be regulated.

* * *

When a motorist is blinded by the headlights of an approaching automobile he is legally required to slow up, according to many court decisions throughout the country.

WHAT DR. CALDWELL LEARNED IN 47 YEARS PRACTIC

A physician watched the resul constipation for 47 years, and bel that no matter how careful people their health, diet and exercise, co tion will occur from time to time next importance, then, is how to it when it comes. Dr. Caldwell al was in favor of getting as close to as possible, hence his remedy for pation, known as Dr. Caldwell's Pepsin, is a mild vegetable comp It can not harm the system and habit forming. Syrup Pepsin is ple tasting, and youngsters love it.

Dr. Caldwell did not approv drastic physics and purges. He di believe they were good for any system. In a practice of 47 yea never saw any reason for their us Syrup Pepsin will empty the bowe as promptly.

Do not let a day go by with bowel movement. Do not sit and but go to the nearest druggist an one of the generous bottles of Dr. well's Syrup Pepsin, or write "S Pepsin," Dept. BB, Monticello, Ill for free trial bottle.

Fair Exchange

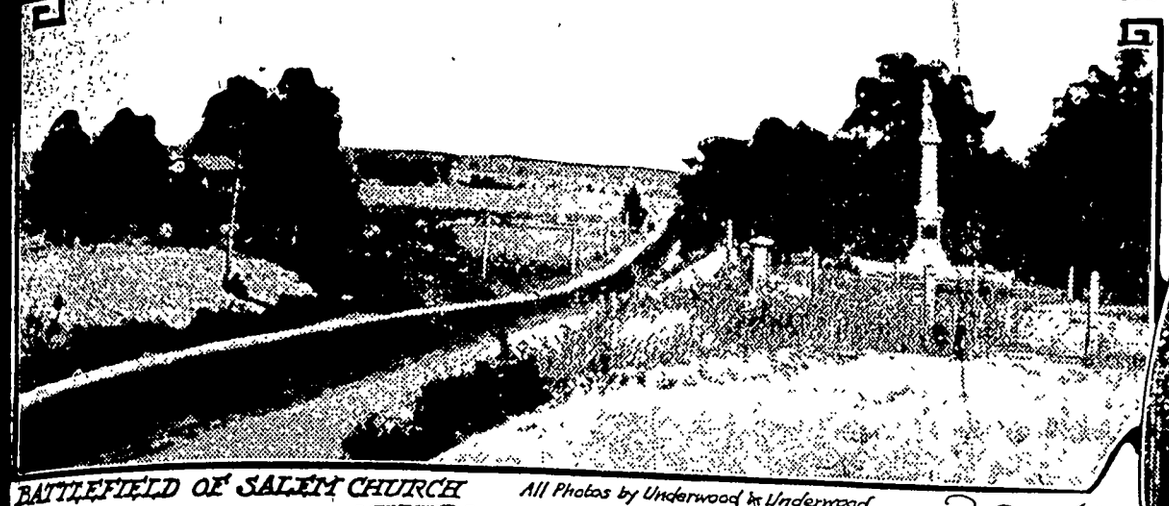
America's Bloodiest Battlefield a National Park

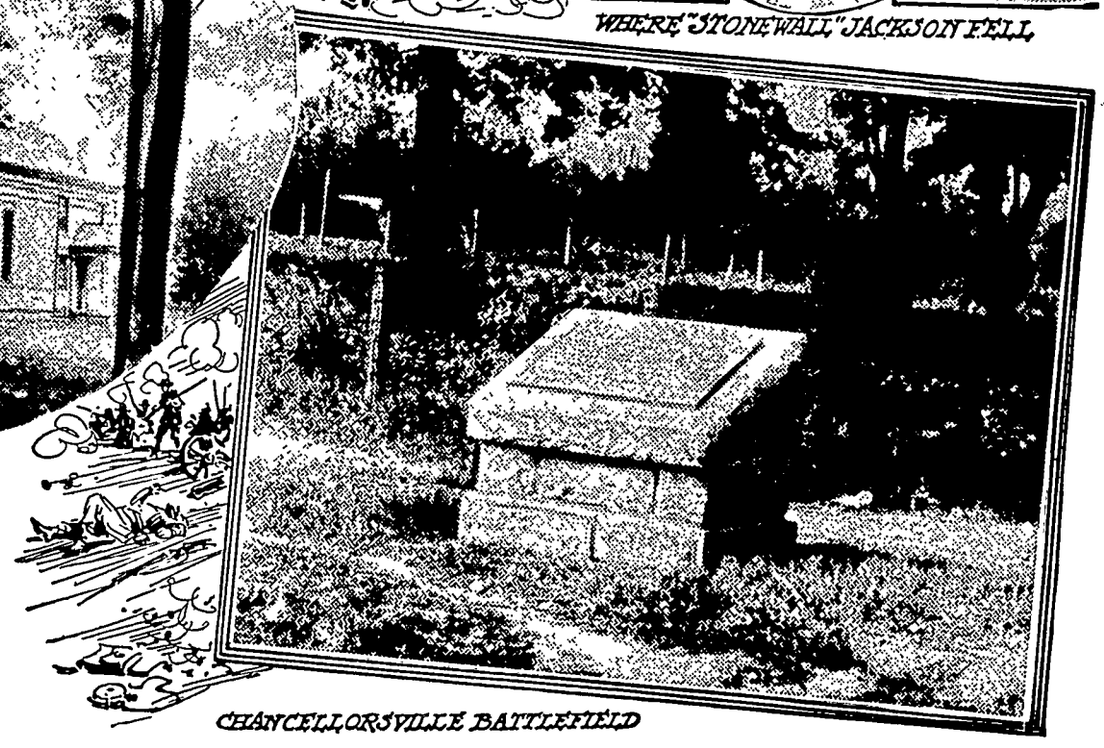


BATTLEFIELD OF SALEM CHURCH

All Photos by Underwood & Underwood

WHERE "STONEWALL" JACKSON FELL

SPOTSYLVANIA COURTHOUSE



CHANCELLORSVILLE BATTLEFIELD

By ELMO SCOTT WATSON

AMONG the many national parks which Uncle Sam has set aside for the enjoyment of his children, none is more interesting nor has had a more thrilling history than the Fredericksburg and Spotsylvania national battlefield park, the latest addition to the list of our national playgrounds. For here was America's greatest scene of courage, a small section that could be included within a semicircle with radius of twelve miles, an area that has been appropriately called "The cockpit of America," where more armies maneuvered and more men were killed and wounded than on any other similar area in modern history prior to the World war. This park, which was dedicated late last year by President Coolidge, includes six battlefields—Fredericksburg, Chancellorsville, Cold Harbor, Salem Church, the Wilderness, and Spotsylvania Courthouse. Here in the space of nine days of actual fighting 700,000 men struggled heroically and 100,000 were killed or wounded. No fewer than nineteen generals were shot down on the fields. Among them were Jackson, Longstreet, Cobb, Hays, Bennett, Grey, Jenkins, Dandridge, Sedgwick and Wadsworth. It is a curious coincidence that the latter was the grandfather of Sen. James Wadsworth of New York, chairman of the military affairs committee which reported on the bill presented to congress last year providing the establishment of this national battlefield park.

"History stumbles over itself in this neighborhood," says a recent writer. "Confederate soldiers fought in the same trenches that their Revolutionary ancestors had used in same sections. Two battles had to be fought at Manassas before the curse of war left that field. Two were fought at Cold Harbor and two at Fredericksburg and two in the Wilderness thickets. In Fredericksburg remains of Colonial, Revolutionary and Civil war days are to be found on the same block. The Wilderness stretches as grim and tangled today as in the days of the '60's; the Chancellor House, Spotsylvania Courthouse, the trenches of Bloody Angle must all appear very much as they did then." For this region was the very heart of the conflict between the two greatest forces of the Union and the Confederacy, the Army of Northern Virginia, defending Richmond and the Army of the Potomac, seeking to break its way through the cordon of Gray to the Confederate capital.

The first fighting in the section took place in November, 1862, when Burnside attempted to capture Richmond by way of Fredericksburg. First occupying the town he crossed the Rappahannock under cover of his own guns and attacked the entrenchment on Marye's Heights to the west of it. After a battle that lasted all day, during which the Irish Brigade made itself immortal by its series of hopeless charges on the Heights and the Sunken Road at the foot of them, Burnside withdrew, recrossing the river. He had lost 12,965 men and the Confederacy 5,377. Burnside, after Fredericksburg, was succeeded by Hooker who early the next spring moved his army up the north bank of the Rappahannock and crossed at three different places, marching by as many different roads towards Chancellorsville, where his forces converged and started toward Fredericksburg. Through this move Hooker had got behind Lee's army while Sedgwick, with 30,000 men, was in front of it. Learning of the move Lee faced his army west and advanced to meet Hooker, leaving behind a small force to watch Sedgwick, still at Fredericksburg. The Federal forces planned to crush Lee between them. Sedgwick broke through at Fredericksburg and proceeded to Salem church where Lee sent reinforcements to his troops which had retreated before the advancing Federals. The two forces fought on May 3 and Sedgwick was driven back across the Rappahannock, crossing at Banks Ford, several miles above Fredericksburg.

In the meantime Lee met Hooker's advance at Chancellorsville, defeated the Federals and forced them to recross the Rappahannock several miles above the ford at which Sedgwick's troops had crossed. The losses in the fighting were 16,845 for the Federals and 12,463 for the Confederates.

Lee followed up his advantage by advancing into Pennsylvania, was defeated at Gettysburg and the two armies returned to Virginia where they wintered. Grant had assumed command of the Northern army, Jackson had been killed and his place in the Southern army taken by Longstreet.

On May 5, a year after the battle of Chancellorsville, Grant crossed the Rappahannock about fifteen miles above Fredericksburg and started towards the Wilderness. Lee, who had wintered at Orange, moved east to intercept him.

It was critical time in the life of the Union. Notwithstanding Gettysburg the North was discouraged. Her sea commerce was badly disrupted, volunteering, which had begun spontaneously and with burning enthusiasm, had stopped and she had been forced to resort to the draft. Political plotting was rife, demands to end the war were insistent. Had Lee forced Grant back across the Rappahannock there would have been a cry for an armistice, backed by Europe.

At "the opening in the Wilderness" the two armies met and began what some historians place among the 20 decisive battles in the history of the world. For three days they struggled for the strategic key to the situation, the Brock road—for Grant the way to Richmond, for Lee the means of blocking the movement and forcing the Federals again across the Rappahannock.

The two great armies swayed and fell back and advanced in turn. One hour the Brock road appeared to be Lee's, again it was almost within Grant's grasp. Then, slowly, the tide of gray began to sweep past the Brock road. Grant's army fell back stubbornly, contesting every inch of ground. His career threatened, Grant sent reinforcements. These, too, gave way before the slowly advancing rebels. But suddenly the Confederates ceased to move forward. Concentrated effort was momentarily succeeded by hesitation and confusion.

For the second time chance and fate had combined against the fortunes of the South. A single bullet, fired by one of his own men, had struck down General Longstreet within less than two miles from the spot where almost exactly one year before "Stonewall" Jackson, Longstreet's predecessor, also had been killed by his own men.

Grant seized the situation and attacked. The Confederates withdrew to their first lines. The Brock road was Grant's. The next day he began moving over it towards Spotsylvania Courthouse, on the way to Richmond. Lee, to the east of him, began to cut a road through the woods to meet him. At the Wilderness the Confederates had lost 10,641 men, and the Federals 17,668.

The race for Spotsylvania, ten miles away, continued with straggling encounters until the armies met at Bloody Angle where took place the greatest hand-to-hand and small arms fighting that is recorded in history. Here for 12 hours nearly 60,000 men struggled for the possession of a section of land containing less than 500 acres, not larger than the average Virginia farm.

At times the ground became cluttered with the dead and dying. Lines of Union troops advanced to the trenches and fired blank into the faces of the Confederates who rose to defend them, whole companies hacked each other to pieces with bayonets, a tree 12 inches in diameter, a portion of which is preserved in the Smithsonian institute, was cut down, bit by bit, by musket balls. The wounded could not be cared for and many were left on the field to die unattended. The fighting at Bloody Angle entirely overshadowed the fighting on the other seven miles of line along the battle front at Spotsylvania.

After Bloody Angle the exhausted armies fought no more for nearly a week. Then Grant began a "siding" movement toward Richmond and Lee moved along on parallel lines. In a short time both armies were on the North Anna river, out of the park area. The Union forces had lost at Spotsylvania 16,577 men and the Confederates proportionately more, their killed and wounded being 11,588. The total losses for both sides in the five battles on the park area was 102,811.

The passage of the bill in congress last year which set aside this area, not as a memorial to war but as a monument to the 100,000 who gave their lives to the nation, marked the culmination of an effort which began more than thirty years ago and which had been made by the people of both the North and the South. Although the effort was unsuccessful for many years these fields of battle were places to which thousands of Americans made patriotic pilgrimages every year and in the march of modern progress they found golf balls instead of cannon balls whizzing across the fields. For famous old Mannsfield hall on the battlefield of Fredericksburg, had become a country club and the game of golf was being played over the field once drenched with blood. Cannon balls which had been unearthed in the vicinity were used as tee markers. It was on the porch of this country club that President Coolidge stood last fall at the dedication of the new national park, and said: "The unanimous action of congress in passing the military parks bill and the joint participation of the people of both the North and the South in carrying into effect the law is another welcome demonstration in a long line of events not only that the war is over but that reconciliation is becoming complete."

General plans for the park which are now being carried forward by the government reveal that the project is one of the greatest of its kind ever undertaken. The builders of the park propose to strive for beauty. Scores of miles of fine roads will be built, lined with grass lawns and abutting the trenches in which the northern and southern armies met on the fields of Fredericksburg, Chancellorsville, Spotsylvania and the Wilderness. Along these roads will be long lanes of blossoming trees, cherry trees, dogwood trees, japonica and many other specimens, some of them very rare, the purpose being to so plant the trees that at all times of the year when any trees are in bloom many hundreds of blossoming trees of one or another variety will offer a colorful drive longer and as beautiful as the famed cherry drive at Washington.

The roads will be well built and about the same width, but at spots the roads will swell into large parks, with beautiful stone or rustic bridges in imitation of nature, and with memorials and markers placed upon them. Beside these areas, where the government will build large parks along the parklike roads, it is expected that states, organizations and individuals will establish parks on the roads as memorials.

An effort will be made to get away from the stilted monuments peculiar to battlefields, and to have placed upon these fields only monuments and markers which have inherent beauty and which are to be placed in spots which can be made attractive and where shrubs and flowers will add charm and there nooks and benches will be provided for those who want to rest. Every advantage is to be taken of the natural landscape to add beauty to the roads and parks. In order that the battlefield park may not be marred by ungraceful monuments or shrubbery, the fine arts commission in Washington will pass upon every design and nothing but those which they approve can be built.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

KEEP AN EYE ON YOUR EYES

A SCHOOL nurse recently visited a home to report defective vision in one of the younger members of the family. Records had indicated that average acuteness was noticeably lacking in this particular scholar, while to all appearances the intelligence of the child was normal.

"You see," said the nurse, "the medical inspector came around today and discovered that Robert needed glasses. No wonder he has appeared dull!"

The point of this story is not to demonstrate the intelligent care that is being given to conserve child life and develop it to its highest state of mental and physical efficiency, but to emphasize the vital part that the eyes play in both the young and old.

As a matter of fact, both parents of this youngster were chronic headache sufferers because they needed glasses; and didn't have them. But after the nurses' story they developed a suspicion of this fact and straightway went to a store and purchased glasses for themselves!

Of all the foolish things man is likely to perpetrate upon himself to tamper with that marvelously delicate mechanism which registers objects for the brain is about the worst. Yet thousands of ignorant "smart" persons will go to a counter, try on glasses until they get a pair that "fit their eyes" and march away elated over the dollar spent and the ten dollars saved!

It is difficult to understand the colossal conceit which prompts an otherwise intelligent person to "pick out" his own glasses—an act which calls for most expert examination and experience.

And the mail order business is just as bad. However, urged by the high-powered statements of expert advertisement writers, there are many, especially those of the more remote or rural regions, who answer a questionnaire and obtain a "perfect correction in beautiful gold frames." The fact that the eyes are likely to suffer vitally as a consequence is quite beside the point.

Just remember this: Your eyes are your best friends. It is no fun to wear glasses and if you do not have to do so consider yourself fortunate. But find out about this matter and obtain your information only from an oculist or registered optometrist. It is quite beyond your own intelligence.

A final warning: If you are suffering from an affection of the eye then proceed quickly to an oculist only. He alone is the person qualified to advise you, and when necessary, to tamper with this most useful member of your anatomy. Keep an eye on your eyes!

* * *

STAY OUT!

"LOVE thy neighbor as thyself," is a familiar biblical injunction. But even so, it has its qualification. And the quarantine sign is one of them.

There appears to be a popular notion that for those on the "inside looking out," quarantine is a mandatory sort of thing, but that for those on the "outside looking in," it means little or nothing.

Oversolicitous about the welfare of a sick neighbor or a neighbor's sick children, people will deliberately disobey the order plainly set forth on the sign and go visiting by the way of the back door. Thus, under a misguided idea of friendship, they will violate a rule which for their good and that of others should never be broken.

One has to be commended for the display of solicitude for friends and acquaintances, but if it takes the form of invading a home that is guarded by a quarantine sign it is carrying the thing a bit too far. It must be understood that neither fancy nor whim had anything to do with its placement. Based upon the absolute knowledge that health officials possess, it is put up for the protection of the public. It plainly says, "Stay out!" And that means everyone except the physician and persons in attendance upon the case. Others are trespassers, and criminal ones at that!

The germs of the communicable diseases are not to be tampered with. While invisible to the naked eye, they nevertheless possess the power to hang on to you, infect you, or by using you as a carrier, infect others.

Just a few days ago there was a back-door infraction of a scarlet fever quarantine. "Not a bit afraid," remarked the kind neighbor lady who was reluctantly admitted to the home. She was not prosecuted, convicted and fined for her indiscretion, but she paid a penalty nevertheless. Scarlet fever attacked her in five days later and in two weeks she was dead.

Therefore, the next time you see a quarantine sign on a friend's house, use the telephone for your inquiries and solicitations. Don't stick your head into the lion's mouth. It might bite!

Advice

A man is hopelessly egotistic who won't listen to advice—but he is worse than that if he takes advice without giving it a great deal of thought and turning it over many times in his mind.

Are You Ready

When your Children Cry for It

Baby has little upsets at times. All your care cannot prevent them. But you *can* be prepared. Then you can do what any experienced nurse would do—what most physicians would tell you to do—give a few drops of plain Castoria. No sooner done than Baby is soothed; relief is just a matter of moments. Yet you have eased your child without use of a single doubtful drug; Castoria is vegetable. So it's safe to use as often as an infant has any little pain you cannot pat away. And it's always ready for the crueler pangs of colic, or constipation or diarrhea; effective, too, for older children. *Twenty-five million bottles were bought last year.*

Fletcher's CASTORIA

For Galled Horses

Hanford's Balsam of Myrrh

Money back for first bottle if not suited. All dealers.

Prefer Somber Bibles

Bright-colored Bibles are in demand in districts of South America, but in no other part of the world, declared Dr. J. H. Ritson, chief secretary to the British and Foreign Bible society, which sells 3,000 Bibles a day in 600 languages. This statement was made in reply to the question, "Why are Bibles so often not only printed poorly, but bound in mournful black?" propounded recently by the bishop of Southwark, England.

For true blue, use Red Cross Ball Blue. Snowy-white clothes will be sure to result. Try it and you will always use it. All good grocers have it.—Adv.

Was one of the inalienable rights overlooked in the list—that of being a fool?

Makes Life Sweeter

Too much to eat—too rich a diet—or too much smoking. Lots of things cause sour stomach, but one thing can correct it quickly. Phillips Milk of Magnesia will alkalinize the acid. Take a spoonful of this pleasant preparation, and the system is soon sweetened.

Phillips is always ready to relieve distress from over-eating; to check all acidity; or neutralize nicotine. Remember this for your own comfort; for the sake of those around you. Endorsed by physicians, but they always say *Phillips*. Don't buy something else and expect the same results!

PHILLIPS Milk of Magnesia

USE GLENN'S SULPHUR SOAP

Contains 33⅓% Pure Sulphur

Skin eruptions, excessive perspiration, insect bites, relieved at once by this refreshing, beautifying toilet and bath soap. Best for

Soft, Clear Skin

Frank and Donald Gibbs and their guests, Lewis Croston and brother, Billie, from Morningside, Sioux City, were dinner guests at the A. D. Gimer home Saturday evening.

Walter Lemke, who attends the University at Iowa City, spent the Easter vacation visiting with his parents, Mr. and Mrs. R. R. Lemke and family.

Sheep Helpless When Turned on Its Back

There are so many ways in which sheep can and do die that it is a wonder any of them are left alive. The most peculiar method of all is that called "dying on their backs," writes A. B. Gilfillan in Atlantic Monthly. When horses or dogs roll they either roll all the way over or roll back to the position from which they started; they are unable to balance themselves on their spine, as it were. But when a sheep rolls and reaches a position with its legs pointing upward it is often unable to complete the turn, especially if it has a heavy coat of wool, as is the case in spring.

The reason for this is that a sheep's legs, being very thin, are not able to exert any pull to one side or the other and thus aid the sheep in righting itself. Its only chance is to twist itself violently, in the hope that some movement may turn it on its side. If unsuccessful in this the unnatural position for some reason causes gas to collect in its body and it begins to bloat. Finally the pressure of this gas on its heart and lungs becomes so terrific that these organs cease to function. If the ewe is found at any time before life is extinct and is turned over on her stomach she will get up, stagger off and deflate, looking meanwhile like a misshapen balloon.

Brides Cling to Old Beliefs About Luck

Wedding superstitions are dying out very slowly, according to a British authority on matrimonial problems.

Although the superstitious bride is now the exception rather than the rule, the question of lucky or unlucky hours, days or months still holds a place in the mind of many a young woman contemplating marriage, he said.

May is usually a lean month for weddings, and there are couples who hesitate to get married on Friday. Others have a dread of the 13th of the month.

More remarkable still is the fact that one o'clock—the thirteenth hour—is very rarely chosen for the wedding ceremony.

Green—which, worn as an emerald, is believed to be a talisman against evil—was long viewed with disfavor as a portion of the wedding dress. In recent years, it has been used more frequently.

Recently, a prospective bride stumbled on the doorstep while about to enter a register office. Had she actually fallen there is little doubt that the ceremony, which was taking place on a Friday, would have had to be postponed till a more propitious time.

Destructive Locusts

The cicada or harvest fly is not a locust at all, the true locust being a grasshopper. The periodical cicada or 17-year locust is a large insect about an inch and a half long with wide blunt head and with prominent eyes on the outer angles. It is black, banded and marked with some orange on the abdomen, and it has six reddish legs. It has four shiny transparent wings with network of orange-colored veins. Its life cycle is about 17 years, most of which is spent as a larva or pupa underground. The locust has long hind legs with thickened thighs and narrow leathery wing covers.

Beware "Friendly Enemy"

The original saying, "I fear the Greeks bearing gifts," appears in Vergil's "Aeneid." The reference is to the siege of Troy. The Greeks besieged the city of Troy without success. Finally they resorted to strategy, offering a huge wooden horse to the Trojans as a gift. The horse was taken into the city, and while the Trojans slept the warriors, with which the horse was filled, came forth and opened the gates for their Greek comrades. The conclusion is that one should fear an enemy most when he seems friendliest.

"Penny" Is Unofficial

The term "penny" has been in general use in this country since the Revolutionary war, but it has never been the official designation of any coin minted in the United States. It is and has been a recognized coin of Great Britain and the coinage of England was used in this country for a number of years after the Revolution, and the use of the term became an established custom at that time and the name became applied to the cent as it was about the same value. The first cents actually minted under the Constitution appeared in 1793.

Hopeless

The minister had been talking to the little son of a neighbor.

"It grieves me very much, my young friend," he remarked, "to hear you say that you pray for your mother and not for your father. Now, tell me the reason."

"What's the use?" returned the boy. "Mamma says that dad is beyond all hope.'

Get Set

This thing of jumping around from one job to another may make you acquainted with a lot of scenery. But it will never make you acquainted with success. Stick with your job long enough to call it by its first name. —Grit.

Don't indulge in irony except with intelligent people; they are the only ones who will understand.

Drop a nickel in the toy bank today and have 5 cents' worth of exercise trying to get it out tomorrow.

Rats Sacrifice Leg to Escape Drowning

For years the residents of Orrs island, Maine, were puzzled by the prevalence of three-legged rats. It remained for Jack Woodle, a New Meadow clamdigger, to solve the mystery. Clamdiggers often in gathering up their spoils leave a few live clams or quahogs scattered about the flats. The rats while scampering about in search of food frequently put a foot into an open shell. The shell closes instantly with a viselike grip. Woodle came across several rats so held. Watching, he saw the frightened rats drag the shellfish along for a few minutes, but the rough nature of the flats soon tired them. Rather than be drowned by the incoming tide, these rats deliberately gnawed away the member imprisoned and freed themselves.—Indianapolis News.

Park and Deer Herd Belong to College

Prof. Stewart Gordon, the new president of Magdalen college, Oxford, says a writer in the London Daily Chronicle, will have at least one unique distinction. He will be the ruler of the only college in the world which possesses a real deer park. The Magdalen college deer are sometimes supposed to be descended, like those of Epping forest, from the original wild fallow deer associated with Robin Hood and his romantic outlaws, but the original herd, if it ever existed, must have been consumed for food during the siege of Oxford in the Civil war. There is no mention of the deer in the college accounts until the beginning of the Eighteenth century.

Not Interested

When Carl von Hoffman returned with thousands of feet of film from Africa, where, with his movie camera, he had spent two years studying various interior tribes, he thought the stuff might be of financial interest to the movie people.

He sought out the director of the "educational" department of one of the big screen concerns and asked him if he was in the market for especially fine ethnological pictures.

"No," said the director, "we never go in for religious stuff."—Panorama.

Luck's Other Name

Julius Rosenwald, Chicago capitalist, said modestly on his sixty-fifth birthday that he imputed his success to luck.

"I'm convinced," he went on, "that it's luck, or opportunity—the same thing—that makes our Rockefellers."

Then Mr. Rosenwald laughed and ended:

"Of course a great many men fail to recognize opportunity because she is always disguised as hard work."

Their Mistake

"Where's your new license?" demanded the officer, eyeing the 1928 plate.

"Why, officer, we're just on the way to the courthouse now to get it," exclaimed the grass widow and widower in the car, with one voice.

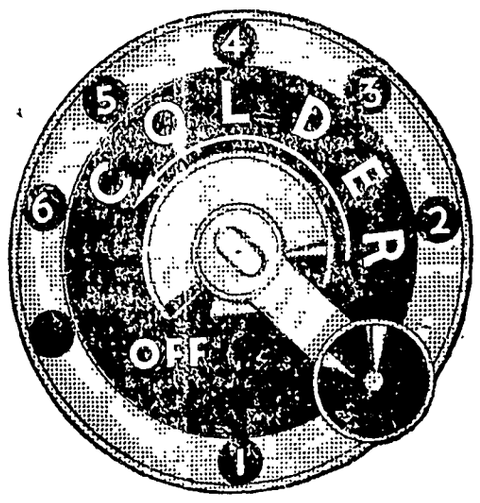
SPECIAL OFFER

for seven days only

We are prepared to make a special offer to all who buy Frigidaire during our 7-day demonstration. Let us tell you about this offer. Let us give you the surprisingly low prices. Let us tell you about the General Motors liberal payment plan. Come in tomorrow or at your first opportunity. We will be open evenings until ten o'clock all this week.

Tuesday



we start a special 7-day demonstration of the new Frigidaire

Cold Control

Delicious frozen desserts will be served. Valuable books will be given away. You will have an opportunity to operate the new "Cold Control"... to see exactly what it does and how it does it. And in addition to all this, the most sensational electric refrigerators ever announced will be on display. Will you be our guest?

Central States Electric Company

GARNER, IOWA

LIVE STOCK

START BROOD SOW IN RIGHT SHAPE

Will Produce Larger Litters Than Thin Animal.

Proper attention to feeding and care of the brood sows before and during the breding season has a big influence on the number of pigs one will be able to save, according to W. E. Carroll of the University of Illinois. A sow in thrifty condition and gaining rapidly a short time before she is bred will produce larger litters than a sow in thin condition.

Because of this it is desirable to feed sows a full feed of a well balanced ration for a week or ten days before they are bred. This stimulates the maturity of the eggs in the ovaries which are to produce the litters of pigs. If the breeding is delayed until pasture is gone, it will be well to include in the ration some good quality alfalfa hay, either as alfalfa meal or fed whole in a rack.

Protein suppplements also are necessary. If skim milk or buttermilk is available a gallon of either of these daily for each sow, together with a ration of corn or barley or a mixture of corn and oats or corn, oats and barley, will give excellent results. If skim milk is not to be had, a mixture of two parts tankage, one part linseed meal and one part alfalfa will make a fine substitute. The sows probably will eat about one-half to three-fourths of a pound of this supplement in addition to a full feed of corn. Water, of course, should be available at all times.

Where soy beans are available it is possible also to supplement the ration with these. The sows probably will eat about a pound of the beans daily a head. In case the soy beans are fed, a mineral mixture should be allowed. This can be made of two parts ground limestone, two parts steamed bone meal and one part salt. After the sows are bred the ration can be reduced in order to avoid getting them overfat for farrowing.

Tankage Is Excellent Protein Supplement

Tankage is an excellent protein supplement to use with corn for hogs. At the present prices of feeds, a mixture composed of tankage two parts, linseed or cottonseed meal one part, and alfalfa meal one part is cheaper and will produce just as rapid gains as tankage. Shorts is worth approximately the same, pound for pound, as corn for fattening hogs and slightly more than corn for pigs at weaning time. The shorts may be fed dry or mixed with milk. Oats is worth about one-half as much per bushel as corn. Not over one-third of the grain ration should consist of oats. A protein supplement should be fed with oats, shorts, and corn. Pigs that receive corn plus skim milk or tankage in the proper amounts do not need additional mineral when running on alfalfa pasture.—A. D. Weber, University of Nebraska.

Silage Is Excellent for All Live Stock

Silage can be fed to sheep, in fact, it is quite the universal practice for those who own silos and sheep to feed them silage. The fact of the matter is silage has a much wider use as a feed for all classes of live stock than is commonly accorded it.

In the feeding of silage to sheep or horses there is one point that must be given close attention. These two classes of animals should not be fed silage that in any manner is not first-class silage. Sheep and horses react very unfavorably toward spoiled silage. Outside of this one point, however, silage can be fed to sheep.

Live Stock Items

Young animals are more susceptible to trouble from parasites than older ones.

* * *

Good feed and plenty of exercise in winter will aid the ewes to produce good lambs in spring.

* * *

There can be no definite rule as to just how much grain is required to keep the ewes in proper condition for the spring lambing.

* * *

Live stock frequently suffer from lack of water during freezing weather. When the only water supply available is a stream or spring, daily attention is necessary to be sure that the ice is broken.

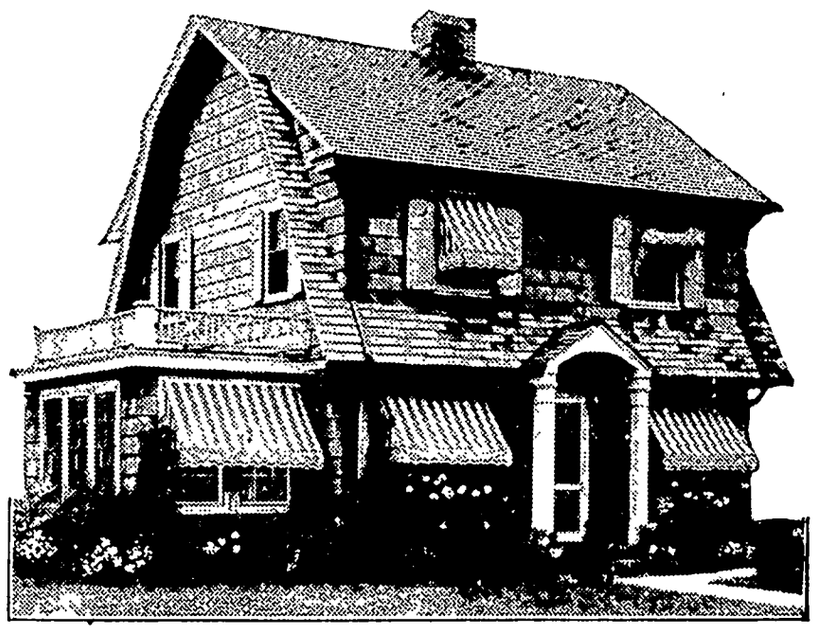
* * *

Feed supplied to the sow plays an important role in the success of the spring pig crop. It is not too early to think of this matter because proper nutrition is just as essential at the time of mating as in any subsequent period.

* * *

Make sure plenty of clean, fresh water is always available. Drinking cold water is claimed by some men to be dangerous for the sow. The greatest danger comes from drinking water that is contaminated with disease germs, dirt and filth.

Attractive Frame Shingled House Is Adapted to Small Building Lot



The roof treatment of this frame shingled home makes it stand out as an attractive house. The home contains five large rooms and bath. The living room extends the width of the house with french doors opening onto the sun porch. Upstairs there are two large bedrooms and bathroom.

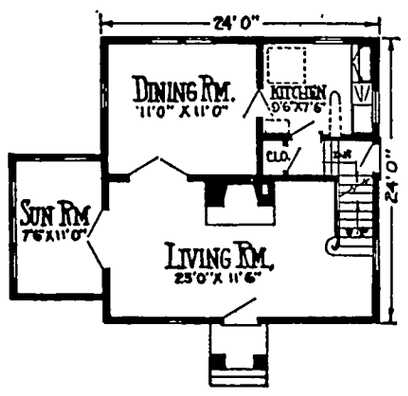
By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

In a great many localities there are many people who want to build a home, but do not care to or have not enough money to make a large investment in a lot on which to build a house. They would rather put more money into the home and less into the real estate on which it sits.

Shown in the accompanied illustration is a very unusual design for a five-room home. It is a most attractive house and when it is surrounded with plantings such as shown in the illustration it becomes a real home.

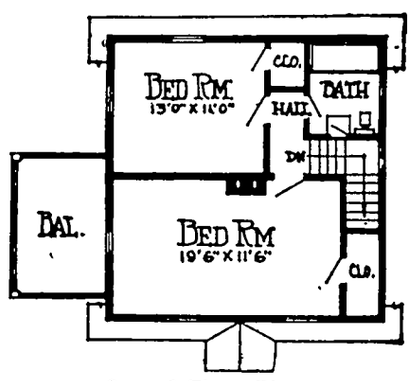
This house is 24 feet square, exclusive of the front entry way projection



First Floor Plan.

and the sun room shown at one end. It contains five large rooms. The living room into which the entrance door opens is 23 feet long by 11 feet 6 inches wide. Shown on the floor plan is an open fireplace in the center of the house. At one end of the unusually large living room is an open stairway running to the second floor. At the other end connected by double french doors is a sun room 11 feet deep and 7 feet 6 inches wide. The dining room also is large, being 11 feet by 11 feet and is also connected with the living room by double french doors. When the doors into the sun room and living room are open the main floor becomes practically one spacious room. The kitchen is at the rear and is 9 feet 6 inches by 7 feet 6 inches.

Upstairs there are shown on the plans two bedrooms and a bathroom. The stairs open into a short hall off



Second Floor Plan.

of which these three rooms open, making the bath convenient. The bedroom at the front is 19 feet 6 inches long by 11 feet 6 inches wide. The one at the rear is 11 feet by 13 feet. This arrangement permits considerable closet space off both bedrooms.

The roof and wall treatment of this house make it one that is distinctive. The side walls are covered with shingles and the steep pitched roof is broken with a dormer at the front and at the back. This break in the roof gives head room in both bedrooms besides adding to the exterior appearance of the house. Over the sun room is a balcony which can be used as an open sleeping porch with the addition of a frame for curtains.

Under the house is a basement also 24 feet by 24 feet. The house is of frame construction set on a concrete foundation, giving the basement concrete walls.

Finish of Woodwork Is Job for Expert

As one correspondent writes: "It's almost impossible to make my rooms artistic because of the woodwork. In every decorative scheme I've tried, the woodwork stands out like a sore thumb. What would you advise?"

Evidently this home decorator fails to appreciate the adaptability of woodwork. If it doesn't match—change its color. If, for instance, the color scheme is bright and gay, make the woodwork harmonize. And follow the same rule with a dark decorative scheme. There is nothing easier.

On soft woods and where the scheme calls for a color in the woodwork, paint or enamel will give the desired finish. Nowadays, however, enamels are used more frequently than paint. Enamels come in such lovely colors that they can be mixed safely to secure a variety of tints and shades.

Today woodwork in the same neutral tone as the background of the walls is decidedly the vogue. Sometimes it is a little lighter, sometimes a little darker. But don't let the woodwork unduly assert itself.

Real hardwood finished in its natural color always will be in style; although often it is desirable to stain the wood so as to preserve the grain and at the same time change the color tone. This is not a difficult job. But be sure that good varnish or varnish stains are used. The finish should be waterproof—one that can be cleaned without harming its luster or durability.

Woodwork and its part in the decorative scheme is one of the problems over which many home decorators want expert advice.

Single-Paneled Door

The simple single-paneled door lends itself more readily to different styles of architecture than the more elaborate one.

Many of the more beautiful homes are using this type of door because of its richness and simplicity.

Stucco

Stucco should never be run to grade. There should be at least eight inches of brick work or of solid cement at the grade line.

Various Woods Used for Floor Purposes

Both hard and soft woods are used for floors. The sofe wood, unless it is edge grain, does not stand up under traffic. Edge grain flooring is quarter-sawed so that the annual rings run clear through the board and make parallel lines along its face. There are thus no splinters to be kicked up. In a flat-sawed board the annual rings come to the surface of the plank in layer upon layer of flake-like forms. They present at this surface thin edges which splinter very readily.

Although flat-sawed soft woods will not stand direct wearing, the edge grain material is very durable indeed. Hard woods may, on the other hand, be of edge grain or flat grain. Their temper is hard enough so that they do not readily splinter. The quarter-sawed hard woods are expensive and are therefore not commonly employed.

The soft woods most used as flooring are pine and fir. Pine for inside work and fir for porch floors and the like. Redwood, cypress and spruce are also used for outside work.

The hard woods most commonly used for flooring are oak, maple, birch and beech. Other hard woods are occasionally used.

Pecky Wood Wins Favor for Interior Trimmings

Antique hunters have company in home builders who seek peck wood for trimmings.

Pecky cedar or cypress is a grade of lumber in which the wood looks decayed because of numerous holes filled with brown powder. This appearance is deceptive, for such wood is exceptional in its power to resist decay. After the logs are sawed into lumber the character of the wood does not change.

The holes extend longitudinally, varying in width from one-quarter to three-quarters of an inch, and often are several inches long. Architects are using such lumber as interior trimming. When it is tinted and varnished the effect is striking, according to those who have inspected the finished product. What causes the wood to become pecky is not known.

POULTRY FACTS

CLEAN AND SPRAY TO CONTROL LICE

Preventive Measures Should Be Taken Before Summer.

Surveys, made by the poultry department of the North Carolina State college, show that more than 53 per cent of all poultry flocks in North Carolina are infested with either lice or mites.

"These pests multiply very quickly during the hot months and for that reason control measures should be taken before the summer sets in," says Dr. B. F. Kaupp, head of the department. "The henhouse should be given a thorough cleaning with a 4 per cent coal tar dip. All cracks and crevices should be sprayed and the perches painted with a pure dip or creosote. New scratch litter and nesting material should be put in before the hens are allowed to use the house. If these precautions are not taken, the sitting hen will be killed and the small chicks will weaken and die."

The adult fowl should be dusted with sodium fluoride. This should be used sparingly as there is some danger of injuring the skin. A pinch of the material should be held between the thumb and finger and worked among the feathers. This operation should be continued until the entire body has been covered, and should be repeated in five days if all the lice were not killed.

All brooder houses, henhouses or any place that the chickens roost should be gone over with the 4 per cent solution of coal tar and where possible the hens transferred to another house during the cleaning.

Doctor Kaupp recommends that new houses be built, especially where the old houses have been in use over a long period and are thoroughly infested with the pests. The old houses should then be torn down and burned, he says.

More Hopper Space for Feeding Fowls Is Urged

To enable all the hens to obtain plenty of laying mash it pays to allow ten feet of hopper feeding space to each 100 hens. A five-foot trough hopper open on both sides gives good satisfaction. These open hoppers built up on a little platform to keep out the straw litter are proving more popular than wall hoppers, and some poultrymen are tearing out their wall hoppers and installing the long open boxes. Then the mash does not clog and is plainly visible to the hens. If the wall hoppers remain they can be used as a reserve supply and mash taken from them and added to the open hoppers as the supply needs replenishment.

Eliminate Tuberculosis From Chicken Quarters

Fortunately with poultry the disease is not difficult to control. It should be remembered that the disease is confined to very old birds. Birds under a year old are seldom infected. By maintaining a flock in which the number of old birds has been kept at a low figure the danger of infection is reduced. If, however, the premises are badly infected the house and yards should be given a rest for two years. The house can be thoroughly cleaned and disinfected, and then be used, but to eliminate tuberculosis from the yards the resting of the yards is necessary. During the resting of the yards their cultivation is desirable.

Actions of Guineas

A guinea will usually build her nest in the edge of a brier patch or under a clump of weeds, and while on the nest will cackle a soft and long cackle similar to the male bird, but not so loud. The male bird often stands near the nest and cackles while the hen is on the nest. When the hen gets a large nestful of eggs, she will get broody and go to sitting on them, if she is not broken up. When she goes to sitting she rises and flies from her nest when she comes off.

Direct Sunlight Best

Direct sunlight promotes health and egg production. Sunlight through ordinary window glass is ineffective. Only direct sunlight or sunlight which passes through special glass or glass substitutes, which will permit the ultra-violet rays to pass through, is beneficial.

Direct sunlight or its equivalent aids in maintenance of health, reduces mortality, increases egg production and improves hatchability and quality of eggs, especially egg-shell texture.

Feeds for Poultry

For poultry feeding, the right kind of protein is generally obtained from milk, skim milk, buttermilk, whey, fresh meat, meat scraps, fish scraps, tankage, or alfalfa leaf meal feeds. Very little of it is found in the common farm feeds, and for this reason when home-grown grains are used, it is necessary to purchase small amounts of the high protein feeds to supplement the home-grown grains. Milk of any kind is the most popular protein feed for poultry.

Martian Transformer

A Brazilian inventor recently announced that he has perfected a device to make walking swifter and less tiresome. The apparatus, which he calls a Martian transformer, weighs about two pounds and is attached to the back. It is supposed to energize the nervous system, so that one may hike long distances over high mountains with a small expenditure of bodily energy. With a similar device weighing about 33 pounds, the inventor claims that one may take off in aerial flight like a bird. As yet, however, no practical demonstrations have been given.

On the days that "everything goes wrong," you will find that about all that went wrong were trifles.

NICE WORDS WON'T DYE a dress or coat...

Neither pretty pictures nor colorful adjectives will dye a dress or coat. It takes real dyes to do the work; dyes made from true anilines.

Next time you have dyeing to do, try Diamond Dyes. See how easy it is to use them. *Then compare the results.* Your dealer will refund your money if you don't agree they are better dyes.

You get none of that re-dyed look from Diamond Dyes; no streaking or spotting. Just fresh, crisp, bright new color. And watch the way they keep their brilliance through wear and washing. They are better dyes because they contain plenty of real anilines—from three to five times more than other dyes.

The *white package* of Diamond Dyes is the original "all-purpose" dye for any and every kind of material. It will dye or *tint* silk, wool, cotton, linen, rayon or any mixture of materials. The *blue package* is a special dye, for silk or wool only. With it you can dye your valuable articles of silk or wool with results equal to the finest professional work. When you buy—remember this. The *blue package* dyes silk or wool only. The *white package* will dye every kind of goods, including silk and wool. Your dealer has both packages.

THE FEMININE TOUCH

(© by D. J. Walsh.)

THE old yellow house stood, the last one on Carrol street, like a pot of gold at the foot of the rainbow. That was what his Uncle James had told Jimmie years before when he had come to live with him. And many other queer sounding things he had said, which made Jimmie ponder. Sentimental—old Bethie, the housekeeper called him.

But Uncle James believed himself anything but that detestable word. Hard-boiled was the word that would have pleased him. Tyrannical. (Said tyranny resulting from the fact that Jimmie's mother, being engaged to James Boyd, had played the age-old trick of marrying his best friend instead, much to her undoing, and upon her denth had left the child Jimmie to the jilted lover's care.)

And now Jimmie was bringing a bride to the old "pot of gold"—which to any other bride than Roberta would look more like a pot of soap, ruined in the making. But Roberta's bliss knew no bounds, in spite of the fact that underneath Jimmie's golden layer of happiness there had fluttered a fear that hard-boiled uncles and dilapidated houses and brides would make no pleasant mixture.

"It's my first chance of ever being anybody," she had said, when he, swept madly from his heretofore well-balanced feet, had commanded her to marry him. "You just give me a chance, Jimmie, and I'll show you that I can be a real lady!" (There were things about Roberta's family which Jimmie never wanted Uncle James to know.)

To Jimmie's surprise everything sailed along smoothly enough. Except for Jimmie's worries—which he kept to himself. The added expense of a wife. He had sneezed at it to Uncle James! But how was he to know women's clothes cost so much? He had told Roberta the truth—that he wanted her to have the best. Sure—maybe all the other fellows wanted their wives to have the best, too; but they'd probably learned to keep it to themselves! Well—! by now she surely had everything bought up that she would need for years to come, so there was no use to hurt by putting the lid on.

But here Jimmie found himself all wrong. Bob bought a coat. It was a beautiful coat, and she looked—well, it made Jimmie Boyd forget the things he didn't want Uncle James to know when she pivoted before him in that coat! A real lady—and then some! He wanted to ask her the price of it, but he couldn't. Because he thought that she didn't want him to—especially before Uncle James.

And then one afternoon at the end of the week when he returned from work she kissed him more tenderly than was her wont—which was very, very tender, indeed! "You're the queerest man!" she accused mysteriously—and Jimmie was too happy to wonder at her assertion.

The next week Roberta bought new curtains—draperies, she called them. And the week following she took a sudden pillow craze. There were red pillows, blue ones, yellow and mottled ones wherever he went in the old house. And the next week the worn-old lounge and the battered chairs bloomed out. Chintzes, she called it—and there were lamp-shades, rose hued and warm. Everything looked a hundred per cent better.

But still Jimmie was worried about the bills—after the staggering blow her check for the coat had dealt his little bank-roll. At the end of the month, however, in spite of all her fold-rols, from kitchen knives to porch-mats, Jimmie failed to find a check of Roberta's nor did any bills come in. The young husband was puzzled. And once again an imprisoned fear fluttered underneath his golden layer of happiness. Her mother had been forced by a trifling husband to do her neighbors' family washings — something Uncle James must never know—but surely Roberta would not attempt a thing like that!

His own mother had been forced to do the same, he dimly remembered. But now that Uncle James had given Jimmie his perfectly good Boyd name, Jimmie's wife must never drag it down. Heavens! Roberta boasted of her buxom strength. Could it be that she was "working out" during his and Uncle James' absence through the day?

Jimmie rose resolutely the next morning and went to the kitchen where Roberta in a bewitching apron was preparing breakfast. For a moment his heart wavered; then he determined to have it out with her. The scene ended with Roberta, at white heat, accusing Jimmie of a frame-up to rid himself of her. And she ran blindly from the room, snatched on her hat and coat, and went back to the folks who had "never taught her how to be anybody."

After a while Uncle James came in to breakfast—it being Sunday. But there was none ready. Jimmie knew he would be only too glad to cook it himself to be rid of a woman in the house, for he had dismissed old Bethie as soon as Jimmie could well exist without feminine care.

But the old man's eyes failed to gleam with satisfaction when he was informed that Roberta had gone. (No need for Jimmie to lie about it.)

"Why in the world did she leave you, Jimmie?" he demanded.

"She had no reason, Uncle James! Merely a squabble over money. I asked her where she'd been getting the money for all these new fixings, and she accused me of framing-up on her to get rid of her—because, she declared I'd been leaving the money on the cook table for her every week!"

"But, Jimmie," gasped Uncle James, "I left the money there for her!"

"You? Why should you do it, Uncle James?"

"There were debts—of which you didn't know."

"Rot!" retorted Jimmie, grabbing his hat. Then he dashed out the door.

After an interminable time he returned with Roberta.

"You told me," roared Uncle James tyrannically, "that the price of the coat was twice as much as the check. I thought—"

"It was—but I got it at half-price sale," said Roberta. "I told you that to stagger you—Jimmie said you hate women so!"

"And you said some women got nice coats and paid for them on the weekly installment plan. I knew Jimmie thought yours was paid for—and you acted like you didn't want him to know—"

"I didn't want him to know I was aggravating you," put in Roberta. "As for the money I found on the cook table every week, I thought it was Jimmie's queer way of giving me an allowance—as he never seemed to want to talk money matters with me."

Uncle James' roar was growing into a harmless murmur. "You looked so pert. The coat was so becoming that I thought it shouldn't go back—so I left all I could spare on the table to help pay for it."

"And now I've got to pay you back all that money—serves me right for fibbing to you!" said Roberta.

"No, you don't!" objected Uncle James. "You've made this old sow's nest into a real home! I don't see how you did it with so little."

"It wasn't the amount of money spent, Uncle James," gloated Jimmie; "it was the feminine touch!"

"Looks reasonable!" said Uncle James, turning away in the face of their kisses.

Unable to Convince Jurors of "Frog Rain"

A larceny trial supposed to be unique in the annals of criminology, resulting in conviction by a jury of five recently, grew out of a series of thefts of preserved frogs from a biological supply company in New Orleans by two former collectors of the company. The interesting feature of the trial, says Percy Viosca, Jr., in a communication to the American Association for the Advancement of Science, was virtually a clash between modern mythology on the one hand and the sciences of ecology and taxonomy on the other.

A single charge was filed, covering only one theft, that of 462 preserved frogs, consisting of five species, four of local and one of northern distribution. The defendants, pleading not guilty, set forth the plea, through their attorney, that it is a well-known fact that evaporation draws frogs and fish up into the clouds and the rain showers them again onto the land. It was therefore easily explained how the race f rana pipiens, indigenous to Indiana and Wisconsin, was collected in St. Bernard parish, in southeast Louisiana, by the collectors, who sold them to a competitor and to a local university.

"The employees of the company," says Mr. Viosca, "described and identified the five species in the barrel from which the frogs were stolen, these including a large percentage of rana pipiens, which had been imported from the two northern states in the shortage resulting from the unprecedented droughts of 1924 and 1925. Every detail in the chain of circumstantial evidence was presented by the state, even the purchasers acting as state's witnesses.

"Percy Viosca, Jr., and Henry B. Chase, Jr., of the biological company, were qualified as experts in taxonomy and ecology of the order of animals to which frogs belong, and it was necessary for living and preserved frogs to take the stand as exhibits in order to prove he story of the defendants untrue.

"A surprise of the trial was the presentation by the defendants of living specimens of rana pipiens which they claim they caught in St. Bernard parish the night before the trial in a typical rana sphenocephala habitat, several hundred miles from the nearest approach of the range of pipiens. The defense attorney then attempted to prove that the defendants had obtained their knowledge of frogs through experience, whereas the state's experts had obtained theirs from book study, but it was proved otherwise.

"The verdict was in a sense a victory for science in that the results of scientific study seemed to make a better impression upon a jury of New Orleans citizens than the fables and argumentations of the defense attorney."—New York Times.

Betty's Hallucination

"You say the newly married couple aren't getting along very well together?"

"Unfortunately it's true."

"Let's see, it was a case of love at first sight with Betty, wasn't it?"

"Yes, and now she's beginning to think she ought to have her eyes tested."—Boston Manuscript.

The Present Need

"The magician was great, pa. He changed water into wine."

"He's no good. What we want is a fellow who can change ice into coal."

Horticultural News

PRUNING PEACHES QUITE IMPORTANT

Tree Bears Its Fruit on New Wood Only.

Rapid developments are being made in the research work on pruning the peach. Experiments show that pruning is not a "cure-all" for all the ills of peach production. Nevertheless, pruning is one the important orchard operations and should be done carefully, states G. Woolsey, University of Arkansas college of agriculture extension service.

The peach bears its fruit on new wood only, and therefore pruning should be done with this in view. The young peach tree should be cut back to about 18 to 20 inches at the time of setting. This causes the peach tree to be low and open head in shape. Heading back at this point causes a number of small branches to shoot out below the cut. Three, four or five of these lateral branches should be selected as the main scaffold branches the following year, and the remaining ones should be removed. The lateral branches should likewise be cut back about one-third to one-half of their growth.

The following year, the second year after setting, the peach tree grows very rapidly. Pruning following this year should be a matter of cutting back about one-fourth of the new growth and in thinning out the undesirable branches that fill up the center of the tree. The tree at all times should be cut out in the center to admit the free circulation of air and to allow sunlight to penetrate all parts.

The third year peaches are inclined to come into bearing, although it is undesirable to allow them to fruit heavily. The first full crop will occur in the fourth season. Pruning, following the third growing season, should be done with this fact in view. The fruiting buds are borne usually in pairs along the new growth. The tips of the new growth are usually the last to form and, therefore, the buds are usually weak. The tree at this age should be pruned according to the growth. If a good heavy growth is made the previous season, the trees should be pruned accordingly.

Still Plenty of Apples Despite Tree Decrease

The number of apple trees in the United States has been declining since 1910, according to census figures. For each 100 trees in the country, in 1910, there were 70 and 64, respectively, in 1920 and 1925. This decrease in number of trees from 1910 to 1925 was around 79,000,000 out of a total of 217,000,000 trees reported in 1910.

This apparent large reduction in the total number of trees is less alarming than appears at first glance. Except in years of adverse weather conditions, there has been no shortage of apples, and the crop of 1926 was the largest produced in many years. In fact, commercial production of apples has been increasing, and it is believed that a large part of the reduction in the number of trees has taken place in scattered family orchards and in the less favorable commercial areas. In some areas production has increased because of the increased capacity of trees through an increase in age, through better selection of varieties and better orchard management.

Selection of Trees for Planting of Importance

The setting of the orchard, so far as the planting methods and the handling of the soil and the trees immediately after planting are concerned, is of prime importance. But there is another factor which, while perhaps it may be mentioned last, is a consideration which should occupy the attention of the orchardist very early. That factor is quality of the trees selected for planting.

It never pays to plant a poor, worthless tree.

Horticultural Facts

There are splendid opportunities for commercial growing of strawberries.

* * *

It is very difficult to do effective spraying without good spraying machinery.

* * *

It's a mistake to slash too freely into mature trees. A tree is a living thing. The main purpose of pruning is to keep down the height so that spraying and picking the fruit will be easier.

* * *

Where the grapevines are affected with scale insects, use the lime sulphur spray of one gallon lime sulphur to seven gallons of water.

* * *

While the methods of pruning all young, deciduous fruit trees are more or less similar, as the trees grow older, their differences in general growth, shape and fruit characteristics become more pronounced, requiring greater study and care in order to meet their individual requirements, and to serve better the economic needs of the grower.

Disinfect Seed Potato Pieces

Old Standard Treatments With Bichloride of Mercury Still Best.

In disinfecting potato seed pieces for the control of disease, the old standard treatments with bichloride of mercury or formaldehyde still prove best.

Test New Mixture.

This statement is made by G. W. Fant, extension plant disease specialist at the North Carolina State college, who has been testing some of the new commercial mixtures placed on the market recently. Mr. Fant states that these new mixtures are still in the experimental stage. They have not yet been developed to where they are perfectly safe. Several growers have had poor stands of potatoes resulting from the use of the mixtures. The new materials require a shorter time for treating the seed pieces and this is important at planting season, but if any of the material is allowed to collect on a seed piece in the form of a paste, as so often happens, injury will result.

In tests made by the county agents of Wayne and Pamlico counties, Mr. Fant found that injury to germination of the seed pieces was especially pronounced if any paste was allowed to collect. The new materials must be kept in suspension by constant stirring or a poor stand of potatoes will result. Mr. Fant made several photographs which showed a poor stand where potatoes were treated with the new materials as compared to the old, standard treatments with bichloride of mercury or formaldehyde.

Treatment Necessary.

In spite of this, however, Mr. Fant finds that potato growers realize that seed treatment is necessary if disease is not to be introduced into the soil. More attention is now being given to such seed treatment and better potatoes are being grown as a result. For the time being, however, growers had best use the old, time-tried disinfectants and leave the new mixtures alone until they have developed further. The saving in time may be offset by the loss in stand of crop.

Grit Quite Necessary to Hens When Confined

Grit seems necessary to hens when they are confined, but the supply is neglected in some flocks, and it must greatly reduce their powers of grinding feed like whole corn. We have been using a commercial mineral grit with good results, says a writer in an exchange. It contains 70 per cent carbonate of lime and 22 per cent tricalcium phosphate. This grit seems to have good grinding powers, and supplies some phosphorus for the making of eggs. It also seems to help in producing eggs of a good shell texture, and there are practically no soft-shelled eggs laid, at least they are not found. But we use oyster shells along with the mineral grit, and the combination seems all right. I don't know which material deserves the most credit for the good shell texture on the big Leghorn eggs.

Roughage Mills Favored for Cutting Bulky Feed

The popularity of roughage mills for cutting up corn stalks, straw, hay and other coarse feeds for live stock is indicated by their use on 35 adjoining farms near State Center, Iowa. On each of the 35 live stock farms is a roughage mill and no farm within this huge block is without one.

These 35 Iowa farm operators and many others find that by chopping it up with a roughage mill they can save much feed that would ordinarily be wasted. Feeds are made more palatable in this way for all classes of live stock, including hay for poultry. Roughage may also be chopped by means of recutting attachments for ensilage cutters.

Around the Farm

Get the harness repaired for spring work.

* * *

Drained soil will become warm earlier in the spring than wet soil.

* * *

It is cheaper to buy fertility in a rich soil than it is to buy fertilizers.

* * *

Fertilizer should be used in large enough amounts to grow a profitable crop.

* * *

Is that farm shop fixed up in good shape? You will need it in a hurry quite often.

* * *

We are reminded that a fertile mind is no less important to profitable farming than a fertile sod.

* * *

Drain the cylinder oil of the tractor as per manufacturer's instructions—oil is cheap compared to tractor repairs.

* * *

Alfalfa hay has a ready market now. A large increase in acreage would have to be marketed principally through live stock.

* * *

Chicks grow most rapidly the first few weeks. Since protein is needed for growth it should be fed in large amounts at first and in lesser amounts as the chicks grow older.

That Million-Dollar Feeling

"Heard you went home with a cold yesterday, Tom. How are you feeling now?"

"Boss, I feel like a million today. Took NR last night."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

NR TO-NIGHT TOMORROW ALRIGHT

MAKE THE TEST TONIGHT

BE WELL 'n HAPPY

Get Relief. *Drive Out the Poisons*

Auto-intoxication, Constipation, Biliousness, are caused by defective elimination. For over thirty years Nature's Remedy (NR Tablets) has proven the safe, dependable relief for these conditions.

Huh?

"This poet says the world is a masquerade." "He must think some people have rented funny faces."

Constipation Gone. Has Roses in Her Cheeks Now

"About seven years ago, I was dying slowly of constipation. My system was full of poison, which not only dulled my senses, but my complexion was muddy, eyes blurred, my stomach was ruined, and I was continually catching cold. I did not have any life or energy.

"After reading one of your ads, I bought several bottles of Milks Emulsion, and began improving at once. Improvement was so marked that everyone noticed it, and spoke of how it cleared my skin, made my eyes much brighter, and put roses in my cheeks. In fact, I was an entirely different person. I took altogether 15 large bottles of Milks Emulsion, and looked wonderful and felt the same way. It absolutely made me over. It adds more to your looks than anything I have ever heard of. After I had taken the first 8 bottles, people began to notice the improvement in my skin and my eyes being brighter.

"Every woman should know of it. I have never had a cold since I took Milks Emulsion, no stomach trouble or constipation. I think it is a God-send to humanity.

"A nephew of mine was almost dead of stomach trouble. I started him on Milks Emulsion and while he has only taken 4 bottles, he can eat nearly anything, and is beginning to feel fine.

"You will always find me a Milks Emulsion booster." MRS. REBECCA CAMPBELL, R. R. 1, Dyersburg, Tenn.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Philippine Coinage

Money coined for the Philippine islands first arrived in the Philippines from the Philadelphia and San Francisco mints in June, 1903, and was first placed in circulation in July, 1903. This was done in accordance with the provisions of a tentative law passed in 1902. On June 23, 1906, an act was passed to establish the standard of value and to provide for a coining system in the Philippine islands. From that time on the San Francisco mint, when requested to do so, has coined money for the Philippines. For the past few years the United States has not struck coins for the Philippines. The old dies are still in use.

Norwegian Tree Planting

Norway's forests are valued at approximately $250,000,000, three-fifths of the forest area being made up of pine and fir trees. Since 1900 Norway's Afforestation association has planted between 10,000,000 and 15,000,000 trees annually.

People who forgive their enemies may be accused of being afraid of them.

What Do You Mean, "Aged?"

Speaking of Chief Red Fox, an article says, "Though nearing his sixtieth year he is wiry and active and able to engage in campaigns, were they necessary." Age is a relative matter. The young reporter in referring to any citizen past forty speaks of him as "aged." The other day we heard an elderly gentleman say, "Youth has no time for age. I called to take my niece, fifty-eight years old, out to lunch, but she told me she had a luncheon engagement, so I was compelled to lunch alone."—Houston Post-Dispatch.

School Children's Sickness

Children lost about 4 per cent of the possible days of attendance at school on account of sickness, according to an article by Dr. Hugh S. Cumming of the United States public health service.

City's Earliest Names

The earliest name of Bethlehem was Ephrath or Ephratah.

WHEN damp days, **sudden** changes in weather, or exposure to a draft makes joints ache, there is always quick relief in Bayer Aspirin. It makes short work of headaches or any little pain. Just as effective in the more serious suffering from neuralgia, neuritis, rheumatism or lumbago. No ache or pain is ever too deep-seated for Bayer Aspirin to relieve, and it does not affect the heart. All druggists, with proven directions for various uses which many people have found invaluable in the relief of pain.

Dr. R. W. Specht, Dentist, Garner, Iowa. adv

M. F. Penrod went to Britt Wednesday morning to visit school.

Dom't forget the Concert tonight at the M. E. Church!

Edith Haupt is visiting for a few days at the Elmer Schlei home.

L. O. Deal was at Clear Lake on business Tuesday evening.

John Swalve and family were Mason City visitors Saturday.

Mr. and Mrs. Otto Pringnitz were Mason City callers Saturday.

Emil Barz is driving a new Ford two door sedan.

Miss Adella Schroeder of Keswick, came Saturday for a short visit with her mother.

Mr. and Mrs. J. C. Thomas and baby were Mason City callers Monday afternoon.

Miss Irene Harms went to Alden, Wednesday for a few days visit with relatives.

Mrs. Clarence Bachman and children visited several days this week at the Wm. Bachman home.

Mrs. Pete Moulton returned home Sunday from her visit with her parents at Fonda, Iowa.

The Auxiliary ladies sponsored a dance which was held at the Idle Hour last night.

Wm. Smith and Dorance Day were at Garner Tuesday and Wednesday having dental work done.

Glenna Gruetzmacher's Sunday school class of girls took in $8.60 at their bake sale Saturday.

Mrs. George Stokesbary and children, Eva, Orville and Geogre, were at Goodell on business Saturday morning.

Yep! Spring is here! Bill Lau and Harry Smith were both out at the creek fishing last week and both caught some fish.

Miss Ruth Bailey drove in from Sioux City last Thursday to spend her Easter vacation visiting with Klemme friends.

Mr. and Mrs. Chris Gram have purchased a General Electric refrigerator from the Central States Electric Co.

Miss Valeria Koerner worked at the telephone office on Easter Day, so the local force could enjoy a vacation.

Mr. and Mrs. August Ridder, and sons, Harold and Walter, went to Waterloo Saturday, returning to Klemme Monday.

EGGS FOR HATCHING— from large boned dark Reds. A healthy flock, Dean & Tompkins strain. $3 per 100. Luppo Blank, Klemme. 3c

Mrs. F. W. Franks of Waseca, Minnesota, came Wednesday evening for a visit until Sunday with Klemme friends.

Miss Fern Stille is enjoying a few days vacation (since Wednesday) from her household duteis at the C. A. Larsen home.

Mr. and Mrs. C. F. Keraus went to Clear Lake Tuesday to get their three cottages in readiness for the summer vacationists.

Miss Marie Blanks' Sunday school class expects to have a good collection Sunday as they have been selling candy and pop corn balls.

Mr. and Mrs. Fred Kluckohn have purchased a large model Hot Point Automatic Electric range from the Central States Electric Co.

We are glad to report that Mrs. J. N. Day is recovering from her illness and is able to sit up a little each day.

Mrs. "Happy" Johnson and children went to Spencer Wednesday for a visit until Sunday with her folks.

We are glad to report that Dr. Zinn is making a good recovery at the Mercy Hospital and expects to return to Klemme soon.

Send in your news items or call us on the phone. We want the news and are glad to have your co-operation. Times Office.

R. W. Elder, C. A. Larsen and family, Alvin Stokesbary and family, and Buford Meyers and family drove to Iowa Falls Sunday to attend the funeral of Grandma Fuller.

Mrs. Lena Schroeder and daughter, Adella, and Emil Barz and son Max drove to Alexander Saturday on business.

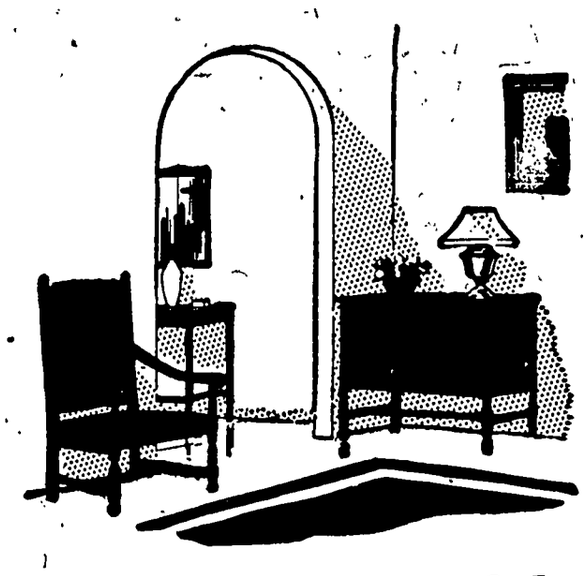
Albert Fuller and children, John, Walter, Ruth and Esther came Sunday from Minnesota to attend the fumeral of Grandma Fuller at Iowa Falls.

Ed. Jacobs, J. C. Thomas, C. G. Waterman and Sumner Trumbell went to Garner Tuesday evening to attend Masonic lodge where work in the second degree was put on.

We understand that Ben Coobs has purchased a lot from Mrs. Medaus, located north of the Grange residence, and intends to build a house this summer.

Emil Barz is driving a different brand of car than the last time we saw him. He went by so fast we didn't notice what kind he is now driving.

Mr. and Mrs. Chris Blumer have moved to the country, residing on the place formerly occupied by the John Osterkamp family. We understand the Lyn Drake family are moving to the place vacated by Mr. and Mrs. Blumer. Mrs. Straatman now resides with her daughter and family, Mrs. R. R. Lemke, so that house will perhaps be vacant.



For walls of restful beauty

Let us show you how you can get many beautiful and unusual decorative effects with LOWE BROTHERS MELLOTONE —an oil paint for walls and ceilings.

Mellotone dries to a smooth, flat finish—without gloss or lustre. Its beauty can easily and quickly be restored time after time, with just soap and water or Lowe Brothers Cleaner. Come in and let us show you the many attractive tints and shades in which Mellotone comes.

BOARD RE-ELECTS ALL TEACHERS

SUPT. AND TWO HIGH SCHOOL TEACHERS WILL RETURN

Mr. Penrod And The Misses McGinnis And Trumbell Will Stay

At their recent meeting the school board re-elected every teacher on both the high school and grade faculty, but only three have signed up contracts to return. Others have expressed themselves sometime ago that they expected to teach elsewhere or attend school next year. Supt. M. F. Penrod, Principal Miss Trumbell and Miss McGinnis, home economics teacher, are the one who expect to return to Klemme next year. We are sorry to lose the others for their work has been very satisfactory. They are all desirous of bettering themselves in both position and salary. We believe they are all worthy of realizing their cherished ambition. We shall deeply regret their not doing so.

School Going Fine Again

School has started off after the spring vacation with good interest. Both students and teachers are feeling fit and we should be able to do good work these next two months.

They Looked Pleasant!

Our Seniors went to Mason City Tuesday P. M. of this week to sit for their photographs. Let's hope the camera was a good one and the photographer just right. Roberts was the man elected to make the pictures. He did the work for last year's class and seems to have satisfied them.

Will Give Class Play May 2nd

Our Seniors and our Principal, Miss Trumbell, are hard at work on their class play and hope to have it ready for a big audience May 2nd. This leaves the way open for some to attend the big conference at Algona on May 3, when the famous Italian Opera Singer now singing for the church can be heard. He has recently been at Upper Iowa University and folks there sound loud his praises.

The date set for the Junior-Senior banquet is May 10th.

Complete Course At Church

Several of our high school and grade students have recently completed their course with Rev. Grosshuesch of the Reformed Church in our community. This is work that has our approval and we are glad that there were so many taking it.

Tests Prove Popular Here

School achievement tests are growing more popular each year in the best schools and some are being used in our own. In an arithmetic test recently given by Miss Root to her grades 5 and 6, we find the total scores for fifth grade ranged from 8 to 23, and for sixth grade from 13 to 42. The two ranking highest in grade 5 were Cecilia Heginger 22, and Leo Brinkman 23. The four highest in grade 6 were Mabel Schlichting, 37; Elise Lau, 39; Ruth Wellemeyer, 41; and Bessie Larson, 42. The medium or the middle score for grade 5 was 16½ and for grade 6 was 33, just double that of grade 5. Since the tests have been prepared for grades 4-8 inclusive they must contain some material beyond the preparation of the lower of these grades. The tests given were prepared by men at our own state University and Supt. J. W. Studebaker, of Des Moines. It should be understood that the scores are not in per centage.

We are giving some tests this week prepared by men from the State Teachers College of Emporia, Kansas. They are being given in many Iowa High Schools at this same date, and we shall have a chance to compare our work done here with that done in other Iowa schools. Next week we shall be able to give the names of those scoring highest in each subject for which tests are being given.

P. T. A. Program April 23

We are hopeful of getting Miss Myrtle Johnston, Home Demonstrator of the Farm Bureau, at our next P T. A. Program, April 23.

MR. AND MRS. LEITZINGER HAD LOTS OF COMPANY SUNDAY

F. R. Perkins And Family Came In Time For Breakfast

A sort of family gathering and get together dinner was held at the home of Mr. and Mrs. Harold Leitzinger Sunday.

Mr. and Mrs. F. R. Perkins and family of Waterloo, made an early start and arrived in Klemme in time to enjoy breakfast with the Leitzinger family.

Other guests at the Leitzinger home for dinner were: Geo. Stokesbary and family; Mr. and Mrs. Joe Stokesbary; Mr. and Mrs. Clyde Babcock and daughter, of Kanawha and Mr. and Mrs. Charles Perkins, of Britt; and Mr. and Mrs. Pete Moulton, of this city.

All report a very pleasant day was enjoyed.

FIVE HUNDRED MEN AND BOYS ARE WANTED!

A whole army of men and boys are wanted to be on the job at the town park this Friday evening right after supper. Come "armed" with a good rake and help get the park lawn in fine shape for spring and summer. This is your park, help to keep it looking good!

DAIRYMEN WILL SPONSOR TOURS

COW TESTERS PLAN LOCAL SUMMER TOURS AND PICNIC

Howard R. Horne Is Tester In Garner-Klemme Association

Twelve cow testing association testers from nine surrounding counties, met Thursday and Friday, April 4 and 5 in the chamber of commerce rooms at Mason City, with two representatives of the Dairy Extension Service, Ames, primarily to formulate plans and to arrange tentative dates for summer tours and picnics for association members and friends.

Tours End At 4:00 P. M.

These tours are designed to start at about 9:30 a. m. and terminate at 4:00 p. m. The testers have concluded from past experience that a short tour of three or four stops is most successful. The stops will include dairy cattle judging demonstrations and contests, picnic lunch, sports and games, studies of successful herds, legume crops, creameries and other subjects of dairy interest.

The testers' conference was opened by brief reports by the testers on achievements of some of their members. One of the testers stated that nothing contributed more to the unity cooperation and good fellowship of his association than the tour and picnic held last year. Most of the men gave accounts of the improvements made in individual herds as a result of information gleaned from studying the feed and production records of their cows.

Banquet Was Held For Men

On Thursday evening, the group held a banquet at the Cerro Gordo hotel Lester Proctor, Franklin Co. tester, served as toastmaster. Responses were made by Walter Nydigger, Worth County teter,. Ed. Mathro. dairyman near Mason City, V. B. Hamilton, county agent of Franklyn County and Earl N. Schultz, owa Extension dairyman who is now at Minnesota University working toward an advanced degree. Visitors at the banquet included county agents and dairymen from Floyd, Worth, Kossuth, Chickasaw, Hancock, Franklyn and Cerro Gordo counties. The counties represented by the testers attending the conference were: Webster, Hancock, Chickasaw, Worth, Humboldt, Hardin, Kossuth, Franklyn and Cerro Gordo. Floyd J. Arnold and Ray H. Smith, Dairy Extension Service, Ames, led the confernece.

Howard R. Horne, tester for the Ganner-Klemme Association says, "Be prepared for our picnic tour in June."

Mr. Horne has been with the local association since January 1st.

NOTICE

Proposals For Erection Of School House In Liberty Township

Notice is hereby given that the proposals for the erection of a brick school house in Liberty Township, District No. 2, in the county of Hancock, state of Iowa, will be received by the undersigned, at the Center School House, District No. 5, Liberty Township at 8:00 o'clock p. m. on Monday, April 29, 1929, at which time the contract will be awarded to the lowest responsible bidder. The Board reserves the right to reject any or all bids.

Plans and specifications may be seen at my place in Liberty township.

JOSEPH SCHULDT, Secretary.
Klemme, Iowa, April 2, 1929.

NOTICE TO CHICKEN OWNERS

You are hereby notified to lock up your chickens at once, in accordance with town ordinance which prohibits chickens running at large with penalty for violation of same.

FRANK WARD'S MOTHER DIED WEDNESDAY AT ROCHESTER

Was Long Time Resident Of Kossuth County, Iowa

Frank Ward received the sad news yesterday afternoon that his mother, Mrs. Arthur Ward, had died at a Rochester, Minnesota hospital of a cancerous trouble, for which she had undergone two operations in the hope of finding relief. She had been at the hospital since the 22nd of February, receiving treatment.

For the past twelve years Mr. and Mrs. Ward, with some of the younger children had lived at Algona. Prior to that time they resided on their farm north of Wesley.

Besides her husband Mrs. Ward leaves to mourn her loss six children, three boys and three girls. They are, Walter Ward of Wesley; Mrs. Earl Reed of Burt; Sylvia of Pennsylvania; Frank Ward of this city; John Ward, of Santiago, California; and Nellie who is at home. John Ward, of California, came on Monday to see his mother.

Funeral services will be held at Algona. At this writing the time had not been set.

The community extends its sympathy to the bereaved family.

GRACKA QUANDT BROUGHT IN FIRST WILD FLOWER

Several Others Found Flowers The Past Few Days

Miss Gracka Quandt was given a box of stationery by The Times for bringing to the office the first bouquet of wild flowers found this spring. Gracka brought in a vase of several crocuses Thursday afternoon. The flowers were found near the railroad tracks.

Early Saturday morning Novella Bredbenner came to claim the prize with a bouquet of Blue flowers. She was, however a bit too late.

Emma Baack phoned in from the country shortly after that she had some crocuses.

Early Saturday afternoon Harriet Gibbs brought us a Bloodroot, and a few minutes later Bernice Tanner brought in a bouquet of crocuses. In the mail Monday morning we had several crocuses from Mrs. Jay Griggs with the following note attached: "April showers bring May flowers."

Girls and Boys! Watch the Times each issue as every once in a while we are going to have a free offer for you.

THREE MARRIAGE LICENSES ISSUED PAST WEEK

Two Couples From Mason City Get Licenses In Hancock County

Business at the local marriage bureau of the Clerk's Offile in Garner was more brisk than usual last week. Chris Johansen and his good looking deputy issued the following permits to the love lorn:

John H. Stevens, Mason City, and Martha Lysne, Mason City bought a license on April 3rd.

The same date a license was also issued to Henry Held and Gladys Crowell, both of Mason City.

On April 6th a license to wed was issued to a couple from Britt, Harold Seifert and Louise Jensen.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Morning Worship: Klemme 10:00 o'clock and Liberty 11:30 o'clock.

Sunday school, Klemme 11:00, Liberty 10:30 o'clock.

Beginning with this coming Sunday evening the League will meet at 7:15 instead of at the old time. This will make it possible for more of the country young people to attend. The evening preaching service will likewise be one half hour later than usual, the new hour being 8:00 o'clock.

You are cordially invited to attend all of these services.

FOR YOUR POULTRY

We have lots of Nutrina Chick Mash, and poultry supplies of all kinds. E. F. Jacobs. 1tc

TRUCK DAMAGED BY LOCOMOTIVE

E. J. ARNOLD AND SON HAD A NARROW ESCAPE

Their Truck Was Struck By Rock Island Engine While Switching

Saturday afternoon E. J. Arnold and son Wilbur had an experience they do not care to have repeated.

As we gather the story Mr. Arnold and Wilbur had delivered hogs to the local stock yards in a Ford truck, Wilbur driving, and had unloaded the hogs at the yards. Two or three hogs had again been purchased and loaded into the truck when they started homeward. As they were crosing the track north of the yards they failed to observe the train switching in the yards and were struck by the engine with sufficient force to turn over the truck by the slowly moving engine. Luck was with them as no one was hurt beyond a few minor bruises and even the hogs escaped without injury. The truck was more or less damaged with a broken left front wheel and the body twisted out of shape.

The engineer stopped his engine almost as soon as it struck the Artruck, as the train crew were switching and were not going fast.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. German services.
11:00 a. m. Sunday school.
Election of officers

The Bible Class will meet Tuesday evening at 8:00 o'clock.

The following officers were elected at the last meeting:

Pres. Harvey Barz
Vice Pres. Emma Gohl.
Sec. Raymond Barz
Treas. Mabel Schuldt
Supervisors, Alvin Thieman & Ewald Josten.
Group Leaders: Verner Priebe, Edwin Thieman, Gladys Kothenbeutal, Emma Kothenbeutal.

The Choir will meet Saturday evening.

EPWORTH LEAGUERS ENJOY PARTY OUT IN LIBERTY

Entertainment Planned And League Yells Practiced

Tuesday evening about thirty of the young people of the Epworth League of the M. E. met at the Liberty Church basement for a social evening. Everyone came with the thought of having a good time and entered whole heartedly into the games which had been carefully planned for the evening's entertainment. About 10 o'clock refreshments were served after which a few League yells wer practiced and everyone went merrily home.

Card Of Thanks

I wish to thank all my friends children for their help and kindness extended to me during my illness.
Dr. George Zinn.

PUBLIC NOTICE

The Trustees of Ell Township at their annual meeting held in April decided to raise the price of Cemetery Lots from $10.00 to $20.00 for residents of the township and $25 a lot for non-residents. The cost of care annually has been raised from $1.25 to $2.00 per lot. All money for the care of the lots should be paid to the Sexton and Caretaker, Fred Gates, not later than June 1, 1926. Township Trustees. 2tc

Sir Hubert Wilkins for his proposed undersea voyage to the North pole. 3—Girl Scouts doing a maypole dance on the White House grounds on Easter Monday, wearing fluffy dresses instead of khaki.

NEWS REVIEW OF CURRENT EVENTS

Mexican Rebels Beaten and Slaughtered at Reforma; Wisconsin Votes Wet.

By EDWARD W. PICKARD

MEXICO'S revolution, or at least a great portion of it, was drowned in an ocean of blood last week, if federal statements are reliable. The rebel army of General Escobar, commander in chief of the movement, having been driven for miles by the troops of Gen. Juan Almazan, concentrated in the city of Jiminez, Chihuahua, and for several days fought desperately to hold the place. They were well entrenched and Almazan gives them credit for extreme bravery. But the assaults of the federal infantry, artillery, cavalry and air forces were too much for them and they withdrew from the city to Reforma, 12 miles away. General Serrato's cavalry, meanwhile, was hurried to the north of Reforma and there destroyed all the bridges and culverts, and when Almazan's air scouts reported that the rebels could retreat no further, he ordered an attack in full force. Escobar and other rebel generals saw they were trapped and fled, leaving their infantry to fight alone. These men took refuge behind their troop trains and the battle there was described by Almazan as the bloodiest in years of Mexican history. Neither side asked or gave quarter and the slaughter was "tremendous." The rebel dead covered the battlefield, and many hundreds of their wounded fell into the hands of the federals.

The entire action, which began at Corralitos on March 31 and ended in the smashing victory at Reforma, was declared by the federal commander to be decisive. In his report to General Calles he praised highly the work of all branches of his army, and also paid a compliment to Escobar's military ability. In Sonora and other regions the rebels, at last accounts, were still carrying on. The aviators in raids over the federal fortifications at Naco created a lot of excitement by dropping two or three bombs on the American side of the international boundary, one of them injuring an American motion picture man. This and the possibility of similar incidents gave considerable concern to the State department in Washington. Mexican federal troops held at Fort Bliss, Texas, after their retreat across the border when the rebels captured Juarez, were ordered released by President Hoover at the request of the Mexican government.

PROHIBITION in its many ramifications insists on holding a place on the front page every day. Tuesday the voting population of Wisconsin went to the polls and by a majority of about 2 to 1 directed the state legislature to repeal the state dry enforcement laws and to remove the penalty on 2.75 per cent beer. The wets naturally were jubilant but the dry leaders were not dismayed and asserted that the referendum was "futile." They held that the drys carried a majority of the counties, and that the legislators were bound to follow the wishes of their constituents rather than of the state as a whole. Should both houses pass a repeal measure it would place Gov. Walter J. Kohler in a delicate position. He indorsed President Hoover's prescription of "concurrent enforcement of prohibition by states." If he should sign or veto the bill he would alienate either wet or dry backing.

CONGRESSMAN M. ALFRED MICHAELSON of Chicago, a professed dry, who was indicted at Jacksonville, Fla., last October on charges of bringing a trunkful of liquor into the country from Cuba, surrendered to the federal authorities in Chicago and gave bond for his appearance for trial in Key West in May. He declined to be interviewed but denied the charges.

In the case of Congressman William M. Morgan of Ohio, also a dry and also involved in liquor charges, a peculiar situation has arisen. United States Attorney Tuttle of New York, investigating the story that Morgan brought four bottles of liquor from Panama, was told by the customs agents that the Ohioan admitted that the bottles were in his baggage but refused to open his trunks, demanding the right of free entry. This was granted him by Deputy Collector H. C. Stuart, who was not told of the presence of the booze. The agents said Morgan threatened to "raise h—l in Washington" if his baggage was not passed without examination. Since the agents did not see the bottles and Mrs. Morgan, who was with her husband cannot testify against him, it may be the only persons to suffer, if any, will be certain custom officials.

STUYVESANT FISH and some of his friends are exercised over the fact that his cruiser yacht was held up in New York harbor by enforcement agents and searched for contraband liquor. Mr. Fish said the boat was fired upon. No liquor was found on the vessel. Federal officials in New York after investigation declared the action of the enforcement men was entirely proper since the boat did not stop at their signals and the shots were fired high in the air.

MYRON T. HERRICK, American ambassador to Paris, died suddenly from heart failure, and all of France was thrown into deep mourning for he was beloved by the entire nation and was considered the best friend of France ever sent there by the United States. Officials of highest rank, and representatives of all countries hastened to the embassy with their condolences, the press was filled with articles lauding the dead American, and the government at once arranged to give him an elaborate national funeral with full military honors—an unprecedented honor. After simple ceremonies in the American embassy, during which orations were delivered by Premier Poincare, General Pershing and Quinones de Leon, Spanish ambassador to Paris, the cortege set out for the American procathedral. The pallbearers were: M. Poincare, Foreign Minister Briand, Senor de Leon, General Pershing, J. Pierpont Morgan and Owen D. Young. The casket was accompanied by two squadrons of republican guards, four platoons of infantry and representatives of all the official circles and American organizations in Paris, and the line of march was lined with infantry under the command of the military governor of Paris. After brief church services the body was taken to Brest by the embassy staff and there turned over to the French goverment which transferred it to the light cruiser Tourville as a salvo of 19 guns was fired. The cruiser was to bring Mr. Herrick's remains to the United States, being due in New York on April 12. Following a parallel course with it was the Aquitania, bearing Mrs. Parmely Herrick, the late ambassador's daughter-in-law.

SENATE and house committees were exceedingly busy formulating farm relief legislation for the extraordinary session of congress. Among these heard, the most important was Secretary of Agriculture Hyde, who said he was giving his personal views but who, it was taken for granted, was expressing the ideas of President Hoover. He placed emphasis upon his belief that legislation should confer broad powers upon the farm board without attempting to define its exact procedure. The board, he indicated, must be depended on to provide the real solution of the agricultural problem. In response to questions Mr. Hyde expressed the opinion that a board of seven would be less unwieldy than one of twelve, that bipartisan representation on the board was acceptable, but that he objected to geographical representation. He said the board should be within the Department of Agriculture instead of an entirely independent agency.

Some members of the committee exhibited an unfriendly spirit toward the administration's proposals, but Representative Aswell of Louisiana, Democrat, declared that the Hoover program would have his complete support.

VICE PRESIDENT CURTIS put up to Secretary of State Stimson a rather embarrassing problem. It is likely to be especially embarrassing to Mr. Curtis. As every one knows, he is a widower, and he took to Washington his half-sister, Mrs. Edward E. Gann, to be the hostess of his establishment. Before Mr. Stimson assumed office his predecessor, Mr. Kellogg, after study of precedents, ruled that while Mrs. Gann might sit where she pleased at dinners given in the Vice President's home, she must be seated below the wives of ambassadors and ministers at official dinners where she and Mr. Curtis were guests. The Vice President informed the press last week that he had asked Secretary Stimson to overrule Mr. Kellogg's decision. If this request is refused, it is possible Mr. Curtis will decline to attend official dinners or other functions where Mrs. Gann is not accorded the rank he believes she should have. Of course social circles in the national capital are tremendously interested in the controversy.

FINANCIAL operations during March, according to a treasury statement, resulted in a reduction of the gross public debt by $108,980,352; and the net balance of the general fund on March 31 was more than $350,000,000 greater than a month before, funds thus being available for further retirement of government securities during April. The reduction of the public debt during the fiscal year ending June 30 next is expected to exceed $700,000,000. Treasury officials and congressional leaders are agreed that it is too early to consider tax reductions, preferring to wait until it becomes certain that income tax revenues will maintain the present high level.

EMPLOYEES of the Loray cotton mill at Gastonia, N. C., are on strike and last week they became so demonstrative that the police became alarmed and called on the governor for help. Several units of the state National Guard were ordered to the town and the disorders were quelled. A committee of strikers called on J. A. Baugh, general manager of the mill, and presented a series of demands, including a forty-hour, five-day working week, a minimum wage of $20 weekly, and changes in working conditions. Mr. Baugh rejected the demands. Half a dozen textile mills in South Carolina are closed as a result of strikes.

The Brotherhood of Railway Trainmen and the Brotherhood of Locomotive Firemen and Enginemen have started a nation-wide campaign for a six-hour day to combat unemployment. Their opening meetings were held in Faneuil hall, Boston. Timothy Shea, assistant president of the engineers, told them that they must go to congress for a bill of rights to "protect men who are being cast into the junk heap." Contemplated railway consolidation plans, he said, meant that their union alone would have at least 20,000 more men out of jobs. A series of regional meetings throughout the country was planned.

AMANULLAH KHAN, former king of Afghanistan, began last week the drive by which he hopes to regain the throne he relinquished. With 30,000 soldiers he marched on Kabul and there were vague reports of heavy fighting with the troops of Bacha Sachao, the self-made king. Amanullah's forces were said to be armed with Russian rifles and ammunition, which was taken to mean that the Soviet government had interested itself in his behalf. Prince Omar Khan, member of the Afghan royal family, who recently escaped confinement in Allahabad, is reported as likely to take the field against Amanullah, supporting his own claim to the throne.

CHANCELLOR SEIPEL, who for six years has managed the affairs of the Austrian republic, has resigned, together with his cabinet which was made up of men from the Christian Socialist party. Opposition to Doctor Seipel had been increasing since the great riots of July, 1927. He said he could have continued to resist criticism as a government official, but that he could not hold his office in the face of opposition to him personally as a priest. The church, he said, was his chief concern.

Poland also had a cabinet crisis for the government of Premier Kazimierz Bartel resigned because the government and parliament failed to co-operate. Marshal Pilsudski appeared to dominate the situation.

TOURISTS AVOID NIGHT DRIVING

Clearance Space is Insufficient for Safety Even in Daylight.

More than 70 per cent of all motor tourists avoid night driving whenever possible, according to an analysis made by the touring bureau of the Chicago Motor club of statistics gathered by the national touring board of the American Automobile association.

Fears of Motorists.

"Our analysis discloses that the fears of those motorists are fourfold," declared Charles M. Hayes, president of the club. "First, many main highways are narrow, 16 or 18-foot concrete strips. The clearance between passing cars is insufficient from a safety standpoint in daylight; it is, in the case of some drivers, dangerously close at night; secondly, there is the headlight menace; thirdly, poor visibility of highway signs, and finally, the prevalance of intoxicated drivers on the highway at night.

"The narrow roads are, to some extent, being eliminated. In some metropolitan areas the counties have widened them to 40 feet, but this great movement is yet in its infancy. A vast amount of work is to be done.

Eliminate Hazards.

"All of these hazards can be successfully eliminated if the right steps are taken. Headlights can be standardized and adjusted in such a way as to eliminate glare. Frequent inspection and enforcement is the cure, once a uniform safety standard has been agreed upon.

"The inadequacy of signs, of which so many motorists visiting our touring bureau complain, is not due so much to the character of the signs as the positions in which they are placed. Ofttimes they are well out of the easy range of the headlights of a car, and the car owner must come to a full stop and 'comb' the landscape for them with his spotlight, if he has one.

"The answer to the drunken driver menace is prosecution to the limit. Were all of these conditions surrounding night driving removed, or remedied to a large degree, far more motorists would drive at night, with a resulting decrease in the congestion on highways during daylight hours."

Average Motor Used 200 Gallons of Gas in 1928

Every motor vehicle in the United States used an average of approximately 200 gallons of gasoline during the first six months of 1928, as compared with about 170 gallons during the same period of 1927, according to the American Automobile association.

The statement is based on a gasoline consumption of 1,652,393,535 gallons during the first half of the current year, 3,971,423,311 gallons in the same period last year, and a total registration of more than 23,000,000 motor vehicles. It rather offers conclusive proof that the automobile is a necessity.

"Never Happened Before" Troubles Easily Found

"It never did this before," is a remark one frequently hears, especially around repair shops.

The story is told of one motorist who had trouble starting his motor after having warmed it up and then switched it off. Other persons with the same make of car had had the trouble on numerous occasions. But it never had happened to him before!

A little investigation revealed the fact that he had just started using a gas that vaporized more readily.

Electric Gasoline Gauge Needs Good Attention

These electrical gasoline gauges located on the instrument board of a number of cars today have a great many car owners guessing. It should be remembered that the gauge does not register accurately unless the ignition is turned on.

This being the case, the way to check up on the filling station is to read the gauge just before the engine is cut off to have the tank filled and immediately after it is started again.

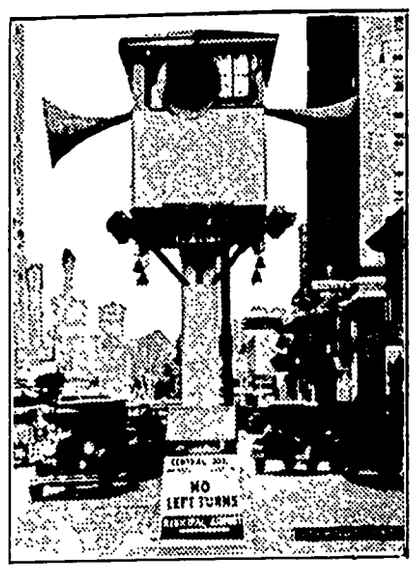
Six-Wheel Truck Saves Paving Along Highways

One of the greatest factors in minimizing highway damage under heavy loads during the last two years has been the development of the six-wheel truck. According to the results of tests made by the United States bureau of roads the impact—which is the determining factor in road destruction—of a six-ton, six-wheel truck, is less than that caused by a two-ton four-wheel truck under similar conditions.

"Three and one-half years ago," says the head of a truck-making concern, "there were but two manufacturers of six-wheel units who were actually marketing six-wheel trucks and busses. Since then the number has increased to nearly a dozen in the United States, and at least twenty-five of the leading truck manufacturers in Europe are producing six-wheel equipment."

Motorists Entertained With Program of Music

While anxious motorists wait for the green "Go" light of the main traffic tower in Orlando, Fla., they are entertained with a musical program from four huge amplifiers. The tower



Amusement for Motorists.

is in the center of this city's business district, and relieves the patience of the motorists who feel that they are unnecessarily delayed under ordinary circumstances.

Trees Are Spared Along Roads in Massachusetts

In Massachusetts the department of public works is empowered by law to make roadside improvements, the work including such planting, replacements and care as may be necessary. When a road is laid out as a state highway it is generally made sufficiently wide to provide an area on each side of the traveled portion for roadside improvement. No tree, shrub, or plant within such a highway can be cut, removed or new ones added without a permit from the highway department. The state has a nursery at Palmer, where trees and shrubs are propagated and where the highway landscape supervisor trains men in the care of trees and roadside beautification.

AUTOMOBILE NOTES

As of this date, the 1928 auto license is only an antique, and is legally so regarded.

* * *

Wheels should be kept in proper alignment, otherwise there will be useless tire strain.

* * *

After the car has passed a night in a cold garage care in starting often will save wear and tear on the machinery.

* * *

"More and more women drivers are inclined to use only half the road in driving." Yes, with a quarter of the road on either side.

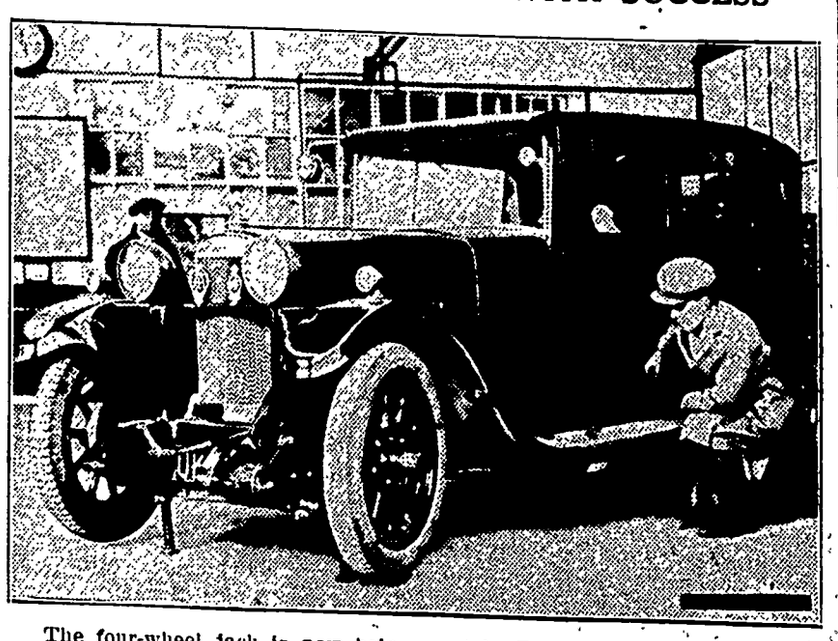
* * *

In sedan bodies it will sometimes be found that as the windows are lowered they are broken by hard objects carried in the door pockets.

* * *

Test the battery with a hydrometer every two weeks. If, on any two consecutive tests, the specific gravity is 1.200 or under, remove the battery from the car and have it charged.

FOUR-WHEEL JACK USED WITH SUCCESS



The four-wheel jack is now being used in England with much success, and much blessing from motorists. The four jacks are placed under the axles next to all four wheels, and by means of a pumping handle on the running board of the car, the entire machine is lifted from the ground. The jack handle is easier to use than a bicycle pump.

MOST people depend on Bayer Aspirin to make short work of headaches, but did you know it's just as effective in the worse pains from neuralgia or neuritis? Rheumatic pains, too. Don't suffer when Bayer Aspirin can bring complete comfort without delay, and without harm; it does not affect the heart. In every package of genuine Bayer Aspirin are proven directions with which everyone should be familiar, for they can spare much needless suffering.

Many a wife is hungering for an occasional word of approval who will be buried in a rosewood coffin.—Cupper's Weekly.

Baby's little dresses will just simply dazzle if Red Cross Ball Blue is used in the laundry. Try it and see for yourself. At all good grocers.—Adv.

You may safely cherish one or two bad habits; but don't have so many.

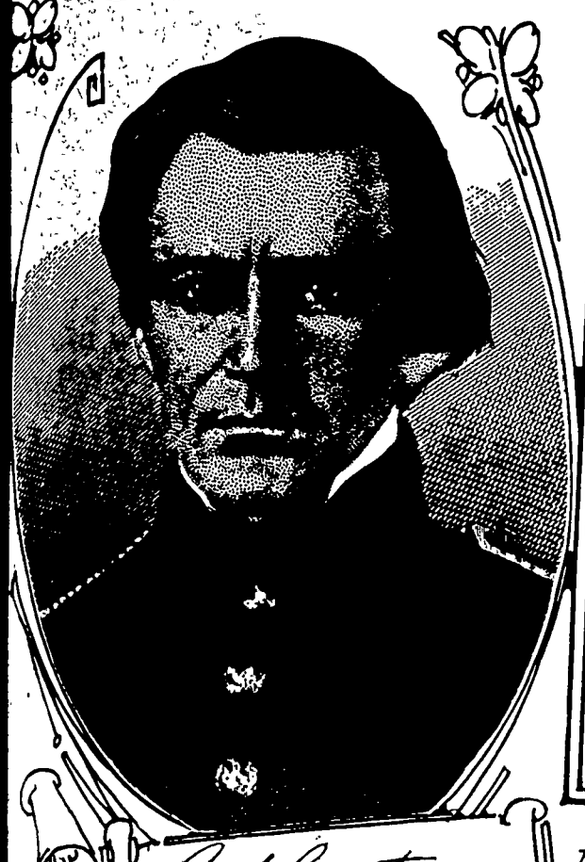
SAME PRESCRIPTION HE WROTE IN 1892

When Dr. Caldwell started to practice medicine, back in 1875, the needs for a laxative were not as great as today. People lived normal lives, ate plain wholesome food, and got plenty of fresh air. But even that early there were drastic physics and purges for the relief of constipation which Dr. Caldwell did not believe were good for human being.

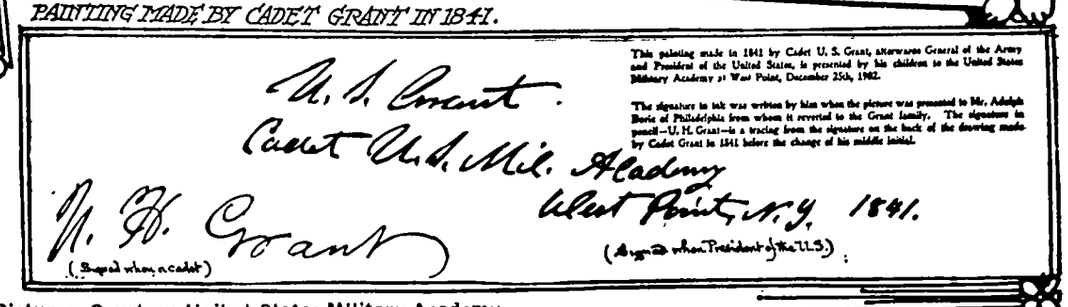
The prescription for constipation which he used early in his practice, and which he put in drug stores in 1892 under the name of Dr. Caldwell's Syrup Pepsin, is a liquid vegetable remedy, intended for women, children and elderly people and they need just such a mild but effective bowel stimulant.

This prescription has proven its worth and is now the largest selling liquid laxative. It has won the confidence of people who needed it to get relief from headaches, biliousness, flatulence, indigestion, loss of appetite and sleep, bad breath, dyspepsia, colds, fevers. At your druggist, or write "Syrup Pepsin" Dept. BB, Monticello, Illinois, for a trial bottle.

"Cadet U. H. Grant"



PAINTING MADE BY CADET GRANT IN 1841.



This painting made in 1841 by Cadet U. S. Grant, afterwards General of the Army and President of the United States, is presented by his children to the United States Military Academy at West Point, December 25th, 1902.
The signature in ink was written by him when the picture was presented to Mr. Adolph Borie of Philadelphia from whom it reverted to the Grant family. The signature in pencil—U. H. Grant—is a tracing from the signature on the back of the drawing made by Cadet Grant in 1841 before the change of his middle initial.
U. S. Grant
Cadet U.S. Mil. Academy
West Point N.Y. 1841.
U. H. Grant
(Signed when a cadet)
(Signed when President of the U.S.)

Pictures, Courtesy United States Military Academy

By ELMO SCOTT WATSON

ONE May day in the year 1839 there walked into the old frame hotel, which had been built to provide accommodations for visitors to the United States Military academy at West Point, N. Y., a freckled-faced, undersized, awkward youth of seventeen years. He wore a suit of butter-colored jeans woven on a backwoods hand loom. On his feet were a pair of coarse shoes, rough and heavy-soled, also evidently homemade. In a halting bashful manner he made known his desire for a room and when the proprietor of the hotel pushed across the desk the ruled sheet of paper which served as a register, the awkward youth scrawled on it the name "U. H. Grant, Georgetown, Ohio."

It is doubtful if the hotel proprietor gave him a second glance as he assigned him to a room D-32, for the arrival of such youngsters at his hotel, preparatory to their entrance into the military academy, was no novelty to him. If anything he must have remarked in his own mind that this rustic lad was even more unpromising material from which an "officer and gentleman" was to be made than the average youth who came to the Point. Certainly he could not have realized that he was a witness to the beginning of a military career of a man who was to be the victor in the greatest civil war the world had ever known and whom future generations were to hail as one of the great captains of all times. For this shy youth was the future Gen. Ulysses S. Grant, whose memory Americans honor on April 27 of each year, the anniversary of his birth.

"Cadet U. H. Grant" and "Gen. Ulysses S. Grant"—how did one become the other? This inconsistency in his name is one of the many in the paradoxical career of the man. From the beginning it seemed there were to be many mixups in his name. On April 27, 1822, a son, the firstborn of Jesse Grant and Hannah Simpson Grant, arrived in their home at Point Pleasant, a small town on the Ohio river, 25 miles east of Cincinnati. History has recorded that for six weeks this first born was without a name because his parents could not agree upon one. Finally it was decided to let chance decide the question, so the assembled relatives and friends took slips of paper, wrote their choices upon them and somebody drew one. That name was Ulysses and the person who had written it was Grandmother Simpson. Later—nobody knows who—tacked Hiram on in front of Ulysses, evidently believing that this virile Biblical name (it means "most noble") was more appropriate for the son of a pioneer than was the Greek Ulysses (it means "a hater"). But little Hiram Ulysses' mother preferred the second part of the name, which she called "Lyss" for short and as Lyss Grant he started out in life.

When Lyss was a year old the family moved to Georgetown, Ohio, and there the boy grew up into a bashful youth who was looked upon by the other boys as something of a dullard and a weakling. So perhaps it was inevitable that he was to be known in Georgetown as "Useless" Grant. When he reached the age of seventeen his father, finding that the boy had no desire to follow in his footsteps as a tanner, decided to try to get him appointed to West Point. He took the matter up with the congressman of his district, Thomas L. Hamer, and Hamer made the appointment. At this point another name was tacked on to the unfortunate Grant. Hamer knew his name was Ulysses but could not remember what his other name was. Remembering, however, that Jesse Grant had married Hannah Simpson, he wrote out the name Ulysses Simpson Grant and sent it to the War department as his choice for a vacancy at West Point.

When young Grant got ready to start for West Point the village carpenter made a trunk for him and as a finishing touch put on it in brass tacks the initials H. U. G. (for Hiram Ulysses Grant). When Grant saw this he immediately visualized the nickname which the cadets would be certain to bestow upon him. "Useless" was bad enough, but "Hug" would be worse, so he pulled out the tacks, and in order to avoid any possibility of a repetition of that embarrassment he transposed his two given names. So we find him registering at the hotel as U. H. Grant (they will show you that page from the register if you go there today).

When on May 29, 1839, he presented himself to the adjutant of the military academy and signed his name in full on the adjutant's register as Ulysses Hiram Grant another difficulty arose. The adjutant said that he was expecting a "Ulysses Simpson" Grant (that was the work of Congressman Hamer) and here was "Ulysses Hiram" Grant applying for admission. It was such things as this which produced the endless yards of red tape which have characterized the work of the War department from its beginning and the adjutant declared that the papers would have to go back to Washington to have the name changed. But the young cadet, with the simple directness which was to characterize his future career, cut through the red tape without the slightest hesitation. He decided then and there to take the name "Ulysses Simpson" and be done with it.

Grant's life as a cadet forms one of the most interesting parts of a new biography of the great Civil war leader. It is "Meet General Grant," by W. E. Woodward, published by Horace Liveright of New York, and in the chapter headed "The Unwilling Soldier," Woodward tells how Grant came to West Point as follows:

Gray-coated cadets loiter about the bulletin board of the academy guard room. Slim young fellows, their movements graceful and fluid, they are living in a time-dimension that contains neither age nor youth. Their fresh contours have not been eroded to sharpness by the disillusion of life. Though they have ceased to be boys they have not yet become men. Their existence is happily suspended between ambition and achievement. They laugh a lot, for they are still to learn that ambition and achievement never meet.

In the throng is a vivacious youth named Sherman, slender, redhaired and blue-eyed. The world is to hear of him; and, after he has departed, his image in bronze will sit on a bronze horse and stare pensively through the changing years at the flood of new generations in New York's Fifth avenue.

But on that day his metal steed was far away in the incredible future. He was simply young Sherman—called Bill—full of good nature and likeable traits. He had queer ideas and a whimsical mind. His finger runs down the list of new cadets on the bulletin board and stops at "U. S. Grant."

"Here's U. S. Grant," he calls out, "U. S. yes, that's what it says. What do you suppose the U. S. part of it stands for?"

"For United States!" somebody shouts. "That's what U. S. stands for. We're going to have a fellow here named after this great big United States."

"No, it doesn't," comes another voice from the crowd. "There isn't anybody named United States. It can't be. . . ."

"Well, it's Uncle Sam," another cadet insists. "Uncle Sam Grant. That's what he is—the grandson of our good old Uncle Sam."

When Grant arrived at the academy he found himself already named. He was "Sam" Grant. No matter how he protested; and he did not protest much. The name "Ulysses" was never heard at West Point and does not appear when Grant is mentioned in the reminiscences of his classmates. They all knew him as Sam.

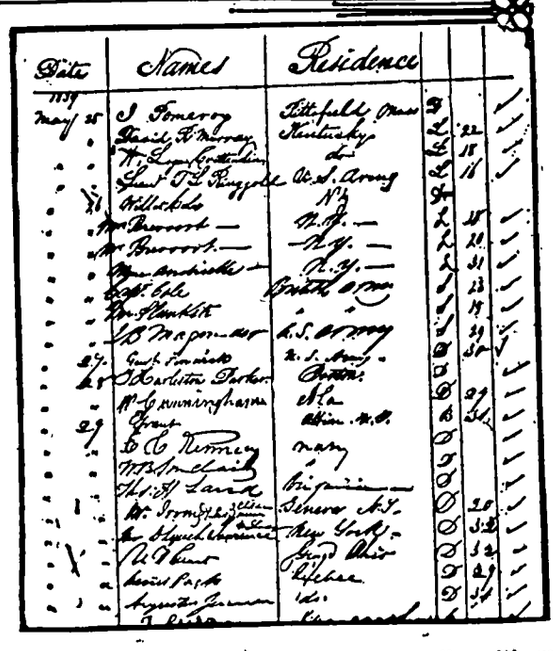
Despite Woodward's description of the scene of Grant's entrance upon his military career the apparent logical explanation of how Grant became known as "U. S." instead of "U. H.", the fact remains that two years after he had entered the academy he was signing his name U. H. Grant. At least, that is the signature on the back of a drawing made by Grant in 1841 as a part of his academic work, still preserved at West Point.

But the most interesting paradox of all is the fact that this man who was destined to become one of the greatest generals in American history had a profound distaste for military life, as Woodward's chapter heading "The Unwilling Soldier" implies. In regard to this Woodward observes:

To those who attended the shrine of Mars, he seemed a very unmilitary figure, not only on his first day but for many months thereafter. His shoulders had a noticeable stoop—the result of his back-bending labor as a child; and he walked with the high-stepping clomp-clomp of a farmer on newly plowed ground. One of his fellow cadets recollected him as "unique appearing." Another said they all thought him "countrified." To many of them he seemed an obvious misfit.

They kept him in the awkward squad for months, and after a time he succeeded in adjusting himself crudely to his environment . . . thought he continued for four years to be something of a trial to the tactical officers. The fact is that he possessed no native talent for soldiering—and he did not like the military profession. The moulding force of West Point had to struggle here with raw material that was not adapted to its processes, and the effort was somewhat like that of trying to make an automobile engineer out of a man who wants to be a physician. Near the close of his life, after he had become West Point's most distinguished son, he wrote that when he entered the academy he had little hope of ever getting through the course; and he had expected, if he did graduate, to resign from the army and try to get a place as a professor of mathematics in some small college.

Even more remarkable, in view of his latter fame as a general, is Grant's own testimony of his dislike for military life. During his first year as a cadet there was a bill in congress to abolish the academy because the opponents of military education declared that West Point was a breeding ground for snobbishness, that it was inefficient as a school and that keeping it up was simply a waste of money. Grant has told how he looked at the newspapers every day, hoping that the bill had passed. "It never passed," he adds, "and a year later, although time hung drearily with me, I would have been sorry to have seen it succeed." Woodward quotes a letter which Grant wrote to his cousin, in which he declared that he was very fond of West Point and enjoyed the life there, a statement which the biographer doubts seriously. Of this letter Woodward says, "It is wholly out of tune with Grant's direct, sledge-hammer character—and stands as a horrible example of what rhetoric may do for a simple-hearted plowboy" and adds "Poor homesick boy! Writing bravely of the delights of West Point to keep up his courage . . . and scanning the newspapers in hope that congress has put an end to the whole affair."



At the end of his first year as a cadet, no one was surprised when his name did not appear among those who were appointed as corporals. But every one was surprised when the commandant made Grant a sergeant at the beginning of his third year and the appointment was made the subject of considerable joking. The other cadets said that Sam Grant was made a sergeant because he could not keep step. As a sergeant he would march among the file closers and in that position he could not throw the column out of step with his stumbling. That their joking was more or less justified was shown by the fact that he did not make good as a sergeant. At least, he was passed over in the list of captains and lieutenants at the end of the third year and during his last year he served as a private.

Graduation from the academy meant simply another frustration, in a life of many frustrations, and an apparent failure for Grant. There was just one thing in which he had excelled all others while he was a cadet and that was in horsemanship. So when he was graduated he had hoped to get a commission in the cavalry. But he was told that there was no vacancy in that arm of the service, so "the finest horseman at West Point" had to be content with a commission in the infantry and as a second lieutenant in the Fourth infantry he went to Jefferson Barracks near St. Louis. One other frustrated hope occurred at this time. Next to his horsemanship his ability in mathematics had been about the only note of distinction in an otherwise insignificant career at the military academy. So he applied for a position as teacher of mathematics at West Point and was told that there was no opening at that time. He was promised a place when next a vacancy occurred. But it never did occur, so far as Grant was concerned.

Perhaps it was just as well, for as Woodward has said, "He would have been a failure as a teacher. Without the charm of personality which every successful teacher must possess, his work would have become before long an ineffective drudgery. Undistinguished and unpromoted, he would have gone laboring on for years—and then the world would have heard no more of him." Fate had something different in store for him than a return to "these gray walls" as a teacher of figures. It was to lead him through nearly a score of years of adversity and apparent failure before promising him any measure of success. Then his fellow cadets who had jokingly translated "U. S. Grant" as "Uncle Sam Grant" were to see a nation thrilled by its translation into "Unconditional Surrender Grant" and a few years later West Point was to welcome "Cadet U. H. Grant" back as general of the army and President of the United States, the only graduate it has ever had to hold both of those positions.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

STYLE VS. SENSE

WINTER in the northern woods can be extremely bitter and usually is very cold. Therefore, put on warm clothing which is absolutely necessary for those whose daily work is done in these magnificent forests. But because the lumberman dresses himself against the rigors of the Arctic blasts is no excuse for the man or woman who in a temperate latitude dons excessive clothing for the mere reason that the calendar indicates the presence of the winter season.

There are many days when fur coats and other heavy garments would serve better on the peg than on one's back. To realize this fact and to put the idea into practice would be a life-saver for some, a disease-breaker for others and would mean continuous high vitality throughout the year for still another large group.

While there is no desire in any way to lessen the popularity of the coat of fur, one should not put all one's eggs in a single basket on this important question. This practice is perhaps one of the main reasons for many colds, cases of pneumonia and deaths.

An auxiliary coat of lighter weight is required for the forty to sixty degree days. If you own one, watch your thermometer and use it when it registers within those limits. If you do not possess such a garment get it at once, even if you have to pay a dollar, down and the rest eventually! Believe it or not, it's lack is a real hazard; its ownership and use, a positive health insurance policy.

For those whose activities are indoors, winter-weight clothing is superfluous. If the temperature of your home or office was maintained at fifty degrees there might be some reason for heavy-weight suits and dresses. But seventy to seventy-five degrees is summer heat. And that is what you likely are living in. So far as the indoor temperature is concerned light summer clothes would be more logical, wouldn't they?

To conclude, it is not a safe thing to sweat in a fur coat; and it is equally unsafe to perspire in home or office when a freezing temperature awaits you outside.

If you are a woodchopper or outdoors person, heavy everything then. Otherwise, dress for comfort and safety. There will still be plenty of days left, even then, on which to be stylish.

* * *

CONCERN FOR LITTLE THINGS

THE other day a congenial mosquito made the personal acquaintance of a lady while she was enjoying the balmy breezes on her porch The lady soon became itchy, she scratched—and yesterday she died. Also, a few days since, a man scratched his hand on a rusty nail. "A mere touch," said he—and yesterday they buried him, too.

These two stories are indicative of the average attitude toward insect bites and minor injuries. And while they are extreme cases, they nevertheless eloquently demonstrate an important point in the how-to-live-longer plan.

The amount of damage that bacteria can accomplish by way of the cut, bite, scratch or burn depends, of course, upon the virulence of the particular germ in the case. And while a relatively large number of injuries of this character will remain local in their manifestations, there is no use taking any chances on the possibility of more serious trouble. This is especially true since the preventive measures are so accessible, so easily applied and so cheap.

The majority of local infections can be prevented if the initial cause is promptly treated with antiseptics. A safe rule is to disinfect every small flesh wound, insect sting, burn and cut with an approved preparation.

The above suggestion, however, must not be considered as propaganda for self-treatment. Quite the contrary. As a general rule, the local application of a nonirritant germicide will settle the matter. If in spite of precautions infection manifests itself, then "double time" to your physician. Delay may be extremely unsafe. The principle of "great oaks from little acorns grow" applies to the little hurts of the body as well as to trees. General blood poisoning is a disease "oak" and the merest scratch of the skin has been known to cause it.

A word concerning powder burns and punctured wounds. They can cause tetanus. No matter how small the wound, rush to your doctor. And it takes a physician who knows his business to administer the necessary prevention.

Use care therefore in the little things, and thus kill the big ones before they kill you.

(©, 1929, Western Newspaper Union.)

Contests on Stilts

Crude and barbaric contests on stilts are those held by the natives of the islands in the southern Pacific. A band of from 15 to 20 young men, with their faces painted in grotesque designs, perch themselves on high stilts and engage in a free-for-all fight, in which they try to trip and knock one another down.

What you do When your Children Cry for It

There is hardly a household that hasn't heard of Castoria! At least five million homes are never without it. If there are children in your family, there's almost daily need of its comfort. And any night may find you very thankful there's a bottle in the house. Just a few drops, and that colic or constipation is relieved; or diarrhea checked. A vegetable product; a baby remedy meant for young folks. Castoria is about the only thing you have ever heard doctors advise giving to infants. Stronger medicines are dangerous to a tiny baby, however harmless they may be to grown-ups. Good old Castoria! Remember the name, and remember to buy it. It may spare you a sleepless, anxious night. It is always ready, always safe to use; in emergencies, or for everyday ailments. Any hour of the day or night that Baby becomes fretful, or restless. Castoria was never more popular with mothers than it is today. Every druggist has it.

Fletcher's CASTORIA

The Transition

Another portentous moment in the life of the young sprout is when he finally learns the pronunciation of "Aida" or something and decides to align himself with the intelligentsia.—Detroit News.

A Sour Stomach

In the same time it takes a dose of soda to bring a little temporary relief of gas and sour stomach, Phillips Milk of Magnesia has acidity completely checked, and the digestive organs all tranquilized. Once you have tried this form of relief you will cease to worry about your diet and experience a new freedom in eating.

This pleasant preparation is just as good for children, too. Use it whenever coated tongue or fetid breath signals need of a sweetener. Physicians will tell you that every spoonful of Phillips Milk of Magnesia neutralizes many times its volume in acid. Get the genuine, the name Phillips is important. Imitations do not act the same!

PHILLIPS Milk of Magnesia

Huh?

"This poet says the world is a masquerade."

"He must think some people have rented funny faces."

HELPED DURING MIDDLE AGE

Woman Took Lydia E. Pinkham's Vegetable Compound

Denver, Colo.—"I have taken six bottles of Lydia E. Pinkham's Vegetable Compound and will take more. I am taking it as a tonic to help me through the Change of Life and I am telling many of my friends to take it as I found nothing before this to help me. I had so many bad feelings at night that I could not sleep and for two years I could not go down town because I was afraid of falling. My mother took the Vegetable Compound years ago with good results and now I am taking it during the Change of Life and recommend it."—Mrs. T. A. Miller, 1611 Adams Street, Denver, Colorado.

LIBERTY TOWNSHIP NEWS NOTES

(By Special Correspondent)

Mr. and Mrs. John Lemke were Britt callers one day last week.

Miss Mary Lange visited at the J J. Stille home Tuesday evening.

Miss Lydia Beier was a caller at the Albert Carolus home Saturday.

Miss Trumbell was a guest for supper at the Herman Gast home Tuesday evening.

Mr. and Mrs. Ed. Schoenwetter and children visited at the O. E. Carlson home Sunday.

Francis and Florence Tanner visited at the Will Lemke home Sunday.

Prof. Penrod was a visitor at school No. 8 last Friday. Miss Mabel Schaefer is the teacher.

Miss Fern Stille visited several days lat week with her parents, Mr and Mrs. J. J. Stille.

Mrs. Rika Schuldt, of Garner, visited at the home of her daughter, Mrs. Lew Abele over Sunday.

Mr. and Mrs. Emil Beier were Sunday evening callers at the Carolus home.

Miss Margaret Neiman visited at the Tanner home Saturday and Sunday.

John and Will Lemke attended a meeting of the Masonic Lodge in Garner Tuesday evening.

Mrs. Emil Beier vis'ted at the Elmer Schaefer home Thursday afternoon.

Mrs. Art Knoke and daughter visited at the Art Schoenwetter home Monday afternoon.

Mr. and Mrs. Clarence Bredlow were Sunday guests at the Ben Reimer home.

Miss Dalia Stromer spent the night Tuesday visiting at the Geo. Schoenwetter home.

Mr. and Mrs. Hiram Watermiller and son, George, visited at the Carolus home Sunday.

Mr. and Mrs. Quintin Stille and sons visited in Belmond Wednesday with Mr. and Mrs. Jones. The latter is a sister of Mrs. Stille.

Miss Dorothy Marshall returned home last Saturday from Meservey where she has been for about ten weeks.

Ray Lange is working at the home of his uncle, Sam Hammond, near Garner now, driving to and from school in Klemme each day.

Alvin Kalka drove to Elkader on Saturday, returning Monday. Mr. Kalka is working on the J. J. Stille farm this year.

The Standard Bearers will meet at the church next Sunday immediately after Sunday school. Mrs. Abele has charge of this Society of girls.

Clarence Lemke was a pretty sick boy all last week, which was a rather poor way for him to spend his vacation. He is able to be in school again this week.

Miss Alice Carolus has been suffering the past week from an infection of the burns she received a few weeks ago. She is some better at this time.

Mr. J. J. Stille is still a sufferer from a very sore finger. He broke a needle in the joint of his fore finger six weeks ago and has been unable to use his hand but very little since.

Mr. and Mrs. J. J. Stille and Miss Fern visited at the Fred Maxtroth home in Garner Friday. Mrs. Maxstroth is very poorly again and it might become necessary for her to return to Rochester again.

The Epworth League of the M. E. church in Klemme held a social in the Liberty church basement Tuseday evening. The Liberty young people were all invited and royally entertained.

Mr. and Mrs. Ed. Schoenwetter and childern and Florence and Francis Tanner attended the school play given last Friday evening in Goodell. They put on four short plays and Miss Velda Schoenwetter took part in one.

The Ludekes had one of their family gatherings again last Sunday when they met at the Carl Suckow home in Garner. The ones from this vicinity that were there were: Mr. and Mrs. Ralph Ludeke and children, Mr. and Mrs. Henry Ludeke and Paul, Mr. and Mrs. Artur Schoenwetter and Ethel and Mr. and Mrs. Geo Schoenwetter and children.

Persia Has Salt Lake Larger Than Dead Sea

Five thousand feet above sea level in Persia is to be found a huge, salty inland lake. It is known as Urmia and is 250 miles around, covering an area of 1,600 square miles, and boasts of some 56 islands. It is among the highest bodies of salt water on the globe.

Ninety miles long by some thirty wide, it completely dwarfs the Dead sea, something like a mile and a quarter lower in level, and contains a greater percentage of salts in solution.

Urmia is fed by a number of small streams and is the catch basin for a considerable area, but as it has no outlet whatever except evaporation the salt that comes in stays in. Constant leaching by the streams brings in a continuous supply of salt, and given enough, this results in a salt lake, for while the evaporation takes care of the water it must leave the salt behind.

And this is what has happened to Urmia. For years and years it has been becoming saltier and saltier, probably exceeded in this respect only by Karabugas, the salt water annex of the Caspian sea. No fish live in it.

Many English Words Are Arabic in Origin

The Arabs have given the English-speaking people more words to express their thoughts than any other of the Semitic, Asiatic or African groups.

"When in summer you wear your 'mohair' or 'cotton' suit, avoid 'alcohol,' enjoy "sherbet' with 'candy' and 'coffee' with 'sugar,' or lie on a 'sofa' or 'mattress' reading a 'magazine,' you are drawing on that vocabulary," Prof Philip K. Hitti of Princeton told the Linguistic Society of America.

"In a complete English lexicon, Arabic would figure in no less than 198 entries under the letter A alone."

Many of these words have come into English indirectly through the romance languages, he said, but Arabic also has served as a medium for transmitting a number of words of Greek, Latin Persian, Sanskrit, Egyptian, Turkish Coptic or Hindustani origin, such as apricot, azure, borax, camphor and ebony.

St. Augustine's Chair

The wonderful old chair of St. Augustine, in which the new archbishop of Canterbury sits on the occasion of his enthronement, has had a long history. Tradition asserts that it was formerly the throne on which the old kings of Kent were crowned, but it is generally agreed that it dates, at any rate, from the commencement of the Thirteenth century. It is composed of three pieces of Purbeck marble in the design of a Roman state chair and stands in the chapel of the Corona in Canterbury cathedral. Each archbishop of Canterbury is enthroned in this chair, thus signifying his assumption of the primacy of England.

No Law Against Thinking

Even very small girls have their quarrels and following one of them this little girl came home to her mother much exercised over their little difficulty.

"Mother, Mary Lou is a cat," the one little girl said, probably echoing a term she had heard older people use.

"Oh you mustn't say such things," her mother reprimanded, "you mustn't say things like that about your little playmates. Lots of times we may think things that we shouldn't say."

"Well, then, I think Mary Lou is a cat," was the reply.

Old Elephants

A traveler says that an elephant when old goes on a high cliff and commits suicide, but it is doubtful if any considerable number of them hurl themselves from cliffs in this manner. It appears to be true, however, that the herds of wild elephants have their own natural cemeteries in the swamps or jungles, to which the old and weak crawl to die. Some of these places are known to the natives of Africa and are valuable sources of ivory. Other wild animals are said to adopt this practice of going to particular spots to die.

Dad's Dilemma

"How's the family?" inquired Jenks of Bing, his happily married friend from the other side of town.

"Well, my children are at a difficult age just now."

"Difficult? Why, they've all passed the measles and teething age, haven't they?"

"Long ago. But you don't know a father's troubles. My children are at the age where if I use slang my wife says I'm setting a bad example. And if I speak correctly, the kids think I'm a back number. Which would you do?"—Kansas City Star.

Signs Long in Use

The history of signs goes back to ancient Egypt and reaches America by way of Greece, Rome, Italy, France, Germany and England.

Inns were among the first industries to avail themselves of signs, Rome leading off with a bush swinging before the tavern door. From it came the adage "Good wine needs no bush." The cross was used for Christian wayfarers and the sun and moon for pagan travelers.

Dogs Called U... by Bibl...

Many people have a ...dice against selling dogs. Some go so far as to regard the sale of a dog as positively sinful. One elderly woman, says the Pathfinder Magazine, severely condemned a man who engaged in the business of raising shepherd dogs for the market. She branded his business as sinful and protested against her church accepting contributions of his "tainted" money.

The origin of this prejudice is not known for certain. It may be based on the old Hebraic Scriptural teachings. Deuteronomy 23:18 says in part: "Thou shalt not bring . . the price of a dog into the bouse of the Lord thy God for any vow." Many commentators, accepting "dog" here in the literal sense, state that Moses declared dogs unclean and prohibited traffic in them.

Others take a different view of the passage. They say that "dog" here does not refer to the animal, but to a person who has prostituted himself by committing any abominable action This opinion receives some confirmation from the context, especially the preceding verse. In Palestine the dog was looked upon with loathing and aversion, as filthy and unclean. This animal is mentioned in the Bible more than forty times and, with few exceptions, it is mentioned with contempt, to remark either its voracious instincts, its fierceness or its loathsomeness.

Medici Family Crest Now Pawnbroker Sign

In America there are but few shop signs reminiscent of an old day. The one most in use is that of the pawnbroker and his sign of three globes. With this is connected a varying and interesting background.

Averado de Medici was a commander of fighting men under the great Charlemagne. During the course of his battles on behalf of his overlord he met and slew the giant Mugello. As the spoil of war, he took the giant's club, to which for effective service in action were affixed three iron balls swinging upon a short chain.

It can readily be understood that a well-placed blow from such a club in the hands of an angry giant would certainly, to use slang, "make the birdies sing," and the three effective additions to the club would complete the picture. Therefore, Averado might well have added the three globes to the family crest. In later years the Medici took to the gentle but effective art of poisoning and as a side line engaged in the business of loaning money, using the memory of Mugello's battle-ax fixtures as their insignia.—Kansas City Star.

Substitutes for Gold

Perhaps all the world isn't struggling for gold and silver, but it is only because those precious metals aren't known in some of the out-of-the-way spots—and even there a substitute is found.

In the South Sea islands, for instance, porpoise teeth strung around a native's head indicate his wealth, recounts the Farm Journal. On the island of Yap the rich man is known by the number of cartwheel stones piled in front of his hut. In the East Indies and throughout a large part of Africa beads and shells are used for money, and in the Polar regions, where fishing is the chief source of livelihood, fishhooks are a principal medium of exchange.

Siamese Currency

It takes 100 satang to make a baht the latter being the equivalent of 0.66567 grams of fine gold. The baht, sometimes just bat, is also the unit of weight. Eighty baht equal one chang and 50 chang equal one haph. One-eighth of a baht is called a fuang, and two fuang are a salung. There are also wahs, kups and niews, as well as sens, yotes, tauhs and tanans. Twenty tanans formerly equaled half a cocoanut shell. You will have to keep them all straight in your mind if you have financial intercourse with Siam. But remember especially that the tical is now out of use officially as a money unit.—New Orleans Times-Picayune.

Various "Complexes"

The word "complex" is used by many modern psychologists and alleged psychologists to denote a group of ideas and feelings which are mentally associated with a certain subject. For instance, they would say that Napoleon had a "conquest complex." Usually, but not always, the ideas and feelings are supposed to be repressed. A person is said to have an "inferiority complex" when he inherently feels himself incapable of doing certain things. The opposite state or attitude of mind is termed a "superiority complex."—Pathfinder Magazine.

"Height of Land"

This is another name for watershed, water parting or divide, the line of separation between the basins of two adjacent rivers, lakes or drainage valleys, from which streams flow in opposite directions. In Minnesota there is a small lake of this name from which streams find their way to the Red river of the North and to the Mississippi. Maps of northern Ontario also show the Height of Land, marking the divide between rivers flowing to the north and those flowing to the Great Lakes and St. Lawrence.

LIVE STOCK

FALL FRESHENING HAS ADVANTAGES

Good Feed Supplies Are Required, Including Silage.

Where cows are kept for beef purposes and on those farms where dairying is new, or is merely a side issue, the common practice is to have the cows freshen in the spring. Under these conditions the cows produce most of their milk during the pasturing season and are nearly dry by the beginning of winter and entirely dry by midwinter. Under this condition most of the milk is produced from pasture which is, as a rule, the cheapest feed if the labor of growing winter feed is taken into account. Spring calving usually goes with a small average milk production. It is justified under some conditions, for example when summer feed is very cheap, but proper winter rations expensive.

After a community has passed through the early stages of development in dairying, a change to fall calving usually begins. To do this requires good feed supplies, including a succulent feed, either silage or roots for winter feeding. More attention is also necessary to having comfortable barns and good provision for supplying abundant water during the cold months.

When these conditions are reached the advantage of fall calving begin to be realized. The cows are expected to milk at least ten months in the year. It is found that when proper winter conditions are maintained, cows calving in the fall will produce more milk than when calving in the spring. The average test is also a little higher.

Furthermore, the farmer, if engaged in general farming as well, has more time to give to the cows and to raising the calves. Still another advantage is that the dry period comes during the hot part of late summer when the weather is unfavorable for milk production. Still another advantage is that fall calving brings the highest milk production during the months when the price is best.

Exercise Is Essential for Profitable Porkers

An abundance of exercise for the pregnant sows is absolutely indispensable if thrifty pigs are to be expected. To force the sows to take plenty of exercise, it is a good plan to feed them at a point quite a long way from their sleeping quarters. If there is at this place a rack with choice legume hay, the sows will make many trips back and forth each day. When sows are fed ear corn and the allowance is properly limited, they will spend considerable time searching for the last kernels, and the longer they can be kept on their feet, the better it is for their health. If a ground concentrate mixture is fed, it is often a good plan to scatter a little shelled corn, whole oats, or sheaf oats on the ground for them to work over. Sows heavy in pig should not be compelled to plow through snowdrifts, but paths should be made for them. Ashes or litter, such as straw, should be put on icy places, else they may slip and wrench themselves, which may result in abortion.—Bulletin 400, Wisconsin Experiment Station.

Never Locate Pastures Along Running Water

The hog lots and pastures should never be located along a stream and if possible they should be removed somewhat from highways. It is not always possible, especially where pasturing is being done, to protect the hogs from sources of infection along the road, but it is possible to fence the animals away from streams. Free range is desirable in extensive hog production where the farmer is raising his own feeders, but the possibilities of obtaining hog cholera infection should be guarded against carefully in a case of this kind.

Sheep Get Chaff Into Wool Around Hay Stack

Sheep should not be permitted to eat around hay or straw stacks, or to eat in any other manner that will permit seed and chaff to get into the wool. It is very difficult for the woolen manufacturer to comb this seed and chaff out of the wool during the manufacturing process, and sometimes burry and seedy wool has to be "carbonized"; that is, treated with certain acids which dissolve the chaff and other vegetable matters that have lodged in the wool, without destroying the wool fibers, which are animal matter.

Brood Sow Feed

There are a number of mixed feeds which have been fed in connection with corn to brood sows which have given very good results. The extent to which they should be used depends quite largely on relative prices and how much bother it is to a farmer to do his own mixing. Most of the commercial feeds should be fed at the rate of about three-fourths of a pound per sow daily in connection with enough corn to keep the sows in good flesh but not fat.

Perennial Crops in Every Garden

Common Vegetables Once Established Need Little Added Care.

Every garden should have a portion of it devoted to perennial crops, such as asparagus, horseradish, rhubarb, strawberries, raspberries, etc. These crops should be placed on one side of the garden where they will not interfere with the culture of the annual vegetables. After such crops are properly established little labor is required to keep the plantation going. Yet by far the larger share of our gardens lack perennial crops. Increase the delicacies on your table by planting these crops.

Asparagus.

This vegetable deserves a place in your garden. A row 75 to 100 feet long will supply your table with all the asparagus you want. It is not hard to grow if properly started. Asparagus requires a deep, rich, moist soil. Dig a trench 8 to 10 inches deep and about 1 foot wide at one side of the garden. For each foot of trench mix a shovelful of well-rotted manure with the loose dirt in the bottom of the trench. Spread the asparagus roots out on this mixture, spacing them 15 to 18 inches apart in the row. The small fibrous roots should be spread out horizontally and when properly planted resemble the spokes of a wheel laying flat on the ground. The crown of the plant would be comparable to the hub of the wheel. Cover the crowns with 2 or 3 inches of dirt. As growth proceeds during the summer the trench should gradually be filled until level with the surface of the ground. A bed properly established should last 10 to 20 years. Cutting should not be practiced the first year. One-year-old roots are best for planting.

Rhubarb.

The soil requirements for rhubarb are practically the same as those listed for asparagus. No trenching is required. Well-rotted manure should be mixed with the soil and the crowns should be set level with the surface of the ground. Set the roots 3 feet apart in the row. Fifteen to twenty hills will be sufficient for the average family.

Horseradish.

The plant is worthy of wider cultivation. It is not found in one garden out of a hundred, yet it is very easily grown. It requires a deep, rich soil and given this, little care is required for it to flourish. Root cuttings may be purchased from any seedsman. Ordinarily, such cuttings have the bottom end cut to an angle and should be planted with the slanted end down. Otherwise the roots will be poorly shaped. Rows should be 3 feet apart and the roots should be planted 12 inches apart in the row. Ten to fifteen roots are sufficient for the average family.

Nature Tells Us When to Plant Garden Seeds

Did you know that Mother Nature keep a calendar which tells the gardener just when to plant his seeds out in the open ground? It's a fact, and here's how to read her signs:

When the peaches and plums are in blossom, or where these trees aren't grown, when the willows and poplars put out their catkins, then it's time for out door planting of lettuce, kale, radish, beets, turnips, carrots, smooth-seeded peas, onions, cabbages, and cauliflower. Wrinkled peas, being tender, should wait a little longer.

When the apple trees bloom, or when the dogwood or white oak buds unfold, it's time to plant the heat loving vegetables outdoors—the cucumbers, beans, sweet corn, okra, pumpkins, melons and squash.

Concrete Floor for Hog House Thwarts Moisture

There are two ways to keep the moisture from interfering with concrete floors of a hog house. One is to lay floor tile of clay under the floor on a good foundation and then place an inch of mortar over the top of this tile and between the joints. The other way is to use coarse gravel and small rock under the floor. If the location is a low one the tile will be considerably more valuable for this purpose. When a good mixture of concrete is used there is little trouble with moisture. The proportion of sand and cement in the cement mortar on top of the tile should be one part cement to two and one-half parts of sand.

Agricultural Hints

Flies hatch in manure piles.

* * *

A patch of spinach may be planted to advantage.

* * *

Lack of efficient use of machinery is more important than its exposure to weather

* * *

Plant a bed of lettuce in a cold-frame or some protected spot to make plants to set in March.

* * *

Early hardy varieties of English peas such as John L. and Alaska may be planted any time.

* * *

How about getting those gates up so you can handle them without losing a part of your religion?

THE PREMEDITATED LOCKOUT

(© by D. J. Walsh.)

GRACE DENTON was as pretty as the last pink cloud of a summer sunset. She had been employed by the Acme company for a number of years, earning a fairly good salary, and might have afforded better things than made-over hats and cheap gowns, but Grace was not one to live each day for itself alone.

She realized that some day, if she did not marry, her earning power might diminish instead of increase, and she was sufficiently forehanded to wish to fortify herself while she was able against any such contingency as that.

"If I do not marry!" she repeated the words to herself as she worked, recalling how Mollie Newcomb had recently taken her to task for her aloofness toward Ted Martin. Ted was the son of Acme's president, a wholesome young man of twenty-five, a college graduate and an all-around athlete who appealed particularly to the eternal feminine, but who treated them all alike, that is, all except Grace Denton.

"Believe me," Mollie had averred, "if Ted Martin saw fit to smile on me the way he does on you, I'd have him hooked so fast he'd never know what had happened until it was all over but the honeymoon."

Grace did not view this situation through Mollie's eager eyes. Ted Martin had singled her out for special attention since coming to act as his father's secretary in the Acme offices, but Grace had her own idea of the valuation men in Ted's class usually place upon girls in hers and she had no notion of subjecting herself to the trying ordeal of openly repulsing this young scion of the house of Martin, while perchance she might lose a good position thereby.

Only last night Ted had asked her to go to the theater with him and some place to dance afterward, but how much did she know of the sincerity of his admiration for her? She had no parents or brothers to fight her battles for her, so she couldn't be too careful, she decided, refusing therewith Ted's invitation, with a very carefully thought-out, plausible excuse.

The next day, at the lunch hour, when Grace was adjusting a new velvet cloche over her lovely, curly blonde bob, Ted Martin approached, his admiration so openly evident that she felt herself coloring like a full-blown peony.

"That bonnet's great on you, Grace!" Ted exclaimed. "Bet it cost you plenty, too."

"Only the price of the material," Grace returned solemnly, resolved to make her position clear to this young man without further delay. "I make all my own hats and most of my dresses."

"Some girl, I'll tell the world!" the young man enthused, falling into step beside her as she was leaving the building for lunch. "See here, Grace," he went on, linking his arm through hers to guide her over a treacherous crossing, "I might as well confess here as any place, I want you for Ted Martin. Any hope?"

"Are you by any chance proposing to me, Mr. Martin?" she asked, looking up at him soberly.

"Just that, young lady," he assured her. "My mother needs a daughter, her son needs a wife and every girl needs a husband. If eventually, why not now?"

They reached a popular, high-class dining palace as Ted finished speaking. Still holding Grace's arm, he propelled her through the revolving door to a table in a secluded corner, exactly as he might have moved a checker to another square.

Grace was about to refuse Ted without further reasoning, much as she longed to say yes, but something prompted her to ask him to wait for his answer, and, during the weeks that followed, she had all she could do to ward off the fatal day.

Finally, one day Ted announced firmly that he was coming to her rooming-house that evening after dinner for his answer. She had put the situation before him again and again as she saw it—the cultured son of rich parents and the poor girl so unsuited, to walk beside him in the luxurious paths through which life undoubtedly would lead him; the aristocratic mother who, without question, would be ashamed to acknowledge as daughter the lowly girl her son had chosen, but to each and every argument Ted furnished the same answer.

"I love you and you've admitted you love me. You're honest and upright. That's all my mother expects to ask of my wife, Grace."

Grace remained adamant, thinking she was acting for Ted's good. At eight o'clock he was coming for his answer and she would tell him they must part. She would seek a new position and they never must see each other again.

Her heart was aching and her eyes were filled with tears when the bell rang. Mrs. Pogue, the woman with whom she roomed, was out, so she went to the door herself. When she opened it and saw Ted standing there, she stepped outside, feeling that she did not dare subject her failing courage to the intimacy of Mrs. Pogue's cozy little parlor. Almost immediately the door blew shut and she was locked out, without coat or hat or a place to go that was near enough to keep her from becoming drenched.

"I'll have to stay here until Mrs. Pogue gets back," she finished, after telling him what had happened. "I don't know where she's gone and every window in the house is locked."

"I'm not going to have you stand out here and get pneumonia when I've got a car at the curb," insisted this masterful young man.

"But what will your mother say?" Grace asked chokingly.

"We'll run right over and ask her!" Ted joined jovially.

Without further argument, he lifted Grace in his arms and hurried out to his car. In a few moments, moments in which Grace's thoughts ran riot, but during which no word was spoken by either, they reached the Martin home and Grace found herself standing confusedly in the presence of the lovely gray-haired lady who was Ted's mother.

"I—I'm sorry the door blew shut, Mrs. Martin," she faltered. "I—I know I'm just a working girl, unsuited—"

"I've no false ideas about girls who employ themselves honestly to earn their daily bread," Mrs. Martin interrupted, taking the hand of the embarrassed girl, reassuringly. "Furthermore, I've raised my son so that I never need doubt his judgment when he is ready to select a wife. You've been locking him out of your life for no reason at all, just as the closing door locked you out of your home."

"But the door just happened to close and—"

"You're wrong again," Mrs. Martin insisted, smiling broadly. "Mrs. Pogue was at home, hidden in the hall closet, instructed to push the door shut the moment you stepped out voluntarily or were pulled there by my boy's strong arm. It was my plan. I could think of no other way to get you here for this interview which is to show you just how much I want Ted to be happy. There is a clergyman waiting in the library and Ted got the license this afternoon."

Forgotten Colony of Dutch Found in Java

Some time ago more than three hundred fair-haired, blue-eyed people were discovered on a little island east of Java. All their neighbors belong to the Malay race, and they themselves speak only Malay; yet each new-born child in the colony is as pink and white as any baby born in the Occident. How did they happen to be living there?

It was not easy for them to give an account of their origin, but the records of the Dutch East India company on being investigated showed what must have happened. In 1665 the company, which in those days conducted its business as if it were a government, landed eight Dutch soldiers with their wives on a little isle of Kissa. Under a sergeant by the name of Kaffyn they were to guard against the poachings of the Portuguese, from whom the Dutch had taken many possessions in the East Indian archipelago. Then the little colony apparently was torgotten. The records of the company show nothing further concerning them.

When the little group had eaten itself out of provisions and found that no ships were likely to land there any more, they turned to cultivating the rather barren soil. For two years they had a hard fight for life. Fortunately, they had some corn and potatoes from their little store, and they did well with irrigation. The few coconuts that they found were also planted and cultivated. In time, with economy and industry, the plots surrounding the little dwellings looked almost like Dutch gardens.

The soldiers and their wives had been trained in religion at home. Cast upon their own resources, they chose one of their group to be their teacher and preacher. They elected another chief. In time they came into contact with the natives of the little isle, and with those of surrounding islands, too. They mastered the foreign tongue, and so well did the children take to the native language that presently they forgot their fathers' language altogether. When, during the latter part of the Nineteenth century, the forgotten colony was rediscovered, not one of the inhabitants was able to respond to the inquiries that were made to them in Dutch. In four generations the old tongue had been completely lost.—Washington Star.

May Be National Park

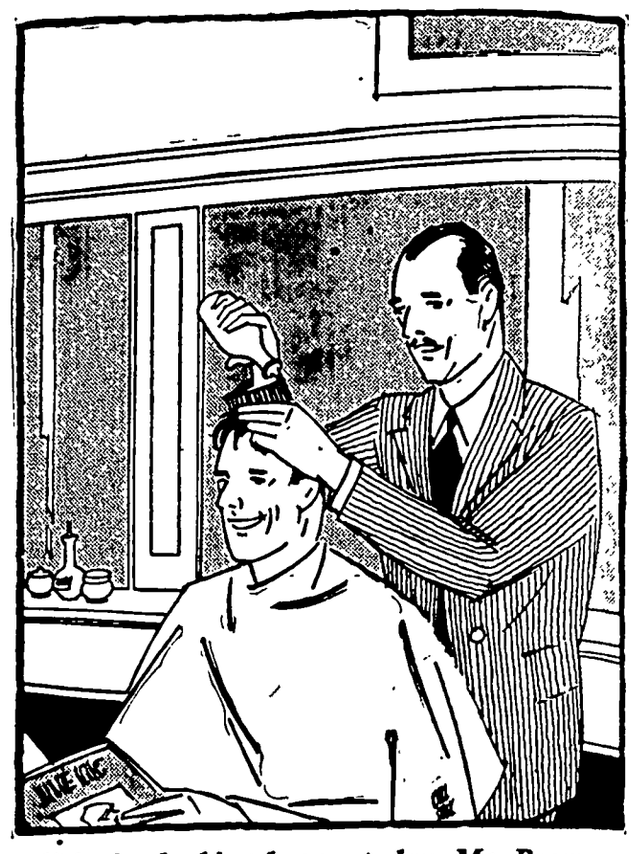
The ice bluffs of Kotzebue sound, near the Bering straits, just within the Arctic circle, are one of the world's wonders, and Alaskans will ask congress to make the site a national park.

The bluffs, resembling high plateaus en mass, are of solid, clear ice, covered with two to three feet of soil and volcanic ash, in which trees and shrubs are growing. About 100 miles up the Kobuk are still higher ice bluffs, on top of which are growing spruce trees more than two feet in diameter at the stump, also birch, alder and willow.

Historic Old Church

The Protestant Episcopal church at Pohick, Va., was projected in 1767, George Washington being one of the interested parties. The completed church was turned over to the vestry February 15, 1774. It was in fairly good condition until the Civil war, during which time the whole interior was ripped out and the edifice used as a stable for army horses. After the war only the brick walls and roof remained, and it was left practically in this condition for many years. It has now been restored.

That Million-Dollar Feeling



"You're looking happy today, Mr. Brown. Someone leave you a million dollars?"

"No, Louie, but I took NR last night and I feel like a million."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

NR TO-NIGHT TOMORROW ALRIGHT

MAKE THE TEST TONIGHT

BE WELL and HAPPY

Get Relief. Drive Out the Poisons

Auto-intoxication, Constipation, Biliousness, are caused by defective elimination. For over thirty years Nature's Remedy (NR Tablets) has proven the safe, dependable relief for these conditions.

Relative Importance

"John, how's your cold?"

"Why, I still have it, if that's what you mean."

"Did you go to a doctor?"

"Of course not! I wouldn't bother a doctor with my slight colds and petty ailments."

"Will you let me mix you a hot drink?"

"Don't go to the trouble. I'll get rid of it in time."

"John, you make me so provoked. Now if there was something wrong with your golf swing you'd read all the books you could get and hire the best professional at the club to correct it."

"But that, my dear, is something you must never neglect."—Life.

Rid of Constipation. Improved Both Health and Looks

"I suffered from stomach and bowel trouble for a number of years. I finally got so bad that I had no life or energy left, and felt that there was no help for me. I was completely worn out all the time, had a distressed, haggard look on my face. My mind was dull, my eyes blurred, and I was unable to take an interest in anything.

"I commenced using Milks Emulsion in May. It occurred to me that the best way to let you see the wonderful improvement Milks Emulsion had made in my health and appearance, would be to send you the picture that I happened to have taken a few weeks before I started using your Milks Emulsion, and to have another picture taken now, and send both to you.

"I am still taking your Milks Emulsion and improving each day. I know I would have been in my grave had it not been for your Emulsion. I love to take it. It is so pleasant and agreeable.

"I only weighed 108 pounds when I began to use Milks Emulsion, and now I weigh 138 pounds. It has cleared up my complexion, made my eyes bright and a difference in my looks, as you will see by the two pictures. I don't look like the same woman. To my mind it is Nature's beautifier.

"I try to get everyone that I meet to take Milks Emulsion as it is the most wonderful medicine in the world." Yours truly, MISS SARAH KATE KNIGHT, 722 Anderson St., Bristol, Tenn.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Town Made Invisible

While flying over the town of Böblington, near Stuttgart, Germany, an aviator was surprised to see the houses and factories disappear before his eyes. It was during a test being made by German air ministry officials and a party of engineers of the new gas invented by Doctor Reddeman, the German gas expert, which enables a city to protect itself against air attacks by rendering it invisible. The vessels, containing a secret chemical solution, had been placed about the buildings, and by pressing an electric button Doctor Reddeman ignited the chemical, and clouds of smoke 300 feet high covered an area of 300 square yards. At Cuxhaven a large plant is being constructed to store the chemical to be used in veiling the city in case of war.

"De world, as it keeps movin'," says Uncle Eben, "gives us de only kind of a free ride we has any reason to be for."—Washington Star.

Grandmother Knew there was nothing so good for congestion and colds as mustard. But the old-fashioned mustard plaster burned and blistered.

Musterole gives the relief and help that mustard plasters gave, without the plaster and without the blister. Gently rub it in. See how quickly the pain disappears.

Try Musterole for sore throat, bronchitis, tonsillitis, croup, stiff neck, asthma, neuralgia, headache, congestion, pleurisy, rheumatism, lumbago, pains and aches of the back or joints, sprains, sore muscles, bruises, chilblains, frosted feet, colds of the chest (it may prevent pneumonia).

POULTRY

CKHEAD CAN BE CONTROLLED

ase Is Caused by Animal erm in Young Fowls.

kkhead of turkeys is one of the dreaded diseases of this class of y, but destructive as it is, the e may be controlled.

e find that blackhead is caused animal germ," says Dr. B. F. p, head of the poultry department te college. "It generally attacks turkeys from five to seven of age on up until they mature. ll definitely whether a bird has head, one has but to open a bird and if blackhead is present, ver will appear to be spotted. If ver be cut through, these spots d tissue will be found scattered ghout. To prevent future spread e trouble, the eggs for hatching d be soaked for ten minutes in a 10,000 solution of bichloride of ury and hatched in an incubator a turkey hen away from chick- Where blackhead is not on the ises, these precautions are not sary. A drug called sulpho- l may also be used. Always give birds all the buttermilk or soured milk that they will drink. This up the general health condi- "

learn more of the real nature of disease, Doctor Kaupp will begin studies with turkeys in the four tain counties of Ashe, Madison, son and Avery. These four coun- have many turkeys and the owners suffered losses in the past by on of the blackhead trouble. Doc- Kaupp states that all the exper- tal work will be conducted under al farm conditions and he hopes nd definite and practical control reventative methods which may be by all farmers.

rkey-growing offers good profits, cially to the grower who is pre- d to put first-class birds on the et at Thanksgiving and Christ- There are many successful tur- farmers in various parts of North lina and if it is possible to find a tical control for blackhead, the in- ry should easily become more table.

nner Ducks Classed ás Heavy Egg Layers

unner ducks are classed as laying s and are the only breed recog- d in that classification. In many nces Runners have produced as y eggs as chickens. If managed perly ducks of this breed may be ected to lay almost as well as hens. se ducks are small in size, the es weighing four to four and one- pounds and the females three a half to four pounds. In spite he fact that they are heavy lay- they mature quite rapidly and e good broilers. They are killed this purpose when they weigh ut two and a half to three pounds. se ducks are long and narrow bod- The body is carried very erect. re are three varieties of Runner ks: Fawn and White Runners, ciled Runners, and White Run- s. In all three varieties the mat- s are made in the proportion of one ke to each six or eight ducks.

Poultry Hints

point to keep in mind in feeding sh to the turkeys is that they need vitamine D provided by a good h-grade cod-liver oil just as badly do chickens.

* * *

Most turkey raisers will wish to tch the eggs in an incubator and od the poults artificially. By doing s they can keep the turkey hens production almost continuously.

* * *

There's no better feed for young lts than plenty of sour milk. Feed e times daily at first, but don't over- d, and be sure to keep grit, char- l and clean water before them at times.

* * *

Build open sheds for turkeys to st under as soon as they begin to nt to fly up to roost.

* * *

Keep young turkeys shut up until e week old. Then turn out for a few urs each day during the warm part the day until they are two weeks .

* * *

Each turkey egg is worth a great l more than a single chicken egg, d because of this fact the loss is eater when the eggs do not hatch when they hatch into weak turkeys.

* * *

Start birds on bran and clabber sh if possible; otherwise, use corn eal.

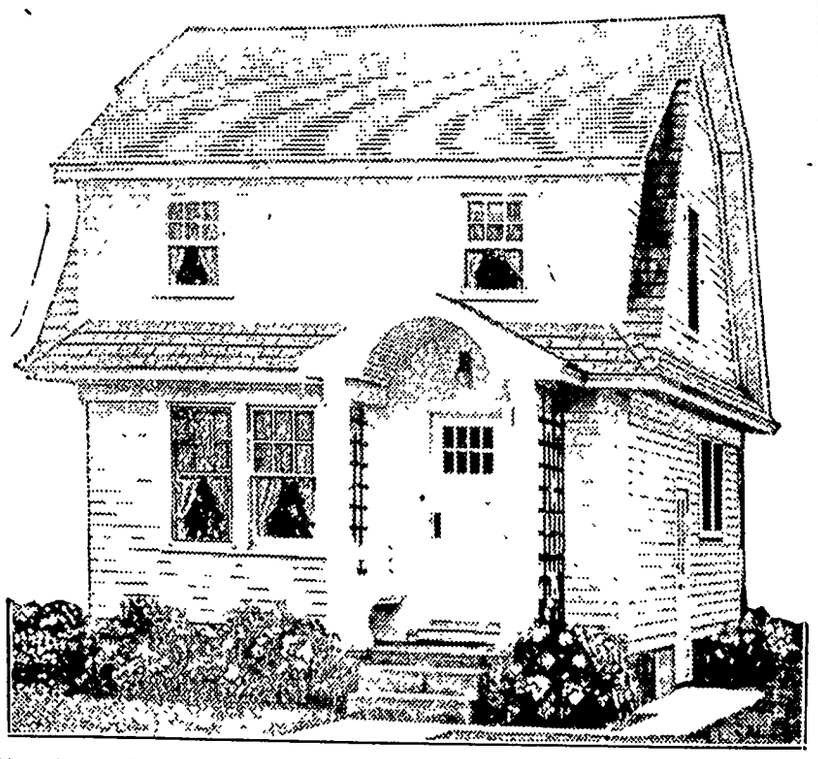
* * *

Don't try a late hatch unless you ve separate enclosure for these late rkeys. Two ages of turkeys don't x any better than two ages of chick- s do.

* * *

Usually it is necessary to use one nder to every three or four geese. young gander will do provided he fully matured. Geese may be turned t in any moderately cold weather.

This Home Will Bring Happiness, Comfort and Sunshine Abundantly



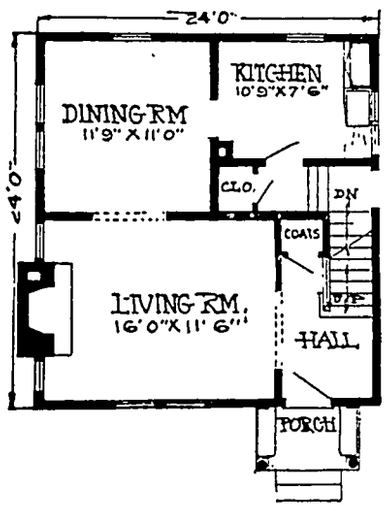
Happiness, Comfort and Sunshine. This Home Will Bring It in Abundance. It Is Well Designed Without a Bit of Waste Space. The Cost of This Home Is Surprisingly Low.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

In many of the smaller towns and on the farm there is a demand for a small home such as shown in the illustration. On larger farms this would make a very excellent tenant house, while for the use of those who live in town, it is an excellent design for the small lot or for the family of not more than five people.

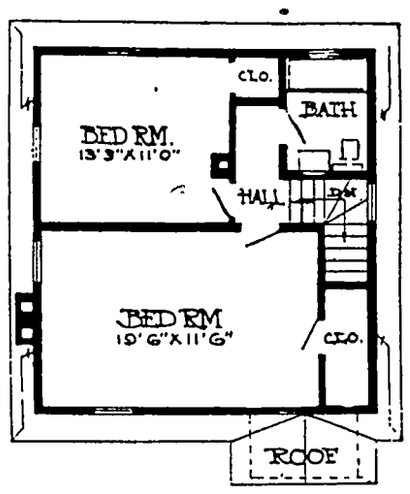
The house is 24 feet by 24 feet. Its foundation walls are straight, which means economical construction cost. The plain walls of the square house



First Floor Plan.

are broken by unusual roof design. As a matter of fact the wide dormer above at the front and at the back adds to the roominess of the house and takes from it the plainness that is often found in smaller homes of this type. The overhang of the roof and the attractive entrance porch with colonial seats on either side and the trellis over which vines or flowers can be trained are features which will appeal to the prospective home builder.

The entrance door leads to a stair hall and at the left is the living room extending most the width of the building. This room is 16 feet by 11 feet 6 inches wide. It is connected with the dining room, 11 feet 9 inches by 11 feet, by a double cased opening which makes the two rooms practical-



Second Floor Plan.

ly one. The kitchen is of good size, being 7 feet 6 inches by 10 feet 9 inches. Upstairs there are two large bedrooms, the one at the front of the house being 10 feet 6 inches by 11 feet 6 inches. The one at the rear is 13 feet 3 inches long by 11 feet deep. Both rooms have ample closet space in connection with them. At the head of the stairs off the hall is the bathroom.

This house is set on a concrete foundation and has a basement of the same size as the house itself. It is of frame construction, the outside walls being covered with ship-lap siding.

This home building design will appeal to those who want a small attractive home, but who do not have a large amount of money to invest in one.

Keep Kitchen Bright-Colored, Latest Edict

Make your kitchen charming if you would keep up with the times.

The modern housewife is in rank rebellion against the dull, the drab, the uninteresting "Give me color," she says, "in my life, in my dress, even in my kitchen!" And she is only echoing the general need for it, the rapidly growing use of it.

And why not a colorful kitchen? Because a task is humdrum, must it be made worse by a dreary environment? The progressive woman says not.

"The kitchen is my workshop," she explains, "so it is going to be a tidy, cheerful place, equipped with just as many conveniences as my husband has to help him in his work.

"Would he bother with out-of-date ineffective tools or stick to the methods of his great grandfather? He would not! And if he did, he would never be asked to relate the history of his life in a 'success' magazine!"

It pays the feminine go-getter to be just as fussy. She ought to insist upon having a cheerful, well-lighted kitchen, made sanitary and attractive with good, washable paint, in pleasing colors. Even the plebian garbage can and waste basket may have their homeliness concealed behind bright-hued paint.

The stool with steps on one side, so that it can be used also as a ladder, offers another surface for colorful paint. There is a great deal in the psychology of color. Just put a canary into a red and yellow kitchen and hear it sing!

Tastes differ, of course. Some may prefer a blue and orange color scheme. Tangerine and nile green may appeal to others. And there are natures happier in a springlike setting of lilac and daffodil yellow.

There is nothing so hampering to efficiency as the cluttered kitchen. Let the kitchen cabinet and broom closet conceal unornamental utensils and create an effect of tidiness.

Paint their exteriors to match the woodwork, but brighten their interiors with some gay, contrasting color.

Quality Siding Must Be Demanded in House

The quality of siding is determined by a number of things. Well-made bevel siding is thick. The wider the board the greater its thickness. For a board more than six inches wide one-inch material is resawed. A board twelve inches wide should be cut from one and one-eighth material. Thinner boards are sometimes substituted from an erroneous idea of saving expense. The additional thickness costs very little. The additional durability is considerable. The specifications should state the thickness as well as the width of the siding.

The quality of siding also depends upon the grade of the wood, the number and extent of defects it contains. Thus if there are a large number of knots the siding is of a lower grade. When cheaper, knotty siding is used special care must be taken with the painting. A statement about the grade of the wood to be furnished is therefore another clause for the specifications.

Good Lumber Needed for a Good Building

If lumber is worked on the "job" it takes additional time for the carpenters and additional money from the builder. The best workmen cannot build a good-looking home with a poorly manufactured product.

For that reason it is only good business when building a home to rely upon some known lumber that is manufactured by a reliable firm. And the best security is in a trade-marked brand of lumber, for here the manufacturer must depend upon his lumber to make his easily distinguishable product acceptable to the building world.

There are many frame homes standing today that were built when the United States was confined to the east coast. This, coupled with the fact that lumber now is prepared much more scientifically and more carefully than when those houses were built, indicates the homes built soundly today will last as long as those of the past.

ORCHARD GLEANINGS

LITTLE PRUNING BEST FOR PEARS

Trees Have Proved Most Satisfactory to Grower.

The merits of high and low-headed trees have been compared, and a study made of the effect upon tree growth and fruit production of much and little pruning. Low-headed trees receiving little pruning have been proved most satisfactory in all respects.

Such well-known varieties as Anjou, Bartlett, Kieffer, Sheldon, Seckel and Lawrence were used in the Geneva experiment station tests to study the relative value of high and low heading. Certain of these varieties have also been used in tests of much and little pruning for pears. From the results secured it would seem that low heads were best for all varieties of pears, especially for the tall, upright-growing types.

Low-headed trees produced larger, broader and rather more symmetrical tops than did the high-headed ones, it is said. This proved particularly advantageous for unwieldy varieties like Kieffer. Careful heading and early training are always desirable.

It can be safely recommended that all varieties of pears will respond better to little pruning than to severe pruning and thinning. Little pruning seems to produce rather more symmetrical tops as well as larger bearing areas. Heavy pruning appears to stimulate a greater wood growth which results in rather bushy growth or sometimes rangy and unwieldy branches and relatively smaller bearing areas.

Peach Leaf Curl Worse in Cool, Rainy Seasons

Peach leaf curl, as the name indicates, affects the peach tree principally and is worse in cool, rainy seasons. The character of the losses is the dropping of the leaves in the spring followed by a forcing of a new crop of leaves later in the year, thus lowering the vitality of the tree. Again there may be a partial or total failure of the tree to set or yield a crop of peaches because of the loss of the foliage.

Repeated loss of leaves for several seasons will result in the death of the tree. When the disease is so severe, the twigs of the trees may be killed.

The first noticeable affect of peach leaf curl is in the spring when the leaves begin to unfold and there is a puffing and folding of the leaves as they develop. The leaf blade becomes thickened and puffed along the midrib causing the leaf to curl. Diseased portions become yellowish with tints of red. As the leaf thickens it becomes brittle and finally shows a silvery bloom over the upper surface. Affected leaves finally die and drop from the tree. In some cases the entire tree is defoliated.

This is a fungus disease and should be combated by means of spraying as any other disease. The fungus seems to hibernate on the bud scale in the form of spores and these spores germinate during the spring rains at a time when the buds swell.

Planting Good Fillers in an Apple Orchard

If you wish to plant fillers in your apple orchard then it is suggested that you use some early bearing variety of apples such as Wagener, Jonathan or Grimes. But first be sure that you possess the nerve to take out the fillers when it becomes necessary. Peaches are rather undesirable as fillers in an apple orchard because they require different care and spraying. Often the spray from the apple trees will drift to the peaches and injure the foliage. The only favorable thing about peach fillers is that they will usually remove themselves and thus spare the grower the painful job.

Trees Held in Original Package for Over Week

When the soil is too wet for heeling-in operations the trees may be held in the original packages for a week or more without danger of injury by storing them in a damp cool place such as a cellar or building where the temperature may be kept above freezing. At the time of storage examine the roots and if dry sprinkle the packing material around them to keep it moist until the trees are heeled-in or planted.

The roots of the trees should never be exposed to the wind or sun in heeling-in or in planting.

Setting Cherry Tree

The cherry trees which are received from the nursery have tops entirely out of proportion to the roots that remain on the trees. The very nature of growth is such that only a very small percentage of the roots can be retained in the process of digging. It is therefore necessary to cut away a good many of the branches of the cherry tree, and all of them should be shortened in, otherwise, a small amount of growth will be made at the terminal buds of the branches.

Man's weakness lies in his fancied wisdom.

Sir Walter's Thoughts Must Have Been Lurid

In days of old when postage rates were high many people sent their letters "collect." Once Sir Walter Scott received by mail from New York, a thick package on which he had to pay £5 ($25) postage. Opening it, he found inside a manuscript entitled "The Cherokee Lover," written by an American woman who requested that he read it, improve it, write a prologue, and have it staged at Drury Lane, as well as to take the necessary steps to secure the copyright for her.

Two weeks later, another packet arrived on which Scott paid another $25 postage. He opened it, says Alvin F. Harlow in "Old Post Bags," and there was another copy of "The Cherokee Lover" from the author. She wrote that the weather had been so stormy and the mails so uncertain that she feared the first copy might be lost and so inclosed another.

Genius Rewarded

Judge—Why did you take that man's second-hand auto? You ran it 100 miles, too, didn't you?

Car Owner—Judge, I didn't know he ran that machine 100 miles. I haven't the heart to prosecute him; he's a genius.

If thou hast fear of those who command thee, spare those who obey thee. —Rabbi Ban Azal.

Kidneys Bother You?

Deal Promptly With Kidney Irregularities.

KIDNEY disorders are too serious to ignore. It pays to heed the early signals. Scanty, burning or too frequent kidney excretions; a drowsy, listless feeling; lameness, stiffness and constant backache are timely warnings.

To promote normal kidney action and assist your kidneys in cleansing your blood of poisonous wastes, use *Doan's Pills*. Used and recommended the world over. *Ask your neighbor!*

50,000 Users Endorse Doan's:

J. F. Shaw, 987 Columbus Ave., New York, N. Y., says: "My kidneys were not acting properly. The secretions passed too frequently and this broke my rest at night. I felt tired and my back bothered me considerably. I tried Doan's Pills and it was only a short time before I felt all right again."

A Running Start!

Spring and summer are coming with reduced bills for heat, light and cooking.

Why wouldn't it be a good plan to start an account and deposit the amount of that saving each monh?

You'd never imss it because you have grown accostumed to making your budget meet winter's expenses.

It would mean that next fall you'd have the cash in the bank to get a running start at things.

Let us help you select your paint and varnish!

PORCH AND DECK PAINT
Lowe Brothers Porch and Deck Paint goes on easily and dries to a smooth, hard, durable surface. It stands up under exposure and hard usage, and is easy to clean.

FLOOR ENAMEL
Lowe Brothers Floor Enamel forms an ideal finish for all interior floors—especially good for the kitchen. It provides a hard surface of tile-like smoothness that is easily cleaned and always attractive.

NEPTUNITE VARNISH STAIN
Lowe Brothers Neptunite Varnish Stain makes old furniture, floors and woodwork look like new. It stains and varnishes with one stroke of the brush—brings out the natural beauty of the wood. It is easy to apply and dries quickly to a beautiful, lasting finish.

PAR-O-KEET LACQUER
Your furniture, floors and woodwork, toys, metal work, glass, etc., can be made bright and new with Par-O-Keet—a brushing lacqner in striking colors. And in less than one hour after application the finished surface can be used.

REGARDLESS of what you have to paint, we can help you select the paint, varnish, enamel or lacquer that will give the greatest satisfaction for the least amount of money.

We carry a complete stock of the famous LOWE BROTHERS Paints and Varnishes—quality products that are backed by more than half a century of paint making.

We sell Lowe Brothers Paints and Varnishes because we know them to be reliable—because we know they will live up to our recommendations. Whether you want just a small can for an odd job, or enough to paint your house, it will pay you to see us before you paint. Ask for color cards.

DINGS AT SCHOOL THE PAST WEEK

(By M. F. Penrod, Supt.)

GHT PUPILS HAVE PERFECT ATTENDANCE THIS YEAR

er Items Of Interest To Pupils And Parents Of Kelmme)

We appreciate regularity of attdance and punctuality. Here follin the first six grades names of dents with good records in these. ither absent nor tardy since Sepber or when school began are:

Milvern Barz
Cecelia Heginger
Franklin Kluckhohn
Buster Jorgenson
Thelma Gimer
Juanita Pavey
Charles Book
Reuben Grosshuesch.

Those neither absent nor tardy semester are: Thomas Gimer, bel Griffin, Bessie Larson, Mabel lichting, Ruth Wellemeyer, Arr Krause, Nora Wellemeyer, Ceci tzinger, Elsie Ward and Ruth inger.

Both pupils and parents deserve dit for these records and we wish ers might emulate them. How-, it must be understood that a d should never be sent to school n feverish or when threatened any contagious disease. There ittle gain in risking a child's th to establish a record for perattendance and there are days n children will be kept from ol by the wisest of parents.

Six Weeks Period Terminates

his week terminates the second weeks period of this semester tests are in order. It happens on Wednesday of thi week we giving some form tests in mathedics, English, Science and His-. Thee have been prepared by at our own State Univerity. means of these tests there will held academic meets over the e and the best scholars in each ects selected by a process of elnation. The three best in each ect in which tests are given in own school are invited to go to na on Friday of next week to other tests in competition with three best from other schools of section of Iowa. The best from meet or those scoring highest then be invited to another meet later date. Our school is in B since its enrollment is less 125 in high school. School llments of 125 or more are callclass A schools. Students comagainst those in other schools he same class.

High Scores In Other Tests

last wek's tests mentioned in columns, we shall give the highest in each subject taken. he subject of clothing taken by home economics girls last semthe three following scored the est: Blanche Gimer 77, Nova ner 74, and Gladys Schlichting In manual arts (woodwork), eth Patet 48, Kenneth Kluck-47, Byrnes Missman 45; Phys-Laurence Greiman 52, Elmer n 39, Ray Lange 37. In Geom-Mildred Gast 18, Floyd Klotz-14, Esther Greiman 14. In ra, Kenneth Kluckhohm 29, e Meinders 28, Emma Goll 28 Nova Koerner 28. In General ce, Wilbur Arnold 92, Kenneth khohn, 92, Bynnes Missman 91, a Goll 91, Nova Koerner 91. phomore English, Esther Grei-76, Floyd Klotzbach 62, Frananner 58.

may interest some to compare making the highest scores on tests with thoe making highcore on thi week's tests.

a little wholesome rivalry can arted in our regular academic cts comparable to the rivalry hletics, public speaking, and extra-curricular activities our ls and pupils, we belive, will profit.

P. T. A. Next Tuesday Night

Miss Myrtle B. Johnston, County Demonstration Agent of Hancock County, has consented to address our P. T. A. next Tuesday evening. Her talk or paper will have to do with home decorations or making the home more beautiful. We invite farm bureau members as well as parents to hear this address. There will also be some special music. The eats committee is asking that each home represented bring one covered dish that there may be enough to supply the crowd with refreshments.

The game committee will have a number of games that all can enjoy.

AUXILIARY LADIES HAVE PLAY READY FOR PUBLIC

Will Be Given Next Wednesday And Thursday Nights

"The Strike of the Ladies Aid," American Auxiliary home talent play is ready for public presentation and will be given next Wednesday and Thursday nights at the Idle Hour Theatre. The play is a comedy and is full of humorous situations from start to finish.

The ladies have put much time and several weeks of rehearsing to make the play a success.

The cast of characters will be found elsewhere in this issue.

Home talent plays are popular in this community and we predict the show will draw a full house for both nights.

WORK TO START SOON ON THE KLEMME COUNTY ROAD

Supervisors Say Work Will Begin As Soon As Ground Is Fit

The County Engineer and the Board of Supervisors were here last Monday morning looking over the county road leading west out from the Main street of Klemme to the Wilson highway. They report that the work of grading and draining this short stretch of road will start as soon as the ground has dried out sufficiently to allow the heavy road machinery to work properly.

There was a little opposition on the part of some who would rather have had the county road lead out from town a few hundred yards further north, or over the Ludeke hill. A petition to this effect was presented to the Board Monday afternoon and quite a number of men went up from Klemme, either in support or against this proposition. The board however made it plain that the road had already been established as petitioned first and would remain that way, which is the way it should be, according to the expression of the majority of people in Klemme and many farmers. However, in all probability the north, or township road will be improved later.

We are at least sure of one fine road, graveled and garded, leading into Klemme and which should be passable under all conditions.

NOTICE

Proposals For Erection Of School House In Liberty Township

Notice is hereby given that the proposals for the erection of a brick school house in Liberty Township, District No. 2, in the county of Hancock, state of Iowa, will be received by the undersigned, at the Center School House, District No. 5, Liberty Township at 8:00 o'clock p. m. on Monday, April 29, 1929, at which time the contract will be awarded to the lowest responsible bidder. The Board reserves the right to reject any or all bids.

Plans and specifications may be seen at my place in Liberty township.

JOSEPH SCHULDT, Secretary.

KLEMME UNIT ENTERTAINING COUNTY AUXILARY TODAY

County-Wide Meeting Held At The Parish House This Afternoon

The ladies of the Klemme Auxiliary are today entertaing the county Auxiliary at the Parish House.

A splendid program of a varied nature has been planned for the visitors, including a vocal solo by Mrs. Harry E. Whyte; violin solo by Miss Mildred Johnson; an instrumental solo by Miss Gracka Quandt and a reading by Oral Gibson, who will speak 'The Man Who Nobody Knows." Mrs. Juhl of Crystal Lake will address the gathering.

Following the program and business session the Klemme Auxiliary will serve refreshments to the visitor.

SEVERAL FROM KLEMME WILL RECEIVE DEGREES

Klemme Young Men And Women Have Made Good In College

Several young men and ladies of Klemme will be among the College asd University graduates this year.

Fred Arnold will graduate from the Iowa State College at Ames as an Electrical Engineer.

Clarence Elder will graduate from the same college in the Agricultural Journalistic Department.

Both of the above young men will graduate from four year courses.

Walter Lemke, son of Mr. and Mrs. R. R. Lemke will graduate at the State University of Iowa from the Commerce Department.

Miss Elvira Stille will complete her course at the State Teachers College at Cedar Falls.

We extend to all of these our best wishes for a successful career in their chosen profession.

They Come In Pairs

The mule he has two feet behind,
And two he has before;
We have to stand behind to find
What the two behind be for.

CELEBRATED BIRTHDAY LAST SUNDAY

Wayne Lemke Enjoyed Fine Dinner At Home Of Parents

Mr. and Mrs. Otto Lemke entertained Sunday to a birthday dinner in honor of their son, Wayne, of Mason City, a group of young folks who helped him observe the day in a pleasing manner. The guests invited were the Misses Dorothy and Winnifred Hampel, Lenora and Ralph Larson and Richard Ax.

At the close of day a light lunch was served, consisting of ice cream and a decorated angel food cake, on which twenty-one candles burned brightly—telling of the tale.

"SUNDAY DOZEN" CLASS HAVE LARGEST OFFERING

Competition Keen In Methodist S. S. Classes For Easter Collection

Several of the Sunday School classes of the Methodist Church made a special drive to raise funds for their Easter Offering and of the group three classes were outstanding in their work and the amount of money they turned in.

Miss Marie Blank's Class of girls, who call themselves the "Sunday Dozen," earned $22.77, or an average of $1.84¼ per member.

Miss Mildred Johnson's class captured second place and turned in $14.86, or an average of $1.48½ per member.

The "Young Ladies Class", with Glenna Gruetzmacher teacher, turned in $11.39, or an average of $1.14 per member.

The above classes of girls earned their money selling candy, popcorn, seeds, easter eggs, bake sales, etc.

The total collections amounted to $79.85 for the church, and with the offering from Liberty amounted to over $100 for the special Easter Offering.

The three winning classes are to be complimented on the fine showing they made.

Mrs. Martha Bredbenner, secretary of the Sunday School gave out the above figures in her report last Sunday.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

The subject for the sermon on next Sunday morning will be "The Hopefullness of Dissatisfaction."

In view of the fact that next week is set aside for the promotion of better homes, and the movement is being observed by schools, churches and other organizations, we will have some lantern slides for our evening service which will deal with Religion in the home. This topic should be of interest to all, and you are invited to attend.

Last Sunday the Adult Bible Class from the Klemme Sunday School, with their families and several others who were invited into the circle, had a chicken dinner together at the Parish House. The dinner was fine, and the program of music, reading and speeches which followed made it an occasion of delightful fellowship. Such meetings not only helps to create a finer spirit of brotherhood, but awakens new interest and inspiration for our common task.

Last Monday evening another of our Sub-District Epworth League Rallies was held at Clear Lake, and we are glad to announce that our League was represented by a delegation of twenty-one. During the supper hour yells were frequently heard by the different delegations present. This was followed by a good program which lasted about an hour. Then came the social period which lasted about a quarter of an hour and the evening program came to an end.

The new cases for the May Term as they will appear on the docket will be published in The Times as soon as they are available.

WILL BE NATURALIZED IN MAY TERM OF COURT

Five Wish To Become Citizens Of The United States

May 10th has been set as Naturalization Day in the Hancock County District Court, by Hon. Judge Kelley who will give the examinations to the five who seek to become citizens of the United States.

The list as it appears on the record's in the Clerk's Office is as follows:

Karl Schefelbein, resident of Garner, born in Germany.

Karl Hampe, resident of Britt, born in Denmark.

Otto Theilen, resident of Britt, born in Germany.

Karl Kuch, resident of Crystal Lake, born in Germany.

Martha Kilian, resident of Tonka, born in the United States. In this instance the lady lost her rights of citizenship when she married a foreigner. However, her husband became a citizen at a recent term of court, and now she will again become a citizen of this country.

p. c. Numb. 5.

The Boston News-Letter.

Published by Authority.

From Monday May 15. to Monday May 22. 1704.

Westminster, Novemb. 12. 1703.
The Address of the Lords Spiritual and Temporal, presented Her Majesty.

WE Your Majesties most dutiful and loyal Subjects, the Lords Spiritual and Temporal in Parliament Assembled, do offer up our hearty acknowledgments to Almighty God, for the preservation of Your Royal Person, so essential to the happiness of Your People, & the Safety of *Europe*.

We see, with the greatest satisfaction, the zeal with which Your Majesty espouses the Publick Interest, which carries You even beyond the obligations of Your Treaties in Defence of the House of *Austria*, against the Usurpations of the House of *Bourbon*, & the glorious restoration of that Family to the Monarchy of *Spain*, which we have great reason to expect from the late Alliance with the King of *Portugal*, will be chiefly owing to Your Majesties Arms and Assistance.

Your Majesty may depend upon Security & hope in the love of Your People, our Persons & Fortunes shall ever be ready to defend You upon all occasions, and Your Majesty may therefore, with the greater Safety and Glory, send Your Fleets and Armies abroad in the Defence of Your Allies.

The happy Declaration of the Duke of *Savoy*, for the common Interest, gives Your Majesty a seasonable opportunity to shew Your Compassion and concern for those Protestants in the South of *France*, who lie under the heaviest Persecution and oppression.

We lament for our selves and others the unavoidable expences of War, but have reason to thank God and Your Majesty, that we are free from all the other Calamities of it, having almost nothing else to wish for to being secured of a Protestant Succession; but Your long and happy Reign over us And we shall most willingly pay our proportion of Taxes, encouraged by Your Royal Generosity for the ease of Your People, & by the frugal management of what is given; being sensible, there is no better way to save the Wealth of the Nation, than by carrying on the War at this time with the utmost vigour.

Your Majesty may expect from us a most ready compliance with all Your desires, so justly merited by Your care of the general welfare and happiness of Your People, extended even to the poorest and meanest of Your Subjects.

This appears yet more eminently in that earnest and pressing Recommendation to Your Parliament of Union and Peace amongst themselves; And we, in the most solemn manner, Assure Your Majesty, That we will not only avoid, but oppose whatsoever may tend to create any disquiet or distusion amongst Your Subjects.

We shall never be wanting in any part of our Duty towards the Supporting Your Majesties honour & Your Allies, nor doubting but Almighty God will prosper Your Majesties Arms, so gloriously employed to protect all those whom the ambition of the *French* King would oppress.

To which Her Majesty return'd Her most Gracious Answer in these words.

My Lords,

I am extreamly sensible of the particular concern You express for me in this Address, and of Your great zeal for the common cause of Europe.

I rely very much upon the Assurances You give me of Your Duty and Affection, and shall always esteem it my best endeavours to establish the Safety and Happiness of the Kingdom.

Piscataqua, May, 13 Letters thence acquaint us of some more damage, done by the Sculking Adversary, on the 11 instant *Nicholas Cole* of *Wells*, with *Nicholas Hayden, Thomas Dane* and *Benjamin Gough*, Souldiers, went about a Mile from Capt. *Wheelwright's* Garrison to Look after his Cattle, and on their return were Attack't by 12 Indians, who kill'd said *Cole* and *Hayden*, took *Dane* Captive, *Gough* escaping, advised Capt. *Hate* of it, who immediately called his Souldiers together, but the Enemy were fled.

Her Majesties Council by His Excy. direction hath appointed Thursday the 18. instant a day of Publick Fasting with Prayer, being the same day appointed by His Excy & Council in the Province of *Mass. Bay* and for said ends contain'd in said Proclamation.

Arrived here *John Holcom* from *Antigua*. *Richard Sheuridge* for *Fyall* wind-bound. Outward-bound, Capt. *Alcock* for *Barbadoes* ready to Sail, *John Frost* for said Port in Ten days, and *Robert Emery* in about 3 weeks, and *Richard Waterhouse* for St. Christophers in Week.

Northampton, May 13. A Company of Indians and French, between day break and Sun rising, about 60 Set upon a Garrison house of *Benj Jones's*, about two Miles from the body of the Town, and set fire to it ere they were aware of it, Kill'd and carryed Captive about 30. Persons. The Town being Alarmed, pursued them, the Enemy finding it, scattered themselves into parties, and so did the English into Ten in a Company, pursuing them, Capt. *Taylor* was kill'd in the pursuit.

Lisbon, March 27. On the advice brought the King of *Portugal*, of the Fleet from *England*, being on the Coast in whom was the King of *Spain*; he ordered a Wharff to be made from his Palace to the Waterside, & overlaid it with Cloath of Scarlet, and went in his Barge on board to receive him, returned and the King of *Spain* on his right hand; who was received with all imaginable Demonstrations of joy, by discharing of Guns, ringing of Bells, bon fires, illuminations, Fireworks, *&c.* and for a Fortnight nothing but Feasting. Three days ere the K. of *Spain* Arrived the Princess (Daughter of the K. of *Portugal*) designed to be his Queen, Dyed, and that lest like to made up by her Sister, some two years younger. Seven Grandees of *Spain* (besides those he brought with him) came to him upon his Arrival, who informed him that all places would submit to him as soon as he appeared. The English and Dutch Forces were about 12 thousand. The King of *Portugal* had 15. thousand, and daily leavying of New Forces: Upon his Arrival he sent the Forces to the Frontiers, reserving a few Companies for guard of his own Person to the Army, whither he designed to March the Week, that Capt. *Elton* came away & then directly for *Madrid*. Upon the Fleets Arrival in *Lisbon*, consisting of about 40 Sail of Men of War, and about 300 Transport Ships: A Dutch Privateer being chased by 5 Sail of Men of War, informed Admiral *Rook*

THE

New-England Courant.

[No 58

From Monday September 3. to Monday September 10. 1722.

Quod si ii corde fobrii, ifi in ore ebrii.

To the Author of the New-England Courant.

SIR,

[No XII.

IT is no unprobable tho' unpleasant Pursuit, diligently to Inspect and conduct the Manners & Conversation of Men, who, insensible of the greatest Enjoyments of human Life, abandon themselves to Vice from a false Notion of Pleasure and good Fellowship. A true and natural Representation of any Enormity, is often the best Argument against it and Means of removing it, when the most severe Reprehensions alone, are found ineffectual.

I WOULD in this Letter improve the little Observation I have made on the Vice of Drunkenness, the better to reclaim the good Fellows who usually pay the Devotions of the Evening to Bacchus.

I DOUBT not but moderate Drinking has been provid for the Diffusion of Knowledge among the ...nious Part of Mankind, who want the Inter... ready Utterance in order to discover the ... of their R... entertaining

Ted Appetite. What Pleasure can the Drunkard have in the Reflection, that, while in his Cups, he retain'd only the Shape of a Man, and acted the Part of a Beast; or that from reasonable Discourse a few Minutes before, he defcended to Impertinence and Nonsense?

I CANNOT pretend to account for the different Effects of Liquor on Persons of different Dispositions, who are guilty of Excess in the Use of it. 'Tis strange to see Men of a regular Conversation become rakish and profane when Intoxicated with Drink, and yet more surprizing to observe, that some who appear to be the most profligate Wretches when sober, become mighty religious in their Cups, and will then, and at no other Time address their Maker, but when they are destitute of Reason, and actually affronting him. Some think in the Morning, and others 'twell they can in an Instant understand all Arts and Sciences, by the liberal Education of a little vivifying Punch, or a sufficient Quantity of other exhilerating Liquor.

AND as the Effects of Liquor are various, so are the Characters given to its Devourers. It argues some Shame in the Drunkards themselves, in that they have invented numberless Words and Phrases to cover their Folly, whose proper Significations are parmelee, or have no Signification at all. They are ...dom ... very ... very often

By ELMO SCOTT WATSON

TWO HUNDRED AND TWENTY-FIVE years ago there took place in Boston a history-making event which gets but scant if any mention at all in our school-book histories, yet it marked the beginning of an institution which for the next two centuries was to exert a vital influence in shaping our nation. For on April 24, 1704, John Campbell, postmaster of Boston, issued the first number of the Boston News-Letter, the first successful American newspaper. It was only a little single sheet, six and one-fourth by ten and one-half inches in size, with two columns of news matter on each page and printed on both sides. There was not a single advertisement or illustration of any kind in it. The news which it contained was taken from London newspapers of more than four months past and the small quantity of local news was of slightly less ancient vintage. Not a very impressive beginning for American journalism was this little handbill, yet from it there has grown a profession employing hundreds of thousands of workers, an industry which ranks high up among all the other industries in the country in point of capital investment and annual earnings and a commodity which has become to the average American as much a necessity of his daily life as the food he eats or the clothes he wears.

In calling the Boston News-Letter the "first American newspaper," that adjective must be somewhat qualified. As a matter of fact the first newspaper issued in the United States also appeared in Boston some fourteen years earlier. On September 25, 1690, Benjamin Harris, an exiled newspaper publisher who had settled in Boston as a book seller and proprietor of a coffee house, brought forth a four-page newspaper (only three of which, however, bore any printing, the fourth being blank) which he called Publick Occurrences Both Forreign and Domestick. His paper, however, was promptly suppressed by the governor of Massachusetts Bay Colony and the council because it "contained Reflections of a very high nature" and "sundry doubtful and Uncertain reports." Accustomed as we are to the "freedom of the press" which has been in existence since this nation was founded, it may seem strange that a newspaper could be thus summarily disposed of by the authorities. But it must be remembered that these were the days when human liberty, as we now think of it, was practically nonexistent, when there was a system of licensing for nearly everything, including printing. Every colonial governor sent to America to rule the English colonies here between the years 1686 and 1730 was given the right to regulate the press. So this first newspaper venture in what is now the United States died a-borning because Benjamin Harris neglected to secure a license and because in this paper he made a reference to the French king and the Maquas (Mohawk Indians) which the authorities believed might cause trouble between France and England.

Postmaster Campbell was more careful not to run afoul of the powers that be. By "waiting on his Excellency or Secretary for approbation for what is Collected," i.e. news, he was able to print in a conspicuous place under the heading of his paper, "Published by Authority," and thus feel no fear of interference from the law. As a matter of fact, he seems to have been a timid soul who was never much in danger of getting into trouble on that account. For as Bleyer says in his "Main Currents in American Journalism":

> Campbell edited his paper in a painstaking but conservative and uninspired manner. He was scrupulously accurate even to the extent of pointing out in one issue that a comma had been misplaced in a preceding issue. On another occasion he explained that, in an account of a fire at Plymouth in the preceding issue, "whereas it is said Flame covering the Barn, it should be said Smoak." Occasionally he would point the moral of a piece of news. When, for example, a woman had committed suicide, he expressed the hope that "the Inserting of such an awful Providence here may not be offensive, but rather a Warning to all others to watch against the Wiles of our Grand Adversary." Again, when a man was punished with a severe whipping for selling tar mixed with dirt, he explains that the account "Is here only Inserted to be a caveat to others, of doing the like, least a worse thing befal them." Such brief comments were the only editorial utterances in the News-Letter . . .
>
> With meticulous care Campbell undertook in the limited space of his paper, "to carry on the threed of occurrences" abroad by reprinting in chronological order news gleaned from English newspapers. By this method he was at times from nine to thirteen months behind in publishing foreign news. His difficulties, particularly in winter, he explained in his clumsy style thus:
>
> Having in our Numb. 207 Given you a Summary of the Publick Occurences of Europe for five months time, viz. from the middle of August to the middle of December; And in our five last and in this, a more particular Account of the most Remarkable Occurrences of Europe for six months and an halfs time, viz. from the middle of August to the first of March, in our Numb. 208,209,210,211,212. And in regard we have not Weekly and Monthly Pacquets as they have in Europe and the West Indies, whereby to carry on the Occurences regularly; We shall now return back where we left off in our Numb. 207 to carry on the Threed of Occurrences as methodically as it will admit of . . . until Vessels from Great Britain or from the West Indies do arrive in any part of our Continent, when the Undertaker shall give you as he usually did a Summary and Abridgment of the most Remarkable Occurrences of Europe, for the succeeding Months.

The end of the first year found this pioneer publisher somewhat discouraged with his job. He took his readers into his confidence as follows:

> This Publick Printed News-Letter was undertaken to be Published for a Publick Good, to give a true Account of all Foreign and Domestick Occurrences, and to prevent a great many false reports of the same, and was propounded to be Printed for one year for a Tryal viz. from the 14th, of April last to the first of May next, to see if the Income by the Sale thereof at a moderate price would be sufficient encouragement to defray the necessary Charge expended in the procuring and Printing of the same, which Charge is considerable beyond what most people conceive it to be, besides the trouble and fatigue attending it; all which would be too long here to enumerate, yet for some satisfaction, we will venture to set down some of the Charges and trouble that arises thereby & leave other-some to rational persons to conceive of. 1. The Undertaker has several setts of the several Prints from England, & sent him in several Vessels, that being time of War might have one Sett if the rest should be taken, which are ordered to come by all Vessels coming to our Continent where the Post is settled almost five hundred miles from E. to W. from N. Hampshire to Pensilvania. 2. Correspondents settled in several Ports & places our Shipping goes to, for sending Intelligence. 3. Waiting on Masters, Merchants and others when Ship & Vessels arrive to have from them what Intelligence they can give. 4. Waiting on His Excellency or Secretary for approbation of what is Collected. 5. Paper & Printing & c. And when so done as we said before, we set the half Sheet at a more moderate price than it was set at in Exeter in England, where they began to print much about the same time that we began here, here it was set at 2d. and there it was at 2d and that sterling money, & when sent out to any house in Town inclosed, they were to have Twenty Shillings per Annum, and it was propounded here to be sent out for Twelve Shillings per Annum, tho' the paper and labor & other Charges here is four times at least dearer than it is at Exeter. And tho' it was proposed at such moderate Rates for both Town & Country, having had 11 months experience of the Income & trouble & charge in procuring & Printing it; the Undertaker is money out of Pocket, & has not sufficient to defray the necessary Charge; and unless some better encouragement be given for the future, it must drop: & therefore several being desirous it should not drop but be continued, we thought fit to insert this Advertisement, That either the price for the half Sheet a week and the Quarterly and Yearly Customers must be augmented, Or else there must be more of them Sold, and more Quarterly & Yearly Customers than was last year.

Concerning this first editor's troubles, Bleyer continues as follows:

> Campbell struggled along, making frequent appeals for support, and twice during 1706 receiving grants from the government. Finally, in March, 1709, having published the paper continuously for five years he was compelled to suspend it for eight months "for want of any Tollerable encouragement to support it." On January 1, 1710, it "was again set on Foot at the desire of several in this and the Neighbouring Provinces, particularly of the Town of Boston, in hopes of meeting of a far better reception both from Publick and private hands, for its present support, and future continuance, which hitherto it has not met with." Despite the fact that for the first fifteen years of its existence it was the only paper in the colonies, it never received adequate support. In 1719 Campbell points out, in one of his periodic complaints of lack of patronage, that "he cannot vend 300 at an Impression, Tho' some ignorantly concludes he Sells upwards of a Thousand." Obviously, with so small a circulation to show for fifteen years of struggle, he must have carried on the publication more out of a sense of duty to the community than from any hope of profit.
>
> In 1719 Campbell lost his job as postmaster but refused to turn over the News-Letter to William Brooker, the new postal official. Whereupon Brooker started a rival paper, the Boston Gazette. Campbell continued the News-Letter for three years, finally retiring in 1722 and leaving it in charge of Bartholomew Green, who for many years had been the printer who got out the paper.
>
> The appearance of the Gazette, which was first published on December 21, 1719, was of more significance than the fact that it was the second newspaper in the colonies. For the printer who set the type for it and laboriously printed the little sheets was a young man named James Franklin. Thus there came into American journalism a name which was to add luster to the profession for all time to come. Two years later James Franklin set up a printing press of his own and on August 7, 1721, there came from that press the first issue of the New England Courant. Bleyer has well said that its appearance marked "a new stage in the development of American journalism. The Courant was the first newspaper established in any colony in avowed opposition to its recognized leaders, as well as the first to publish essays, letters and verse. . . . When on a March night in 1722 Benjamin Franklin, a sixteen-year-old apprentice in his brother's print shop, slipped under the door of the Courant office his first contribution, a letter signed 'Silence Dogood' the paper secured a valuable contributor who was destined to become one of the ablest of colonial editors."
>
> James Franklin was encouraged to start his paper in opposition to the Gazette, the official organ of the postmaster who succeeded Brooker, and the News-Letter, still published by Campbell, by a group of men who were not at all in sympathy with the Puritanical ideas of the leaders in Boston. They could not have secured a better man for the job, especially in view of the ability of his young brother, for the new paper immediately began stirring things up in the colony. It is interesting to note that the first act in the stirring up process was to oppose the practice of inoculating for smallpox, a method of combating the disease which was supported by Rev. Increase Mather and other Puritan leaders. In fact they succeeded in stirring up such a row in this matter and in other criticisms of the authorities which appeared in the Courant that the council finally decided to curb James Franklin's activities.
>
> This was done in January, 1723, but James Franklin outwitted the authorities by substituting the name of his brother Benjamin for his own as printer and publisher of the Courant and for a short time the seventeen-year-old boy continued in that position. Finally he quarreled with James and left Boston, going first to New York and then to Philadelphia where later as editor and publisher of the Pennsylvania Gazette he made his mark as the most brilliant editor of colonial times and one of the greatest in all American journalism.
>
> If to John Campbell and the Boston News-Letter belongs the credit of publishing the first illustration in an American newspaper, to Benjamin Franklin and the Pennsylvania Gazette belongs the credit for printing the first editorial cartoon and one of the most powerful cartoons that has ever appeared in our newspapers. Campbell's illustration was a wood cut reproduction of a new flag which the United Kingdom of England and Scotland was to use hereafter and it appeared in the News-Letter of January 19-26, 1707. Franklin's famous Snake Cartoon was printed in the Pennsylvania Gazette for May 9, 1764, just before a congress of representatives for the English colonies was called to meet at Albany to prepare for the coming French and Indian war. Showing the disjointed segments of the snake, each one representing one of the colonies, its warning "Join or Die" came to be regarded as a symbol for united action by the colonists not only in resisting the encroachments of the French and Indians but also during the oppositon to the Stamp Act in 1765 and again at the outbreak of the Revolution.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

A MASTER CRIMINAL

ONE person out of every five who contracts pneumonia dies from it. And that is a margin much too close to risk. Moreover, this blackguard is no respecter of persons. It nits the high and the low, the poor and the rich, the known and the unknown, the robust and the weak. It plays no favorites and it treats everyone exactly alike—with all its power it attempts to slay.

Now the sad part of the story is that in most cases it need not have been. Carelessness has been responsible for most of pneumonia's activities—either carelessness on the part of the afflicted person or of some one else.

As with other trouble-makers germs are back of it all and their great potency is not to be found only in their particular killing character, but in their general presence as well.

By far the majority of the communicable diseases are usually contracted from persons suffering with the particular malady (carriers excepted), but with this master criminal the germ may be contracted from the throat and nose discharges of entirely well people. Moreover, it is possible for these germs under certain conditions to live a long time.

Pneumonia frequently starts with a severe chill, prostration, loss of appetite and a congested feeling in the chest noticeable upon breathing or coughing, followed a little later by bloody expectorations.

Fortunately the recognition of pneumoula symptoms does not require a trained intelligence. If you notice any of them, go to bed at once and call a physician. Indeed, if a slight cold appears promptly visit your doctor. A neglected cold is one cause of pneumonia.

In the next 365 days 150,000 people in America alone will succumb to this disease. This is sufficient excuse for a few common sense rules.

1. Sick or well, always cover your nose or mouth when sneezing and coughing.
2. Do not expectorate upon the floors, streets or in public places.
3. Breathe as much fresh air as possible.
4. Sleep with your windows open but avoid drafts.
5. In winter time keep the indoor temperature between 68-72 degrees.
6. Wear medium-weight clothing during the cold season and overcoats suitable to the temperature outside.
7. Avoid all foolish exposure.

Now then, the rest is up to you!

* * *

RESPECT IT

THE average person over-rates the killing power of old age. True, if you live long enough old age finally will lay you low. That is where the joke comes in. We don't give it a chance. If the newspaper accounts and vital statisticians are to be believed, there is a painfully large group of people who are in that class. They prefer dying by means of the automobile. No old age for them. No, indeed!

It is a pathetic reflection on scientific progress, this back-firing by one of the most useful and pleasure-giving machines ever invented by man. As a killer it is high up on the list. And apparently, so far, no amount of talking or preaching has been able to curb the fatal exhibitions of carelessness daily displayed.

The great war did much damage to American manhood, but there were many times the number of people slaughtered last year in the United States by automobiles than were killed in the American forces during the entire conflict. These are unvarnished facts.

What good is it for health departments, for physicians and for sanitariums to do everything in their combined power to keep you well if you deliberately step in front of a passing car and let it kill you? What is the use of smallpox protection, antitoxin and the rest of the public health safeguards if you persist in driving your car at sixty miles an hour, and end up in a crash at the side of the road?

The sooner every person realizes that automobiles are not harmless playthings and that, whether as pedestrian or driver, an ever-present hazard to be hurt or killed by them exists, just that much sooner will the death rate from this personally preventable cause be markedly reduced.

Public health officials can cope with the communicable diseases; modern science can, and does, regulate sanitation; interstate commerce laws and state regulations surround foods with safeguards and protect them against adulteration, but when it comes to protecting you against the hazard of a joy ride, the thoughtless driver and the careless pedestrian, you and you only are the boss.

Why not give this question serious consideration? Give old age at least a sporting chance at you.

(©, 1929, Western Newspaper Union.)

Both Experts

A "shark" is a slang term for one who excels in something. A "sharp" is a term for an expert, but seems to have the idea of cheating. The idea was formerly included in the word "shark," but that meaning has now become obsolete.

IT'S folly to suffer long from neuritis, neuralgia, or headaches when relief is swift and sure, with Bayer Aspirin. For 28 years the medical profession has recommended it. It does not affect the heart. Take it for colds, rheumatism, sciatica, lumbago. Gargle it for a sore throat or tonsilitis. Proven directions for its many uses, in every package. All drug stores have genuine Bayer Aspirin which is readily identified by the name on the box and the Bayer cross on every tablet.

EWS REVIEW OF CURRENT EVENTS

oover's Choice of Dawes s Ambassador to London Pleases Everybody.

By EDWARD W. PICKARD

RESIDENT HOOVER'S selection of Gen. Charles G. Dawes for the h post of ambassador to the court St. James was a happy one. It ets with the general approval of people of the United States, if wspaper comment is indicative, and government and press of England e assurance that Mr. Dawes will enthusiastically welcomed in Lon-. In accepting the appointment . Dawes made the stipulation that be given time to conclude his work Santo Domingo, where he and a mmission are establishing a budget stem for the government. This job l be ended in four or five weeks. en he will visit his Chicago home d go to Washington for conferences h President Hoover and Secretary State Stimson on policies to be fol-ed, so it is likely he will not as-me his duties in London before the d of June.

Special gratification over Mr. Dawes' ection was expressed by the British vernment in reply to the formal in-ry by the State department. It is derstood that President Hoover is unting upon Mr. Dawes to bring out a new era of good feeling be-een the two nations. Friction has isen recently over a number of mat-rs, including the question of naval nstruction. Mr. Dawes will be par-ularly qualified to deal with ques-ns relative to German reparations. e London newspapers say that while gland is sorry to part with Ambas-dor Alanson E. Houghton, who has en quite successful there, no suc-ssor could be more welcome than r. Dawes.

VERYTHING was made ready dur-ing the week for the special ses-on of congress, and the President let be known that he especially desired e enactment of a farm relief meas-e before June 1 so that the relief rganization may be functioning in me to help in marketing the next rvest. The administration bill is sed on the McNary measure which as indorsed by Secretary of Agricul-re Hyde. Tariff revision is likely cause more trouble in congress than e farm legislation. Urged on by the gar beet growers and beet sugar oducers of the West and the cane gar men of Louisiana and Texas, e Republicans of the lower house, it expected, will make a determined ht for substantial increases in the ties on sugar. The battle in both use and senate over this is likely to prolonged. The proposition to re-ve the tariff on long staple cotton, hich was abolished in 1921, has ought from the General Agricultural ndicate of Egypt an earnest plea in position. The measure, says the ndicate's president, not only would injurious to Egypt and to the re-tions between the two countries, but also "would inflict harm on Ameri-n spinners of fine cotton, purchasers fabrics made from it, purchasers of tomobile tires and other commodi-s in which long staple cotton is ed. It would make the United States se the place which her cotton fab-cs have obtained abroad where they ve succeeded in competing seriously ith other countries."

President Hoover received a large legation of union labor leaders who ked that the views of labor be taken to consideration in the working out the new tariff schedules. The dele-tion also urged the appointment of representative of organized labor on e tariff committee.

ECRETARY OF STATE STIMSON, appealed to by Vice President Cur-s to rescind the ruling of his prede-essor concerning the official status of rs. Gann, the Vice President's sister, d also asked by the diplomatic corps determine the question, skillfully dged the issue by telling Mr. Curtis at he would not accept Mr. Kellogg's ling, and replying to the diplomats that they would have to solve for themselves the problem of where Mrs. Gann was to be seated at official dinners. So the foreign ambassadors and ministers got together and after discussing the matter for several hours, notified the State department that until some definite ruling was laid down by that department Mrs. Gann would be accorded the rank and social status of the wife of a Vice President at all official and ceremonious diplomatic entertainments. This means that Mr. Curtis has won his fight, at least for the time being, and his sister will rank, at such functions, above all other women except Mrs. Hoover. Both Mr. Hoover and Mr. Stimson were annoyed by the affair into which the State department had been drawn, and the secretary said that his department would no longer act as social secretary for Washington hostesses, though it will aid Mrs. Hoover in arranging her dinner parties. The triumph of Mr. Curtis was first celebrated at a dinner given by the Chilean ambassador at which Mrs. Gann was seated as the ranking woman guest.

HARRY F. SINCLAIR may have to reside for three months in the District of Columbia jail and pay a fine of $500, for the Supreme Court of the United States upheld his conviction for contempt of the senate in refusing to testify before the Teapot Dome investigating committee five years ago. The decision, read by Justice Pierce Butler, was a complete victory for the government. It sustained at every point the powers claimed by the senate to compel testimony deemed necessary as the basis of possible legislation. The jail in Washington is an old structure with no exercise yard and is a decidedly uncomfortable place in which to live. Sinclair may be sent to the prison farm instead.

LEVIATHAN, which together with ten other ships of the government-owned lines, was bought by the U. S. Lines, Inc., last week started for Southampton on her first trip as a privately owned American vessel, and as she got beyond the twelve-mile limit she became a "wet" ship. Her medical liquor supplies were opened for sale to passengers, though there was no public bar. The same course will be taken on the other ships purchased by Paul W. Chapman's company, a legal opinion that the plan adopted would be no violation of the law having been obtained. Before the Leviathan's departure from New York a federal order was obtained granting the ship the right to enter the port on return with a certain amount of liquor under seal. When the ship reaches the twelve-mile limit on return that amount will be stowed away, and if any liquor remains it will be dumped overboard.

SECTIONS of north central Arkansas were ravaged by a terrific tornado Wednesday night, and about fifty persons were killed and a hundred injured. The village of Guion was blown completely away, five perishing, while in a farm settlement near Swifton more than a score of men, women and children were killed. Because the districts where the storm struck were rather sparsely settled the property loss was not great.

Tornadoes also struck in Minnesota and Wisconsin, resulting in the deaths of about ten persons and considerable damage to property.

DEFEATED at Jiminez, repulsed in their fierce attacks on Naco and forced to evacuate Juarez and Chihuahua City, the Mexican rebels began moving such troops as they could toward the west, apparently intending to concentrate their fight in the state of Sonora. General Escobar, who was elected "provisional president" by the revolutionary leaders, started his army toward the coast, abandoning the entire state of Chihuahua, and himself arrived in Agua Prieta, on the border just east of Naco, by airplane. General Calles with six troop trains arrived at Mazatlan, Sinaloa, and organized his forces for the campaign on the Pacific coast.

Though the federal garrison in Naco had withstood the assaults of the rebels, its situation was becoming increasingly desperate, for Escobar was gathering about 8,000 men to besiege the place and these troops had good artillery and airplanes. To protect the American border, Maj. Gen. William Lassiter, commanding the Eighth Army corps area, ordered approximately 1,500 United States soldiers to Arizona and New Mexico points close to the international line. Eighteen army planes patrolling the border had orders to shoot any Mexican planes flying over American territory.

COL. CHARLES A. LINDBERGH doesn't care to have all his movements followed by a public that becomes alarmed for his safety as soon as he is out of its sight. Last week after a visit with his fiancee, Miss Anne Morrow, he took off from Mexico City for the north. Because he did not show up in Texas when expected, there were rumors of disaster and suggestions of searching parties. But he finally landed at Brownsville, unruffled except by the public concern, and more than intimated that where he had spent the night was his own concern. Then he again took off on his way to New York, where the body of his friend, the late Ambassador Herrick, arrived on Saturday from France.

REV. SIDNEY J. CATTS, the picturesque former governor of Florida, is in deep trouble. A federal grand jury in Jacksonville indicted him on the charge of having financed a ring of counterfeiters in Tampa who planned to make vast quantities of bogus $20 bills and "shove" them through the assistance of a bank employee in New York. Catts is charged with having given the counterfeiters $5,000 in return for which he was to receive $25,000 in the fake notes.

HERE'S something novel in the way of speculation "squawks." Congressman L. C. Dyer of St. Louis, Mo., took a flyer in the stock of Hiram Walker, Inc., Canadian whisky distillers, and says he did it in complete ignorance that the company manufactured and sold liquor contraband in the United States. As soon as he learned the truth, he says, he sold, and so eager was he to get rid of the stock that he did not bother about the price, and lost money. Now he has demanded that the governors of the New York curb exchange reimburse him for the loss, contending that the exchange has no right to deal in whisky securities.

SIXTEEN members of the Chicago Association of Candy Jobbers, tried in Federal court in Chicago on charges of violating the Sherman antitrust law, were found guilty and face sentences of one year in jail and $5,000 fine each. Eighteen others were acquitted. The defendants were charged with conspiring to fix prices in the candy industry and to stifle competition in violation of the law prohibiting the restraint of trade.

CALVIN COOLIDGE, ex-President of the United States, has accepted an invitation to become a member of the board of directors of the New York Life Insurance company and will be elected at the May meeting of the board to succeed the late Myron T. Herrick. In a letter to the president of the company, agreeing to serve, Mr. Coolidge wrote that to him a great life insurance company is the very symbol of thrift, a co-operative society for the advancement of the public welfare, and a character builder.

LOST since March 31 in the wilds of western Australia, the trans-pacific plane Southern Cross has been found by a searching airman on a mud flat, and its crew of four men were reported to be alive. Food was dropped to them. The crew consisted of Capt. Charles Kingsford-Smith, C. T. O. Ulm, a navigator named Litchfield and a radio man named McWilliam.

GOV. HUEY P. LONG of Louisiana was impeached by the state house of representatives on one of nineteen charges and the legislators continued consideration of the other charges.

GEN. CHIANG KAI-SHEK, Nationalist President of the Chinese republic, has announced that he will resign as soon as he returns to Nanking. He says he is not big enough for the job and plans a tour abroad for rest and study.

RITA'S WHITE HANDS

(© by D. J. Walsh.)

GEORGE watched his wife as she stood facing the group of people. In the intervals between her readings he frequently forgot just how nice she could look. He felt puzzled at the vast difference of Rita in the home and Rita in public. He didn't pretend to listen to the long and exceedingly sentimental selection that his wife was giving; he cared nothing for poetry. He was comparing her modish appearance with the bizarre lady of the breakfast table. Then her rest robe had given him an uneasy sense because of its casual fastenings and the metal wavers in her hair had imparted a weird look to her small head. Her runover slippers had lost the ribbons and were tied with raveled rags of different colors. And George knew that, had he disparaged this frugal habit of using rags, she would have pleaded economy.

At this point in his reflections he sighed, quite forgetting where he was. He was thinking of the cold cream that she lavishly applied at night and which she seemed reluctant to wash off before breakfast. In fact, she often permitted it to remain all morning and the city soot had a way of mingling with the emollient. George didn't especially enjoy Sundays for this reason—he liked a woman to look sweet and neat at table and the belated meal Sunday mornings did not make for appetite. At least, the breakfasts she served were not sufficiently ultra to cause any oblivion to surroundings.

"I wish," he spoke aloud, with vicious emphasis, "that I might never again see an uncooked cereal—" the raised lorgnon of his ample neighbor recalled him to his surroundings and he slumped down into his chair, rosy with embarrassment.

And the slim creature in softest silk with gleaming wavy hair read on soulfully, waving a white hand to accentuate a passage.

That white hand deepened his sense of injury. The brief admiration caused by Rita's appearance had vanished and his thoughtless speech, aloud, further annoyed him. "Why must she keep her hands so sacred?" he asked himself. "After all, our hands are supposed to be given some employment. Suppose I suddenly shut up my shop because the work spoiled the shape of my fingers?" He grinned involuntarily, but the remembrance of the sticky gloves worn by the interpreter of poetry lingered. Rita disliked scrubbing or washing because it spoiled her hands. Sewing pricked her fingers and dishwashing was done only because she knew a housemaid was entirely out of the question. When all the dishes were soiled she piled them in the sink and ran the hot water over them and then picked them out disdainfully to dry. The gloves, worn nights and at other odd moments when she sat plunged in soulful reflections, connected with her readings, had left a trail of marks on the doors; the telephone, especially, was smeared with cold cream and George had learned to wipe it off before attempting to touch it.

The reader closed the exquisitely bound limp-leather volume: "To me that interpretation is wonderful. Life is what we make it. A wretched affair of makeshifts and worries or something ideal. Each glorious day should be filled with beauty"—she hesitated with a gentle smile—"or, at least, that is my conception of life. Life should be the interpretation of beauty."

The overdressed guests of Mrs. Randall Tremaine clapped decorously. Mrs. Tremaine was a wealthy woman who demanded constant flattery and adulation. Her friends were composed of a group of climbers who hoped to enter the sacred portals of society by clinging to her scanty but exceedingly expensive skirts. Rita had been presented to her as a striving young person, who constantly reached for the better things of life, and who—this was the part that pleased the prudent Mrs. Tremaine—would give readings absolutely without charge, because she wished to read before the best people.

"Beautifully interpreted," wheezed a very thin old man with a dyed mustache of an unnatural black. "She grasps the fundamentals of the better life."

As George dazzedly turned his head to see who had made the comment he heard this tart whisper: "That's the man who lives in the flat above us; he beats his wife every Saturday night—"

George wondered savagely why he limited this exercise to Saturday nights, then blushed at his elemental nature.

"You did very well, my dear," Mrs. Tremaine's voice rang out. "Your interpretation of a woman's place in life is charming. Your husband is very much to be envied—" a ponderous hand was playfully wagged in George's direction, who weak-mindedly smirked back—"come and sit with me while I talk to you a bit."

Rita, blushing at the flattery, swam along in the wake of her patroness.

George, convinced that the evening would never end, had stifled three yawns more or less successfully when he was again aroused by Rita's name: "Yes, my dear, she is the wife of a common carpenter. He works in his own shop. Some one said he was here tonight, but I hardly think Mrs. Tremaine would permit that. I'm going to invite her to read at my evening in Woodlawn. She isn't well enough known to charge anything and a reading is as good as anything else. Just so it is from some well-known poet, people will swallow any—" Some people stirring between them shut out the rest of the conversation.

George sat digesting his status in the society of climbers. He had built his shop on the side of a large lot which he owned, planning to put up a modest home on the other half. Rita, however, had been so expensive a proposition as to prevent the carrying out of the plan. The shop was far out and so far she had succeeded in coaxing him to rent an apartment nearer the city. It kept her in touch with important people and he could just as well take the car to work, she had explained. He had given in weakly at first, thinking that he could save the money to build, but her clothes had cost a great deal, reading in wealthy houses necessitated many changes and she hated sewing. In fact, their life was given over to her art. "To the interpretation of the beautiful," he told himself grimly as he placed her handsome evening cape over her shoulders as she had shown him how to do.

She was very silent on the way home. Once inside the uncared-for flat she sat down and began pulling out her hairpins. She had an odd look on her face. "George, Mrs. Tremaine made a suggestion tonight. She said she had done a great deal for me—"

George, getting a drink of water at the sink, turned and stared at this.

"I thought it had been the other way around," went on Rita doubtfully, "but she said that she thought it about time I showed a disposition to reciprocate. She wants you to do over the library—that is, put in new black oak panels and drop beams in—"

"I haven't applied for any work," interrupted George. "I have more now than I can do."

Rita's white hands twisted together painfully. "Why, she doesn't mean to make an estimate and be paid. She wishes it done as a token of—"

"The beautiful, I dare say, Rita, this is the last straw. I have weakly hesitated because I wanted you to be happy, but as you said yourself tonight, 'Life is what we make it; each day should be filled with beauty.' Now, I propose to run things hereafter. There is no beauty in this dusty untidy house. You are going to throw away your limp volumes of scarlet leather and bilious greens, put away your ridiculous silk dresses and wear good, sensible ginghams or whatever women wear to work in. We are going to have real breakfasts and you are going to be neat—"

Rita's eye had begun to flash and now she rose so that her eyes were nearly level. "George, have you been dreaming, or what is it?"

"Just woke up!" he snapped, thankful she hadn't cried; that was what he had dreaded. "No more sickly poetry for you. What has it gained for you except snubs? Who cares anything about you except that you furnish a free entertainment? And now this Tremaine woman tries to fool you into giving her a token"—he stamped his foot as he spoke and there was a prompt knocking on the radiator below; flat dwellers respond instantly to noise. "That's another thing. You haven't helped me any so far, but I'm going to see to it that you stop being a drag. I shall start the cottage at once and the day it's finished we move in. No more paying rent and carfare when I have ground paid for and ready. If you are too proud to live next door to a carpenter shop, why—" He stopped, longing to give in and eat his words as he saw her astounded face. She was his wife and he loved her, but yet: "Life seems to me an awful muddle," he thought drearily; "Rita could be so fine—in fact, she is," he finished loyally and turned to her. She looked so slight and frail that he could not lay down the law any further; perhaps she would compromise—

Rita had been running her hand absently over the dusty windowsills. She was very white but there were no signs of tears. "George," she said clearly, "I never noticed before how tall you were, you look splendid. Why didn't you tell me you didn't care for my readings? I liked to be praised and I guess I thought you would care more for me if other people thought me talented, but tonight when Mrs. Tremaine spoke of some return do you know I began to, as you say, 'wake up'? Poetry is all very well, but after all, one's husband—" She seemed to be searching for words as she examined her dusty finger and the man listening experienced a great throb of thankfulness. "This flat doesn't look as it should, I think it will be a distinct relief to move and start fresh and have no foolish pretenses."

"Then you won't feel badly—" he knew he was weak, but he wanted to make sure.

All the enthusiasm that she had poured into her readings seemed to have been deflected into this new idea—that of making home life pleasant. Rita wasn't stupid—she just hadn't thought. "I wonder if it's too late to look over those plans you have for the cottage? I think I can promise you a different looking place tomorrow night." Her face told him that she had changed her interpretation of life.

Fellow Artists

Mr. Pedalbass—I am a musician. I give recitals on the pipe organ.

Mr. Proudfather—That so! I wish you could meet my son. He plays the mouth organ in vaudeville. You organists ought to be able to help each other.

Makes Life Sweeter

Next time a coated tongue, fetid breath, or acrid skin gives evidence of sour stomach—try Phillips Milk of Magnesia!

Get acquainted with this perfect anti-acid that helps the system keep sound and sweet. That every stomach needs at times. Take it whenever a hearty meal brings any discomfort.

Phillips Milk of Magnesia has won medical endorsement. And convinced millions of men and women they didn't have "indigestion." Don't diet, and don't suffer; just remember, Phillips. Pleasant to take, and always effective.

The name Phillips is important; it identifies the genuine product. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875.

PHILLIPS Milk of Magnesia

10,000 Bottles a Day

Every day 10,000 women buy a bottle of Lydia E. Pinkham's Vegetable Compound. They know that there is no better remedy for their troublesome ailments with their accompanying nervousness, backache, headache, "blue" spells, and rundown condition.

Lydia E. Pinkham's Vegetable Compound

If we had a coat of arms, we should put it on the door of our automobile. Why not?

If the dear public is amused it cares not for the barking of the critic.

Insist upon K-R-O (Kills Rats Only), the original Squill exterminator. All druggists 75c, or direct if not yet stocked. Large size (four times as much) $2.00. K-R-O Co., Springfield, O.

As to a Friend

"I don't think he's fitted for golf."

"Why not?"

"He addresses the ball like you talk to dice."

Snowy linens are the pride of every housewife. Keep them in that condition by using Red Cross Ball Blue in your laundry. At all grocers.—Adv.

We don't want too much freedom if everybody else is going to have too much freedom, do we?

DR. CALDWELL'S THREE RULES

Dr. Caldwell watched the results of constipation for 47 years, and believed that no matter how careful people are of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to treat it when it comes. Dr. Caldwell always was in favor of getting as close to nature as possible, hence his remedy for constipation is a mild vegetable compound. It can not harm the most delicate system and is not habit forming.

The Doctor never did approve of drastic physics and purges. He did not believe they were good for human beings to put into their system. Use Syrup Pepsin for yourself and members of the family in constipation, biliousness, sour and crampy stomach, bad breath, no appetite, headaches, and to break up fevers and colds. Get a bottle today, at any drugstore and observe these three rules of health: Keep the head cool, the feet warm, the bowels open. For a free trial bottle, just write "Syrup Pepsin," Dept. BB, Monticello, Illinois.

Klemme Co-op. Creamery Company

NOTICE OF SHERIFF'S SALE

STATE OF IOWA,
Hancock County, ss.

To John Sondersfeld, Minna Sondersfeld, Carl Sondersfeld, Iowa Loan and Trust Company, Arthur Wellemeyer, Merchants National Bank, Cedar Rapids, Iowa, Garnaveillo Savings Bank Garnaveillo, Iowa, L. A. Andrew, Supt. of Banking, et al.

You are hereby notified that by virtue of a special execution, to me directed, and issued out of the office of the Clerk of the District Court of the State of Iowa, within and for Hancock County, upon a judgment rendered in said Court in favor of First National Bank, of Klemme, Iowa, and against John Sondersfeld, In Rem. for the sum of Two Thousand Nine Hundred Thirteen and 50-100 Dollars debt and Sixteen and 40-100 Dollars costs, and Sixty-nine and 40-100 Dollars attorney's fee, I have levied upon the following described Real Estate to-wit:

The North Half (N½) of Section Thirty-four (34) Township Ninety-five (95) Range Twenty-three (23) West of the 5th P. M. in Hancock County, Iowa, and that on the 4th day of May, 1929, at 10:00 o'clock A. M., at the front door of the Court House in Garner, Hancock County, Iowa, I will proceed to sell the same in satisfaction of said execution, together will all legal costs accruing.

Dated at the Sheriff's office in Garner, this 3rd day of April, 1929.

E. H. WAHLERT,
Sheriff of Hancock County, Iowa.
D. R. Dunn, Attorney.

(Publish April 11-18, 1929)

KLEMME LOCAL NEWS

The weather and roads were both ideal and church attendance from the country people again was on the increase Sunday—or was it the big chicken dinner which brought Tom Nelson, S. S. Supt. to town?

Benn Coobs has begun work on his new house and has the excavating well along. He is building on the lot just across the street and south of the Paul Grange residence.

Mr. and Mrs. Herman Priebe, Mrs. F. Haupt and daughter, Edith, Miss Adella Kuhlman, and Emil Lau and family were visiting with Mr. and Mrs. Wm. Wenz last Sunday.

Mr. F. A. Arnold and Mr. Carl Heiden drove to Ackley Saturday to attend the funeral of Mr. John Bleeker. Irvin Bleeker, son of the deceased, was at one time employed here in the First National Bank.

J E. Stille has made a fine improvement on his house by converting a room on the southwest corner of the house into a garage. In this way Mr. Stille has a handy garage and which is heated in the winter.

Mr. and Mrs. C. G. Waterman had as dinner guests Sunday, Mrs. Mary Waterman, and Mr. and Mrs. T. F. Mitchell of Swea City. Mrs. Mary Waterman accompanied Mr. and Mrs. Mitchell home for a week's visit.

The Loyal Workers, adult class of the Methodist Sunday school, and their families, enjoyed a chicken dinner Sunday at the Parish House. A program of music, speaking by Oral Gibson, and songs were enjoyed follwoing the dinner.

The owl which the the Boy Scouts found about a week ago on a hike has been stuffed and mounted by Henry Ward and is on display in J. N. Day's store. The "Owl Patrol" are the legal owners of the owl. Mr. Ward did a fine job of mounting the bird, which is a great horned owl.

Mr. and Mrs. Wm. C. Keraus and sons, Otho and Verle, of Traer drove in early Sunday morning for a visit with relatives and friends for the day. They came so early that they enjoyed breakfast with Mr. and Mrs. C. F. Keraus at their cottage at Clear Lake. They were entertained for dinner at the home of Mrs. G. W. Kluckhohn and daughter Sadie.

Mr. and Mrs. J. E. Stille and daughter, Marie, have moved into the house which they purchased a few months ago, the residence formerly owned by Frank Gruetzmacher. Mr. Stille has been doing some remodeling and now has a fine residence property. They have been living in the house formerly owned by Geo. Gruetzmacher, which has been purchased by Dr. Anderson.

Dr. and Mrs. D. P. Anderson have purchased the house in southwest Klemme formerly owned by George Gruetzmacher and moved into it the first of the week. J. C. Thomas and family moved into Dr. Anderson's residence on East Main, and the Stoltenberg family have moved into the house vacated by Thomas. Mr. Stoltenberg drives a truck and hauls cream and does other trucking work.

French Shepherds Use Stilts to Advantage

Walking on stilts is a fad that does not die with the ages. On the tomb of one of the oldest Pharaohs is a crude bas-relief depicting a court procession. The procession is led by a trumpeter who is perched on high stilts.

Every nation, in fact, has had its expert stilt walkers. In China, and Japan the fad is popular with youths, some of whom are so adept in this mode of walking that they require no supports or uprights to steady them.

In southern France stilts are more than fads. There they are used almost continuously by the shepherds, who have to keep watch over large flocks of sheep as well as to pass through bogs. The stilts are usually from six to eight feet high and are strapped tightly to the knees.

Both men and women in that part of the country are expert stilt walkers. In their hands they hold a long stick or cane as a support. So accustomed are these people to the stilts that shepherdesses have been known to knit socks while walking on them.

A frequent pastime of these people are stilt races, and not a holiday passes without a stilt contest of some sort. One contest recently was won by a boy and a girl, each fourteen years old. The third to come in was a shepherd, whose age was about seventy.

Splendid Fossil of Ancient Sea Terror

The fossiled skeleton of a teleosaurus, a terror of the seas of the Jurassic period, 150,000,000 years ago, is on exhibition at the Field Museum of Natural History, Chicago. The creature, a sea crocodile about ten feet long, comes from Wurttemberg, Germany, and was excavated near there from land which was a sea bottom in prehistoric times, when that part of Europe was covered by water

The fossil is unusual in that almost every detail of the skeletal structure of the animal is intact and sharply defined in the specimen. Rows of sharp-pointed, vicious-looking teeth in the jaws indicate that the animal probably was carnivorous, and that it undoubtedly preyed upon lesser creatures of the sea. The crocodile was protected by strong plates along its back, which acted as armor. The bones of these plates are preserved in the fossil.

The skull, the short front legs and the longer hind ones and the vertebrae are virtually complete.

Good and Bad Hawks

The biological survey of the United States Department of Agriculture points out that there are a number of different species of hawks, and the food habits of all are not the same. Some prey almost entirely upon small mammals, such as mice, ground squirrels and rabbits, whereas the food of others consists chiefly of birds.

The bird eaters should be killed at every opportunity, according to the survey, but it is equally important that the others be spared, for they do a great deal of good in destroying small animal pests of the farmer. The bird-eating hawks include the Cooper hawk and the sharp-shinned hawk and these species prefer to capture their prey by swift, fierce darts from the concealment of thick foliage.

Big Family

The stork had brought a new baby girl to the family and father came smiling to the breakfast table to announce to the four assembled small ones, Sam, Sally, Lois and David, that there was a tiny new sister upstairs.

Four small, grave faces turned to him, as he said cheerfully: "Isn't it great to have five children? A big family is so much more fun than a small one. I don't believe there is a happier family anywhere than ours."

"There's the orphans' home," said five-year-old Lois thoughtfully.

Dance to Health

Modern science is getting back to some of the same beliefs that held sway in primitive society. Particularly is this true in the matter of physical and mental health, for science now subscribes to the ancient theory that physical exercise leads to mental as well as physical health. The lively Italian folk dance, called the Tarantella, dates from this period and derives its name from the fact that the cure for spider bites was generally believed to be a wild dance unto exhaustion.—James G. Dunton in the Dance Magazine.

Poor Man

"A thorough gentleman, the most polite man I ever met."

"Yes, Algernon. Jenkins was that."

"But he died unhappy, very unhappy."

"So, Algernon, so?"

"Yes, he was afraid his relatives would think his last gasp for breath was a hiccup and he wouldn't be able to excuse himself."

Gotham's Own

"I have buffeted about with the people of Arabia. I have fought hordes of Turks, and battled almost an army of Armenians. I have worked next to sweating South Americans, toiled beside Greeks, Swedes, Chinamen and men from deepest Africa. Yes, I know every race of man."

"Oh, so you're from New York."

Masterpieces of Pen and Brush Forgotten

A pine tree brings forth many seeds but among the millions that it scatters over the mountainside perhaps but one may survive—treasured, say, by a squirrel, stored underground, springing to life when the uncertainties of existence deprive the squirrel of need for food.

Charles Wesley, it is said, wrote 6,000 hymns, but from this 6,000 probably but one has assurance of immortality—"Jesus Lover of My Soul." Wordsworth was prodigious in sonnets but of the thousands he drafted he published but a few more than 450 and of these less than half a dozen have taken root in popular memory. La Farge burned many of his drawings, left between 50,000 and 60,000, and some critics say he will be fortunate if one of them be remembered a few hundred years from now. Raphael painted scores of madonnas, doubtless sketched hundreds that he never painted, and the world really treasures two—the "Sistine Madonna," and "Madonna della Sedia." The "Sistine," it might be remarked, was not thought much of at the time of its painting, a critic then dismissing it with four lines of comment.—Detroit News.

Legal Knots Untied by Chinese Solomon

In a village near Peking, China, four tradesmen clubbed together to buy cotton. To protect it from rats they procured a cat, and agreed that each of them owned one of the animal's legs. Soon afterwards the cat hurt one of its paws, and the owner of that particular leg bound it up with a rag soaked in oil. But the cat went too near the fire, the bandage ignited, and the terrified animal rushed amongst the bales of cotton, which flared up and were destroyed.

The three owners of the uninjured legs sued their partner for loss and damages. The judge ruled thus:

"Since the cat was unable to use the injured leg, the cotton was set on fire by the action of the three uninjured legs on which the cat ran among the bales of cotton. Consequently these three legs were guilty and their owners must pay damag and costs."

Turkish Trade Unions

The oldest trade unions in the world are in Constantinople. Here every worker, no matter what his calling, belongs to a guild. The guilds are very powerful, having been in existence for many centuries and possessing special privileges granted to them for services rendered to the state in times of crisis. To this day in Constantinople, no shoemaker of the guild of shoemakers may be furnished except by special officers appointed by members of his own craft; the favor having been conferred upon the fraternity by one of the sultans of the Sixth century. The guilds regulate wages, length of working day, and even control the "pitches" of the vendors.

Good Job

A young lawyer had a foreign client in police court. It looked rather black for the foreigner, and the lawyer fairly outdid himself in trying to convince the magistrate that his client was innocent.

The lawyer dwelt on the other's ignorance of American customs, his straightforward story, and enough other details to extend the talk fully 15 minutes. His client was acquitted.

In congratulating the freed man the lawyer held out his hand in an absent, though rather suggestive manner. The client grasped it warmly.

"Dot was a fine noise you make," he said. "Thanks. Goo'by."

Metals Found in Scotland

The precious metals exist in several Scottish counties. The ancient Celts made their wonderful brooches, and other trinkets of native gold, probably gathered from the beds of streams In the Sixteenth century the metal was extensively mined in Lanarkshire. Pennant describes a nugget weighing one and a half ounces which was discovered on Crawford Muir. Some years ago, a local writer, Doctor Watson collected a fair amount of gold in small grains from the Wanlockhead district.

Popular Scottish Stone

One of the stones that has never waned in popularity is the Cairngorm. This splendid stone is a variety of rock crystal found in the Cairngorm mountains in Inverness-shire, Scotland, and also in the Grampians. In color it ranges from light orange to deep brown. The Cairngorm is made into various articles of jewelry, which find a ready sale, especially amongst tourists visiting Scotland. From time immemorial it has been used to decorate the dirks and brooches worn with Highland dress.

Teacher's Helper

A kindergarten teacher, who was obliged to leave the room for a few moments, returned just in time to see one mischievous little chap sneaking up the aisle toward the front of the room.

"What are you doing, James?" the teacher asked.

James hesitated a moment; then he replied hopefully:

"I was just coming up front to see if everybody was good."

Marks of Inefficiency

The inefficient man usually overemphasizes the unimportant and neglects the important. He practices petty economies and neglects big opportunities.—Woman's Home Companion.

Quicksilver From Nevada

Great strides are being made in the development and the equipment of certain promising mercury properties in Nevada, and it is predicted by those who are in touch with the business that that state will soon become the leading producer of quicksilver in the West.

Peaches From 40 States

At one time the peach product was limited to one very small section of the United States, but the last peach crop was contributed to by 40 states. In 20 years the commercial consumption of peaches has increased by 50 per cent and during the season an average of 1,000,000 bushels is produced each week.

Record Body Heat

Much has been said about abnormally high body temperatures lately, but what is thought to be the highest recorded authentic temperature is reported by Dr. Harold M. Behneman, assistant in the University of California Medical school.

Writing in the Journal of California and Western Medicine, Doctor Behneman declared that a patient suffered a fever that reached the extreme temperature of 110.6 degrees. The patient lived in spite of this excessive fever, and Doctor Behneman believes that the heat aided in controlling the bacteria causing the illness.

In Doctor Behneman's opinion, this temperature is just about the limit that the human body can withstand and live.

Help is Offered

and is freely given to every nervous, delicate woman, by Dr. Pierce. Write Dr. Pierce's Clinic in Buffalo, N.Y., for confidential medical advice. No charge for this service. Obtain Dr. Pierce's Prescription now, in liquid or tablets, from your druggist or send 10c to Dr. Pierce at above address, for trial package of tablets. One woman writes:

"About two years ago I suffered with very severe pains in my right side, had functional disturbances, was weak, nervous and rundown. Doctors said I could never be a mother. I began taking Dr. Pierce's Favorite Prescription—took eight bottles in all—and today I have a fine healthy boy, and enjoy better health. I cannot say enough in favor of Dr. Pierce's Favorite Prescription."—Mrs. Maude Bailey, Edgar, Nebr.

Have you ever tried Dr. Pierce's Pellets for the stomach and bowels?

Away Low

POULTRY FACTS

FOOD FOR CHICKS GIVEN BY KAUPP

Mash and Grain Should Be Fed First Nine Weeks.

The 100 chicks with which one will start a poultry flock of 50 hens to be raised, will first need 450 pounds of feed up until the ninth week, and thereafter, for the whole year, the 50 hens selected will need 4,250 pounds of feed.

"The 450 pounds of feed needed for the 100 chicks up until the ninth week should be 250 pounds of mash feed and 200 pounds of grain," says Dr. B. F. Kaupp, head of the poultry department at the North Carolina State college. "Then when the 50 hens are selected from the lot, these hens will need 50 pounds of grain and 35 pounds of mash per hen for a year. This makes at total of 4,250 pounds of feed that should be provided on the home farm. Of this amount 2,500 pounds is grain feed and may be supplied by 23 bushels of corn, 24 bushels of oats and 13 bushels of wheat. To supply the 1,750 pounds of mash feed also in the ration, the grower should raise 10 bushels of corn and 11 bushels of oats."

Some additional feed will also be needed on the poultry farm for young and growing birds, therefore, Doctor Kaupp says, if the average farm keeping a flock of 50 adult hens will produce for the poultry, 25 bushels of corn, 26 bushels of oats and 15 bushels of wheat, the owner will need to buy only about 400 pounds of fish meal or meat meal, 400 pounds of middlings and 75 pounds of bone meal to have his birds well fed.

Doctor Kaupp has worked out a laying mash and a grain feed which has given excellent results on the experimental poultry farms. The successful farmer who keeps a flock of pure-bred poultry as a side-line should not have to buy his feedstuffs. They can be raised and mixed at home with excellent results, declares Doctor Kaupp.

Delouse Setter Before Putting Her on Eggs

Before you set any hen not known to be absolutely free of lice, give her some sort of treatment to destroy lice and then see that the nest is clean, with fresh nest material. The nicotine sulphate treatment recently discovered is one of the easiest ways to delouse a setting hen. Paint a few dabs of it in the bottom of a box just large enough for the hen to sit in, and put her in it over night. It will not deter her from setting but it will destroy all living lice. Now use a bit of blue ointment in the region below the vent where lice breed and there will be no lice problem when chicks hatch. If a lousy hen is just about ready to hatch, paint the nicotine sulphate generously in a box that has been warmed to promote rapid evaporation of the fumes, and put the hen in for an hour, covering her eggs with warm flannel in the meantime. Use the blue ointment also to get the nits that may hatch.

There are other ways of delousing which takes more time. Whatever is used, do it before the chicks hatch and avoid the troubles that lice bring.

Poultry Hints

Liquid skim milk is "great stuff" for chicks. Look out for substitutes.

* * *

Buckwheat is often used in the scratch feed. It is high in fiber, although not as high as oats.

* * *

Trap nesting is the only sure way to get an exact record of a bird or flock production, but it is hard work.

* * *

According to experience it is not necessary to feed cracked corn when good whole corn can be raised or purchased.

* * *

In addition to the mash, the hens should be given all the grain they can eat, especially in the afternoon before roosting time.

* * *

It is a mistake to crowd 200 pullets into a house 100 feet long. From 3½ to 4 square feet of floor space should be allowed each bird.

* * *

Wheat screenings should never be used if musty, smutty or heated because it may have a bad effect on the digestive tract of the fowl.

* * *

By trap nesting you are sure to select your best layers and by breeding from them, provided they are of good standard requirements, you can soon increase your flock average.

* * *

Poultrymen should be on the alert for the appearance of roup or chickenpox in their flock. Flock owners cannot afford to have their flocks thrown out of production at the season of high prices.

* * *

From ten days to two weeks after mating, hatching eggs may be saved. The care of the eggs while holding may influence in no little manner the success of the hatch. Eggs should be held in a dry room at a temperature to 55 to 60 degrees Fahrenheit and turned at least once each day.

Breaks in Roof and Wide Dormers Give This Home Attractive Touch

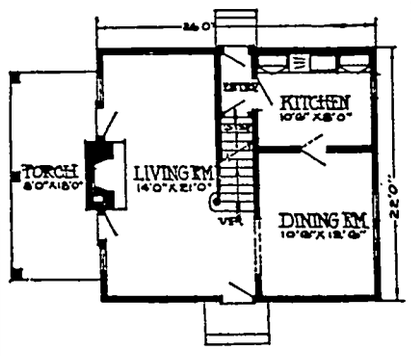
An Abundance of Sunshine Will Always Make Cheerful Rooms Within This Charming House for Though Attractive Shutters Ornament the Windows They Will Always Be Opened Wide to Admit the Light and Air.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The modified type of the colonial home building design which has an irregular pitched roof and wide dormers is commonly termed the "Dutch Colonial." This a popular type of home because its exterior appearance is made attractive by the breaks in the roof and the wide dormers. However, in the interior arrangement it follows rather closely the colonial.

Such a home is shown in the accompanying illustration. This is a five-room house, 26 feet wide and 22 feet deep. The five rooms are large,



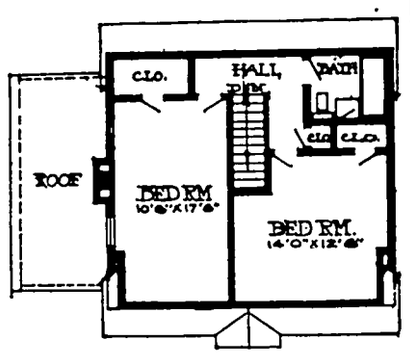
First Floor Plan.

however, and are of the type that are wanted by those who are building their own homes.

The overhang of the roof at the second floor sill and the gabled roof over the entrance porch are features which make this house out of the ordinary. The entrance door leads directly into the living room which is 14 feet by 21 feet. The open stair out of the living room beside the entrance door leads to the second floor. An open fireplace is set in the outside wall with doors on either side leading to the open porch. This porch may be walled and glazed to make it into an "all-year-round" sun parlor if desired.

The dining room is 10 feet 6 inches by 12 feet 6 inches, and the kitchen is of the same width and is 8 feet deep.

The stairs lead to a hall at the rear of the second floor at one side of



Second Floor Plan.

which is the bathroom. Both bedrooms open off this hall, one on either side of the stairway. These rooms are large, one being 12 feet 6 inches by 14 feet, and the other 10 feet 6 inches by 17 feet 6 inches.

The house is of frame construction and sets on a concrete foundation; has a basement of the same dimensions as the house proper. This is the type of home that the small family desires. Its rooms are large and airy. The arrangement of them is such that the work of caring for the home can be done with the least amount of effort. It is attractive from the exterior appearance, and when surrounded by shrubs and flowers as is shown in the illustration, it will make a very attractive home.

Painting Now Is Year-Around Home Operation

It is an erroneous belief that painting is necessarily seasonal. As successful a job may often be accomplished in winter or summer as in the spring or fall.

Good results depend, to a large extent, upon certain necessary weather conditions which are apt to prevail at any time of the year—and when you take advantage of these conditions in the so-called "off seasons" for painting, it is possible to secure the services of the best painters who can give your work their undivided attention. In the busier seasons it is often difficult, even impossible to secure the more skillful workmen. Too, because of the demand on the painters' time, the work is often rushed. Under such circumstances, your work is apt to suffer.

Therefore, if your house is in need of paint, take advantage of the long dry spells that occur in the winter time when the atmosphere is not too cold for exterior painting. Of course, the necessary requirements must be observed—such as dry weather, which will insure a dry surface. The thermometer should register at least 35 degrees or over. If it is colder, the moisture present in the air condenses on the freshly painted surface. Although the paint dries eventually, its durability and life are impaired.

Exterior painting should never be done during rainy weather, or while the surface is wet. Fog and frost on fresh paint kill the gloss and cause "washing." New wood that has previously absorbed moisture must be allowed to dry out thoroughly. Otherwise, the moisture will force its way through to the painted surface and by breaking the bond of the paint, cause it to peel.

Good material will be just as essential to a good paint job as good workmanship. Inferior paint will spoil the finished work. It does not last—and it is apt to crack, peel and discolor. Repainting will be necessary in a short time. Cheap paint will cost less per gallon, but it costs more per square foot.

A gallon of good paint will ordinarily cover from three to five hundred feet (two coats), whereas an inferior product cannot approach this standard.

It is unwise, too, to skimp in the number of coats of paint applied to your house. Sometimes one coat is sufficient, but it is generally agreed that it is more economical to apply two coats, say every four years, than one coat every two years. Two coats will guarantee a perfect finish and more complete preservation. In the end, two coats will be more economical to you than one in that it will last longer and look better for a longer period of time. For an unpainted house three coats are indispensable.

In repainting a house, the unexposed places such as gutters, the undersides of tin roofs, etc., should not be neglected. Because they are out of sight does not mean that they are out of the reach of the elements which cause them to corrode and decay.

It is naturally much easier to create continually favorable conditions for interior painting. The temperature, which should average from 60 to 70 degrees, can be arranged according to necessity, and there is no danger of interruption from snow or rain.

It is to your advantage, then, to plan your house painting (both interior and exterior) for the painter's dull season. As a rule you will find it possible to take advantage of a favorable temperature and clear weather for the exterior work and it is within your own abilities to create such circumstances for the interior work.

Porch Made Livable With Small Touches

The passing of winter is marked by the siren call of spring for all to come outdoors.

The porch may have suffered unwonted hardships through the wintry months, but it can readily be made quite a livable place with a bit of ingenuity. E. Helen Dunbar supplies several suggestions in an article of the People's Home Journal. Outlining the point to be considered in adding dignity and comfort to the living porch, she says:
